It is on this play of words that the proponents of socialized medicine are staking their claim for effectiveness. They know quite well that the American public is not ready to buy socialized medicine. And, as our lawyer friend advised us, it is necessary as physicians to label it correctly in the eyes and the minds of the American public. It is our duty to keep on calling it what it is: socialized medicine.

Reorganization Plan No. 1

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the New York Times regarding President Truman's Rorganization Plan No. 1, and a statement prepared in opposition to the plan.

There being no objection, the article and statement were ordered to be printed in the RECORD, as follows:

[From the New York Times of April 4, 1950]

OPPOSE ABOLITION OF COMPTROLLER—BANKS OF NATION ARE RALLYING AGAINST REORGANIZATION PLAN THAT SPELLS VIRTUAL DOOM—INDEPENDENCE SEEN STAKE—STATE SUPERVISORS JOIN ABA, OTHER ASSOCIATIONS IN FIGHT—HEARINGS DUE THIS WEEK

(By George A. Mooney)

Banks throughout the country are rallying in opposition to President Truman's Reorganization Plan No. 1 which would virtually abolish the Office of the Comptroller of the Currency, it was learned yesterday. Although the proposal primarily affects national banks, the National Association of Supervisors of State Banks, it is understood, has joined with the American Bankers Association, State banking associations and other interested groups in an effort to arouse resistance.

The drive will reach its peak intensity on Tuesday and Wednesday this week when hearings are scheduled to be held before the Senate Committee on Expenditures in the Executive Department. Last week the Senate Banking Committee voted to oppose the shift. Also it was reported that Senators H. WILLIS ROBERTSON, of Virginia, and Ho-

MR CAPEHART, of Indiana, have both introduced resolutions requesting that the proposal be defeated and the resolutions will be presented at the hearings.

Although this action might have been expected to allay concern, bankers are not relaxing the fight, at least not in this area. Despite the resolutions by the Senators, Arthur T. Roth, president of the Franklin National Bank, of Franklin Square, Long Island, mailed out a 7-page statement to all national banks in an attempt to arouse grassroots opposition to the plan. Urging the banks to make their views known to Congress promptly, Mr. Roth pointed out that unless a legal majority of 49 Senators approves the resolution, the plan will automatically become effective May 11.

During the week also, the New York State Bankers Association issued a broadside to its member banks throughout the State, asking immediate action.

"The American Bankers Association in Washington is exerting every influence at its command to save the independence of the Comptroller's office," the State association wrote. "The ABA adds that it is of grave concern to all banking—this move in Washington is a direct challenge to an independent banking system."

URGED BY HOOVER GROUP

Reorganization Plan No. 1, ostensibly an adaptation of a recommendation of the Hoover Commission, was one of 21 Government reorganization plans which President Truman sent to Congress on March 13. Submitted under the Reorganization Act of 1949, the plan would (a) vest in the Secretary of the Treasury all functions of all other department officers, employees, and offices; (b) authorize the Secretary of the Treasury to delegate functions to any officer, employee, or office of the Department; (c) establish an administrative Assistant Secretary in the Department.

As presently established, the Comptroller's office has a semi-independent status. Although under the general supervision of the Secretary of the Treasury, the Comptroller now reports directly to Congress and the office makes its own recommendations to that body. The Comptroller also enjoys a position of prestige on the same level as the heads of other supervisory authorities, such as the Federal Deposit Insurance Corporation and the Board of Governors of the Federal Reserve System.

There are approximately 5,000 national banks in this country, representing more than 56 percent of all the commercial banking resources of the Nation, and the Comptroller serves as the sponsor of these banks in Washington. Thus, the banks are most anxious that the Comptroller's office be maintained intact. They are not concerned that Secretary of the Treasury John W. Snyder might absorb the office if given the power, but they are afraid that some future holder of the office might do so.

VIEWS OF SECRETARY

The Secretary, incidentally, when questioned on his views last week was quoted as saying that he did not need any legislation to help him run the Treasury. He added that he "had no further comment at this time."

Perhaps the major concern of the bankers, however, is the fear that the reorganization plan would be a further step toward breaking down the dual banking system, and another move nearer to nationalization. The plan, it is held, might be only the forerunner of an additional reorganization plan which would transfer either to the Board of Governors, or the FDIC, the examining, statistical, and other functions of the Comptroller.

But while presumably intended to permit economies of operation in Government, the plan would not eliminate any of the demands on the public purse, the bankers point out. Actually, the Comptroller's office is entirely self-sustaining and dependent in no way upon appropriations made by Congress or funds supplied by the Treasury Department. Expenses of the office are defrayed exclusively by the assessment on national banks for examinations made by it. The plan, moreover, would permit the Secretary of the Treasury to transfer the funds of the office as well as its records, property and personnel, to carry out other functions of the Treasury Department.

The foregoing are only a sampling of the variety of reasons in opposition to the plan advanced by the bankers. They hasten to explain that they are in full accord with all plans which would reduce Federal expenditures and promote economy, provided they are consistent with efficient operation of the Government. The bankers add, however, that there are many activities, especially those developed in recent years, in which economies can be readily effected. But the Comptroller's office, they assert, has performed an effective function in its semi-independent status for 86 years.

MEMORANDUM: REORGANIZATION PLAN NO. 1 AS APPLIED TO OFFICE OF THE COMPTROLLER OF THE CURRENCY

The principal powers and functions which would be transferred to the Secretary of the Treasury under the plan would be:

Chartering of national banks.

Approval of branch offices.

Approval of consolidations between National banks or State and National banks.

Approval of conversions of State banks into National banks.

Approval of recapitalizations and reorganizations.

Examination and supervision of national banks.

Power to examine nonbanking affiliates of national banks.

Promulgation of rules and regulations relating to investment securities of national banks. (State member banks are also subject to these regulations.)

Interpretation, application, and administration of laws relating to lending and investment powers of national banks.

Power to initiate proceedings to remove officers and directors of national banks for violation of law or continuance of unsafe and unsound banking practices.

Power to initiate court proceedings to forfeit charter of national bank for violation of law.

Power to publish bank's reports of examination in newspaper if bank refuses to conduct sound banking.

Power to levy assessments against shareholders of national banks to restore impairment of capital.

Power to assess fees against national banks for the purpose of covering costs of examinations and to determine the amount thereof.

Control over funds of the Comptroller's office obtained through assessments against national banks for expenses of examination; this would be transferred to the Secretary to be used as he deems appropriate.

Power to determine insolvency of national banks and to appoint a receiver therefor.

Power to appoint a conservator of a national bank.

Duty of Comptroller to serve as a director of the Federal Deposit Insurance Corporation.

Many of these powers and functions can, in their exercise, be far reaching in their effect on our economy and must be exercised with sound judgment and caution, free from political pressures.

When Congress, 87 years ago, created the national banking system and the Office of the Comptroller of the Currency, it recognized that such office, clothed with quasi-judicial functions, must be independent. Fresh in the mind of all was the country's experience with the United States Bank, politically dominated, bestowing its favors on some and ruin on others.

Congress, therefore, in order to make the Office of the Comptroller of the Currency a nonpolitical office and to remove it as far as practicable from the influences incident to the quadrennial changes in party or political administration of the Federal Government, fixed the term of the Comptroller at 5 years, and he was required to report annually direct to Congress, instead of to the Secretary of the Treasury, as other department-bureau officers are required to do.

The purpose of this latter requirement was to enable the Comptroller to present to Congress for consideration his independent views and recommendations in regard to the conditions and necessities of the banking interests and currency needs of the country, free from censorship by his official superior, the Secretary of the Treasury.

Thus, Congress made the Comptroller of the Currency somewhat akin to an arm of Congress, just as it did in latter years with the Office of the Comptroller General of the United States.

It is, of course, true that the Comptroller is under the general supervision of the Secretary of the Treasury, but a glance at the Comptroller's powers or functions will clearly demonstrate the responsibility placed in him and him alone. Moreover, his office is financed exclusively by fees and charges paid by national banks and not by appropriated funds and if he should be dismissed by the President, the reasons must be reported to the Senate.

Further evidence of the policy of Congress to make the Office of the Comptroller of the Currency independent of the Secretary of the Treasury, even in recent years, can be found in the fact that while originally the Comptroller was appointed by the President, with the advice and consent of the Senate, on the recommendation of the Secretary of the Treasury, Congress in 1935 eliminated the provision for the Secretary's recommendation.

The independence of this office is well illustrated by the opinion rendered to President Taft in 1912 by Attorney General Wickersham when he said: "While the Comptroller is performing quasi-judicial functions, his discretion cannot be controlled by you * * * even though with respect to other duties he acts under the general direction of the Secretary of the Treasury."

These safeguards of independence which Congress has for 87 years thrown around the Office of the Comptroller to insure the impartial exercise of the great powers and functions lodged in that office would disappear if Reorganization Plan No. 1 becomes law.

The power of life and death over about 5,000 banks holding more than 50 percent of the banking resources of this country would pass into other less independent hands. Likewise would pass the general supervision and examination of the banks with power to control and shape credit policies which could lead to political domination and control of the money and credit of this country, the business lifeblood of all our communities and citizens.

The potentialities presented should be the concern of all, whether Democrat or Republican, even though one cannot be apprehensive of the actions of the present Secretary of the Treasury if vested with such powers and

functions. But the use of such powers by a future Secretary in such a way as not to be conducive to sound banking or for the general public welfare cannot be assumed. Political considerations are often demanding and the urge to exercise power hard to resist.

A Secretary of the Treasury confronted with the necessity of floating the public debt and clothed with the enumerated powers now vested in the Comptroller of the Currency could enforce a demand for contraction of credit in loans and the heavy investment in Government securities or as was done during the day of the United States Bank, the withdrawal of credit in a section of the country, to its ruin, where its votes were not deemed to be properly cast.

The reorganization plan is not the so-called Hoover plan. It was designed by the Budget Bureau. As applied to the Comptroller of the Currency's office, it can only be assumed that they know not what they do. Certainly none of the five objections for which Congress directed the Commission to submit plans, is involved. There is no limiting of Federal expenditures, since appropriated funds are not expended in carrying on the functions of such office. Likewise, no nonessential or duplicated services are involved or are any executive functions limited. On the contrary, the plan, if put into execution, could lead to confusion, nonefficient and cumbersome administration.

Congress has by grants of final authority and concentration of responsibility placed in one office the supervision of the national banking system.

Reorganization Plan No. 1 of 1950 inevitably would destroy this invaluable service rendered by the Office of the Comptroller. A Secretary of the Treasury who was so inclined could delegate any of the functions now performed by the Comptroller of the Currency to any other agency or employee of the Department, however ill-equipped or unsuited to perform the particular functions. National bankers who had problems confronting them could rarely discuss them with the Secretary of the Treasury, who would have final authority in making the decisions, because as a Cabinet officer he has so many duties to which he must devote time and attention. The Secretary's complex duties at the present time are such as to prohibit him from giving his personal attention to problems of individual banks. He must confine his activities to making decisions on broad national policies, and there can be no doubt that successful bank supervision demands the closest personal attention of those who are charged with its administration.

A Secretary of the Treasury might distribute the functions of the Comptroller's Office to a number of persons with diverse and even conflicting policies. For example, he could vest the chartering power in one employee, the power to grant branches in another, and different segments of supervision in others, thereby losing the consistency and harmony of policies which have long been dominant factors in molding the national banking system and improving its strength and efficiency.

The national banking system could not long exist on its present high level in the absence of a bureau with the degree of autonomy, authority, and responsibility, the singleness of purpose and the general objectives now embodied in the Office of the Comptroller of the Currency. That Bureau is the very heart and core of the national banking system, having created all of its units and supervised their growth.

The national bankers of this country look to this compact, single-purposed organization for guidance and leadership, and such a change in its status as would be made by Reorganization Plan No. 1 would cause irreparable damage not only to the national banking system but to all American banking generally. Without that independent bureau around which national banking is built, the unit banks would lose the organization which now binds them into the kind of a system intended by Congress to serve the people and stand as a model for the various State systems.

Furthermore, Reorganization Plan No. 1 would vest in the Secretary of the Treasury the power to take over the funds of the Comptroller's office derived from assessments against national banks and to use them for other purposes. It is assumed that the other purposes would have to be related purposes, but even so, it is highly questionable that funds derived from examination fees paid by national banks should be used for any purposes other than the administration and supervision of the national banking system by an independent agency having the sole responsibility.

At the present time competition between the national banking system and the various State banking systems is on a high plane chiefly because of the relationship between the Office of the Comptroller of the Currency and the respective State bank supervisory authorities, as well as the relationship between the Comptroller and the other two Federal bank supervisory agencies. All of these relationships would be destroyed because every other agency would assume that the Comptroller could not speak authoritatively with respect to either the national banking system or the functions and policies of his office, since the Secretary of the Treasury would always be in a position (if he had not already delegated the functions to some other employee of the Department) to overrule his positions. Furthermore, these relationships would be seriously impaired by destroying the prestige and authority of the Comptroller and they could not be rebuilt by the Secretary of the Treasury because of the difference between his position as a Cabinet officer and the position of the respective State and Federal bank supervisor authorities.

Since one of the functions of the Comptroller is to serve as a director of the Federal Deposit Insurance Corporation, the Secretary would—under this reorganization plan—be a director and vice chairman of that Corporation. By virtue of the prestige of his Cabinet position, he would effectively control the Corporation. Hence, control of two of the three Federal bank supervisory agencies would be concentrated in the hands of the Secretary. Under these circumstances, it is questionable whether the third supervisory agency—the Federal Reserve System—could long remain undominated, if a Secretary of the Treasury were inclined toward complete consolidation, a possibility which is alarming to all of our bankers.

As previously pointed out, the intent of Congress, as indicated by legislation from Lincoln's administration to Franklin D. Roosevelt's, has been to keep the Comptroller's office free from political influence, and up to this time that intent of Congress has been faithfully carried out. It should not now be changed.

Reorganization Plan No. 1 of 1950

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a memorandum compiled by the staff of the Senate Committee on Expenditures in the Executive Departments on Reorganization Plan No. 1 of 1950, providing for reorganization of the Department of the Treasury.

As will be noted from the memorandum, resolutions of disapproval have been introduced by Senators ROBERTSON (S. Res. 246) and CAPEHART (S. Res. 247), and hearings are scheduled before the committee beginning tomorrow, April 11.

This memorandum has been prepared with a view to providing Senators who may be interested in this proposal with advance information relative to its provisions and the points at issue. It also indicates the material which was omitted in the reprint of an earlier staff memorandum on plans 1 through 6, in the Appendix of the CONGRESSIONAL RECORD at page A4243.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

SENATE COMMITTEE ON EXPENDITURES IN THE EXECUTIVE DEPARTMENTS,
April 7, 1950.

(Staff Memorandum No. 81-2-49)

Subject: Reorganization Plan No. 1 of 1950, providing for reorganization within the Department of the Treasury.

This memorandum supplements Staff Memorandum 81-2-40 which discussed plans 1 through 6 as a whole. These six plans centralize scattered functions by transferring to individual department heads "all functions of all other officers of (the department) and all functions of all agencies and employees of such department," except those of hearing examiners, and a few specified Government corporations and boards. The plans tackle "the first and essential step in the search for efficiency and economy by eliminating the present diffusion of authority and confusion of responsibility" in line with the four following numbered recommendations in Hoover Commission Report No. 1 on General Management:

HOOVER COMMISSION RECOMMENDATIONS

"14. Under the President, the heads of departments must hold full responsibility for the conduct of their departments. There must be a clear line of authority reaching down through every step of the organization and no subordinate should have authority independent from that of his superior.

"16. Department heads must have adequate staff assistance if they are to achieve efficiency and economy in departmental operations.

"18. Each department head should receive from the Congress administrative authority to organize his department. * * *

"20. We recommend that the department head should be given authority to determine the organization within his department."[1]

PROVISIONS AND EFFECT OF PLAN NO. 1

This memorandum develops further those considerations particularly related to plan No. 1, as to which two resolutions of disapproval were introduced on March 31, 1950, by Senators ROBERTSON (S. Res. 246) and CAPEHART (S. Res. 247).

Hearings will be held on these two resolutions on April 11 and 12, 1950. Witnesses will include Senators ROBERTSON and CAPEHART, the Director of the Bureau of the

[1] The information up to this point was included in Staff Memorandum 81-2-40 discussing plans 1-6, but was inadvertently omitted by the printer in the reprint of that memorandum in the Appendix of the CONGRESSIONAL RECORD (p. A2443).

Budget, the American Bankers Association, and representatives of other banking groups.

Section 1 of plan No. 1 transfers to the Secretary all functions scattered throughout the Department of the Treasury, except the functions of hearing examiners and except the operations of the Coast Guard which becomes a part of the Navy in time of war or when the President so directs. The three other sections of plan No. 1 authorize the Secretary to delegate functions; to appoint an Administrative Assistant Secretary, with the approval of the President, under the classified civil service at an annual salary of $14,000; and to make those transfers of records, property, personnel, and funds which are required to carry out this plan.

The statutes controlling the Treasury Department lodge most of the departmental functions in its major operating units, and, hence, plan No. 1 would shift to the Secretary the powers now scattered among the (1) Office of the Comptroller of the Currency, (2) Bureau of Internal Revenue, (3) Bureau of Customs, (4) Bureau of Narcotics, (5) Bureau of the Mint, (6) Bureau of Engraving and Printing, (7) Fiscal Service, (8) United States Secret Service, and (9) United States Coast Guard.

Since the opposition to plan No. 1 has centered on the Office of the Comptroller of the Currency, the following legal citations are limited to the statutory provisions governing his activities, as amended to date (title 12, U. S. Code):

"SECTION 1. There shall be in the Department of the Treasury a bureau charged with the execution of all laws passed by Congress relating to the issue and regulation of a national currency secured by United States bonds and, under the general supervision of the Board of Governors of the Federal Reserve System, of all Federal Reserve notes, the chief officer of which bureau shall be called the Comptroller of the Currency, and shall perform his duties under the general directions of the Secretary of the Treasury.

"SEC. 2. The Comptroller of the Currency shall be appointed by the President, by and with the advice and consent of the Senate, and shall hold office for a term of 5 years unless sooner removed by the President, upon reasons to be communicated by him to the Senate; and he shall receive a salary at the rate of $15,000 a year." (The provisions of the 1864 statute dealing with Comptroller appointments, also required the recommendation of the Secretary of the Treasury; this provision was eliminated in 1935.)

VIEWS ON PLAN NO. 1

A total of 547 communications from 39 States dealing with plan No. 1, has been received to date, all except one being in opposition to the plan.

A letter has been received setting forth the views of the Secretary of the Treasury, and will be submitted for the record at the hearing.

The American Banker, banking newspaper, is opposing centralization of Treasury functions because it would detract from the prestige and authority of the self-supporting Office of the Comptroller of the Currency. This old office supervises and controls national banks, especially through regular examinations, meets with the FDIC, and reports to Congress. The newspaper states that few bankers will question the present Secretary of the Treasury * * * since he was, at one time, a national bank examiner [but] future Secretaries of the Treasury might, in effect, virtually end the Office's time-honored functions, and adds that the merger of Treasury and Comptroller legal divisions under Mr. Morgenthau's regime in effect, ended the assumed independence of the Comptroller.

With respect to the latter merger of the legal divisions, of the Treasury Department and of the Office of the Comptroller of the Currency, it is stated that the establishment of the new Office of General Counsel in the Treasury in 1934 did not change the legal work performed by the Legal Division of the Comptroller's Office. A possible exception to this statement would be that, whereas the legality of all considerations pertinent to the operations of the Office of the Comptroller of the Currency were handled by the legal division of that agency prior to 1934, the statute passed in the latter year would require joint legal work on legal questions of a department-wide scope.

CONCLUSIONS

The basic question before the committee is whether ultimate authority over all Treasury Department functions should be centralized in the Secretary, as is proposed in general in plans 1 to 6. In connection with plan No. 1, however, consideration must also be given to two somewhat conflicting statutory provisions. On the one hand, the statutes specifically authorize the Secretary of the Treasury to issue general directions to the Comptroller of the Currency. On the other hand, since 1935, they have given the Comptroller the more independent status usually associated with a Presidential appointee; in that year a legislative amendment eliminated the long-time requirement that the Secretary of the Treasury must make recommendations in connection with appointments of Comptrollers.

HERMAN C. LOEFFLER,
Professional Staff Member.

Approved: WALTER L. REYNOLDS,
Staff Director.

Cost of the Chrysler Strike

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the RECORD an Associated Press article from the Washington Post, April 8, 1950, relative to the losses due to the strike at the Chrysler plants. The figures show that today it costs all told better than a billion dollars.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BILLION IS COST OF CHRYSLER STRIKE TO DATE

DETROIT, April 7.—Direct losses due to the Chrysler strike will pass the $1,000,000,000 mark Monday, April 10, Automotive News asserted today.

The various Chrysler plants have been idle since January 25. The trade paper said that regardless of the outcome of current negotiations it would be impossible for them to reopen next Monday.

Automotive News estimates that through Saturday direct losses growing out of the shut-down will total $994,509,680. Another $20,000,000 it adds, will be lost Monday.

Itemizing the losses, the paper says:

"The $994,509,680 includes the following components: $700,000,000 representing average value of the 350,000 lost cars and trucks; $212,000,000 in lost purchases to Chrysler's 6,500 suppliers; $61,509,680 in lost wages to the 89,000 Chrysler workers, and $21,000,000 in lost wages to the 50,000 idled supplier employees (after unemployment-compensation benefits).

"The $1,000,000,000 Chrysler loss is not an automotive strike record. That distinction is held by the General Motors strike of 1945–46, which lasted for 16 weeks and 1 day and cost directly affected parties $1,457,400,000."

The crucial point is still the method of financing $100-a-month pensions, including Federal social security, for Chrysler workers at age 65 after 25 years of service.

The Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. BREWSTER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "The Natural Gas Bill," published in the New York Times on Sunday, April 9. I believe that it is one of the most penetrating discussions I have read of the natural gas bill. It concludes with:

We therefore believe that President Truman should veto the Kerr bill.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE NATURAL GAS BILL

Within a very few days President Truman must decide whether to veto the Kerr bill amending the Natural Gas Act of 1938. This amendment would exempt prices charged by so-called independent producers of natural gas from control of the Federal Power Commission. The practical effect of the bill would be clearly to forestall Federal regulation of companies which by 1952 will produce some 80 percent of the natural gas sold in the United States and which dominate an even higher percentage of America's natural gas reserves.

Congress through the Natural Gas Act of 1933 granted the Federal Power Commission the right, which no one now seriously disputes, to regulate rates charged by pipe-line companies engaged in interstate transportation of natural gas and also in its production. Whether this law permitted the FPC to go one step further back and to regulate independent producers—those who did not engage in transportation of gas—is open to argument. The Supreme Court has said it has that right, but the FPC has disavowed any intention of interpreting the act in so broad a manner. However, this was an administrative decision which can always be revoked. It seems, in fact, likely to be revoked; and it is precisely to forestall such a move that the Kerr bill has been brought forward.

Proponents of the Kerr measure insist that it would do nothing more than reaffirm the original intention of Congress as expressed in the Natural Gas Act. But what Congress may have intended in 1938 is less important than what the facts demand today.

The principal producers of gas are now not the pipe-line companies but the very independents whom the Kerr bill would take out from under any possible Federal control. Who are these independents? There are a few thousand of them, but a mere dozen—including some of the biggest names in the oil business—will soon be producing about half the total amount of natural gas transported from the southwestern fields, where the bulk of the Nation's supply is concentrated.

The crucial point is whether these independents, large or small, are so important and so closely linked with that part of the natural-gas industry which already is indisputably subject to regulation that Federal rate control will become meaningless unless they, too, are regulated. To state the problem in this way is almost to answer it. For under conditions as they actually exist in the industry, once a pipe line (the only practicable cheap method of transporting natural gas) is laid to a field, competition at the source virtually ceases. Pipe lines are too expensive to be laid down and picked up at will, so that a field and the line which it feeds are rather permanently joined. Since it has been found necessary for the Government to regulate rates of the pipe-line companies, it seems inescapable that the Government also be at least in a position to control the rates on gas production with which the pipe lines are indissolubly linked. Dominating the Nation's output as they do, obviously the independents must be subject to Federal regulation if there is to be any effective Federal regulation at all. We therefore believe that President Truman should veto the Kerr bill.

No Excuses for the Kerr Bill

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD an editorial entitled "No Excuses for the Kerr Bill," which appeared in the St. Louis Post-Dispatch, St. Louis, Mo., on April 6, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO EXCUSES FOR THE KERR BILL

Supporters for the Kerr natural gas bill think President Truman will sign the gas grab into law. Edward A. Harris reports from Washington that these Congressmen expect the President to offer five explanations for this jolt to the consuming public:

1. Mr. Truman could say the Kerr bill differs from the Moore-Rizley bill which he bitterly opposed. The Moore bill would have allowed rate increases for the entire gas-producing industry, while the Kerr bill would permit increases for producers who control 85 percent of the gas reserves. The distinction is between letting the gas industry cut a whole pie or most of it.

2. The President could note that the Kerr bill was amended to let the Federal Power Commission study gas-production prices. Rate regulation by studies is obvious nonsense.

3. Mr. Truman could stress that gas prices have not risen as have prices of other fuels. Natural gas is a relatively new industry and its efforts at major price increases date only to 1947. But Senator DOUGLAS reported that these prices have doubled or tripled in many recent instances. Shall they continue upward?

4. Mr. Truman could promise new regulatory legislation if gas prices do go up as a result of the Kerr bill. The common phrase for this is locking the barn after the horse is stolen.

5. The President would sign the Kerr bill reluctantly. It would make more sense if he were so reluctant to sign that he would veto the bill instead. The Kerr bill is just the kind of special-interest legislation which the Fair Deal is pledged to oppose. There is no way to excuse it.

Pricing Natural Gas

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the RECORD a letter which was published in the New York Times of April 10, 1950, under the heading of "Pricing natural gas—Kerr bill said to aid consumer by fostering competition."

The letter was addressed to the editor of the New York Times by Roland F. Beers, head of the department of fuel resources of Rensselaer Polytechnic Institute of Troy, N. Y.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PRICING NATURAL GAS—KERR BILL SAID TO AID CONSUMER BY FOSTERING COMPETITION

To the EDITOR OF THE NEW YORK TIMES:

It is evident that much confusion abounds as to the real meaning of the Kerr amendment to the Natural Gas Act now before the President for signing. It has been reported in the New York Times that the bill passed the Senate and then the House with a majority of but two votes. Since the action by Congress it has been predicted by various sources that the people are to be robbed of their money to pay for the increased prices of gas, that the rich are gouging the poor, and that a few interests have succeeded in putting over a nefarious plot to fill their coffers at the expense of the general public. It may be helpful to point out the factual situation and to quiet the fears of those who may be alarmed.

It is assumed that the purpose of desirable legislation is to encourage the production of abundant quantities of natural gas for long periods of time at prices favorable to those offered by other fuels—e. g., coal and oil. It is the writer's belief that the Kerr bill will accomplish this result.

In order to maintain low consumer prices for natural gas there must be adequate and continuing supplies. The history of the oil and gas industry shows, as a matter of record, that when prices for these commodities are favorable in relation to costs, exploration effort arises which maintains supplies at levels consistent with a satisfactory price structure. So long as there is an adequate reward for the risks of exploration, drilling, production, and recovery, there will be found the venture funds to carry on these hazardous undertakings.

SUBJECT TO REGULATIONS

If the Federal Power Commission assumes control over the price of natural gas at the wellhead, the commodity will, in effect, be subject to two, possibly three, separate sets of regulations: FPC commodity price-control, FPC pipe line rates and State public utility rate controls. It is probable that FPC price control would be based on the net return after taxes, not more than approximately 6 percent, on the computed cost of acquisition. This is the general plan upon which pipe line rates are determined today. The range of acquisition costs is very great.

At the present time the price of natural gas at the wellhead is at an index of 88.3, compared with coal at 108 and oil at 192. It is well to note that the low price for natural gas prevails in the complete absence of price control at this time, and with a market demand many times that of the available supply. If there were adequate supplies of gas at the consuming markets of the Northeast, it is safe to say that gas would quadruple its present volume of consumption in competition with other fuels.

The gas industry is well aware of the possibilities of this great market, and the planning of pipe lines costing hundreds of millions of dollars, operated under the strict regulation of the Federal Power Commission, is contemplated in the face of strong competition of oil and coal. Therefore, the gas industry recognizes full well that these large outlays of capital funds can earn adequate return only on the basis of maintaining a healthy competitive price structure.

Considering these factors together, there is but one logical conclusion as to future practices of gas producers in respect to price. The lack of Federal regulation will not cause them to raise their wellhead prices indiscriminately. If they yield to such temptation, they will sooner or later lose their markets. The natural competition of 5,500 independent gas producers among themselves is the best guarantee in this Nation that consumers will not be gouged of money to fill the pockets of the rich. We cannot say as much for Federal price regulation of other commodities.

DWINDLING RESERVES

Although we now have 180,000,000,000,000 cubic feet of gas reserves, enough for 30 years at the present rate of consumption, this huge amount will dwindle to 9 years' supply in 1955, when our markets will take 20,000,000,000,000 cubic feet per year. Meanwhile, under the incentive of a fair return on exploration and production costs, programs of exploration will be organized to maintain the Nation's gas reserves at safe levels. It is important to note that the oil industry has kept approximately 13 years' supplies in sight for more than 20 years, due to operation of economic laws involving balance of supply and demand in a competitive field.

There seems slight justification for regulation of the price of mineral fuels at this time unless we wish to go all-out for the specialized state. It is surprising to note the loud clamor of people who imagine the threat of domination by the interests to be at their very doors. If we desire abundant quantities of natural gas at competitive prices, the Kerr bill should become law. It is as simple as that.

Head, Department of Fuel Resources, Rensselaer Polytechnic Institute.
TROY, N. Y., *April 5, 1950.*

Way to Cheap Gas

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Way to Cheap Gas," published in the Chicago Daily News of April 7, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WAY TO CHEAP GAS

The Natural Gas Rate Exemption Act passed by Congress and now awaiting action by President Truman offered a prime invitation to demagogy, and its opponents have made the most of it. They have skillfully created the impression that this is a brash grab by greedy interests at the consumers' pocket.

The fact is that the act merely continues the present condition in which the Federal Power Commission does not regulate the price of natural gas sold by independent producers to the pipe-line companies. The FPC had tentatively reached for such authority, and the new law was enacted to clarify the present Natural Gas Act.

Under the present unregulated market, the Bureau of Mines has reported, the price of a million units of heat bought in the form of gas has dropped appreciably in the last 10 years. Bought as coal or oil, the cost of those units has increased sharply. There is good reason to believe that Federal regulation would not, as its advocates assert, cut the price of gas, but, on the contrary, would boost it.

The reason for this is that the independent producers of gas do not have to sell it to the pipeline companies. They have a vast market in concerns which convert natural gas to high octane gasoline and other hydrocarbon products.

Furthermore, the standard regulatory practice of allowing a rate that will return 6 percent on investment is not sufficient to promote the extensive exploration that is required if supplies are to be increased. It is abundant supply that cuts prices.

Senator PAUL DOUGLAS was the most voluble and effective spokesman against the bill, which was sponsored by Senator KERR (who happens to be a millionaire gas producer). Senator DOUGLAS likes Government regulation on principle, be it of rents, farm prices, or gas wells.

He made the point that the independent gas producers hold the relation toward the pipe-line companies that the railroads occupy in relation to shippers. That is to say, "Once the railroads are built, local shippers are at their mercy."

The analogy is good, but it doesn't come out as Senator DOUGLAS intended. He is right about the theory of rail regulation. But it overlooks the competition they have by air, highway and water. The plight of the railroads from the character of this regulation is apparent.

Gas, too, must meet competition. Consumers are not going to install gas furnaces unless it makes a clear saving over oil or coal. Senator DOUGLAS made a tearful plea for "12,000,000 housewives who pay for cooking gas with scanty pocketbooks" cowing before the onrush of the octopus.

These housewives might be glad to know that 4 cents would be a generous estimate of the field price of the gas they use in a month's cooking. They might also be glad of the reassurance of Speaker RAYBURN, who is at least as well informed on the subject as Senator DOUGLAS, that the Kerr bill would not increase the price of gas by one red cent.

The Daily News is for low gas prices. We are convinced that the way to have them is to encourage producers to find more gas and to sell it to the pipe lines. Transmission costs drop as volume increases, and the more high-priced manufactured gas that is displaced by natural gas, the greater the saving.

The clamor for regulation has put President Truman in a delicate spot. If he signs the bill he will appear to be siding against bogus, self-annointed "champions of the consumer" within his own party. It is a hard choice for a man who is professionally on the side of more regulation of everything.

He realizes, however, that his Defense Department has approved the Kerr bill, knowing that incentives are required for the exploration that will add to the existing reserves. He realizes, also, that rent control is not producing housing, any more than price control of men's shirts and toilet paper produced those articles, but merely turned manufacture into other items that would yield a profit.

Gas interests are probably no more and no less greedy than any other segment of business. There might be a drive also to exempt from rate regulation those gas supplies which are owned by the pipe-line companies. If it comes it should be defeated. There must be regulation of self-dealing by a public utility.

Finally, the Kerr bill permits the FPC to carry on a continuing investigation of gas prices. If some combination of collusive practices should result in excessive prices, the legislative remedy is at hand.

Deficit Spending

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Could Stronger States Solve Problem?" from the issue of March 16, 1950, of the Northampton Times, published at Cape Charles, Va.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COULD STRONGER STATES SOLVE PROBLEM?

Without attempting to solve the present political problems facing the people of this country as they contemplate the increasing cost of Government or to decide where Government spending should stop, we call attention to the dangerous practice of deficit spending in times of relatively great prosperity.

If the United States Government cannot reduce its national debt, in the midst of a prosperous era, one wonders whether the debt will ever be reduced. It may be, of course, that the growing wealth of the Nation will enable it, in future years to carry the burden without too much strain. Nevertheless, if the cost of Government continues to go up and governmental expenditures are financed by deficit spending, no one can predict the end.

It is quite apparent, however, that if such a course is pursued by the United States—the kind of government we will have hitherto known—the Government will take over more and more of the responsibility that has formerly attached to individuals. Those with wealth of any kind will be taxed more and more to provide equality of everything for those who have not, for various reasons, earned such equality.

While we are not wise enough to say when such a thing would occur, it is obvious that, at some point, the Government would dominate a completely regimented society.

Discussing this general problem recently, Mr. James A. Farley, former Postmaster General, urged a decrease of Federal grants to the States, asserting that if this trend is not discontinued, the States will gradually give up all of their responsibilities and the Federal Government will absorb them. This process has been going on for many years and, in the end, the result will be the one Mr. Farley predicts unless some intelligent effort is made to strengthen the financial position of the States and other local governing units.

The American Merchant Marine

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. O'CONOR. Mr. President, there appeared in the Baltimore Sun of this morning the first of a series of four articles by Miss Helen Delich on the condition of the American merchant marine. I am convinced that the story unfolded in this and succeeding articles will be of such vital interest not only to the Members of the Congress, but to the people at large that they should be given the widest possible attention.

Hearings conducted by our Subcommittee on Maritime and Merchant Marine have disclosed a pitiful condition in this once great segment of our national economy. To all intents and purposes the American merchant marine, as the testimony and available data reveal, is rapidly passing from the world scene. Only immediate remedial action along different lines proposed, including S. 2786, which I introduced to interest private capital in the construction and operation of merchant and passenger ships, will save the situation, and assure the ships and the ship workers which our country would need badly in case of a future emergency.

I ask unanimous consent that this morning's article be inserted in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of April 10, 1950]

ONE THOUSAND TWO HUNDRED AND EIGHT SHIPS IN MERCHANT MARINE; FIVE THOUSAND THREE HUNDRED AND EIGHTY-SEVEN IN 1946

(The following article is the first of a series of four by Miss Delich on the condition of the American merchant marine.)

(By Helen Delich)

The American merchant marine—one of the most controversial subjects in Washington and United States seaports for the last 5 years—today consists of 1,208 active ships with a total deadweight tonnage of 14,000,000.

On June 30, 1946, there were 5,387 ships with a deadweight tonnage of 55,100,000 flying the American flag.

In the prewar period, on September 1, 1939, the Stars and Strips waved from 1,379 ships totaling 11,700,000 tons. More than 1,200 of these were active. At that time the Merchant Marine Act of 1936 provided for the construction of 50 new ships a year, both to replace obsolete ones and to add to the fleet for a 10-year period.

NOTHING DONE TO HALT DECREASE

Today, while the American merchant marine steadily declines—4, 6, 10 ships a month—nothing is being done to halt the decrease.

A Senate subcommittee on maritime matters, headed by Senator O'CONOR and Senator MAGNUSON, Democrat, Washington, has been conducting hearings on the status of the merchant marine in conjunction with a long-range bill they have proposed to alleviate the plight of the industry.

They are also attempting to get $25,000,000 in a separate appropriation for the immediate repair of 134 merchant ships, considered to be of the necessary military auxiliary type, in the laid-up fleet.

NO MARITIME BLOC

Neither of these bills is expected to meet with congressional approval unless action to awaken the lawmakers is taken at once, both Senators have said.

One of the principal reasons why the American merchant marine issue has been tossed from pillar to post in the Capitol is that the maritime States do not have—and, apparently, are not interested in—any solid front, such as the silver bloc and the farm bloc, to present and push their case.

The nearest to solid support for the maritime cause comes from the Washington State representatives, all of whom are diligent to get some action. From Maryland, Senator O'CONOR appears to be doing more than the other seven Congressmen combined. Yet the maritime industry is as important to this State as to the northwestern one.

DESIRABILITY WIDELY AGREED

It is agreed that any world power must have an adequate merchant marine. Besides its war usefulness, a merchant fleet is important to the peacetime commerce and economic stability of its nation, as well as playing an important role in international finance, foreign relations, and foreign economics.

Despite this, the number of laid-up ships—in deteriorated condition—in the American national defense reserve fleet has increased to 2,180. Seventy-five others are laid up at piers and temporary anchorages by the lack of cargoes.

Special requests by the Maritime Commission and the Joint Chiefs of Staff to have some of these ships in the reserve fleet in absolute readiness to meet an emergency have gone unheeded.

When the laid-up fleets were designated by Congress at the end of the war, the legislators also ordered that these "dead" ships should be maintained. Not only have they failed to comply with their own mandate but they are refusing to allot the requested $25,000,000 to save $268,000,000 worth of ships—the cost of building only 134.

Not included in the 2,180 figure are 86 ships which this country lent to Russia under the lend-lease program and which have never been returned or accounted for since. With the exception of France, which still has one such craft, Russia is the only nation still charged with lend-lease steamers.

American passenger ships, essential for troop transports, now number 39 privately owned craft with a total gross tonnage of 342,000.

In 1939 there were 117 of: 877,300 gross tons.

PASSENGER SHIPS BEING BUILT

Under construction are the United States Lines superliner, two American Export Lines liners for the Mediterranean service, and three for the American President Line to serve round the world.

In prospect are a Diesel-propelled passenger liner for the Mississippi Shipping Co. and two combination passenger-trailer ships for the Los Angeles-San Francisco run.

Arnold Bernstein has requested Maritime Commission permission to buy two P-2 transports and convert them to passenger ships for the New York-Amsterdam-Rotterdam run, not now covered by an American-flag ship. The Commission has authorized issuance of bids to determine the cost of these.

A method of replacing the Moore-McCormack Lines Good Neighbor ships to South America must be worked out by October when their charter on the Government-owned vessels expires.

COASTAL AND INTERCOASTAL

Another phase of the industry sharply affected is the once-important coastwise and intercoastal dry cargo fleets—those which saw the United States through the early days of both world wars. Today they employ 75 to 100 ships. Before the last war there were 409 dry-cargo ships there.

Maj. Gen. Philip B. Fleming, chairman of the Maritime Commission, describes the intercoastal situation as a matter of grave concern.

"We need a domestic fleet to handle a large peacetime volume of coastwise and intercoastal trade," the chairman believes. "In two World Wars, our home fleet has also provided the solid core of vessels operating in our own waters that we required for national security. Let us not forget that it was domestic fleets, transferred to military use, which plugged the gap in 1917 and held the line after Pearl Harbor until we could build a bridge of ships."

WAGES AND CANAL TOLLS

The intercoastal business is affected by seamen's high wages, the high Panama Canal tolls (which the President has proposed to raise even higher) and expensive stevedoring costs.

The average freighter plying between Baltimore and Los Angeles pays $7,000 each time it goes through the Canal. Studies are under way to attempt to lessen the burden of loading and discharging ships.

The status of the American merchant marine is reflected sharply in the shipbuilding and ship-repair yards, whose existence virtually depends on American shipping.

Nine ship-construction and repair yards dating back to the prewar period have had to close down completely because there is no prospect of new building. Repairing has hit rock bottom with the foreign ships having all of their major work done at home.

FOUR YARDS SWITCH JOBS

Four other prominent yards have switched to manufacturing oil-refinery machinery, offset printing presses, paper-making machinery, spinning machines, hydraulic turbines, crushing (ice) and beverage (the coin type) machines.

The beverage-machine manufacturer is the Bath (Maine) Iron Works, a shipyard whose construction history dates back to 1839.

J. M. Willis, head of Baltimore's Bethlehem Steel division, who has been in the business 52 years, calls the situation a "crisis" and describes it as "the most extreme the American shipping world has ever faced."

The Shipbuilders Council of America said the United States must have an absolute minimum of 35,000 to 40,000 men in the private shipbuilding industry to face any emergency.

Today, there are less than 20,000 actually taking checks home each week. Sparrows Point, still the leader in the number of new ships in process and on order, last week ordered an average of 2,600 skilled production workers daily.

A committee appointed by President Truman in 1947 to study the situation declared, "It will be a matter of national concern if the number of men actually engaged in the construction of vessels in private and naval shipyards should drop below 60,000. Every practicable effort should be made so to schedule shipbuilding that the work load in the shipyards may be maintained at a reasonably uniform level."

NUMBER EXPECTED TO DROP

The number of skilled men engaged in private and naval shipyard construction—actual production workers—today is approximately 25,000.

This number is expected to begin dropping more sharply within 2 months and continue until all of the 32 ships now under construction are finished. The last one slated for delivery is the 48,000-ton superliner in April 1952. All the others will be in the hands of their owners by April 1951.

In the ship-repair field, it is recommended that an equal number of skilled repair men be available as new builders.

Commercial ship-repair yards are working about 10,000 production workers a day right now.

COMPARISON WITH 1933 EBB

In Baltimore, considered one of the most important ship-repairing points in the Nation, less than 1,800 men actually worked in the production end the week of March 12.

In 1933, described by the President's committee as the "low ebb of shipbuilding activity," the over-all employment for shipbuilding and repair was about 56,000, of which 34,000 were employed in private yards, both repair and building.

Some 75,000 shipyard workers, who had become skilled and planned to make their livelihood in the yards, have turned to whatever else promises steady work or are drawing unemployment compensation.

DRAFTSMEN TURN ELSEWHERE

Their fear of taking a chance in order to wait for a revival in the shipyard business is illustrated by the 100 draftsmen who were released, but on call, at the Sparrows Point plant about 6 weeks ago.

A week later when Bethlehem needed a number back to help with its own Venezuelan ore-trade building project, only three skilled draftsmen returned. The others had found jobs in more certain industries and were not willing to face a dim future. Sparrows Point shipbuilding is scheduled for a complete shutdown by next March.

The Merchant Marine Act of 1936—which enacted the 10-year-50-ships-a-year program and its subsidies—boosted employment in private shipyards to 67,700 in 1939; 97,500 in 1940, and 307,700 in October 1941.

WAR FORCE BUILT ABOUT NUCLEUS

When the shipyards were expanded before and during World War II, they were built around a small skilled nucleus of immigrant workers brought here in the 1920's under relaxed immigration laws from Scotland and England. Most of these men today are retired or dead. One is president of the CIO shipyard workers union.

No nucleus will be available in another year or two at the present rate of decline. Ten years are needed to train a shipyard worker properly.

Besides the unemployed shipyard workers, longshoremen are affected. Also there are some 40,000 seamen on the beaches around the United States waiting for their turn to ship out. Many feel lucky if they receive one trip a year now.

A large number are drawing unemployment compensation.

WORLD TONNAGE 102,007,200

The present world tonnage of vessels over 1,000 gross tons consists of 12,765 ships of 102,007,200 deadweight tons. With 10,000,000 tons on order and allowing for losses and scrapping, the world picture will remain at above 100,000,000 tons. Before the war, it was about 80,600,000.

The United States owns one-third of that tonnage. But the United States has two-thirds of its tonnage laid up in nine "graveyards" along the coasts.

Therefore, the United States—the country which supplied 5,500,000 tons of merchant ships to the Allies during the war in return for 715,000 from them—operates only 9 percent of the world's ships.

No other country has a comparable inactive fleet.

UNITED STATES RATIO TO TOTAL

In 1890, the United States had 8.2 percent of the world's total; 1914, 6.8 percent; 1919–20, 22.2 percent; 1939, 13.9 percent; 1940, 14.1 percent, and 1946, 49.8 percent.

Only 3.1 percent of the present United States fleet consists of ships of 10,000 gross tons or more. The British have 21.8 percent in this category.

Besides facing competition from such traditional maritime nations as Sweden, Norway, Italy, and Great Britain, the United States is being challenged by countries previously possessing little or no shipping.

For instance, Argentina has 225 percent more ships over 1,000 gross tons than in 1939; Brazil, 68; Mexico, 381; Poland, 121; Uruguay, 643. Eire, Iceland, and Switzerland, which had no seagoing fleets in 1939, have a combined fleet of 150,000 deadweight tons.

ALLOWED GERMAN RECOVERY

Germany has been permitted to regain 40 percent of her prewar ship construction capacity. This means she will return practically to her full commercial construction, because before the war 50 percent of her shipbuilding was for navy and defense purposes. Her new ships are limited in speed and to a 7,000-ton capacity.

Right now three German shipping officials are in this country trying to charter larger ships so they might carry their own ECA goods to that country.

Under its program to aid Japan, the United States is spending more than $22,000,000 to build 20 to 30 ships of transocean carriage which will fly the Rising Sun flag.

American builders and operators do not believe that the large vessels will be held just to operations between the Japanese islands. They fear competition on the Pacific sea lanes.

TANKERS UNDER FOREIGN FLAGS

Of 33 tankers completed in American shipyards last year, 30 are sailing under foreign flags. These are the most modern tankers in the world.

The number of ships in the National Defense Reserve Fleet may seem large to an outsider, but many are considered obsolete and too expensive to operate. They were built to fill an emergency.

Of the 46 new passenger ships recommended by President Truman's committee in 1947 as essential to put the American merchant marine up to date and keep the shipbuilding industry alive, 34 are not yet even under consideration. Six are under construction. Six others are in the talking stage.

Socialism as a Threat to the United States

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to insert the following article in the Appendix of the CONGRESSIONAL RECORD entitled "Socialism Held Threat to United States by Whittemore," appearing in the New York Herald Tribune on Tuesday, March 28, 1950. Mr. Whittemore is an outstanding Democrat and businessman and what he has to say has particular significance.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOCIALISM HELD THREAT TO UNITED STATES BY WHITTEMORE—HEAD OF BROWN CO. SEES WEALTH OUTPUT ASSAILED

Americans have come to understand in greater numbers that their liberties do not maintain themselves, but must be defended through day-to-day actions, Lawrence F. Whittemore, president of Brown Co., told the forty-seventh annual convention of the National Paper Trade Association at the Waldorf-Astoria yesterday.

Nevertheless, Mr. Whittemore said, a trend toward socialism is continuing in this country which, if intensified, could result in a dictatorship. "You will say there is no danger of this sort of thing in the United States, and I will agree with you as long as business is good, but the minute the economic picture changes, the danger is very great," he declared.

Mr. Whittemore said an attack on wealth production was one of the disturbing phases of the socialistic trend, otherwise illustrated by the growth of government and various measures through which individuals have traded their rights for immediate gain or promises of security. He called the antitrust suit against the Great Atlantic & Pacific Tea Co. an instance of the war on wealth production, saying that our system was based on competition with freedom of individuals and companies to grow as large and prosperous as was reasonable as long as the public is not penalized.

The approximately 1,000 paper merchants and millmen registered for the paper-trade convention will deal principally at their work sessions with problems of increasing costs which have made it increasingly difficult to handle small orders, William G. Leathers, the association's executive secretary, declared in an interview.

Mr. Leathers said small orders that once could be handled at a profit were now showing a loss and that, unfortunately, these represented a substantial percentage of the merchants' and millmen's total orders. To combat this, the paper trades are giving closer attention to more efficient selling methods, reduction of office work where possible, and the elimination of operations that fail to sell goods or help to control sales.

Volume of business for the trades represented was off in 1949 about 10 percent in dollars from sales achieved in the previous year. This year's business for the paper merchants will probably not be as great as either 1947 or 1948, but generally the prospects are good, according to Mr. Leathers. The industry is sharing with others in serving the needs of a population that has increased markedly in recent years, he pointed out. Paper consumption has risen particularly as a result of new developments in packaging, he said.

Social Security for Hired Farm Workers

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. ANDERSON. Mr. President, much interest is being shown among farm organizations and throughout the agricultural States in the question of social-security coverage for hired farm workers. It is interesting that in the hearings before the Senate Finance Committee, which have just been concluded, all the major farm organizations appeared to advocate coverage for agricultural labor, as well as spokesmen for many of the agricultural States. The American Farm Bureau Federation, the National Grange, the National Cooperative Milk Producers Federation, the Farmers Union, and the National Farm Labor Union of the A. F. of L., have all endorsed such coverage.

In view of the interest in this subject, which will soon be before the Senate in connection with consideration of H. R. 6000, I request unanimous consent to insert in the RECORD a series of questions and answers entitled "Social Security for Hired Farm Workers," prepared by the American Public Welfare Association.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

SOCIAL SECURITY FOR HIRED FARM WORKERS

QUESTIONS AND ANSWERS

1. What is the present social-security situation with respect to hired farm workers?

At present agricultural workers, like self-employed farmers, are excluded from the contributory Federal old-age and survivors insurance program. This is the part of social security under which most industrial and commercial workers are now assured cash retirement benefits after 65 or survivors benefits to their dependents if they die. These payments are made to insured persons as a matter of equity right from an insurance fund built up by contributions from covered workers and their employers in contrast to assistance which is paid on an individual means tests basis from general tax funds. Since farm workers have no insurance rights a disproportionate number find themselves in need when they are no longer able to work and must turn to assistance. This is usually satisfactory neither to the worker, who is apt to resent the invasion of his privacy implicit in a means test, nor to the agricultural community which must carry a heavier assistance burden than its urban counterpart.

2. Is there any general recognition that farm workers need the protection of the insurance program?

Coverage of farm workers has been recommended by most authorities who have studied the problem. In particular, the Advisory Council on Social Security appointed by the Senate Committee on Finance, in its report to that committee in 1948, recommended that they be covered. In the words of the advisory council, "the social desirability of extending coverage to these workers has long been a matter of common agreement, and it is now evident that administrative considerations no longer constitute an important barrier to their receiving the protection of the system." Coverage of farm workers has also been recommended by all the major national farm organizations including the American Farm Bureau Federation, the National Grange, the National Cooperative Milk Producers Federation, the Farmer's Union, and the National Farm Labor Union of the American Federation of Labor.

3. What would be the effect of H. R. 6000, the social-security bill now under consideration in the Congress, on farm workers?

H. R. 6000, the bill to liberalize and extend social security passed by the House last year, greatly increases the social insurance benefit payments, adds permanent and total disability benefits to the program and extends coverage to 11,000,000 workers, but these do not

include farm workers (except for certain border-line workers employed in processing farm products off the farm). The Senate Finance Committee, however, which is now studying H. R. 6000 has heard much testimony urging that they add farm workers to those covered by the bill. The higher benefit level and protection against permanent disability for those covered has tended to sharpen the sense of discriminatory treatment on the part of those excluded, and has therefore increased the demands for broader coverage.

4. Why should farm workers be covered under this insurance program?

Farm workers need social insurance protection as much as any other group; they are just as likely to grow old, to become disabled, or to die and leave their families with no earning power. Because their earnings are generally lower than those of other groups, they are even less able to provide individually for their own security. Department of Agriculture estimates indicate that over 85 percent of all farm workers earned cash wages of less than $1,000 during 1947; and that almost 95 percent earned less than $1,400 in cash. Almost 85 percent of all male employees who worked only on farms earned cash wages of less than $1,400. Moreover, farm workers do not have effective means of providing security for themselves as a group. The employer and union pension plans which are now developing for the industrial worker cannot, of course, be applied to people engaged in farm work. The typical farm worker nowadays has no recourse in time of need but to go on the assistance rolls, which for this very reason must carry an especially heavy burden in rural communities.

5. Is it true that farm workers could be covered without imposing troublesome requirements on the workers and their employers?

The Social Security Administration has indicated that farm workers could be covered without any difficulty. One of the ways this could be done is through the use of the stamp plan. Under this plan the worker would be provided with a stamp book, in which his employer would place special social-security stamps indicating the amount of wages paid. The employer would buy the stamps from the post office or rural mail carrier, and would deduct half the cost of the stamps from the worker's earnings as his share of the contribution. The money value of noncash wages, such as meals and lodging, would be included in the wages reported. The stamp book would be sent to the Social Security Administration, which would credit the worker with the amount of the wages reported.

6. In view of the low wages which farm workers receive, could they afford to pay for old-age and survivors insurance protection?

They cannot afford not to. Contributions are related to earnings, so that ability to pay is taken into account. While benefits are also related to earnings, they are so computed that the lower-paid workers receive greater benefits in proportion to their contributions than do higher-paid workers. In addition, benefits are payable to the dependents of workers, and farm families are customarily larger than city families. It must be remembered, too, that there is no other effective way for farm workers to provide security for themselves. A further point is that from one-third to one-half of all farm workers spend a part of their lives in employment that is now covered under the program. In 1947 about one-quarter of all employees who did farm work also had some nonfarm work. If farm employment is not covered, many of these workers will never become insured despite the contributions they have paid; others will be insured, but the benefits payable to them or to their families will be inadequate because their wages for farm work will not be included in computing the benefit amounts.

7. How much would farm employees pay for this insurance protection?

If farm workers were covered under H. R. 6000, they would pay 2 percent of their annual net earnings during the years 1951 through 1959; farm employers would pay a like amount. Thus a worker earning, say, $1,200 a year would pay $24—or $2 a month—for the next 10 years, for a total of $240 over the 10-year period. After that the rates would increase gradually to a maximum of 3¼ percent in 1970; at that rate the farm worker earning $1,200 would pay $39 a year, or $3.25 a month.

8. What protection would the farm worker get for these contributions?

If he lived to age 65, he would receive a retirement benefit each month; his wife would also receive a monthly benefit at that age; and if there were children under 18 they, too, would get benefits. If the worker died prematurely, a lump sum would be paid to his widow or to the person who paid the funeral expenses, and the widow and young children, or aged dependent parents, would get monthly benefits. H. R. 6000 would also provide for the payment of monthly insurance benefits to permanently and totally disabled workers, so that the farm worker would receive benefits before age 65 if permanently unable to work. Benefits would not be paid for any month in which the beneficiary earned as much as $50 for covered work.

9. How large would these insurance benefits be?

Under H. R. 6000, if the worker has been covered for 10 years at $1,200 a year he would be eligible at age 65 for benefits of $52 a month. When his wife became 65 the family would get $79 a month. If the worker died after 10 years of coverage at $1,200 and left a widow and one child under 18, the family would receive $79 a month. If there were a child but no widow, the monthly benefit amount would be $39; if there were two children, $65. Benefits would stop when the youngest child attained age 18, but the widow would again be entitled to benefits at $39 a month when she reached 65. In addition, a lump sum amounting to $156 would be paid.

10. How long would the farm worker have to contribute to the insurance program in order to get benefits?

He would be insured for survivor benefits after he had been covered for a year and a half. Under H. R. 6000, he would have to be covered for at least 5 years in most instances before he could get retirement or disability benefits; however, under the "new start" proposal of the Advisory Council he would be insured for retirement benefits after only a year and a half. Where a farm worker has already spent some time in covered employment, this employment will shorten the time he needs to work in the future to become eligible for benefits.

11. Would it be possible to cover migratory workers, tenant farmers, or share croppers under social insurance?

Migratory workers could readily be covered under the stamp-plan method described above. Tenant farmers or share croppers could either be covered as farm workers or self-employed farmers depending on the nature of their arrangement with the farm owner.

12. Does the exclusion of farm workers discriminate against agricultural States?

Yes; because at least a part of the cost of social security for industrial workers is a charge against the cost of production of the things the farm worker buys. Moreover, in agricultural States the major governmental provision for the aged must be made under old-age assistance which is a charge against State and local, as well as Federal tax funds. Thus the farm worker pays for the social security of urban people in the price of things he buys and for rural people in his taxes; the more heavily agricultural the State the greater the pressure on its old-age-assistance program and the greater its economic handicap. There is a parity factor in social security exactly as there is in the question of current income for the farmer or farm worker in his producing years.

Flow of American Secrets to Russia

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have the following editorial from the New Hampshire Morning Union of March 30, 1950, inserted in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JORDAN'S TESTIMONY IS VINDICATED

The accumulating evidence substantiating the testimony of Maj. George Racey Jordan concerning the flow of American secrets to Soviet Russia through the base at Great Falls, Mont., makes positively ridiculous the slurs of those wiseacres who tried to discredit this testimony when it was first given.

The latest and most convincing evidence comes from Victor A. Kravchenko, author of I Chose Freedom. Kravchenko was a member of the wartime Soviet Purchasing Commission in the United States, and in that position, he says he packed some of the secret information sent to Russia, such as maps, charts, photostats, and blueprints, into diplomatic pouches for shipment by sea and air. He told the House Un-American Activities Committee that the purchasing commission had orders from Soviet Foreign Trade Minister Mikoyan to find all secret information about the industry of the United States and especially the military industry, including such matters as bombs and other weapons.

Every Soviet diplomat, Kravchenko said, whether Malik in the United Nations or Panyushkin in Washington, has received extensive training along these lines and has had wide experience in such matters. He added further (and this is most important of all) that it was no wonder that they got what they wanted when the administration attitude in Washington was: "Who cares what the Russians get?"

Leon Blum

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news story

special to the New York Times under date line of Paris, March 30, concerning the death of Leon Blum, former Premier of France. I also ask unanimous consent to have printed an editorial from the New York Times dated March 31, an editorial from the Washington Star dated April 2, and an editorial from the Washington Post dated April 1.

Many times during the past year the Republican leadership has accused the European social democrats of being neo-Communists. I believe that the story of the life of Leon Blum is adequate refutation to the political irresponsibility of the Republican leadership. Europe has known no greater defender of the democratic way of life than Leon Blum. The world has had few men in the history of the twentieth century who more valiantly and vigorously battled against Communists and communism than the Socialist leader, Leon Blum. His record of devotion to democratic ideals and principles, his untiring efforts in behalf of human freedom should put at rest for once and for all the false dogma and political misrepresentation of Mr. Guy Gabrielson and his political lieutenants. Every lover of human freedom should pay silent tribute to the noble work and efforts of this beloved man of France who had the courage to fight against totalitarianism where the battle was hot and militant and the issue was sharply drawn.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times]

LEON BLUM IS DEAD OF A HEART ATTACK—FORMER PREMIER OF FRANCE, VETERAN SOCIALIST LEADER, STRICKEN IN HIS HOME—AT NATION'S HELM THREE TIMES—FIRST IN OFFICE IN 1936, WHEN POPULAR FRONT WON ELECTION—FOSTERED LABOR GAINS

PARIS, March 30.—Leon Blum, former Premier of France and veteran Socialist leader, died today of a heart attack. He would have been 78 on April 9.

He was stricken in his old country cottage near a hamlet called Jouy-en-Josas, 15 miles from Paris. The cottage stands on a small unfrequented road. From the long oak table he used as a desk, M. Blum had looked over a sloping field, fruit trees and bushes lately bursting into blossom.

In failing strength, he had spent in this quiet retreat, under the constant care of his wife, most of the time since his return from German captivity in 1944.

Though in delicate health, notably since an operation a year ago, M. Blum remained a political leader to the last. He was among the Socialists who met in Paris yesterday to celebrate the progress of the Socialist newspaper, Le Populaire, of which he had remained directeur politique. He telephoned to the newspaper office this morning to ask the latest political news.

In recent months, M. Blum's major task was to hold the Socialist Party together despite an internal split, and in this role he may well prove irreplaceable.

NOTABLES PAY THEIR RESPECT

Soon after M. Blum's death, President Vincent Auriol drove to Jouy-en-Josas to pay his respects, as did Edouard Hérriot, President of the National Assembly; Gaston Monnerville, President of the Advisory Council of the Republic, and other officials and Socialist leaders.

Upon receipt of the news, Robert Schuman, Foreign Minister, informed the Committee of Foreign Ministers of the European nations meeting in Strasbourg, which sent a message to Mme. Blum.

Just before the French National Assembly adjourned as a mark of respect, M. Herriot made a speech in which he said that the quality of M. Blum's mind and the extent of his erudition recalled Jean Léon Jaurès, Socialist leader of the latter part of the last century, who was shot in 1914. Leaders of the other parties also paid tribute to M. Blum—except the Communists, whose official manifestoes had called him a traitor.

In March 1946 M. Blum went to Washington and negotiated credits aggregating $1,400,000,000, the largest France has received at one time since the war, not excluding those under the Marshall plan.

M. Blum's political fame rests chiefly on the improvement of the wage earners' lot through collective bargaining, paid holidays, and the 40-hour week during his premiership in 1936. The last article he wrote for Le Populaire contended that wages were too low in France because industry was badly organized.

Those who knew M. Blum will think of him as an exponent of a revolutionary philosophy who remained moderate and tenaciously democratic in its application. In him were combined a brilliant intellect and a passion for social justice. Both were expressed in his newspaper articles, written in the most lucid of styles. His gentle temperament and his quiet appeal to reason differentiated him more and more sharply from some Socialists, and especially from the Communists, who were his political allies in 1936.

COUNCIL OF MINISTERS PAYS TRIBUTE

STRASBOURG, France, March 30.—The Committee of Ministers of the Council of Europe suspended its meeting here for half an hour today on receipt of news of the death of M. Blum. The Ministers paid homage to the memory of M. Blum and dispatched a message of sympathy to his family before resuming their work.

SOCIAL JUSTICE HIS PASSION

Leon Blum was a great idealist in French politics. His passion for social justice took him from the Paris literary salons in the 1890's to become Socialist Premier of France and prime mover of one of the most controversial social experiments of all time.

In 1936 M. Blum headed the first popular front government of Radicals, Socialists, and Communists. Supporters of the ideals of this movement said that it carried forward the will of the French people for long-overdue social reforms. Its antagonists said that it paralyzed French industry, fostered communism, and ruined France's arms production and morale at a moment when Hitler was mustering a united and toiling Germany to launch the blow that laid France low in 1940.

M. Blum's honest idealism never was questioned. His good judgment was challenged frequently, even after his courageous conduct during the Second World War had reinstated him in the hearts of all but a handful of his political enemies.

Leon Blum was born in Paris on April 9, 1872, in a quarter that still echoed with the bloody Communard uprising of a year earlier. He was the son of a well-to-do Jewish lace and ribbon merchant, and grew up much under the influence of a grandmother whose revolutionary fervor was such as to acquire for her the nickname of "La Communarde."

He associated with such brilliant literary figures as Marcel Proust, Pierre Louys, and Anatole France and contributed to the little advance-guard magazines. He was an inveterate first nighter and a bit of a dandy, and his dramatic criticisms were regarded as among the best of the time.

M. Blum was a Socialist when he was 17. His liberalism was tempered in the fires of the Dreyfus affair. Jean Jures, the Socialist leader who was assassinated at the outbreak of the First World War, was the greatest influence in his life after his militant grandmother.

During part of the First World War, M. Blum was executive secretary to Marcel Sembat, Socialist leader and Minister of Public Works. In 1919 M. Blum was elected chairman of the executive board of the Socialist Party and successfully stood for the Chamber of Deputies from a Paris division.

In 1921 he was leader of the dissident group of the Socialist Party—the group opposing affiliation with the Third International. The militant "right" was the most powerful force in French politics. Organizations of uniformed men such as the Croix de Feu sought to dominate the streets and the various elements of the "left" began to draw together for their protection.

On February 12, 1924, M. Blum and his one-time enemy, Marcel Cachin, Communist leader, spoke from the same platform, and the "popular front" was born. The hatred of the "right" extremists for M. Blum mounted, and on February 13, 1935, the scholarly intellectual was attacked and badly beaten by "rightist" hoodlums.

VICTORY FOR "POPULAR FRONT"

The "left" won an overwhelming victory on April 26 and May 3, 1936, in the general elections. The Communists held 82 seats in the new Chamber of Deputies as against 10 in the previous Chamber, and the Radicals, who had lost some strength, could contribute 159 seats. The regular Socialist group of M. Blum, together with various Socialist splinter groups, gave the "popular front" 334 seats out of 618, with scattered support among other groups of the moderate "left." The parties making up the "popular front" never had anything approaching a clear majority of the popular vote, however.

Leon Blum became Premier on June 4, and by the end of the month 12,142 sit-down strikes, involving 1,830,936 strikers, were on record. A new flag, the French tricolors with a red field and the hammer and sickle, appeared over some struck factories.

M. Blum laid before the Chamber of Deputies bills prescribing the 40-hour week, vacations with pay, the nationalization of the armament industries, the reform of the Bank of France, and the establishment of a board to control bread prices, and many other sweeping reforms.

The proposals were almost all approved, and the basis of an entirely new social structure was enacted into law in a few days. M. Blum insisted that he sought to reform the capitalist system without destroying it. This alienated his Communist supporters, who wanted the capitalist system liquidated at once.

The first Popular Front Government foundered on the rocks of finance, just like many French Governments before and since. M. Blum had consented to a devaluation of the franc on October 1, 1936, somewhat against his will, and on June 21, 1937, he was forced to go before the senate to seek authority to set up a financial dictatorship, which was refused. In the early morning hours of June 21, M. Blum resigned, and the first Popular Front Government came to an end.

The ensuing Government of Camille Chautemps was called a Popular Front Government, and M. Blum took part in it and was again called to form a government on March 13, 1938. This time his government lasted less than a month, and he was succeeded by the government of Edouard Daladier, Radical.

During his terms as Premier, M. Blum tried to steer a neutral course in the Spanish Civil

War, which began in July 1936. He withheld open French aid to the Spanish Government, and when this Government was defeated, M. Blum was severely criticized by many who had supported him in the Popular Front.

ON TRIAL BY VICHYITES

M. Blum was placed on trial by the Vichy Government at Riom on February 19, 1942, on charges of "betrayal of the duties of his charges." On trial with him were M. Daladier, Gen. Maurice Gustave Gamelin, Guy La Chambre, Minister for Air in M. Daladier's cabinet, and Pierre Jacomet, General Secretary of the War Ministry under M. Daladier.

M. Blum was a prisoner in Germany when the war was drawing toward a close, and was freed by the Eighty-third Division of the United States Army.

Factionalism had greatly weakened the French Socialist Party. Many of its left-wing members had gone over to the Communists, while a considerable number of its more conservative adherents had joined the ranks of the Popular Republican Party or another of the moderate groups.

On December 12, 1946, M. Blum became Premier for the third time. It was understood that his government was to be an interim affair, and on January 27, 1947, he retired in favor of Paul Ramadier, another old-line Socialist. In November 1947 he narrowly missed being Premier once more. He lost by a handful of votes when the Communists refused to support him.

[From the New York Times of March 31, 1950]

LEON BLUM

Leon Blum was a figure whose great career dealt so closely with modern events that one cannot think of a period since the First World War in which he did not play a prominent part. It was inevitable that his role should have been controversial and that it should have had its ups and downs, its strengths and weaknesses. Historians will have a rich field for study and comment. The inter-war period was not M. Blum's best because it saw him forced to compromise his beliefs and ideals in order to play a positive role in coalition governments. It was Leon Blum's popular front government that joined the British in the nonintervention policy which spelled the doom of the Spanish Loyalists in the Civil War. However, it was also Leon Blum, who stood up so bravely against the victorious Germans at the Riom trial, and in subsequent internment during the Second World War.

His record since the war ended was a wholly admirable one of wise statesmanship and moderation. That France has been able to keep the middle road in these desperate years was due as much to M. Blum as to any French statesman. The best measure of his greatness is that he now leaves a void that cannot be filled. France has suffered a real loss in his passing.

[From the Washington Star of April 2, 1950]

LEON BLUM

Leon Blum became a politician by accident. At the start of the Dreyfus affair in the autumn of 1894 he was a young boulevard literary man without an ideal of any sort in his head unless it was that of writing French attractively. But his Jewish ancestry was a force in his nature, and it drove him into active defense of a fellow-Jew attacked by anti-Semites. The struggle ending in Dreyfus' vindication taught the future premier much. It brought him into close association with Jean Jaures, and that contact made him a Socialist.

But the variety of socialism which he adopted was a philosopher's brand. M. Blum tried to be a rational revolutionary. The Marxist doctrine was too rigid for him to accept without reservation. He attempted a middle-of-the-road course. This endeavor inevitably involved him in difficulties with both the extreme left and the extreme right. By 1924 he was head of his own party, editor of its paper, and the spokesman in those positions of millions of French workers. To gain control of the government he joined with Marcel Cachin, the Communist, in developing the first popular front. The union was unrealistic and lasted little more than a year. But momentarily it did turn France upside down. The good and the evil it accomplished probably will be debated for decades. If it actually democratized French industry, it also weakened the national security of France. The number of sit-down strikes in 1936 reached a total exceeding 12,000.

Twice subsequently M. Blum was called to head a national administration. He was Premier for a few weeks in 1938 and again in 1946. Meanwhile, he had been tried by the Vichy regime at Rion, where his eloquent defense of himself embarrassed both Petain and Hitler and in consequence he was neither convicted nor acquitted but merely held a prisoner. On the eve of his death at 77 he was once more a literary man, writing beautiful French. Washington remembers him as it saw him 4 years ago—a scholar striving to be dynamic, a patriot trying to be rationalistic, a European desperately hoping to survive as such in an age seemingly moving toward universal mediocrity and frustration. He had contributed to the debacle, but so had practically every other leader of his generation.

[From the Washington Post of April 1, 1950]

LEON BLUM

The great figures of the Third Republic combined the profession of letters with that of politics, and Leon Blum, dead at 77, was one of the most glittering stars of the constellation. A boulevardier in his youth, with an ample private income at his disposal, he wrote poetry, dramatic criticism, essays, and books, and seems at the same time to have held down a job as a civil servant. Withal, he flitted from salon to salon clad wholly in black, from his broad-brimmed hat and loose-string tie, and contributed to the bohemian circles of Paris a conversation that is said to have sparkled with wit and to have been couched in a language as pure as any in France.

It seems to have been the Dreyfus case at the end of the nineteenth century that thrust Blum into public affairs. He felt the case as a humanitarian even more than as a Jew, and his polemics rate high in the literature of that celebrated episode. Having taken the plunge, he found his place in public life by the side of Jean Jaures, the father of the Socialist Party, and he led that party through the split with communism, then into collaboration in two prewar popular-front cabinets. He put through social reforms, but at the expense of total neglect of France's defense; yet Blum redeemed his reputation while he was a prisoner in Germany and by his brilliant conduct of his defense at the Riom trials.

Blum was a man of thought more than a man of action, and his spiritual home, as Lania says in his Nine Lives of Europe, would have been in a two and one-half international, or one between the second and third internationals. This effort to reconcile the irreconcilable reappeared in his post-war advocacy of a third force. By that time the world issue had become not one between capitalism and communism, but between freedom and slavery, and there is no middle ground between these two. Yet the cause to which Blum of recent times gave his powerful talents was clear-cut and authentic; he was one of the stalwarts of the European movement. In this respect he had little kinship with the nationalism of more doctrinaire socialists in Britain, but then, there was nothing provincial or narrow-minded in Leon Blum. He had a cosmopolitan culture, a fealty to the European system, and a fierce loyalty to moral values which made him a great humanist.

Acceptance of New Mundt Bill Shows Public Understands Reds

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Acceptance of New Mundt Bill Shows Public Understands Reds," published in the Omaha World-Herald of recent date. The editorial gives the reasons why the so-called Mundt-Ferguson-Johnson bill to control subversive activities, should be reported for favorable action by the United States Senate at an early date.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ACCEPTANCE OF NEW MUNDT BILL SHOWS PUBLIC UNDERSTANDS REDS

Two years ago the Mundt-Nixon bill was a burning issue.

New Dealers and the pinkish fringe were opposed to this anti-Communist legislation almost to a man. So were a number of other people who wanted communism curbed but thought the Mundt-Nixon bill was unworkable or unwise. Governor Dewey and Harold Stassen debated it publicly, Mr. Dewey making a formidable defense of the then fairly popular view that special legislation to expose Communists was unnecessary.

The bill had passed the House, 319 to 58, when the controversy reached fever pitch. It died in the Senate, never came to a vote.

TODAY IT'S DIFFERENT

Today the attitude is different.

The Mundt-Ferguson-Johnston bill to register Communists is much like the Mundt-Nixon bill. Senator MUNDT has held tenaciously to his purpose, argued steadily for his bill, revised it, tempered it, and finally won over the Senate Judiciary Committee unanimously except for Senator LANGER, the North Dakota maverick. The new Mundt bill, backed almost solidly by Senate Republicans and by a cross section of Democrats that includes New Dealers KEFAUVER, GRAHAM, and KILGORE, is conceded an excellent chance of becoming law.

Some of the credit is due to the persistence and the persuasive powers of Mr. MUNDT. However, circumstances have helped a great deal. The Communist conspiracy trials, the Hiss and Coplon cases have convinced most Americans that communism can be fought successfully in the courts. And they are now aware that good, reasonable, enforceable laws are needed to counter the Communist conspiracy. The improved Mundt bill has the makings of such a law.

The purpose of the Mundt bill is exposure. It would recognize frankly that the Com-

munist Party is not a political party like the Republicans or the Democrats or even the Socialists, but an agency of Soviet Russia. Communists would have to register with the Attorney General. Communists would be barred from appointive Federal jobs and denied passports for foreign travel.

COMMUNISTS APART

If it is argued that the Mundt bill sets the Communists apart, it can be argued equally that the Communist has set himself apart by joining a world-wide conspiracy that threatens free American institutions. The Mundt bill would not outlaw the Communist Party and it would prohibit none of the lawful political activity which the Communists claim is their only purpose. But it would make it more difficult for Communists to carry on their conspiracy. It would provide the courts with a useful tool.

The fact that the new Mundt bill has made so much progress with so little fanfare shows how American thinking has changed since 1948. It is evidence that the people and their representatives in Congress do not propose to sit idly by while the Communist conspiracy, masquerading as a harmless political party, tries to undermine and destroy.

New York County Lawyers' Association Opposes H. R. 10

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1950

Mr. KLEIN. Mr. Speaker, my own opposition, the strong minority report filed by the chairman of the Committee on the Judiciary, and the equally adverse attitude of the American Jewish Congress and of the leading immigration lawyers to H. R. 10, a bill which would permit the Attorney General to imprison aliens for no crime and without court proceeding and would take the Immigration and Naturalization Service out from under the Administrative Procedure Act, are all well known.

You can imagine my gratification, therefore, when I received in the mail a communication from Mr. W. Houston Kenyon, Jr., chairman of the committee on Federal legislation of the New York County Lawyers' Association, informing me that the committee on American citizenship had adversely reported H. R. 10 after due consideration.

This is tantamount to adverse recommendation by the association and in all probability reflects the opinion of all the principal lawyers' associations in metropolitan New York.

Under leave, and in the hope that the adverse resolution will come to the attention of all Members, I am inserting the letter from Mr. Kenyon and the resolution in the RECORD.

NEW YORK COUNTY LAWYERS' ASSOCIATION,
New York, N. Y., April 6, 1950.

Hon. ARTHUR G. KLEIN,
House Office Building,
Washington, D. C.

DEAR SIR: Enclosed please find copy of report adopted by the committee on American citizenship of the New York County Lawyers' Association.

Very truly yours,
W. HOUSTON KENYON, Jr.,
Chairman of Committee on Federal Legislation.

HOUSE BILL 10

NEW YORK COUNTY LAWYERS' ASSOCIATION,
February 17, 1950.

The committee on American citizenship having considered H. R. 10 respectfully reports as follows:

The bill was introduced in the House of Representatives by Mr. SAM HOBBS of Alabama on January 3, 1949, and was referred to the Committee on the Judiciary. The salient features of the bill are: (1) to permit the deportation of an alien to any nation which is willing to accept such alien into its territory; (2) pending final determination of the deportability of any alien taken into custody under warrant of the Attorney General, such alien may be continued in custody; (3) pending actual deportation, any alien may be transported to a place of detention designated by the Attorney General and there detained, though not at hard labor; (4) should any alien who has previously departed from the United States pursuant to this law, return unlawfully to the United States, the original warrant of deportation is to be considered reinstated and he is to be proceeded against without the commencement of new deportation proceedings; (5) the validity of detention may be inquired into by writ of habeas corpus; and (6) making inapplicable certain provisions of the Administrative Procedure Act (5 U. S. C. 1004 et seq.) and the Declaratory Judgment Act of 1934, as amended (28 U. S. C. 400) to the provsions of this act or to any law relating to the immigration, exclusion, expulsion or regisration of aliens, or to the nationality or naturalization laws of the United States; nor should the provisions of section 503 of the Nationality Act of 1940 (8 U. S. C. 903) be applicable in any case which involves a determination of the right of a person to be admitted or to remain in the United States under the provisions of any of the immediately foregoing described laws.

On August 4, 1949, a majority of the Committee on the Judiciary reported favorably on this legislation and recommended that the bill do pass (Rept. No. 1192). Minority views, however, were recorded by Congressman CELLER and GORSKI. The majority of the Committee on the Judiciary struck out the bill as advocated by Mr. HOBBS and rewrote same with amendments. There appears to be no material change in the rewritten bill, with the exception that a provision has been inserted depriving any court of jurisdiction to release on bond or otherwise any alien detained under any provision of law relating to the exclusion or expulsion of aliens at any time prior to a decision of a court in his favor which is not subject to further judicial reviews.

Your committee has adopted the views expressed in the minority report. However, the said minority report makes no mention of subdivision (g) of section 4 which was inserted by the committee. As stated above, this subdivision ousts any court of jurisdiction to release on bond or otherwise any alien detained under any provision of law relating to the exclusion or expulsion of aliens at any time prior to a decision of a court in his favor which is not subject to further judicial reviews. This means that it may be only the Supreme Court of the United States, on appeal, that would have final authority to release an alien from detention, under the proposed legislation, in a habeas corpus proceeding. This is the only proceeding available to an alien, because other remedies that he may now have under any of the provisions of the Administrative Procedure Act, Declaratory Judgment Act, or under the Nationality Act would not be available to him. Your committee deplores that fact that it is sought to take out the Immigration and Naturalization Service from the classes of agencies within the scope of the Administrative Procedure Act. The author of this act, Senator MCCARRAN, referred to it as "a comprehensive charter of private liberty and solemn undertaking of official fairness." It was entitled "An act to improve the administration of justice by prescribing fair administrative procedure." It was widely acclaimed as an advance in democratic government. Its main features were separation of powers in adjudicatory matters, procedural requirements in regard to hearings and decisions, and for judicial review. All of these are done away with under the proposed legislation. If this proposed legislation is enacted into law, there will be lodged with the officers in the Immigration and Naturalization Service autocratic power over aliens without the judicial branch of the Government to act as a check on its activities, save the meager relief of an inquiry by habeas corpus, which reviews the legality of detention and not the merits of the case.

Any law which denies to an alien any right to the type of hearing and judicial review contemplated by the Administrative Procedure Act and any law which may deny an alien his liberty until the Supreme Court has spoken, is repugnant to our concept of due process, particularly when we consider that the average alien has not the financial means to take his cause to the highest Court. Moreover, there is no reason to deprive an alien, whose liberty is at stake, from the benefits of the Administrative Procedure Act and other remedial legislation, when such benefits are available where property rights are involved.

For the foregoing reasons, your committee respectfully reports that it opposes the enactment of H. R. 10 as it now stands.

Respectfully submitted.

COMMITTEE ON AMERICAN CITIZENSHIP.

Dr. Charles R. Drew

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, on April 1 Dr. Charles Drew, an outstanding Negro physician and a member of our District of Columbia community, was killed in an automobile accident. Dr. Drew was a pioneer in the field of blood plasma and as a result of his brilliant research in that field saved thousands of British and American lives during the war. In 1943 he won the Spingarn medal for "the highest and noblest achievement by an American Negro." In 1940 he was awarded a doctorate in medical science by Columbia University and was most recently professor of surgery at Howard University and chief surgeon at Freedmen's Hospital.

Dr. Drew's tragic accident is a profound loss to the whole American community. It is fitting that we in the Senate of the United States give his achievements due recognition and express to

his family, to his friends and to the members of the Negro race our sorrow at the loss of this great American.

I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an editorial paying tribute to Dr. Drew which appeared in the Washington Post for April 6, 1950, as well as the obituary notice of his death, which appeared in the April 2 issue of the New York Times.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post of April 6, 1950]

CHARLES R. DREW

Dr. Charles R. Drew, whose life was snuffed out in its early maturity by an automobile accident on Saturday, was among the most gifted of American surgeons. He chose to devote his gifts to the advancement of medicine rather than to the advancement of a personal career or to winning the monetary rewards that were easily within his reach. In particular, he devoted his gifts to the training of young Negro surgeons desperately needed for the medical care of their race. It is said that more than half of the Negro surgeons who have been certified by the American Board of Surgery were trained by Dr. Drew, himself the first Negro to serve as an examiner on the board.

A native of Washington and a graduate of Amherst College and of the McGill University Medical School at Montreal, he came to Howard University as an instructor in pathology and an assistant in surgery in 1935. Subsequently, he was awarded a Rockefeller fellowship in surgery at Columbia University. Since 1941, he has been professor of surgery at Howard and for several years past has served also as chief surgeon at Freedmen's Hospital. The Spingarn Medal was awarded to him in 1943 for the highest and noblest achievement by an American Negro during the preceding year or years. He worked ardently to enlarge the meager opportunities for Negro doctors to receive training in American medical schools and hospitals. He will be missed, however, not alone by his own race but by his whole profession and by men everywhere who value scientific devotion and integrity.

[From the New York Times of April 2, 1950]

Born in Washington, D. C., Dr. Drew was graduated from Amherst in 1926, the year in which he won the National Junior Amateur Athletic Union championship in the high hurdles. At McGill University, Montreal, where he received the degrees of M. D. and Master of Surgery in 1933, he not only won first prize in physiological anatomy and obtained the Rosenwald Fellowship in medicine but was the all-time high scorer in Canadian intercollegiate track competition.

After an interval on the faculty of Howard University he studied at the College of Physicians and Surgeons, Columbia University, at the same time serving as a resident in surgery at the Presbyterian Hospital and in 1940 was awarded a Doctorate in Medical Science.

Early in the Second World War, when it was decided by the Blood Transfusion Association to investigate the possibility of aiding the Allies by shipping plasma to Europe, a planning committee was formed, consisting of Dr. E. H. L. Corwin, Dr. John Scudder, and Dr. Drew, who had already done brilliant research in blood plasma with Dr. Scudder at the Columbia-Presbyterian Medical Center.

On October 1, 1940, in answer to the urgent call from the British Dr. Drew was appointed full-time medical director of the plasma project for Great Britain. This project, which functioned at the Presbyterian Hospital, ended in 1941. The American Red Cross then decided to set up blood-donor stations to collect plasma for the American armed forces. Dr. Drew was appointed the first director of the new project and set up the first collection unit. Three months later, when the work was in successful operation, he resigned to take the chair of surgery at Howard University.

Unbiased Investigation Necessary

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article which appeared in the Exeter News-Letter, Exeter, N. H., entitled "Unbiased Investigation Necessary," written by Mr. James P. Lynch.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNBIASED INVESTIGATION NECESSARY

(By James P. Lynch)

What a price we have to pay for plain stupidity. This great Nation of ours, due to our political clowns, has been turned into the laughing stock of the world practically overnight. We boast of leadership yet by our very actions we lack it. We have seen leadership transformed from greatness to confusion and misgiving.

If ever in the history of the United States there was a dire need for leaders in Washington, then it is today. By our performances we have proven to the world that the mad scramble for political control is jeopardizing the future security of the Nation.

This is no time for business leaders to sit back and watch the men of Washington act like circus performers. This is the time for the executives of industry to be willing to sacrifice personal gains in private business and take a foothold in running the affairs of the Nation. They must come out of the shell of private enterprise and plan the destiny of a greater America.

Many of the politicians at the Nation's Capitol have proven that they are not capable of the position entrusted in them by the people of the Nation. It is time the people voted them out of office so the country will not be subjected to a continuance of such foolish tactics.

We pay our servants in Washington good salaries. Yet today, in actual dollars and cents, the results of our expenditures for such representation is a disgrace to the people of the Nation. Our dollar is worth a trifle of what it was worth years ago. By the same token we are not receiving full value from our politicians. In fact, our return from these public servants is so low that it resembles a bankrupt dollar.

How much longer will the people tolerate these stupid actions? This fall, some office holders will be retired for the good of the Nation. They will retire on a pension fund that they voted for themselves. But the fall is still many months away. The continuance of such unforgivable representation will only tend to lower the degree of respect other nations have for us.

How does one expect the people of foreign nations to understand our political maneuverings in Washington when the people of the United States have a difficult time figuring them out.

We feel that such a committee would serve the people better because the Democrats have proven by their actions on Monday in the Senate that they prefer to prevent any outright probe. For example, our senior Senator attempted to gain the floor to deliver a speech shortly after the Senate convened at noon. It was nearly 7 o'clock before he was able to accomplish this. Even when BRIDGES tried to address this body after being attacked by Senator HERBERT H. LEHMAN, of New York, he was denied the opportunity.

BRIDGES denounced such tactics by stating: "It is rather unheard of that a Senator cannot obtain the floor to speak on a situation of that kind. I have been in the Senate nearly 14 years, and I expect to be here many more years, and I do not intend to be walked on, trod on, jumped on, or imposed upon. In the weeks, months, and years to come we are going to have fair play, or many in this body are going to know the reason why."

He continued: "I believe it is time that someone stands up in this Chamber and asks some questions. They are questions which are formed by the lips of the vast majority of the people of the United States."

BRIDGES denounced the actions of Acheson. He described the latter as playing on the fervent yearning of our people for peace.

Our Senator showed that there is a dire need for an investigation of the State Department.

"Our Department of State," BRIDGES remarked, "has fallen into a condition unparalleled in the Nation's history. That all of us in the Chamber know. But we are not alone in that knowledge. Stalin knows it. And, thank God, the American people know it."

He explained that is the reason why the various Senators are receiving letters demanding that the State Department be liberated from the Communists, and the commie sympathizers, the fellow travelers, the Socialists, the homosexuals, and the just plain incompetents who have brought it so low in the Nation's esteem.

BRIDGES emphasized: "The public is alarmed, and rightly alarmed. After all, confessed and proved spies and traitors have been found in the high policy-making echelons on the State Department."

He pointed out how by the Department's own count, some 91 homosexuals, every one a logical target for exploitation and blackmail by spies, have been caught. "Even by the half-hearted and self-serving investigations the Department has been conducting of itself in the very recent past, these perverts were exposed," stated the Senator.

BRIDGES condemned the tactics being used. Referring to the Senate resolution in regard to loyalty in the State Department, he uttered: "The resolution does not say slap together a quick hearing, discredit the testimony of one witness, call on him to prove single-handed, that which it is the duty of the Department of State and the Department of Justice and the Central Intelligence Agency to act upon, without even being told to do so.

"It does not say," he continued, "to set up a sounding board from which Senators can run for reelection. It does not say to find excuses for covering up that which the country knows good and well to be true."

BRIDGES was quite critical throughout his address of the State Department. If his questions are answered sincerely it will be beneficial to the country.

If one doubts the threat of communism it might be well to look over the figures recently given out by Msgr. Fulton J. Sheen in

a radio broadcast. The noted priest stated: Communism which in January 1945 enslaved only 190,000,000 people, today enslaves 800,000,000.

One cannot overlook these threats. An enlightened America will help bring victory in the cold war.

Doctor Raps AMA—Shows Health Need

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1950

Mr. BIEMILLER. Mr. Speaker, since a great deal of false and misleading propaganda on the subject of Government health activities is circulated by the American Medical Association, I was delighted to find an excellent statement by a doctor on the need for more Government aid to medicine. I think everyone who is sincerely interested in understanding the medical picture in this country will find the following articles, by Dr. Ira D. McCoy of Bad Axe, Mich., most helpful.

Dr. McCoy's articles are a spontaneous effort, having their origin in his many years of medical service to two Michigan communities, Bad Axe and Port Austin. Dr. McCoy graduated from the University of Michigan Medical School. He has since completed studies at Harvard University and the Mayo Clinic, Rochester, Minn. He served as a captain in the Army Medical Corps in World War II.

DOCTOR RAPS AMA—SHOWS HEALTH NEED

(By Ira Dean McCoy, M. D.)

(First of two articles)

WASHINGTON.—The American Medical Association, at enormous cost, has bombarded the American public with a flag-waving, red, white, and blue propaganda leaflet explaining the proposed Federal-health-insurance legislation.

Every member of the AMA was assessed $25 in order that one of the Nation's top publicity agencies might be employed to frighten the American public by untruthfully calling the proposed legislation socialism, statism, and paternalism.

Often in the heat of argument or in criticizing another's belief, the words paternalism and statism are too indiscriminately used and the users forget or lose sight of exactly the form of Government we have in these United States.

APATHY DANGEROUS

The Government is composed of men like ourselves whom the majority of us elect to govern us and it is always within our power to change the political complexion of our National Government every 2 years if we so choose. Far, far more dangerous to the welfare of our country than statism or paternalism is our apathy toward our duties as citizens. It is everyone's duty to be actively inquisitive and interested in Government; and it is the sacred privilege as well as our duty and obligation to cast our ballot at every opportunity. The more active and interested we, as a people, become in Government, the better will be our Government and the safer will be our liberties.

I firmly believe in the system of free enterprise and our capitalistic way of life; but in a complex nation the size of ours, government simply must take over the education and health of our people to a greater extent in the future.

If the handling of atomic energy is too complex and too big for private industry, certainly the health and education of our people is too great and pressing a problem to be allowed to drift much longer. There can be no solution but more and more Government aid and control. After all, isn't good government, "One for all and all for one?" But let's get back to Federal health insurance.

THREE HUNDRED THOUSAND DIE UNNECESSARILY

Over 300,000 of our people, men, women, and children, will die this year because they cannot afford medical care. That isn't all the sad truth: This year, too, America will lose 4,300,000 man-years of work because of bad health. And this year, too, $27,000,000,000 in national wealth will be lost—lost because of sickness and disability.

On the basis of selective-service experience at least 40 percent of our men of military age—between 8,000,000 and 9,000,000 men—are unfit for military duty. On any one day, at least 7,000,000 people in the United States suffer some illness. As many as 23,000,000 persons have a chronic or disabling disease. Sickness and accidents cost the Nation at least $8,000,000,000 a year.

Our health services and facilities are wholly inadequate. Forty percent of our counties do not have even a full-time local public health officer. Hospitals are needed—areas of our country with an aggregate population of 15,000,000 people do not have a single recognized general hospital. Pure shortages of doctors, nurses, dentists, psychiatrists, and other trained health personnel are so great that many persons are forced to forego medical care. In 1944, 553 counties had less than 1 active physician per 3,000 population, the danger line. And numerous counties had no active doctor at all.

STAGGERING STATISTICS

If we had adequate services available for mothers and children, we could prevent at least half of the deaths of mothers who die in childbirth, and one-third of the deaths of the young babies. Our State health agencies have, on their waiting lists, thousands of crippled children who require and cannot get proper attention because of the lack of facilities and personnel, and over half a million children with rheumatic fever fail to receive good medical care.

Staggering statistics, aren't they? But more shocking is the simple fact that we have the knowledge to prevent these needless deaths and this tragic waste. We have the highly trained personnel capable of applying that knowledge. The one essential ingredient lacking is the assurance that people needing that knowledge can have it when they need it.

But before we project the solution, let's look more searchingly at the problem. Can the average American family pay for modern medical care? Can you?

At least 2 out of every 3 Americans—that means 97,000,000 people—cannot, and this figure comes straight from the American Medical Association's Bureau of Medical Economics. If your family has an annual income of $5,000 or less per year, you are in this group. You cannot afford adequate medical care.

PUT OFF CARE

Most Americans avoid seeking prompt medical attention at the first sign of complaint. They tend to put off going to the doctor in the hope that the pain or illness will right itself. They delay mainly because of fear of medical costs.

Such delay is often serious, and sometimes fatal, as in tuberculosis and cancer. We doctors know that 30 percent of cancer is curable if caught in its very early stages. We know that the disabling effects of many other chronic diseases can be halted or even prevented entirely, if caught in time.

There is an endless amount of data to prove that the relation between money and life—between wealth and health—is direct and deadly.

The problem, from which we can no longer run, is simply this: How can we remove this major economic barrier which blocks better health for the Nation and assure everyone who needs it adequate medical care regardless of economic status?

DEMOCRATIC SOLUTION

The democratic solution is: National health insurance. By broadening the scope of our compulsory social security program to include a system of national health insurance, by utilizing the proven, successful method of pay-roll deductions to which employers and employees would contribute equal shares—the costs of physicians and hospital care could be prepaid, guaranteeing both availability of care to all who need it and adequate payment to doctors, hospitals, and others who supply the services.

For a long time, the AMA fought even voluntary health insurance plans. It still fights them today, unless it can control them. It supports voluntary health insurance today in a frenzied rear-guard action to head off national health insurance. The AMA has long been several steps behind the march of events and the needs of the American people.

Voluntary health insurance plans, while often excellent in the limited spheres in which most of them operate, cannot and will not be able to do the necessary job because:

1. Benefits are inadequate. The plans which provide anything approximating comprehensive insurance protection reach relatively few persons—actually less than 3 percent of the population—because they have been held back by the opposition of medical societies. The plans sponsored by medical societies provide only very limited services.

2. Voluntary plans have no sliding scales of payments to match incomes. They charge a flat rate, usually high, for limited benefits that cover only a fraction of the population. It is hardly likely that they could broaden their benefits without pricing themselves out of reach of many present subscribers.

3. Many of them offer only cash payments instead of actual medical services, and these payments cover only part of the costs of care.

4. They have the smallest coverage where the need is greatest—in rural areas and among lower income groups.

DOCTOR DISPELS FOG ON INSURANCE PLAN

(By Ira Dean McCoy, M. D.)

(Second of two articles)

WASHINGTON.—A continuous smoke screen has been laid down by special interests to befog the public's mind on what national health insurance is and what it would mean to the doctor and the patient.

Proponents of national health insurance cherish the freedom and intimacy of the doctor-patient relationship as much as our die-hard opponents. Patients, as now, would select their own doctors; doctors, as now, would accept or reject patients. National health insurance is just a method of paying for medical care.

The only change proposed by advocates of national health insurance is that, instead of the patient paying when and if he has money available, the doctor or the hospital of his choice would be paid by the insurance system at a rate and by a method to which the doctor had agreed.

Those who support national health insurance are keenly aware that our Nation has fewer physicians and hospital beds than we

need, and these so poorly distributed that in some rural counties there are no resident physicians at all and little or no hospitalization accessible.

UNREALISTIC TO DELAY

Nevertheless, it is unrealistic to argue that national health insurance should be delayed for the years required to train many more doctors and build many more hospitals. The supply of medical personnel and facilities will expand only when, through insurance, the money to pay for them is guaranteed. This demand depends on families' purchasing power for medical care. This is the simple principle of supply and demand which operates throughout our economy.

Opponents claim that national health insurance will cost too much, that national expenditure for medical and health services would be greater under this plan, and that administrative costs would be excessive.

The first answer to this objection is that the Nation needs to spend more for health. Too many of us have been doing without for too long. Moreover, a large part of the expenditures under national health insurance would not be new or added expenditures. Money now expended in direct payments for medical care by sick persons would be distributed under the plan in small regular payments from all people. Consequently, the costs of sickness—ordinarily concentrated upon a small part of the population in any given year—would be spread over the whole year and over all the people.

As for administrative costs, it is worth noting that expenses of voluntary, nonprofit plans run to 12 percent or more in comparison with the premiums collected. An important part of these administrative expenses is the cost of soliciting and retaining members, a task that would be eliminated by national health insurance.

OTHER COSTS ELIMINATED

Many other costs would also be eliminated by national health insurance. It might at this time be interesting to note that the Blue Cross of Michigan has approximately 1,500,000 policyholders, or subscribers, as they choose to call the people who are buying Blue Cross insurance.

From January 1 until June 30, 1949, the Blue Cross of Michigan had a total earned income of $12,399,566.37. But during that same period of time their operating expense was $1,135,477.46. Of that $1,135,477.46 are some interesting items of expense: $711,990.07 was paid out in salaries; $47,547.09 was paid out in travel and other expenses; and $79,783.54 was paid out in "sundry" expenses (of which no explanation is made).

By these few figures I have given, it is very plain to be seen that the administrative costs of the Michigan Blue Cross are tremendous in comparison to the amount of money collected from their policyholders. It is, however, a nonprofit corporation. A great many patrons who are using the Blue Cross learn to their sorrow its services are limited. This could be due to the huge expenses I have already cited.

As a result of the very cunning, insidious, and extremely expensive propaganda campaign carried on by the medical lobby, the American Medical Association and its National Physicians' Committee, most people think that all doctors, or nearly all, unqualifiedly follow the AMA "party line" in opposition to national health insurance.

The dictatorial, undemocratic rule of the AMA's house of delegates imposes its policies practically by fiat on a hapless and helpless membership. Serious disagreement by an individual doctor with the policies laid down by the house of delegates or by his local medical society may result in unpleasant economic and professional consequences for that doctor. Few doctors dare risk these consequences.

REACTION AGAINST AMA

But opposition to AMA reaction has been growing and has expressed itself in several organizations of doctors who are in favor of national health insurance and who say so openly. These organizations—the Committee of Physicians for the Improvement of Medical Care, the Physician's Forum, and the Committee for the Nation's Health, composed of both laymen and doctors—are becoming growing spearheads of opposition to the entrenched leaders of the AMA.

The American Medical Association has been spoon-feeding the American people a terrific amount of propaganda against national health insurance; but I can cite the bill itself and tell you as well as anyone just what it is and what it will do for you.

STEP-BY-STEP ANALYSIS

1. It would make available to you and all other employed and self-employed persons (with few exceptions) all the care you need from physicians, both family doctors and specialists, hospital, laboratory, and X-ray services, unusually expensive medicines, eyeglasses, and appliances; and dental care and home nursing to a limited degree.

2. It would also cover the dependent members of your family.

3. You would be free to choose your own doctor, hospital, etc., and to change your selection. Actually, countless individuals would have greater freedom of choice than they have now, because the prepaid plan of health insurance would help assure a better supply of physicians in many areas where there are not now enough doctors, and because the prepayment plan would enable millions who cannot now pay, to have the services of a doctor of their choice for the first time.

4. Your doctor's professional freedom would be fully protected. He would not become a Government employee. He would remain a practitioner, free to accept or reject patients, to locate wherever he wishes, to participate in, or stay outside, the insurance plan. He would be paid by the insurance funds in amounts and methods which he or his own representatives would negotiate.

5. It would cost you 1½ percent of your earnings (up to $4,800 of income). Your employer would pay an equal amount. You would pay 3 percent (up to $4,800) if you are self-employed.

6. If you are a member of a voluntary health insurance plan that meets minimum standards, this plan could continue to provide you with services and your premiums would be paid from the national insurance fund.

7. Health insurance would not be run from Washington. It would be managed by local areas under a plan adopted by each State.

In view of the above-mentioned facts it is almost impossible to understand the American Medical Association's bitter opposition especially when the AMA House of Delegates in 1916 petitioned the Congress to spread a universal health insurance over all the American people. This petition was recalled or withdrawn in 1920.

Many of us fear the threat of communism but do we all realize the best way to combat the scourge of communism is to increase the opportunities of the ordinary individual? America is great enough and rich enough that we should have no slums, we should have equal opportunity insofar as public-school education is concerned in this country for all our children whatever their color or creed. All children have a right in this great country of ours to healthy and sound bodies insofar as our medical science can give it to them.

These are not visionary ideals. We can and must find a way for their fulfillment. "He stands straight who stoops to help a child."

House Concurrent Resolution 64

REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. HAYS of Arkansas. Mr. Speaker, in view of an obvious misunderstanding in certain areas of the purpose of House Concurrent Resolution 64 I wish to present on behalf of the gentleman from Minnesota [Mr. JUDD] and myself a clarifying statement on the meaning of the resolution.

Mr. JUDD. Mr. Speaker, will the gentleman yield?

Mr. HAYS of Arkansas. I yield to the gentleman from Minnesota.

Mr. JUDD. Mr. Speaker, I want to associate myself with the gentleman from Arkansas. What we are recognizing is that the United Nations in its present form is not operating in the way that the people of the world had hoped. When an instrument does not operate properly, the thing to do is not to discard it but to try to improve it. The purpose of the resolution is to discover what is wrong and to do whatever is necessary to strengthen that Organization which is still one of the world's best hopes for peace.

Mr. HAYS of Arkansas. And to define the long-range objectives of our foreign policy.

Mr. Speaker, the gentleman from Minnesota [Mr. JUDD] and I stand strongly behind the world federation resolution. It does not commit us to any particular formula for a world legal order. It does not commit us to changes in the present United Nations that are not specifically ratified by the United States Congress and by the people after they are drafted and submitted for ratification. It does not commit us to the creation of any organization outside of or parallel to the United Nations. It does not commit us to any plan for a broad-powered world government with control of trade, currency, immigration, taxes, and individual civil rights. It does not place us in the position of abandoning all hope for peace by fairly negotiated agreements. Above all, it does not commit us to appeasement or unilateral disarmament while other nations remain armed.

The resolution means just what it says. It expresses full support for the United Nations. It defines more clearly than existing legislation certain objectives of our foreign policy. It is based on the conviction that another world war is not inevitable. It declares that we are for true law and order in international affairs instead of anarchy. It declares that we favor vesting in a strengthened United Nations adequate power and force to enable it to prevent aggression by any country against any other. It declares that the United States has no plans for aggressive war and that it is willing, if other nations do likewise, to confer upon the United Nations authority to outlaw those weapons which

would cause total destruction. We favor only those measures which are adopted in strict conformity to constitutional requirements.

The resolution should be promptly considered by the Foreign Affairs Committee and action taken to fortify the faith of the American people in a system of world law. It will be an historical milestone for the United States and the world.

The Veterans Present Their Case

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. JENISON. Mr. Speaker, like many other Members of Congress, I have been receiving expressions of opinion from many veterans of the armed forces who are gravely concerned over possible changes affecting adversely those who are in greatest need of hospital treatment and medical care. Under permission granted to extend my remarks in the CONGRESSIONAL RECORD, I am including communications from two groups of veterans in the Twenty-third Congressional District of Illinois.

The Crawford County Council of the American Legion "strongly objects" to the portion of the Hoover Commission report which would disturb benefits to veterans under existing law. The American Legion post at St. Peter, Ill., desires to go on record in opposition to socialized medicine proposals as contrary to the best interests of veterans. The communications follow:

ERNEST M. COULTER POST, No. 69,
AMERICAN LEGION,
Robinson, Ill.

Hon. EDWARD H. JENISON,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN JENISON: Attached to this letter is a report of the action taken by the Crawford County Council, American Legion, Crawford County, Ill., concerning the recommendations contained in the Hoover Commission proposals for the reorganization of the executive branch of the Federal Government, especially affecting veterans' benefits and administration of veterans' hospitals and facilities.

We cannot help but believe that you, as a veteran, will agree with your friends here at home, that economy at the expense of our sick and disabled comrades, the widows and orphans of our deceased servicemen, is not the desire of the great majority of our people.

We appeal to you in their behalf.

Sincerely, in comradeship,
LEROY G. HAMILTON,
Commander, Crawford County Council, American Legion.

Hon. EDWARD H. JENISON,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN JENISON: Determined opposition to the recommendations contained in the Hoover Commission report pertaining to veterans' laws and the Veterans' Administration, was strongly voiced at the all-county meeting of the American Legion and American Legion Auxiliary, in a joint session, at Flat Rock, Ill.

By a unanimous vote, the county commander was directed to appoint a committee, representing all American Legion posts and auxiliary units of Crawford County, Ill., with an approximate membership strength of 3,000, to prepare and forward to you this statement: "Strongly objecting to the legislative proposals specified in the Hoover Commission report, which would disturb any benefits of existing veterans' laws."

We earnestly request that you give this matter due consideration in voicing our objections to this Hoover Commission proposal.

Sincerely,

H. L. Thompson, Past Commander, Post 69, Robinson; Past Commander, Crawford County; Past Commander, Twenty-third District, Ill.; Mrs. Beatrice Rogers, President, American Legion Auxiliary 219, Oblong; Mrs. Gwendolyn Meeker, Past President, Auxiliary, Robinson, Ill.; Leroy Littlejohn, Past Commander, American Legion, Oblong, Post 219; Fifth Division Chairman Medal Awards, Illinois; W. Weger Allison, Past Commander, American Legion, Flat Rock, Ill.; H. L. Thompson; Beatrice Rogers; Gwendolyn Meeker; Leroy Littlejohn; W. Weger Allison, Committee.

WODTKA-ROTHE-REISS POST, No. 380,
St. Peter, Ill.

Hon. EDWARD H. JENISON,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE JENISON: Whereas the American veteran in two World Wars has defended the American free-enterprise system, which had made possible the development in this country of the highest standards of medical care and the finest medical institutions attained by any major country in the world; and

Whereas, having experienced the shortcomings of impersonal, assembly-line medical care inherent in the form of Government-controlled medicine necessary in time of war, the veteran understands the dangers of imposing such a system permanently on the entire population; and

Whereas compulsory health insurance would impose an unjust tax on the veteran's pay check for medical care to which it is now entitled free of charge as a reward for his service to his country; and

Whereas compulsory health insurance would force a tax of 3 percent on the income of employed veterans, rising to a tax of at least 6 percent within a few years, creating new financial burdens which would increase the costs of necessities of life and lower the standard of living for veterans and other citizens: Now, therefore, be it

Resolved, That the Wodtka-Rothe-Reiss Post, No. 380, of the American Legion does hereby go on record against any form of compulsory health insurance or any system of political medicine designed for national bureaucratic control; and be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States, to each Senator and our District Representative from the State of Illinois, and that said Senators and Representative be and are respectfully requested to use every effort at their command to prevent the enactment of such legislation.

ADOLPH C. MEYER,
Commander.
ARTHUR A. BOYE,
Adjutant.

Small-Business Loans

EXTENSION OF REMARKS
OF
HON. ERNEST W. McFARLAND
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. McFARLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio discussion between the senior Senator from Illinois [Mr. LUCAS] and George J. Burger, vice president of the National Federation of Independent Business, regarding small-business loans.

There being no objection, the discussion was ordered to be printed in the RECORD, as follows:

RADIO DISCUSSION ON S. 2947 (SMALL-BUSINESS LOANS) BETWEEN HON. SCOTT W. LUCAS, OF ILLINOIS, AND GEORGE J. BURGER, VICE PRESIDENT, NATIONAL FEDERATION OF INDEPENDENT BUSINESS

Mr. BURGER. I have studied carefully the splendid statement you made on the floor of the Senate on January 30 when you introduced your bill, S. 2947, to encourage loans to independent small-business enterprises through the Reconstruction Finance Corporation.

In the first instance, I like the simplicity of your proposed bill. It is not loaded with a lot of long-sounding words, but keeps to its direct objective. I am also pleased, and I know the Nation's independent small-business men are pleased, that in your remarks in the Senate you emphasized again the statement made by the President in the state of the Union message when he said that our antimonopoly laws must be strengthened in the interest of small business and for encouraging the growth of new enterprises.

Senator, in my opinion this must be done by Congress at the earliest possible moment. Strong antimonopoly laws are necessary if small independent business enterprises in America are to survive. I liked that part of your message where you stated that the Corporation in making funds available under your bill is authorized to give management skills, past-earning records, and prospective earnings consideration over collateral security. We who own and operate establishments realize the importance of this recommendation.

If the Congress sets out such a policy and the RFC puts it into effect, I am sure the independent business enterprises of America will be grateful, and in return will set an admirable record in repaying these loans.

Before coming to the questions that I would like to ask you, Senator, I want to say that I was pleased that you placed on the record in clear and understandable words the following statement. I quote your words: "I want to make it clear at the outset that this bill is not being introduced to offer aid to unsound, inefficient or fly-by-night business enterprises, but is being offered to give capital assistance to efficient businessmen at times when such assistance may be urgently needed."

You are to be complimented on making this fact clear to your colleagues in the Senate.

Now, I would like to have you explain in more detail your statement on the floor of the Senate that the guaranty provisions of your bill utilize the present procedures of the RFC but increases the amount of the guaranty up to 90 percent.

Senator LUCAS. The Reconstruction Finance Corporation today is authorized to make business loans in cooperation with private banks. I do not wish to change that practice, but rather I want to encourage more of these loans. Under the present law the private bank makes a loan to a business enterprise and the RFC at the same time agrees to take a certain portion of the loan off the hands of the private bank upon request.

The amount of the loan that the RFC may take off the hands of a private bank is now limited to 70 percent. My bill would increase this to 90 percent. The fact that under my bill private banks would be able to call upon the RFC to reimburse them up to 90 percent of the amount of these private loans should be a real encouragement to private banks in making loans to independent small-business enterprises.

Mr. BURGER. Isn't it also true, Senator, that many independent small-business enterprises which today are unable to obtain loans from any source will be able to get assistance under your bill?

Senator LUCAS. That is very true. Today private lending institutions and the RFC, as a general rule, will not lend money to anyone unless the borrower has property that can be mortgaged. In other words, a loan will not be made to a small enterprise today unless that enterprise can put up enough collateral security to assure its repayment.

My bill permits the private bank and the RFC to place larger emphasis upon management skills and prospective earnings and less emphasis upon the security that a borrower can offer. This should mean that a person about to start a new business or the operator of an existing business enterprise will be able to get a loan without putting on the line every last dollar's worth of his property.

Mr. BURGER. You stated earlier that you hope to encourage loans through private banks. Isn't it possible that cases may arise where private banks will refuse to make loans even with this 90-percent guaranty? If such cases should arise, does your bill make any provision to meet this situation?

Senator LUCAS. It is my firm belief that private banks will cooperate, and that borrowers will be able to obtain loans directly from their local banker. I have looked into this matter quite closely, and the Federal Reserve, the RFC, and FDIC advise me they have been unable to discover any banking regulations which would prevent private banks from making loans such as I propose even though they are not fully backed with collateral security.

Private banks would be taking very little risk. In the first place, the bank can always get back 90 cents on the dollar from the RFC. Also, collateral security will not be dispensed with entirely, and in addition to that, the loans will be made only to those enterprises which will be well managed and which have a promising future. I should expect that the private lending institution will be very happy to cooperate in this program. On the other hand, in those unusual cases where the private bank will not make the loan, the borrower can apply directly to the Reconstruction Finance Corporation.

Mr. BURGER. As I understand your bill, Senator, it is designed to make long-term capital available to established businesses which certainly are in need of such aid.

Senator LUCAS. That is correct.

By long-term capital we mean loans which can be paid back over a long period of time. Banks and other private lending institutions which are willing to make loans to independent small-business enterprises usually require that these loans be paid back over a short period.

My bill directs the RFC to encourage private banks to make loans for periods longer than 10 years. This should be a real benefit to many small-business men.

Mr. BURGER. Your bill, Senator, will also make capital available for new enterprises, will it not?

Senator LUCAS. Yes, it will.

This bill is intended to serve a threefold purpose. It will make long-term capital available to established business enterprises. It will provide a source of loans for the establishment of new enterprises, and it will assist those newly established business ventures which have such a difficult struggle to survive during their early stages.

Mr. BURGER. I agree with you that new business enterprises during their infancy need considerable help. Twenty-six percent of all new businesses undertaken each year are discontinued before the year is over.

Senator LUCAS. On that same point, surveys by the Department of Commerce have shown that just about as many business enterprises fail each year as are started. In other words, the total number of business enterprises in America is standing still.

If we could succeed in cutting the number of these failures in half, we would double the total number of business enterprises in the United States within a period of 20 years. It seems to me that this would be a worthwhile goal; our population has doubled in the last 50 years, our business activity must keep pace. In my opinion this is the way to attain full employment, and this is the way to attain a sound Government fiscal policy and at the same time lower taxes.

Mr. BURGER. Senator, a matter which is of serious concern to independent businessmen in the United States is the tendency for large business firms to grow larger while small independent business enterprises are rapidly disappearing. If this tendency keeps up, we may someday find that there is no place left for the small independent businessman.

Senator LUCAS. I would say, Mr. Burger, that the disappearance of independent small businesses in America would be the last thing that any of us would want to see happen.

We never want to arrive at the point when an ambitious young man or woman cannot start his own business with a fair chance of succeeding. One of the main reasons why small business enterprises are having a difficult struggle while larger businesses are growing even larger is the fact that the little independent businessman is unable to get adequate financial help in times of need.

Under my bill the small-business man who would otherwise sell out his business to a larger firm will be able to get financial aid. Also under this bill the number of healthy independent small-business enterprises in America would steadily mount as financial aid would be given in time to prevent the failure of many new enterprises during their early stages of development.

Mr. BURGER. In conclusion, Senator, I think we could say then that your bill will strengthen existing business enterprises and will encourage the creation of new ones. Rather than burdening the taxpayers, it will stimulate employment and business activity which in the end will substantially benefit everybody.

Soviet Expansionism in Europe and Asia Since 1939

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 5 (legislative day of Wednesday, March 29), 1950

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a lecture delivered by William C. Bullitt at Georgetown University on March 31, 1950, entitled "Soviet Expansionism in Europe and Asia Since 1939."

Mr. Bullitt has had a long and honorable association with the Department of State. During his many years as a representative of this Government in the State Department he has held the following positions: Assistant in Department of State from 1917 to 1918; Attaché to American Commission to Negotiate Peace from 1918 to 1919; chief of special mission to Russia in 1919; special assistant to Secretary of State in 1933; member of American delegation to World Monetary and Economic Conference in 1933; Ambassador to Russia from 1933 to 1936; Ambassador to France from 1936 to 1941; Ambassador at large from November 1941 to April 1942.

Ambassador Bullitt has spent considerable time in China and is considered one of America's best authorities on Chinese conditions and political trends. Bullitt is a good Democrat and was a close associate of President Roosevelt during most of his first three terms. Unfortunately, however, it seems Mr. Bullitt's counsel is neither sought nor welcomed by the Truman-Acheson high command.

Mr. President, I have received from the Public Printer an estimate saying the address will cover two and three-quarter pages of the CONGRESSIONAL RECORD, at a cost of $225.50.

There being no objection, the lecture was ordered to be printed in the RECORD, as follows:

SOVIET EXPANSIONISM IN EUROPE AND ASIA SINCE 1939

Soviet expansionism springs from the Communist creed: The Marx-Lenin-Stalin creed which denies God and claims to be based on science. It attributes all evil to private ownership of the means of production. It teaches that the establishment of Communist dictatorship throughout the earth and the abolition of private ownership of the means of production will end all war and so improve the nature of all men in all nations that the state will wither away, and all men will live without a state in perfect freedom and happiness. This is the utterly unscientific faith which, in the name of science, Communist-controlled governments teach as absolute truth to the children they control. They prepare the children to live and, if need be, to die for it. A large percentage of the children, having no other faith taught them, become believers in the Communist creed, and, as Communist believers, offer their lives for their faith as gallantly as did the early Christians. They believe that they are fighting for the emancipation of all humanity from all evil. They think they serve eternal truth. The Communist Party, to them, is a union of the faithful. Their old testament contains the books of Marx and Engels; their new testament, the works of Lenin and Stalin. Since the highest moral goal, according to their creed, is to achieve the destruction of the state following the establishment of Communist dictatorship throughout the earth, the highest moral duty of man is to promote such dictatorship. This supreme moral end, they believe, justifies all means for its achievement, including the pledged work given and broken, character assassination, torture, murder, and war. In the words of Lenin: "It is necessary * * * to use any ruse, cunning, unlawful method, evasion, concealment of truth. * * * It is inconceivable

that the Soviet Republic should continue for a long period side by side with imperialistic states. Ultimately one or the other must conquer. Meanwhile a number of terrible clashes between the Soviet Republic and the bourgeois states is inevitable."

The dynamo of Soviet expansionism is the Communist creed. Many older Communists become skeptical and disillusioned. But they do not dare to express disbelief. The penalties are too terrible. So the old, however skeptical, render lip service. But the young believe. And while the old die off, the young come on forever. In consequence, so long as mighty races and resources are controlled by Communists, there will be no peace in this world. The aim of the Soviet Government and the other Communist-controlled governments will continue to be the conquest of the world for communism. The Communists will not stop. They can only be stopped.

Stalin sits in the Kremlin with members of the Politburo, who compose his planning staff for the conquest of the world. He prepares his attacks on a world scale as carefully as the commander in chief of an army prepares plans for his advances. He decides when and where to strike, and what forces will be needed to seize his objective. He is a careful and crafty leader who never takes great chances. He always remembers that the physical strength of the Soviet Union is the most important factor in the spread of communism, and he does not risk destruction of that primary source of strength.

In 1939, Stalin controlled about 170,000,000 persons. Today he directs about 800,000,000. The chief methods which he has employed in making this extraordinary advance toward control of the entire human race have been the following:

First. Easy war. For example, 17 days after Hitler had attacked Poland in 1939, when the Polish armies had been disrupted, Stalin attacked Poland, and seized all eastern Poland. Similarly, in the Far East, after we had pulverized the military resistance of Japan, Stalin, only 4 days before Japan surrendered, declared war on Japan and seized Manchuria.

Second. Occupation by the Red army and gradual imposition of absolute Soviet rule. This was the method employed from 1945 onward in Poland, Rumania, Hungary, and, with slight variations, in Czechoslovakia. Its effectiveness is demonstrated by the simple fact that Stalin has now been able to install as commander in chief of the Polish Army a marshal of the Soviet Union.

Third. The method of the camel's nose. You all remember the old story of the camel who was cold one night in the desert and put his nose under his master's tent and persuaded his master to let him keep it there. Soon afterward, the camel was inside the tent and his owner was out in the cold. That method in 1940 was used by Stalin in taking over Estonia, Latvia, and Lithuania. First, under threats of war and promises of peace, he persuaded the governments of those three little Baltic countries to accept the presence of Soviet garrisons at certain strategic points. The Soviet soldiers behaved themselves well, and many Balts believed their prospects for survival were good. However, when Stalin considered that the moment had come to close his hand on those countries, he closed it. He murdered or deported to death at slave labor his political opponents of all classes. He finally reduced his victims to a terrorized mass of despairing individuals whom he then compelled to go to booths and vote for Soviet-chosen candidates under penalty of losing their bread cards which were nothing more or less than permits to live.

Fourth. Use of local Communist movements in areas where Communists have been strong enough to organize armed resistance to existing governments. The foremost example of the success of this method is, of course, China. By turning over to the Chinese Communists all the arms captured from the Japanese Army in Manchuria; by sending a few generals who were masters of strategy and tactics to plan the attacks of the Chinese Communists, Stalin succeeded in bringing the whole of continental China under Communist control. When he attempted to use the same method in Iran and Greece he met such determined opposition from the United States that he allowed his local agents to be defeated—temporarily at least.

Fifth. Communist control or infiltration of nationalist independence movements in colonial countries. At the present moment, Stalin is advancing by this method in Indochina and at other points in southeast Asia.

Sixth. Psychological warfare.

Under this heading must be included two different methods of deceiving victims.

A. The pledged word of the Soviet Union given and broken. Stalin lulls his prospective victims to sleep by entering into all sorts of pacts and agreements with them—and breaks the agreements as soon as it becomes convenient for him to do so. Stalin's violations of the most solemn international agreements have exceeded in number similar violations by Hitler.

B. The deception of naive government officials in all countries. We do not have to go further than our own country to observe Stalin's notable achievements in this domain. Quite aside from Soviet agents in our Government departments and atomic-energy organization, we have had in Washington and throughout the world a number of Government officials who were not Soviet agents but served the Soviet Government as effectively as if they had been Soviet agents. You will all recall that from 1942 until 1947 our Department of State was bamboozled into treating the Soviet Union as a peace-loving democracy. Officials of our Government so described the Soviet Union in a long series of documents.

The Yalta agreements—including the secret one by which we promised Stalin control of the great Manchurian ports of Dairen and Port Arthur and the Chinese Eastern Railroad—were signed during that period. They were one of the greatest triumphs of Soviet psychological warfare. Had we acted in accord with the national interests of the United States and of our faithful ally China, we would have done everything in our power to prevent the Soviet Union from entering the war against Japan. But our leaders had been bamboozled into believing that the Soviet Union would work with us cordially to produce a world of liberty and peace, and in addition had been fooled into believing that we would need Soviet help to defeat Japan. So we secretly sponsored Soviet domination of Manchuria and enabled Stalin to arm the Chinese Communists with the vast armaments of the Japanese armies.

You will recall that officials of our Department of State had also been persuaded by Soviet propaganda to believe that the Chinese Communists were "mere agrarian reformers who had no connection with Moscow." Our Government, acting on their advice, attempted to compel the Chinese Government to take Communists into the Government, and when Chiang Kai-shek refused to do this, cut off all military supplies to him for a period of nearly 2 years. You will remember that we refused his repeated pleas for a top-rank American general to organize the defense of China in the same manner that top Soviet generals were organizing the attack on Chinese independence. Thus we allowed China to slide into Stalin's hands.

Similarly the Yalta agreement with regard to Poland resulted in the present absolute control of Poland by the Soviet Government.

Much ink has been used by apologists for the Yalta agreements in an attempt to prove that what was wrong was not the agreements themselves but the fact that the Soviet Union did not carry out the agreements. This is as if a banker who had been appointed trustee of the fortune of a child should place the funds entrusted to his care in a Ponzi get-rich-quick scheme, and then when the money was lost plead that the trouble was not with the trustees—who accepted Mr. Ponzi's promise to pay 200 percent per year—but with Ponzi's failure to carry out the agreement. The people of the United States hire officials to work in the Department of State because they need experts to handle complex world questions. The officials of that Department are trustees of the vital interests of the American people, and the most contemptible excuse that can be offered by or for them is that they meant well, but were "played for suckers."

There is a great moral difference between traitors and Soviet dupes. It is the same difference that is recognized in law between a man guilty of murder and a man guilty of manslaughter. In the case of manslaughter there is no intention to commit the crime. But in both cases the victim ends up dead. Soviet dupes may do as great harm to the United States as Soviet agents.

Seventh. Infiltration of respected organizations: One of Stalin's most effective weapons to reduce resistance to his attack is, of course, infiltration of educational institutions, scientific societies, welfare organizations, and trade-unions by Soviet agents. He managed to use this weapon so effectively in both France and Italy that leadership of the great trade-unions of both of these countries was seized by the Communists and for a time it seemed that both countries might be hopelessly paralyzed by Communist-led strikes. At the present moment the non-Communist members of the trade-unions in France and Italy have set up their own organizations, but the Communist-led unions are still able to organize strikes of huge dimensions for purely political purposes. Fortunately for our own country, although for a time some of our labor leaders were as deceived as was our Government with regard to the Communists, our great trade-unions have either purged their ranks of Communists or are in the process of purging them. Stalin is having little success in our trade-unions, and I think we should congratulate ourselves on the patriotic qualities of our top labor leaders. I wish I could say as much about our professors, some of whom appear to be too educated for their brains.

Eighth. The final weapon employed by Stalin to disintegrate opposition to Communist advance is fear. Now that Stalin has atomic bombs and plenty of bombers to deliver them to any spot in Europe, Asia, or North America; now that he has China as an ally and is increasing his military power much faster than we are increasing ours; his propaganda has taken a new line—the line of warning his opponents of all classes in Europe and in Asia that power is on his side and that time is on his side, and that unless they desire to meet the fate which he accords to defeated opponents, they had better leave the camp of the United States and join the Soviet side.

The fear which he is thus able to engender has been vastly increased by revelation of the methods which are now used by the Communists to break down and destroy human personality. You have all read recently in the newspapers Shipkov's statement of the relatively simple methods used to break him down and force him to make a false confession to the Bulgarian Communist authorities. Far more sinister and horrible pressures are used when the individual presents more resistance. The final method is that of narcohypnosis. The victim in that case receives quantities of drugs until he can be hypnotized so deeply that he can be deprived of all memory of the actual facts of his past life and made to believe in a new set of facts invented by his hypnotizer. Human

personality can thus be totally changed. No man can any longer say that he is master of his fate or of his own actions and thoughts. If he falls into the hands of the Communists, he can be reduced to a puppet with a new personality invented by his hypnotizer. This is a final horror—an unexampled triumph of satanism. To die in battle is nothing compared to the living death of personality under narcohypnosis. Recently a French lady said to me: "We are all of us enjoying ourselves as much as possible in Paris since we know that within a few years we shall either be destroyed by Soviet atomic bombs, or raped, or hypnotized into new personalities." That is the state of mind which is growing in western Europe.

We have now glanced at the Communist creed which underlies Soviet expansionism, and at some of the methods employed by Stalin to achieve world conquest. Let us now look briefly at the attacks which armed Communists are making at the present moment.

As we have already noted, they are advancing by open warfare in Indochina, or—to be exact—in the eastern portion of Indochino which is known as Vietnam. The war in Vietnam is one of the saddest that has ever been fought, for three-fourths of the troops of Ho Chi Minh, the Moscow-trained leader of the Annamites, who are fighting the French and the forces of the Emperor Bao Dai, are not Communists but simple patriots who believe that they can achieve complete independence only by throwing the French and Bao Dai into the sea. Yet, in truth, the only result of such a victory would be that the Annamites would exchange the yoke of France, which has now become relatively light, for the terrible yoke of Stalin.

The French, 3 years late, have given Vietnam "independence within the French Empire," retaining for themselves control over foreign relations and military affairs. To us, this seems a limited, almost nonexistent form of independence. Yet, if the French were to withdraw now from Vietnam, the country would collapse at once into the hands of the Communists. This is so because of the failure of the French to train Annamites for high administrative and military posts. The French reserved those posts for themselves. They never built up in Vietnam a native civil service comparable to the civil service which the British built up in India. In consequence, Bao Dai, if left to his own resources, could not find the man to staff efficiently the military and administrative services of his country.

For a period, the Annamites, who are highly intelligent as well as patriotic people, will be obliged to rely on the advice and assistance of foreigners of some sort. They would like to have Americans instead of French running their army and their administration, but no American speaks their language. The secondary language of Vietnam is French, and so few Americans of first-rate quality speak French adequately that it is hopeless to expect that thousands of efficient, French-speaking Americans can be found to go to Vietnam. The Annamites would also like to have American troops replace the 130,000 French troops now resisting the forces of Ho Chi Minh. Quite aside from other considerations, we have no such number of troops to spare. And we should be thankful that the French Army is fighting Ho Chi Minh in Vietnam. They will probably have to meet stronger attacks in the near future. For the Chinese Communists have now reached the borders of Vietnam and are passing arms and munitions to Ho Chi Minh.

In consequence, unless Indochina is to fall into the hands of Stalin, we shall have to work with and through both Bao Dai and the French. If we fail to do so because some State Department dupe of Soviet psychological warfare takes the position that we must not give help to Vietnam until all the French shall have left, we shall merely be handing the country by default to the Communists.

If we let Indochina fall, Burma, Siam, and British Malaya—with its vast production of rubber and tin—will also fall. Then it will be India's turn.

At another point, the Communists are making small attacks preparatory to a great attack. The Chinese Communists for some time have been attempting to seize small islands on the way to the great strategic island of Formosa. Formosa is still being held by the Chinese Nationalist Army which, just 2 weeks ago, gave proof of its good morale by seizing a port on the mainland. If the Chinese Communists should capture Formosa, Stalin's forces would be within 250 miles of the northern Philippines. It was from Formosa that Japan attacked and captured the Philippines. Our Joint Chiefs of Staff, headed by General Bradley, pleaded with President Truman to send munitions and equipment, as well as economic aid to Formosa, and a few American officers to advise regarding defense. Secretary of State Acheson opposed our military leaders, and persuaded President Truman to decide that we would continue to give no support to the Nationalists, do nothing toward preventing the fall of Formosa. That is our present policy. For the Philippines, the Department of State is preparing another Bataan.

Recently Secretary Acheson announced that we must wage total diplomacy. And in San Francisco he intimated that if the Chinese Communists should commit aggressions against the countries of southeast Asia, they would find themselves in trouble with us. But his total diplomacy does not include Formosa. He and his closest associates and friends have a vested interest in their own mistakes with regard to China. In any European parliamentary democracy, a minister for foreign affairs who had tossed a great ally like China into the hands of Stalin would have been dismissed from his post. Mr. Acheson retains his office and turns his back on Formosa.

In the Near East, Iran, with its huge oil production which plays such a large part in British economic life, is again threatened by Soviet-directed revolutionaries of the Tudeh Party. They have a fertile field in which to work. The poverty among the peasants of Iran is so grinding that they are close to revolt. Unless the Government of the United States moves rapidly to alleviate the suffering in Iran, Stalin may soon add that ancient country to his long list of satellites.

These, for the moment, are the areas in Asia where Stalin is pressing his advance strongly. But we cannot congratulate ourselves that even the situation in western Europe is satisfactory.

In Italy, more than 20 percent of the workmen are unemployed, and the Communists, who gathered one-third of the votes at the last elections, are gaining in strength.

In France, the Government is far weaker than any French Government before the Second World War, and its entire apparatus is riddled with Communists. Even the head of French atomic research is a Communist.

Great Britain is staggering toward another financial and economic crisis. In 1945 the British voted themselves a higher standard of living than, under existing world conditions, they could possibly earn. Today they can neither feed themselves nor defend themselves.

Western Germany, under the pressure of unemployment, is beginning to listen to the Soviet propaganda which says: Side with the United States and you will have unemployment, underfeeding, shortage of raw materials, a divided country, and, finally, Soviet atomic bombs on your cities; side with the Soviet Union and you will have all the wheat and raw materials you want, no unemployment, and a united Germany including the part that is momentarily Polish. Pastor Niemoeller, much admired by Americans, has now declared himself in favor of a united Germany even at the price of Communist rule.

Moreover, the whole of western Europe is without defense, and everyone in western Europe knows it. Its cities cannot be protected against Soviet atomic bombs except by our Air Force, which today is not strong enough for the task. To oppose the 125 Soviet divisions, the French have 6, the British say they can furnish 1, the Belgians 1. To have a chance to stop the Red army for a few months, the European democracies would need from 50 to 60 divisions. Modern equipment for such a number of divisions would cost from $10,000,000,000 to $20,000,000,000. And most military authorities agree that no western European defense system can be effective unless both the western Germans and the Spaniards are included in it.

When we began to give Marshall-plan aid, and when we signed the Atlantic Pact, our object was to make western Europe a strong ally. We have succeeded only in keeping alive 17 picturesque, competing countries which cannot feed or defend themselves. If they would unite their economies by entering a European federation, they would be on the path to strength. But their governments refuse to take any serious steps toward federation and our Government is making no effective effort to move them toward federation. They feel confident that, even after 1952, we will not stop our doles to them. And, indeed, we do not dare to stop for fear that they will all collapse into the hands of Stalin and be organized as Soviet satellites for his final attack on us.

When will such an attack come? To that question I can, of course, give no definite answer. But I can give you my own opinion and the reasons for it.

Today Stalin has atomic bombs and at least 35 long-range bombers capable of carrying them to any spot in the United States. We have no radar warning net to detect the approach of his planes. We have only a fraction of the number of pursuit planes needed to make effective use of a warning net. The authoritative Finletter Commission in 1948 recommended as a minimum for national security 70 air groups. We have 44. Stalin's total air force outnumbers ours by about 3 to 1. His annual production of war planes is about three to our one. He has 125 army divisions to our 10—among them, 30 armored divisions to our 1. In addition, he has approximately 270 submarines—about 30 of the latest type against which we have not yet produced effective counterweapons. Furthermore, thanks to his agent Fuchs who transmitted to him all our secrets for production of both A-bombs and hydrogen bombs, he may be ahead of us in production of H-bombs.

Some officials in Washington who have access to most secret information believe that Stalin will attack us this year. They argue that by August 1950 he will probably have 50 A-bombs, enough to destroy our great cities and our atomic production plant, and thus prevent effective American counterattack. But my opinion is that Stalin will not launch a shooting war until he is certain that he can defeat us easily. As I have said before, he is a cautious and crafty leader, who strikes only when he feels sure of quick victory. This year his first surprise attack might not be successful. We might be able to strike back effectively. Therefore it seems likely that he will not start bombing in the near future, but will go on increasing his military strength faster than we are adding to ours, and seize more peoples, resources, and strategic areas, until he feels that his power is irresistible. We are allowing time to run on his side, and he knows it.

What then is the real state of our defenses against Soviet expansionism? Our own military strength is falling behind the growing military strength of Stalin. Asia is slipping into Stalin's hands; the Near East is threatened; Europe is defenseless. The Soviet atomic bomb threat to our homes, our families, and our country is increasing each day. The Communists are advancing; we are retreating. They are on the offensive; we are on the defensive. And no war, hot or cold, was ever won by forces which remained on the defensive.

Why are we doing so badly? Because our Government has never faced the fact that Stalin will not stop, but can only be stopped. Our President has not understood that an over-all plan for defense not only of our own country but also of those countries which still remain outside Stalin's domain is essential. Not so long ago he said, "I like old Joe." In consequence the systematic advances of the Communists, executed by carefully planned attacks, have been met for the most part either by American retreats or spasmodic and inadequate defensive efforts.

Time is running against us; but at the present moment our Government is behaving exactly as the French Government behaved from 1936 to 1939. In that period, when the Nazis were preparing for war and working 60 hours a week, the French cut their working hours to 40 a week. When the Germans were producing 700 to 800 planes a month, the French cut their plane production to 50 a month. They did this for much the same reason that we are now reducing our expenditures for our military forces and for support of our friends throughout the world. The people of France, like all other peoples, wanted a higher standard of living and leisure. They did not realize that a higher standard of living would soon give them a higher rate of dying. In 1940, Hitler destroyed the independence of France.

Today we should be living hard, as our forefathers lived hard in the days of Valley Forge. We are living soft. Our President has staked his political future on a program of hand-outs for crop support, housing, education, and other projects which appeal to groups of voters. To get more tax money for the hand-out program which produces votes, he has cut down the defense program which might produce survival. Our tax money is being used to buy surplus potatoes instead of jet planes.

In consequence, the balance of power in the world is swinging rapidly in favor of the Soviet Union. And our President, who is an entirely patriotic American, has not yet found within himself the intelligence and the spirit to take the offensive effectively against Soviet expansionism. Unless he will take the offensive, unless we—the American people—will let him know that we do not want to hear from him what we can get from our country, but do want to hear from him what we can give to our country, we shall suffer the fate that France suffered in 1940.

We restored the independence of France. There is no nation standing behind us to restore our independence.

Is it too much to hope that we will find within ourselves the courage and the will to save our country and our Christian civilization? It is not too much. It is late—very late. It is not too late. We can begin today to take the offensive. We can increase vastly our expenditures for national defense and cut our expenditures for hand-outs. We can take action to prevent Communist conquest of Formosa. We can help the Annamites and the French throw the Communists completely out of Indochina—as we helped the Greeks throw them out of Greece. We can achieve the federation of western Europe and make that federation a strong ally. We can give effective economic aid to Iran. We can help the Albanian exiles to rescue Albania from the Communists and thus give new spirit to all the enslaved peoples behind the iron curtain. We can give far greater aid than we have been giving to the resistance forces in all the Soviet satellite countries. We can stand up with force to the threat of the Communists in eastern Germany who have had the effrontery to announce that on May 28 they intend to arrange an invasion of west Berlin by Communist-led bands from east Berlin.

Those Americans who are still befuddled by Soviet psychological warfare will argue that such a course of action would produce an unbridgeable chasm between the free world and the Communist world. That chasm already exists. It was dug by the Communists. There is no bridge, and there will be no bridge. We face today, not a struggle for security, but a struggle for survival. However much we all wish and pray for peace, this is the hard fact which we cannot get rid of by wishful thinking. We can stop Stalin only by keeping him constantly confronted by superior force and by daring to use that force whenever and wherever he commits direct or indirect aggression. Today we are the last strong power on the side of liberty and Christian civilization. We have to find within ourselves the same courage and will that our forefathers found at Lexington and Concord. We have to be ready once more to give all that we have and all that we are to save the greatest adventure in human freedom that this earth has known—our America.

Our Older Workers

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent that the following editorial from the Boston Daily Globe of April 1, 1950, be inserted in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR OLDER WORKERS

Just as a matter of fair play, men and women who remain in the labor market after they have attained 65 years of age should be relieved of paying the 1½-percent tax for old-age and survivors Federal insurance. Bills to bring this about have been introduced by Senator BRIDGES, of New Hampshire, and Congressman ANGIER L. GOODWIN, of Melrose.

The subject grows increasingly important as the percentage of aged persons able and willing to work grows in this country. It would be an incentive to them to continue to give their services and also to employers, who would also be relieved of the tax, to hire them.

At present a worker over 65 who earns more than $14.99 a month has his benefits suspended. Later when he does give up work his social-security payments are increased by what he has earned after 65. Congress, in considering the legislation, should make certain the untaxed earnings are credited. The change would then be 100-percent meritorious.

AMA Lobbyist Prefers Charity to Security

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. BIEMILLER. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an article by Jonathan Stout which appeared in the March 11 issue of the New Leader:

AMA LOBBYIST PREFERS CHARITY TO SECURITY

(By Jonathan Stout)

WASHINGTON, D. C.—There appears to be an overproduction of representatives in Washington. Representatives of the people are not confined solely to Congressmen. There are other representatives, but most people do not realize that.

For instance, last week three gentlemen came to Washington. They said they were representatives of the 144,000 physicians who belong to the American Medical Association; and they told a visibly impressed group of important Senators what kind of legislation the people of America ought to have.

The occasion was a hearing before the Senate Finance Committee on the proposed bill to improve the social-security law.

One wondered why the American Medical Association and its three medical spokesmen should interest themselves in the nonmedical question of social security. But the answer was soon forthcoming. The bill before the Senate includes a new social-security provision to establish what amounts to pension payments for people who, through fate or accident, become totally disabled and can never work again or earn a living. Essentially, this is an extension of the idea that old age is an unavoidable disease all of us eventually catch—if we live that long; that it prevents many people from earning an independent livelihood; and that it makes many old people burdens on their families if not, indeed, wards of charity.

The point of the logic is that old age is not only the only disease that disables wage earners and leaves them helpless. Some diseases—unlike age—do not wait until we are old before they incapacitate people permanently. There is, for instance, the person who contracts an incurable cancer. If such a person is past 65 he can get an old-age pension to help him meet his problems with self-respect.

But what if such a person is only 35? Should he be shrugged off because he is unable to meet the only acceptable criterion of unemployability—old age?

President Truman wants to improve the social-security laws to provide pensions for persons who become permanently disabled at any age, by treating them the same way as if they already had reached the retirement age of 65. The three doctors from the American Medical Association came to Washington last week to tell the senatorial committee that they don't think such a provision would be good for the American people.

One of the three was Dr. R. L. Sensenich, of South Bend, Ind., who is the immediate past president of the American Medical Association. Whether the general public would approve what he said is a moot point; but more pertinent is the question whether the 144,000 physicians in the AMA will think Dr. Sensenich expressed their views.

Dr. Sensenich said the board of trustees of the AMA was against permanent-disability

insurance. "Total and permanent disability," he maintained, "is often a condition over which the individual who is disabled and his physician may exercise control. This subjective control which may be exercised by the individual multiplies the opportunity for malingering."

Now this sounds very much as if Dr. Sensenich were implying that doctors and their patients might go into cahoots on a widespread scale to do a lot of cheating—which is a startling implication for an AMA leader to make. The implication is also left that the board of trustees of the AMA—or, at least, their official spokesman—have a low opinion of people generally, including the 144,000 physicians they claim to represent.

Still another thought is expressed in Dr. Sensenich's statement. According to him, it seems to be the AMA view that, rather than let one malingerer get away with anything, it is prepared to let honest men suffering from some permanent disability to go unaided through the physical and spiritual miseries of their helplessness.

It made some of us wonder not only what kind of doctors these are, but what kind of people they are. It seemed incredible that this could really be the opinions of the 144,000 physicians for whom Dr. Sensenich claimed to speak.

Dr. Sensenich later undertook to answer the questions he had raised. The result was hardly fortunate. Dr. Sensenich warned about what he called the high additional percentage of national income to be committed to social programs by the enactment of the extensions in the social-security bill. Dr. Sensenich, in short, was expressing concern over his pocketbook.

One might have accepted medical objections from Dr. Sensenich. But he wasn't really expressing medical objections at all. What he said might have come from a typical representative of a group of manufacturers, brokers, bankers, or any well-to-do group.

Once that became apparent, a lot more became clear. For instance, at another point Dr. Sensenich said:

"The American Medical Association recognizes the need for assistance to the disabled needy, and feels that this aid should always be administered on a local level. Financial assistance to the locality should only be advanced from State or Federal sources when a need can be clearly shown."

The Senators listening to him asked Dr. Sensenich what he meant by that. Dr. Sensenich explained:

"With reference to the complaint that in those areas where medical care is provided by a governmental agency the need must be demonstrated, that seems to be a very painful matter to a certain group who constantly say that it should be set up in such a way that it is a matter of right, and that the matter of determination of need is a very painful and undesirable thing. * * * I am not so much concerned about this need definition. I don't think it should be embarrassing to the individual and in any way harmful."

In plain words, it is not going to embarrass Dr. Sensenich if a worker becomes a charity patient.

Dr. Sensenich and his colleagues came to Washington last week, speaking officially for the American Medical Association, to tell us that he and his fellow fat cats disagree with the idea that social security is a right, not a form of charity. They don't seem to think it important to preserve the self-respect of people. So they see nothing wrong with requiring people to declare themselves paupers and proving their need before they can get help.

The Plea of Puerto Rico

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the RECORD a statement prepared by Hon. Luis A. Ferre, vice president, Ponce Cement Corp., and Porto Rico Iron Works, Inc., which was read at a public hearing of a subcommittee of the Committee on Education and Labor of the House of Representatives held at Ponce, P. R., on the 23d of November 1949.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE PLEA OF PUERTO RICO

(By Luis A. Ferre, vice president, Ponce Cement Corp. and Porto Rico Iron Works, Inc.)

Gentlemen, as a member of the Puerto Rico Statehood Party, who polled 180,000 votes during the last election as candidate for the post of Resident Commissioner in Washington, I have followed with great interest your experiences in Puerto Rico during the last few days and have noted your statements of surprise as to the dire need in which more than 2,000,000 American citizens find themselves in Puerto Rico, and your repeated assurances that you intend to do everything you can to help us out of this situation. As a representative of my party I wish to express to you our sincere appreciation for your generous interest in our problems.

However, it is necessary that we point out to you that our problem is one that requires more than a kind interest on your part and that of Congress to extend to us this or that measure of help, in a generous spirit of fair deal, which is typical of America. The root of our problem goes deeper and requires an equal deal for the American citizens of Puerto Rico which will give us the equality of opportunity to which every American citizen is entitled, to be able to solve his own problems by his own effort and through his own enterprise under American principles of government.

The Governor of Puerto Rico, Mr. Luis Muñoz-Marin, has indicated that Puerto Rico has recently changed its attitude from Operation Lament to Operation Bootstrap. I believe—and your statements seem to show that you have arrived at a similar conclusion—that we, American citizens of Puerto Rico, have been doing an honest effort to improve our lot with the limited resources at our command. But you will agree with me that we cannot hope to go very far in solving our problems if we are to be restricted to pulling ourselves up by our own bootstrap. You all are practical men and are familiar with the physical impossibility of such a feat. What we must be given is the opportunity to start Operation Equal Deal, which will give us the same opportunities as are enjoyed by the American citizens of the 48 States of the Union to solve our own problems.

The true reason for the great misery you have seen around in Puerto Rico is twofold.

In the first place, Puerto Rico was a poor island when in 1898 is was transferred from Spain to the United States. At that time total island exports and imports amounted to $8,500,000 and $9,000,000 respectively, and the exchange of currency from Spanish pesos to American dollars amounted to $3,077,485 in 1900. In the year 1948–49, exports to continental United States were $195,000,000 and imports from continental United States were $326,000,000—a total trade of over $520,000,000, while bank deposits amounted to $270,000,000 in June 1949.

Of the above imports amounting to $326,000,000, $15,000,000 were automobiles, which came from the State of Michigan, here represented by the chairman of the committee, Congressman JOHN LESINSKI; $10,600,000 were pork products and $8,500,000 lard, coming from the State of Illinois, here represented by Congressman H. VELDE; $13,700,000 were dairy products from the States of Illinois and Iowa; $20,500,000 were building materials coming substantially from the State of Pennsylvania, here represented by Congressmen A. B. KELLEY and CARROLL D. KEARNS, and $8,600,000 corresponded to gasoline imports from corporations operating mostly in the State of New Jersey, here represented by Congressman CHARLES R. HOWELL.

In relative terms American citizens of Puerto Rico have made a great progress in 50 years under the American flag and for this opportunity they are happy and grateful to the people of continental United States. But how do we still compare in the development of our economy with the 48 States of the Union? In this respect we are still way behind the poorest State of the Union, Mississippi, since our per capita income is approximately $250, while Mississippi's was $555 in 1946 and the average for the Nation is over $1,200. Of course, you have had first-hand information of this condition by your direct observation of our slums.

The explanation to this discrepancy in income gives the clue to the second reason for our undeveloped condition. The fact that our economy has been completely integrated with the economy of the United States to the extent that 95 percent of our commerce is with continental United States, while its development has been subjected to the arbitrary though benevolent regulation of Congress, without the rightful means to protect our interest when in conflict with other regional interest, gives the explanation for our inability to expand our economy to raise the standards of living of our 2,200,000 American citizens to the general average of the Nation. Members of Congress have been at times very kind and have always—as in your present case—been very receptive when they have had first-hand information of our problems. But in the give and take of congressional everyday business we have had no opportunity to protect our economy in the global manner it needs protection. And our economy and our progress have been stifled accordingly.

In this respect, a number of misconceptions have been paramount. Congress has felt satisfied because it has not extended the Federal income-tax law to the American citizens of Puerto Rico, and because Federal excise taxes from rum and other items shipped from Puerto Rico to continental United States, including customs receipts in Puerto Rico, are returned to the insular treasury. Congress has felt that these concessions are an economic aid to the island and they are justly so. However, how much do we lose in exchange for this advantage?

We do not receive full benefits of social security, nor do we participate in the proportion we would participate if we were a State of the Union, of Federal legislation such as rural electrification, rural roads, main roads, rivers and harbors, farm-support legislation, etc. Nor is the area of Puerto Rico included in the Federal blueprint for admin-

istering Federal aid in proportion to the unemployment situation under Mr. John L. Steelman's new program. Under this program it is proposed to funnel military and other Federal expenditures into areas where unemployment is in excess of the 6 percent national average, such as New Bedford, and Worcester, Mass., Philadelphia, and Scranton, Pa., San José, etc. Instead the Navy has just announced that two air bases in Puerto Rico will be shut down without considering that unemployment in the island is over 15 percent.

I am giving you below a tabulation of economic advantages and disadvantages of our present status and you will see that we are the direct losers.

TABLE A

Economic advantages under present status	$36,000,000
1. Federal income tax on $100,000,000 net taxable income	20,000,000
2. Custom receipts in Puerto Rico	3,000,000
3. Excise tax on rum shipments to continental United States	5,000,000
4. Excise tax on local rum and cigarette consumption	8,000,000
Disadvantages	40,000,000
1. Social security and benefits	28,000,000
2. Rural electrification	3,000,000
3. Secondary roads (1949 Federal budget $128,000,000)	3,000,000
4. First-class road (net direct loss $4,000,000)	4,000,000
5. Others	2,000,000

(If the Barden bill for Federal aid to education had become law we would then have lost an additional $14,000,000.)

During fiscal years 1946–47 and 1947–48 Federal aid to various States was as follows:

Florida, 2,300,000 inhabitants	$30,260,000
Oklahoma, 2,200,000 inhabitants	65,600,000
Louisiana, 2,500,000 inhabitants	30,124,000
Washington, 2,254,000 inhabitants	34,048,000
Illinois, 8,000,000 inhabitants	55,500,000
Pennsylvania, 10,000,000 inhabitants	86,500,000
Michigan, 5,200,000 inhabitants	25,592,000
Massachusetts, 4,600,000 inhabitants	47,190,000
Indirect loss of gross income:	
Price differential on 1,000,000 tons raw sugar from $6 to $9	60,000,000
500,000 tons quota limitation at $180	90,000,000
Limitation on sugar refinding	30,000,000
Insufficient tariff protection on needlework, etc	90,000,000
Insufficient tariff protection on pineapples, tobacco, coconuts, citron, etc	30,000,000
Total	300,000,000

Furthermore, though the American citizens of Puerto Rico do not contribute directly in the form of Federal income and excise taxes to the general fund of the United States Treasury from which social-security benefits and other appropriations are made, they do contribute indirectly, since by purchasing manufactured and farm products from producers in continental United States we pay in higher prices to maintain a fair return on their investments after paying Federal income tax and contributions to social security through pay-roll increases, while we have to sell our products in continental United States at prices that do not allow us to pay similar high wages.

You will point out that you are considering to correct this situation in part by extending social security to the American citizens of Puerto Rico and that you will do your best to see that we get a fair percentage of other future Federal appropriations, and we appreciate and thank you for your expressions of good will. But what guaranty do we have that a few years hence, when other men take your places in Congress, they will not, through lack of familiarity with the problems which you yourselves have observed, let things slide back so that the American citizens of Puerto Rico will not receive their due proportion of Federal aid?

Such a dependence on a paternalistic attitude from kind-hearted men is not the American way of doing things. Americans believe in a government of law, not a government of men, that is, in obtaining what is due them under a system of legal government that guarantees equal opportunities to all.

Furthermore, will the help that we can receive through this legislation be enough to solve our problems? We may receive from social security $28,000,000 a year. This amount is far from the minimum requirements of Puerto Rico to meet its many problems. According to the Columbia University report just published, $65,000,000 a year are required to give the minimum educational facilities to our 600,000 children of school age, of which number 300,000 are out of school, while $50,000,000 is the minimum required to supply the necessary building facilities. Our appropriation for education is $21,000,000 out of a general budget of $73,000,000. Furthermore, our housing problem requires about 50,000 homes with a total outlay of $200,000,000. And our industrial development needs investments of at least $500,000,000 to really make a difference.

Indeed, what is being considered now is simply a drop in the bucket and certainly justifies the expression "operation boot strap" which the Governor has used.

What must be done instead? I contend that the problem of the American citizens of Puerto Rico must be met with a massive attack, with courage, determination, and honesty. If we are American citizens, then we must be given the tools that our fellow American citizens in continental United States have to solve their problems; and these tools are equal rights under statehood. Why?

Our economy is principally dependent on sugar. Sugar means to us 60 percent of our income, and yet sugar is the only staple under the American flag whose production is limited, and whose price has been arbitrarily maintained below the average rise of the cost-of-living index.

Consider what would happen to the State of Michigan if its automobile production were reduced to 60 percent of its present output; or to Illinois if a similar reduction were ordered in its meat industry. And yet, none of those two activities loom as important in the economy of these two States as sugar does in the economy of Puerto Rico.

You will contend that sugar quotas also limit the production of sugar in the States. To this we answer that, in the first place, sugar is only 1.5 percent of the wealth production of Louisiana, 1 percent of Utah, 1 percent of Florida, 3 percent of the wealth production of Colorado, and that furthermore the quotas allocated to the sugar-producing States are such that they do not in fact limit their production because they have never been able to fill them. In the case of Puerto Rico, our shipping quota is 910,000 tons, while Cuba, a foreign country, has a quota of 2,229,000 tons, though our potential production capacity for export is 1,500,000 tons. A ton of sugar sells for $120. An additional sugar production of 500,000 tons would mean $60,000,000 additional yearly income to the island. Instead, we are forced to carry over this year 96,000 tons of sugar from the 1949 crop into 1950 with the resulting economic loss entailed.

By contrast the potato farmers of Maine obtained a subsidy of $61,000,000 for their excess potato crop last year, later sold at a nominal price to the alcohol distilleries. And Maine is a State with a total population of 847,000 as against 2,200,000 for Puerto Rico.

In addition, the price of sugar before price controls were released, was $4.20. When sugar was removed from price controls, Congress passed the Sugar Act ordering the Secretary of Agriculture to maintain the sugar consumption quota at a figure that would maintain the proper relation of the $4.20 price of sugar with the index of consumption increase after OPA was released. The index has gone up to 2¼ while sugar price today is $6. In accordance with the spirit of the law it should be $9. The proper increase in the price of 1,500,000 tons of sugar from $6 to $9 per qq. would mean an added income to the island of $90,000,000 per year.

Furthermore, we are restricted in the refining of our sugar to 110,000 tons. If we were allowed to refine all our sugar our income would increase by $30,000,000 a year.

This change in the sugar economy of the island would mean an additional yearly income of $180,000,000. With such an increase in production, the sugar industry could mechanize and could certainly meet the minimum wage of 75 cents which has just become law besides taking care of Federal income tax and of social-security contributions.

The above-described situation exists also in the needlework industry. We cannot pay the 75 cents minimum in this industry because reciprocal trade agreements have been negotiated with China, Switzerland, Czechoslovakia, the Philippines and other countries, reducing the tariff protection on such things as handkerchiefs, gloves, etc., in such a manner that to meet such competition we can only pay 20 or 25 cents per hour to our needleworkers. Are you surprised that we have slums now instead of the decent homes our workers could have if they worked in an industry that was able to offer them decent wages? The needlework industry which amounts today to about $30,000,000 a year could certainly increase to $120,000,000 if it were duly protected.

You may go through the rest of our farm and industrial products and you would find a similar condition with pineapples, tobacco, citron, etc.

What then is necessary to increase the income of the island by at least $600,000,000 a year in order to increase the average per capita income to $550?

We believe that an equal deal for the American citizens of Puerto Rico, so that they can protect their economic interests in that very place—Congress—where economic policies are established, is not only necessary but indispensable to the solution of its problems.

Only by having two Senators and six Congressmen who can be on the alert all the time and who have the power to protect our interests, can the American citizens of Puerto Rico give their economy the necessary impetus to solve their problems.

This was the right which the States of Delaware and New Jersey fought for during the Constitutional Convention in 1787, and it is the right which the States from which you gentlemen come fought for later, for all you

realized that only by having equal opportunities could you protect the interests of your people.

As to the fear which has been voiced in the continental United States of the possible migration of industries to Puerto Rico to the detriment of the interests and welfare of other States, the simple realization of the fact that the total labor force of Puerto Rico is only 600,000 workers while the number of gainfully employed persons in continental United States is approximately 60,000,000 proves the fallacy of such a statement. What risk of any substantial industrial migration is there to give employment to maybe 100,000 unemployed persons in Puerto Rico? Contrariwise, the gainful employment of the unemployed American citizens of Puerto Rico and the general increase in their wage rates, would mean greater purchasing power to buy automobiles from Detroit, pork products from Chicago, and manufactured products from New Jersey and Pennsylvania. The constructive and fair solution of the problems of Puerto Rico, will, as it has always happened when the wealth of other States has increased, reflect itself in more opportunities for work throughout the Nation.

On behalf of 2,200,000 American citizens of Puerto Rico, I request that you help Puerto Rico to receive not only the benefits of social security and other similar Federal legislation, but in addition the "equal deal" of statehood, with all its rights and all its responsibilities.

Medical Care for Needy Persons

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. HILL. Mr. President, we hear so much about controversy and disagreement in matters affecting health legislation that it is particularly impressive when all major health organizations join in urging on Congress that provision be made under the Social Security Act to provide medical care for needy persons.

Last summer the American Medical Association, the American Hospital Association, the American Dental Association, American Nurses' Association, the American Public Health Association, and the American Public Welfare Association joined together to form the Inter-Association Committee on Health for consideration of mutual problems. Dr. George F. Lull, secretary and general manager of the American Medical Association, in behalf of the Inter-Association Committee, released a statement regarding the committee action on this subject, which I ask unanimous consent to have printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The Inter-Association Committee on Health which met in New York on Saturday March 25, made public today a statement in regard to medical care for the needy. The Inter-Association Committee on Health is made up of representatives from the American Dental Society, the American Hospital Association, the American Medical Association, the American Nursing Association, the American Public Health Association, and the American Public Welfare Association. The statement which follows has been approved by the parent associations of all members of the committee:

"It is recognized that public-welfare departments are now handicapped in carrying out their existing responsibility to assure medical care, when needed and not otherwise available, to recipients of federally aided public assistance by the inadequate financial provision of the Social Security Act and its requirement that all aid be extended in the form of cash payments to the recipient. It is therefore recommended that the latter restriction be eliminated and that the agency administering assistance be authorized to finance the purchase of medical care in behalf of assistance recipients. In order to assure the quality of medical care thus purchased for assistance recipients and relate it to their individual needs, it is also recommended that its financing be accomplished through funds earmarked for that purpose rather than charged against the funds available for cash payments to individuals. The further view is expressed that any provision to finance medical care for assistance recipients should permit the administration of the medical aspects of such care by public-health departments and that such arrangements should have the support of these six organizations.

"Wherever the term 'medical care' is used in this statement, it is understood to include dental, nursing, hospital, and other health care as well as physicians' services."

Agricultural Policy

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "Food Allotment Program," delivered by the senior Senator from Vermont [Mr. AIKEN] at the Northeast Dairy Conference held in Washington, D. C., on March 31, 1950. I also ask unanimous consent to have printed in the RECORD an address entitled "Dairy Products and the Agricultural Surplus," delivered by Dr. John D. Black at the conference on March 30, 1950. I am informed by the Public Printer that the manuscript of Dr. Black's address will make 2¾ pages in the RECORD, at a cost of $218.67.

The addresses of Senator AIKEN and Dr. Black are an interesting and fruitful contribution to the general subject of our agricultural policy.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

THE FOOD ALLOTMENT PROGRAM

(By Senator GEORGE D. AIKEN, of Vermont)

For the last two decades, with the exception of a few years, the United States has been severely plagued by the twin problems of surplus food and malnutrition.

I don't use the words starvation or hunger because those are scare words and, as a matter of fact, the number of people suffering from actual hunger is only a small percentage of the whole.

On the other hand, the percentage of people suffering from malnutrition or underconsumption of foods necessary to an adequate diet is far larger than one would think.

While there is no way of actually determining the number of people in the United States who suffer from lack of a proper diet, yet we do have some figures that give an idea as to how many there may be.

During the month of December 1949 assistance was given to 2,700,000 persons through old-age assistance and survivors insurance.

Two million one hundred thousand were living in families where aid to dependent children was given.

One hundred thousand received aid to the blind and 1,300,000 were participating in general assistance programs, including State relief.

Therefore, this group receiving direct assistance of some kind totaled 6,200,000 persons.

We are also informed by the Census Bureau that in 1948 13,000,000 persons were living in broken families, with 54 percent of these families having an income of less than $2,500 a year.

Assuming some duplication by the groups receiving direct assistance and the broken family group, we can still safely assume that 10,000,000 people in the two groups do not have enough purchasing power to buy the foods necessary to maintain good health.

These two groups mentioned, however, are far from representing the total number of Americans whose income would indicate that they could not afford an adequate diet.

We can add to this number at least part of over a million disabled veterans or their families drawing pensions or disability compensation. There are possibly 200,000 retired and disabled firemen, policemen, State, and municipal employees and an unknown number of other persons living on fixed incomes which have depreciated in purchasing value during recent years. Besides those groups there are doubtless several million other low-income persons who are unable to buy the food they need.

It is indeed paradoxical that the number of persons who lack the means to buy nutritious food seems to increase proportionately as surplus foods pile up on the farms or are taken from the market by Government in order to maintain a living price for the farmer.

Of course, if the purchasing power of the farmer falls, the number of unemployed people in the cities becomes greater and the number of people who are unable to buy health-giving foods increases.

We have been trying and are trying now to maintain a healthy national economy through a farm price-support program. We are already finding out that support prices if held too high reduce farm income through necessitating sharp cuts in production.

We also know that when farm prices are held high and there is much less than full employment among consumers, there is more than a corresponding drop in consumption which, in turn, necessitates a still greater reduction in production on the farm.

We have also learned from experience that unemployment and lack of purchasing power in our industrial areas diverts the purchase of food from the high quality animal protein commodities, such as milk, butter, cheese, poultry and meats, to the lower cost commodities, particularly cereal products, thus creating still further unemployment among processing, transportation and distribution groups, as well as diminishing the market for grain.

At the present time, there is little indication that the problems of surplus foods and unemployment are getting any less acute. In fact, the only reason that they have not reached the critical stage before this has been the foreign assistance programs of our Government.

Most of us have favored aid to other nations, particularly the western European na-

tions. Now, we have reached the point where western Europe does not need our surplus food so much by reason of becoming more self-sufficient each year. We may look forward to a reduced export outlet for farm surpluses from now on.

We may look forward to a greater degree of unemployment and diminishing purchasing power in our industrial areas unless steps are taken soon to prevent it.

I have frequently stated that full employment for industry is a legitimate farm objective and conversely high purchasing power on the farm is an industrial necessity.

I have also held, and I do so now, that the farm problems of today cannot be solved on the farm.

What the cost of our efforts to maintain farm income through a price-support program may be is difficult to determine.

I would say that when all the cards are placed face up on the table it will be found that it is costing a billion dollars a year right now.

We are told that the number of unemployed in the United States has now reached a total of about five million.

It has been suggested that a solution lies in letting all our farm output go on the market at a low price level and then reimburse the farmer for the difference between the average price received and a high support level.

While this proposal might work in the case of certain commodities, at certain times, it would not be workable as a general policy for the simple reason that the cost of the program would fall heavily upon the taxpayers, and the most important and by far the largest source of tax revenue is the working people of America. Neither could we be sure that the commodities produced in heavy surplus would be the kinds most needed by consumers.

With mounting surpluses and increasing unemployment, there is no time to be lost in meeting the challenge head on.

We have learned several ways how not to meet the problem. We can no longer depend upon dumping surpluses overseas. We can no longer rely upon the destruction of food supplies to do the job, particularly in view of the rising tempo of consumer wrath. Finally, we have found that a severe restriction of production on the farm will only aggravate rather than alleviate our troubles.

There is, however, right at our front door, the solution we seek if we can only find a way to reach it.

That large element of our population that I mentioned in the beginning, the low income people of America, would prove to be an outlet for most of our surplus production if we can find a means of getting badly needed food into their homes.

Probably the dairy producers of America are more keenly aware of the possibilities of this outlet than almost any other group.

The milk producer remembers all too well those cruel days of the thirties when food spoiled on the farm and prices collapsed in the market place while untold millions of American citizens walked the streets in search of jobs and went hungry.

The dairyman remembers full well the start of the penny milk program which was the result of a desperate effort to find an outlet for milk which at one time reached the wholesale price of less than 2 cents a quart.

From that humble beginning, the penny milk program has been developed into the highly successful school-lunch program which today furnishes nourishing lunches to nearly 8,000,000 school children and in fiscal 1949 utilized among other commodities 245,000,000 quarts of milk served for drinking and 170,000,000 pounds of milk equivalent served in the form of cheese, butter, and evaporated milk having a value of $80,000,000.

The school-lunch program is now well on the way toward meeting its need in all parts of the country. Not all school children are included as yet and in some sections not even milk is available for school lunches.

But the achievements of this great health-giving program from the early days of the penny milk sales have been little short of miraculous in improving the health of our children as well as providing an additional outlet for the products of our dairies.

It was the results obtained from the school-lunch program, more than anything else, which drew the attention of some of us a few years ago to the possibility of expanding the consumption of food not only among children, but among the low-income adult population of the country.

The question which arose in our minds was the manner in which this could best be done.

There was no question as to the benefits to be derived in the form of better health and improved markets.

Back in the late thirties, when the Government was still groping for more satisfactory methods of assisting needy people, it initiated on an experimental basis what was called the stamp plan of that day.

Through this plan, certain areas were selected where stamps to be used for food purchases were provided to low-income people to enable them to enjoy a better and more healthful life. This stamp-plan program was probably the most successful and satisfactory of all the assistance programs attempted during the decade of the thirties.

It was not entirely satisfactory, however, and many mistakes were made in its application.

Therefore, in 1943, when Senator LaFollette and I, realizing that there were still a great many people in America who didn't have enough to eat and foreseeing the day when surplus foods would again be with us, introduced the first food allotment bill.

We drew heavily upon the experience and knowledge of those who had been concerned with the operations of the stamp plan of the late thirties.

The bill we offered at that time was, in my opinion, a vast improvement on the stamp plan.

Since 1943, I have seen to it that a food allotment bill has been introduced in each session of Congress, making changes in the text and provisions of the bill as such improvements have been deemed advisable.

The proposed food allotment program has received a good deal of support of a sporadic nature. Some farm groups, some consumer groups, and some commercial people have evidenced a great deal of interest in it.

I have not felt that the time was propitious for asking Congress to act upon this proposed legislation until pressure for its enactment became more widespread and better organized.

Although from the start we had cooperation of Department of Agriculture people in the preparation of the bill, it was not until 1948 that Secretary of Agriculture CLINTON ANDERSON formally endorsed it.

The food allotment bill is based on the conviction that adequate diets for all families and better markets for farmers are in the national interest and that it is a national responsibility to achieve those ends as far as possible.

Primarily, the objective sought is a better dietary level, but when this is attained, we will have an automatic broadening of the market for the products of the farm.

The basic principles of the food allotment program are simple.

The first step is to determine scientifically the level of nutrition needed to keep an average person strong and healthy, and to translate that nutrition level into actual amounts of lower-cost foods.

The second step is to determine the value of the low-cost adequate diet periodically at current retail food prices. This cost on a yearly basis would be known as the food allotment.

The third step is to supplement the buying power of families that are not able to afford low-cost adequate diets.

In carrying out the third step, needless red tape that would limit the effectiveness of the program must be avoided.

At the same time, Federal funds must be used in the most effective way to raise levels of nutrition and improve farm markets.

To meet these difficulties the food allotment program utilizes the fact that on the average, lower-income families in the past have spent about 40 percent of their income on food.

Under the proposed program, participating families would continue their normal spending for food. The amount contributed by the Government would be used to buy additional food or better food.

Here is an example of the way the program would work:

Suppose the retail cost of the food allotment per person was $15 a month and for a family of four was $60. If the family had an income of $100 a month, it could get the $60 worth of coupons by paying 40 percent of its income, or $40.

If the family income was $125, it could buy the same number of coupons for $50.

But if its income were $150 the family would have to pay $60 for $60 worth of coupons, and, therefore, would find no advantage in participating.

A family of five with an income of $150, however, would gain benefit by buying $75 worth of coupons for $60.

Thus, the Government's contribution would largely represent a net increase in family food consumption.

Operation of the program could be relatively simple.

It would not in any sense be a relief program; no means test or long investigations by welfare agencies would be necessary. A simple declaration of income, similar to that required in connection with the Federal income tax, would be sufficient.

Any family would be eligible to buy coupons by paying the required percentage of its income. This would be in marked contrast to the food stamp plan, which in almost every area was limited to families receiving public assistance. Participation would not be limited to people in cities and towns. Many farm families are poorly nourished, too. Some them, of course, could best help themselves by raising more family food.

The food-allotment bill has special provisions for taking home-grown food into account.

This allotment has attracted a great deal of favorable attention among grocers, market men, and others engaged in the normal channels of trade.

These people remember all too well that period in the thirties when there was a great deal of political distribution of food which added to the troubles of already greatly harassed tradesmen.

The program I propose provides for the expenditure of food coupons at the store where the recipient usually does his trading.

The market man puts them in the bank along with his regular deposit.

It is highly essential that in attempting to alleviate distress among one group of people that we do not increase the trials and tribulations of another.

The cost of the food-allotment program would be determined by the extent to which it were used. However, if used to the maximum practicable extent, I doubt if the cost would be much, if any, more than what we are now spending in keeping food off the market.

Whereas the money we spend for food to be destroyed or kept off the market actually reduces employment, the same amount of money spent in enabling low-income persons to purchase food would have a salutary effect in enhancing the national economy through furnishing greater employment as well as improving the health of the Nation.

What the direct effect upon the dairy industry would be is also problematical, although it goes without saying that it would be very beneficial.

Recent surveys by the Bureau of Human Nutrition and Home Economics indicate that families with incomes from $3,000 to $5,000 consume more products than families with less than $2,000 income in the following percentages:

	Percent
Dairy products other than butter	35
Butter	57
Meat	26
Eggs	15

If only 10 percent of the people of the Nation participated in a food allotment program, this would mean an increased total consumption of—

	Percent
Butter	5.7
Other dairy products	3.5
Meat	2.6
Pork	5.0
Eggs	1.5

Inasmuch as Government purchases of butter, nonfat milk solids, cheese, and evaporated milk in 1949 amounted to between 3 and 4 percent of our total milk production, it can be seen that had the food allotment program been in effect last year, no Government purchases of dairy products would have been necessary and we would not now have on hand 200,000,000 pounds of powdered milk and 100,000,000 pounds of butter that we can't dispose of.

In discussing the advantages of a food allotment program, I am not unaware of the probability that the bill which I am sponsoring is far from perfect.

I am also fully aware of the probability that a program such as I am sponsoring might encounter obstacles in its application.

For that reason, I have hoped that Congress might authorize it on an experimental basis before we get to the point where it may be urgently needed.

By trying it out in selected areas, both urban and rural, in different sections of the country, we could learn how it would work and take the kinks out of it before it becomes necessary to apply it on a broad scale.

The cost of trial programs would be very small in proportion to the value of the knowledge acquired.

Inasmuch as the dairy producers themselves would probably benefit from such a program more than any other agricultural group, I hope that this organization will give the matter serious study and use its influence to create and promote a wider interest in one possible solution to our economic ills.

Dairy Products and the Agricultural Surplus

(By John D. Black)

As I get into this paper, you will discover how fortunate I am in having had Senator Aiken come before me and outline his thinking on how not to have any surpluses of dairy products and his program for bringing this to pass. The question as he has analyzed it is not one of how to dispose of excess stocks of dairy products that accumulate under the kind of mismanagement that we have under our present agricultural programs, but one of preventing such stocks from ever accumulating by keeping them moving freely into consumption. My thinking and Senator Aiken's run exactly parallel. If it is exceptional to find an economist and a Member of Congress thinking closely alike on a subject, you will have to blame the exception in this case on Senator Aiken—it is because he is thinking like an economist and not because I am thinking like a Senator.

It is true that the Commodity Credit Corporation now has some nonfat milk solids, butter and cheese and other dairy products on hand, but the amounts are small and of little consequence. The reason that the CCC is doing little to dispose of them is because the amounts are so small. If the Government stocks were 10 times what they are, disposal action would be more urgent, and probably would be taken. For, after all, getting more dairy products consumed is relatively simple. None of them, like potatoes, is costly to transport and store, or like potatoes is pressing hard on all potential uses. I say this even though around 100,000,000 pounds of butter have been allowed to accumulate.

The important aspect of the subject in hand is of another nature. It is simply this: If dairy products were substituted, as they easily could be in the food consumption of the United States, for potatoes and wheat and other cereals, this would help greatly in preventing food surpluses in general. Also if considerable rolling land now in cotton in the South were shifted to dairy production and the resulting dairy products consumed in the South where they are much needed in the diets, this would help greatly with our cotton surpluses. Combine with these possible shifts in land use and consumption the possible parallel shifts to more meat and poultry production and consumption and we have almost the whole solution of the agricultural surplus problem.

Let us see some of the evidence in support of this:

Assuming potato yields of 180 bushels per acre, the substitution of dairy production for production of 100,000,000 bushels of potatoes, and substitution in our diets at the same time of the resulting dairy-product calories for potato calories would provide a use for 4,000,000 surplus acres of land. That is, it would take 4,000,000 acres to produce the calories in the form of dairy products now provided by the 100,000,000 bushels of potatoes being produced on 560,000 acres.

A parallel shifting to dairy production of 100,000,000 bushels of wheat, and substituting the resulting dairy-product calories for white-flour calories, if we assume a yield of 15 bushels per acre, would provide a use for 18,000,000 present wheat acres. In other words, it would take 18,000,000 more acres than the 7,000,000 now being used to produce this 100,000,000 bushels of wheat to produce as many calories in dairy products as are provided by this 100,000,000 bushels of wheat in the form of white flour.

A parallel shifting to dairy production of 2,000,000 bales of cotton grown on rolling land of the South would provide a use in dairy farming, assuming a cotton yield of 200 pounds per acre, for 5,000,000 present cotton acres. This would mean additional dairy products to consume in the South at the rate of 40,000 calories per person per year, equivalent to 60 quarts of milk. All of this needs to be consumed in the South, where fluid-milk consumption is little more than half what it is in the North.

The increased dairy output from these 4 plus 18 plus 5 equals 27,000,000 more acres of land devoted to dairy production would equal the equivalent of only two-fifths of a quart of milk per person per day in the United States. Distributed among consumption uses in the usual proportions in this country, this would mean, per capita annually, 90 quarts of whole milk, plus 5 pounds of butter, plus 4 pounds of cheese, plus 10 pounds of evaporated milk, plus 2 pounds of nonfat milk solids.

If diversion of 27,000,000 surplus acres of land to dairy production in this way did not prove enough to prevent agricultural surpluses, many more million acres or so of potatoes, wheat, and cotton land could be handled in the same way. Or, if our people preferred it instead, as they probably would, they could divert another 27,000,000 acres or so to the production of beef, pork, eggs, or poultry meat, or preferably some balanced combination of these. Pork production uses four times as much land per million calories as potatoes, and 2.2 times as much as wheat. Poultry production uses 15 times as much land as potatoes, and 8 times as much land as wheat. The corresponding figures for beef production are 40 and 25. Poultry and meat production thus use up land much faster even than dairy production.

We are, of course, concerned with the amount of farm labor used as well as with the amount of land. Dairy production uses less labor per acre than potato and cotton production, but more than wheat production. The general effect of diverting to dairy production the 27,000,000 acres now in potatoes, wheat, and cotton, in the proportions indicated above, would be to increase the employment of farm labor by 80,000 workers. This results from the fact that so large a part of the diversion is out of wheat. If the level of our national diet were raised presently by adding more dairy and other livestock products than produced on these 27,000,000 acres, plus whatever more is needed to prevent agricultural surpluses, we should then be employing still more labor. Dairy production uses 5 times as much labor per 1,000,000 calories as potato production, and 20 times as much as wheat production. Future population growth will contribute to the same effect.

Now let us consider the dietary significance of such a program. If the additional dairy production was consumed in this way, it would add 700,000,000 pounds annually of animal protein to the diets of our people, of which much more than half would be replacement of poorer plant proteins. It would increase the per capita intake of calcium by 20 percent, and of vitamins by 5 percent.

If the additional dairy output were used all as whole milk, it would mean only 2.8 quarts more per person per week. This would add 1,700,000,000 pounds of animal protein per year, or 14 grams per person per day. The increase in calcium intake would be from 1 to 1.4 grams per day.

Few of us need to be told how much better the land of this country would be conserved if 30,000,000 to 50,000,000 acres of it now in potatoes, cotton, and other row crops, or in wheat or sorghum in the Great Plains, were diverted to hay crops and pasture to be used as dairy and cattle feed.

The obvious conclusion to be drawn from the foregoing is that all this country needs in the way of a surplus program is a program for getting consumed the dairy and other livestock products that would be produced on 40,000,000 to 50,000,000 acres of land now in potatoes, wheat, cotton, tobacco, and a few other crops. The farmers will need some credit and other help in shifting their production over to livestock, but this will be easy to provide and will cost very little.

Once such a program is in full operation, there will be no more need for acreage allotments or marketing quotas. They may be needed in some situations while the program is getting under way, but not after it is in full swing.

The place to begin is with legislation to set up programs that will bring about the increased consumption of dairy and related livestock products. It is at this end that all programs should begin. Shifts in production to dairy and other livestock products should follow the shifts in consumption, and come only as fast as the expansion

of consumption provides a demand for the additional dairy, poultry, and meat production.

Such legislation should, however, presently guarantee to every producer of dairy products a market for all that he produces at a return per unit of product which multiplied by the national dairy output per capita of the national population of that year will give to the dairy producers of this country the same level of income measured in purchasing power as received by them in some near-at-hand reasonable base period. This proposal, you will note, is for a parity-income standard. The essence of any true parity-income standard is that it will take account of increases in output, resulting from higher yields, improved technology, or other related causes, as well as of changes in prices. It needs also to allow, moreover, for the expansion of any line of production as demand increases with growth of the national population. The base period chosen as a standard should be recent so that the base will be in terms of current technology. It must, however, be one in which agricultural prices and incomes are in general in that relation to other prices and incomes as can be expected with reasonably full employment and normal exports and imports of farm products.

The returns thus guarantied should be very largely obtained in the market place. Some use of production payments to supplement market receipts may be made to advantage at the start of such a program. They should not be needed after it is in full swing. The objective of the whole program should be to raise consumption to a point that no supplements to market prices will be needed and no acreage or market quotas.

What form should a consumption expansion program take? First, a doubling or trebling of the present school-feeding program. As Senator AIKEN stated, we are just well started with this program. If for just one generation all the school children in the United States had really adequate diets, with all the dairy and other livestock products, vegetables, and fruits in them required for proper growth and bodily functioning, and formed the habits of eating such foods, malnutrition in this country would become history only. The cost of a full-scale school-feeding program is a small amount to pay for such an accomplishment. The present school-feeding program is deficient in some other respects, but these can be corrected in the legislation. There must be more assurance that the children are getting the right foods.

Second, the Aiken national food allotment program exactly as Senator AIKEN has presented it today. This plan is carefully designed to spend the public money on exactly those groups in the population who will expand their food consumption most with a given amount of aid in the form of what amounts to lower prices. Under it the great bulk of low-income families will, in effect, be able to buy their dairy and poultry foods and meats at half price or close to it, and another large group of them at around two-thirds prices. It might be wisest to start this program with families on relief of the types listed by Senator AIKEN, and bring in other low-income families later. I was glad to hear him include the families receiving social-security payments and the unemployed. Social-security payments are far below what families need, and to make food available to them at low prices is the most effective way to supplement the small payments. At the start, I would favor going further in limiting the foods to foods of livestock origin than Senator AIKEN proposes.

Why these programs rather than the Brannan program for letting prices of farm prices fall to whatever level they will have to to move supplies and making up the differences in production payments? A chart on page 51 in the 1950 Outlook Chartbook on Rural Family Living of the United States Department of Agriculture shows that for families with an income below $4,000 per year, the consumption of dairy products expressed in quarts of milk increases at the rate of 2.9 quarts per week for each additional thousand dollars of annual income after taxes. Above $4,000, the comparable increase is only at the rate of six-tenths of a quart for each $1,000 of additional income, or one-fifth as much. This indicates that, other things being the same, a sum of money spent on expanding the dairy products consumption of families with incomes below $4,000 would go much further than if spent on higher-income families—possibly as much as five times further. It probably would not do this at once—it takes time for families to adapt their consumption practices to make full use of particular foods as they become cheaper. But there is little reason to doubt that large responses would occur within a year or two, and that they would be much greater with low-income families than with high-income families.

The reader may be interested in figures for some other food products comparable to the five for milk included in the same chart:

Meats: Low-income groups two times that for higher-income groups.

Eggs: Low-income groups two and seven-tenths times that for higher-income groups.

Citrus and tomatoes: Low-income groups one and four-tenths times that for higher-priced groups.

Other vegetables: Low-income groups three times that for higher-income groups.

Thus for all these foods, any expenditures designed to support farm prices and incomes by expanding consumption will be much more effective if designed to expand the consumption of the lower-income groups; and money spent making foods cheaper for the higher-income groups causes very little increase in their consumption. It is much to be doubted that the Congress will ever be liberal enough in its appropriations to expand the consumption of food to warrant spending much of it on the higher-income groups.

As further support of the foregoing, Senator AIKEN told you that the low-income families of the United States spend 40 percent of their incomes for food. The comparable figure for the average family in the United States reported in the last Agricultural Outlook Charts was only 24 percent.

A program such as just outlined seems clear and obvious enough. Then what are we waiting for? The answer is equally obvious. The organized dairy and other livestock producer groups have not given Senator AIKEN and his kind enough support for such a program to make him believe that it was worth his effort to press for it hard in Congress. He has, in fact, just told us this in his own words. As a result, the producer groups and their Congressmen who want high support prices at almost any cost have been allowed to carry the ball most of the time in the last two Congresses.

Why have the dairy and related producer groups not pushed hard for such a program? One principal answer is probably that they have not understood the situation and realized the value to them of such a program. I hope I have done something in this paper to remedy this situation.

Perhaps a stronger reason has been fear that any program of this sort might expand production faster than consumption. This fear must be met in the two ways I have outlined, by providing for the expansion of consumption first, and a firm assurance of income supports in the event of such a mishap.

As the situation now stands, the dairy groups are in the key position. There is no real escape from the stinking mess that our agricultural programs have become but to begin at the consumption end and expand the use of the products that will use our land most freely and thus reduce our large surplus of acres in wheat, cotton, and potatoes. I have shown that expansion of dairy production consumption for families with less than $4,000 of income is the most effective way of increasing food consumption. Why, then, do not the dairy groups step into this situation and save the day for the agriculture of the Nation as well as for themselves? The poultry and other livestock groups would surely want to join in if the dairy groups would lead the way.

Most of the foregoing has been written from the point of view mainly of solving the Nation's agricultural surplus problem. Fortunately, the diets of our people could be improved greatly at the same time. The dairy industry has another opportunity to improve the national diet. This one will reduce no surpluses except that of the nonfat dry solids. This is by getting the important food values in skim milk and whey into human food. The simplest way of getting skim milk and whey thus used is to get it included in bread and other foods in the form of powder. The commercial bread sold in this country averages only around 3 percent of milk in all forms. Twice or three times this amount could be used to good advantage both from the standpoint of quality of the loaf and nutritive value. Millers and bakers generally, however, do not seem willing to incur this extra cost. It has been calculated that a subsidy of about half the price of skim-milk powder, or around 6 cents per pound, is needed to offset this extra cost to the bakers. This would add little if any to the receipts of dairy farmers. Present prices of such powder do little more than cover the cost of assembling the skim milk and processing it. But the people of the United States would be getting in their staff-of-life a food containing the particular proteins that are most essential to health. Nonfat milk powder contains about all the proteins that are vital to health in about the proportions needed.

The production of skim-milk powder reached a level of 900,000,000 pounds in 1949. Of this, 475,000,000 pounds was used in domestic foods. The rest was handled by the Government or exported. Production should be doubled in the next 5 years, with all the increase going into bread and other foodstuffs, the expansion of production in this case, too, following that of the expansion of consumption. Some very simple legislation giving specific instruction to the Commodity Credit Corporation would meet the immediate needs of this situation. Apparently this will be required if it is going to be done. The present law permits this, but the present administration of the Department of Agriculture apparently prefers to give its stocks of skim-milk powder to Europe to feed its livestock.

In place of a bold stroke such as instructing the Commodity Credit Corporation to make available to millers and makers at, say, 5 cents per pound, all the nonfat milk powder that they will use in flour, bread, and other bakery goods, the dairy groups in this country are fussing around over what to do with the 125,000,000 pounds surplus of it now left to be distributed. No doubt, it was what to do with this, and comparable amounts of butter and cheese, that you folks expected me to discuss today. I am altogether too busy a person to spend my time over such piddling questions. As I said at the outset, the only reason that we are not doing something really significant with dairy surpluses is that we do not have enough of them to make it worth while.

At the end of one protracted discussion of long-range agricultural policy in which I participated not long after the end of the war, I came out of it with the conclusion that no Congress of the United States would enact any legislation in the next few years that would really meet the situation, and

that probably no farm organization would accept such a proposal; that the situation was one in which what needs to be done will not be done so long as the country and its agriculture are getting along after a fashion—in other words, things must get a lot worse than they were before any action of the necessary sort would be taken. Today, I have to report to you that things are still not bad enough, that they must still get worse than they are now. However, we are clearly headed toward such a state of affairs. For full action of the sort needed, we may even have to wait for a general business depression. You may say that then it will be too late. It is true that earlier action would be twice as effective. But, constituted the way we are, we cannot get such action now. Hence we have to do it the only way available. Senator AIKEN has told us that we have no time to lose. I am pretty certain, Senator AIKEN, that we are going to keep on losing it for awhile—at least until after the next congressional election.

In particular, it may be needful to clarify the present confusion on two points before any real progress can be made. One of these relates to the level of support of agricultural income. Secretary Brannan in his original statement presented a parity income standard that meant prices averaging within a few percent of full 100 percent parity on the 1910–14 base. The administration also waged its last presidential campaign in language that implied close to a full parity standard, and there is much to indicate that it has similar intentions for this summer and fall. I have just read a report in the Wall Street Journal to the effect that a strong group in the Republican leadership is favoring a campaign promising a level of prices higher than the Democrats ever have thus far dared to promise. Thus we may have a campaign in which the two parties may strive to outdo themselves with impossible promises.

In actual fact, Secretary Brannan is now administering an act of 1949 which sets something like 90 percent of revised parity standard as a base, with adjustment for the size of crop (except in the case of tobacco) beginning next year, for the six basic crops, and 75 to 90 percent of such parity for dairy products, and gives him still wider discretion for everything else except wool and sugar. Exercising such discretion, he has set a level of around 79 percent for dairy products, 75 percent for eggs, and 60 percent for potatoes. He is demonstrating under this act plenty of ability to recognize that setting a price too high means accumulating large surplus stocks, and there are reports that his economic advisers are figuring in terms of production payments, if his program were accepted, far below what he set up in his original announcement. His recent presentation in favor of production payments for potatoes seems to have taken $1 per bushel, or 60 percent of parity, as the level for determining production payments.

Now, if Secretary Brannan has in mind price and income levels, such as he is now prescribing under the present act, as the levels to be used under a production payment plan, or only as much higher than these as he thinks he can get Congress to appropriate the money for, as would seem to be indicated by his statement on potatoes, by all means the helpful thing for him to do is to announce this publicly. Then there need not be any competitive out-promising the others in the coming campaign.

This raises the whole question as to the level that this country really can be expected to support. Much wild talk is being made on this subject. A chart on page 17 of the same Outlook Chart Book on Rural Family Living, that I cited before, shows that rural farm-family incomes rose 39 percent from 1945 to 1947, and urban-family incomes only 11 percent. Now all of us have to admit that farmers were doing pretty well in 1943–45, but still we are having a lot of loud talking about how far farm prices have fallen since 1947 while urban wages are still rising. The sharp break upward in prices of farm products in 1945–47 was highly abnormal and cannot properly be used as a basis for judging reasonable farm-price levels.

Another of the Department of Agriculture series shows that the farm population is now less than 19 percent of the Nation's population as compared with about 26 percent in 1925–29, and that its share of the national income was virtually the same in 1949 as in 1925–29. This represents a gain for agriculture of 26 percent. Another USDA series shows that in terms of income per capita of the farm and nonfarm population, the parity ratio in 1949 was 129 in favor of agriculture on the 1910–14 base, and 128 on the 1925–29 base.

Agricultural output has increased 67 percent in this country since 1910–14. This larger output is being produced with 10 percent fewer workers in the farm labor force. Hence the increase in output per worker in agriculture has been much larger—in fact, 86 percent.

Here are two figures that are very much worth while comparing—129 on the 1910–14 base as the figure for gain to 1949 in per capita farm income, and 186 as the figure for gain to 1949 in physical output per worker in agriculture. The 29 out of the 86 is the measure of about the extent to which agriculture was itself benefiting in 1949 from its improvements in technology. The remaining 57 had been passed on to consumers. At 1947 levels of prices for farm products farm folks would have been getting 64 out of the 86.

Figures of this kind do not of course take account, on the one hand of the improvements in transportation (the automobile and roads, for example), in communication (the telephone, rural mail service, and the radio, for example), in housing, in the reduction of the physical strain of hard labor, and a score of other things, that have probably added more to farm living than to urban living since 1910; nor, on the other hand, of the larger reduction in working hours of urban than of farm workers. After all, it is the living that a people gets out of its work that counts and cash income, or so-called purchasing power, or what is sometimes called real income, may be a poor measure indeed of the actual living obtained.

It would seem probable from the foregoing, nevertheless that if agricultural incomes go much below present levels, agricultural folks will not be sharing as they should in the gains in technology that they are making. We therefore need to bestir ourselves to find ways of keeping them from doing so. But it is important that the ways chosen will really achieve the ends desired. Trying to hold prices up on stilts by simple direct price-support measures, supported by storage and marketing quotas, we should have learned by this time, is largely a waste of effort except for a few products taken at a time for a few years at a time. The only really effective methods are those that get to the heart of the problem and adjust consumption and production, as outlined in this paper.

There is of course another kind of tactics that farm folk could try; that is, yelling loudly for much more than they have any right to expect. This is what labor does when it gets ready to enter into a new contract with employers. But agriculture is trying to work out its problem in collaboration with Government, and Government is not the employer of agriculture. It is instead the representatives of the public. As such it must seek with agriculture to find out what is agriculture's contribution to the national dividend and due reward.

The other subject on which there is much confusion is that of the cost of the different programs. Senator AIKEN has told you that the present program is costing the country $1,000,000,000 a year if everything is counted in. This is a very good estimate. The cost will run fully as high next year and afterward in spite of the flexible pricing arrangements for the basic crops. After all, they represent only a minor fraction of the total. Furthermore, they will be kept at this level only by extending marketing quotas to more and more of the nonbasic crops and managing somehow to enforce them. Senator AIKEN says that the same amount of money employed as he proposes would finance his program. I agree with him. It would, in addition, in due time make acreage and market quotas largely if not wholly unnecessary.

What the Brannan proposal would cost depends entirely upon the level of production payments. To achieve the same level of income, prices plus production payments, with no acreage or market quotas, as would be obtained under Senator AIKEN's proposal and mine would probably cost at least two billions a year, and probably more. This is because so much would be spent under his plan in lowering the prices for the higher-income groups which buy little more as prices are lowered.

Those favoring the Brannan plan over the Aiken plan sometimes draw comparisons between the Aiken plan and the old prewar stamp plan. No comparisons of this sort have any meaning. The prewar stamp plan was conducted on the basis of disposing of the particular goods that were in surplus. Often these were bulky foods that could not find an outlet in the same territory and were often stored for months and shipped long distances, often under refrigeration. The Aiken plan would lead to the production largely of foods of livestock origin that are not bulky and costly to store and transport, and the major portion would move into nearby consumption. They would be far less in bulk than the foods they would replace, and cost less to move through the channels of trade. Moreover, they would move through the regular channels of trade.

Cultural Interchange Promotes Inter-American Friendship

EXTENSION OF REMARKS

OF

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, April 11 (legislative day of Wednesday, March 29), 1950

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by Miss Ellen Collins, a graduate of St. Joseph's College, Emmitsburg, Md., and a master of arts of Columbia University, on the occasion of the annual celebration of Pan American Day at St. John's University. It was in connection with this event that Miss Collins was awarded the university's gold medal voted each year to the citizen who has done the most for the cause of inter-American understanding.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CULTURAL INTERCHANGE PROMOTES INTER-AMERICAN FRIENDSHIP

(By Ellen Collins, associate editor of World Affairs)

Not long ago, a Latin-American girl, visiting in Texas, remarked that, prior to her experience in the United States, she had been led to believe that all Americans chewed gum, were always in a hurry, and had too much money. After a few months in this country, however, the young lady from South America discovered that there were many of our people who eschew the product of the chicle, who know the uses of leisure enough to putter around a garden, and who, in most instances, do not have enough American dollars. First-hand, eyewitness, day-to-day knowledge of the United States made the difference.

Almost every student from the other American Republics can report similar revelations. Although, for some of the Latin boys, it is a shock to find that every North American girl is not a Betty Grable, the young men from Hispanic America soon adjust themselves to an environment where chaperones, or duennas, are not even considered a necessary evil, whether asleep or awake. They are quick to realize that living in a country is a sure bridge of friendship.

When university study deepens the relationship, the boy or girl goes back to his or her own people an apostle of international understanding. Politicians may come and politicians may go; but the student, girl or boy, is an eternal phenomenon. Not only the college or university remains for the scholar a cherished mother; the country, too, continues an alma mater.

One of my most vivid recollections of study at the University of San Marcos, Lima, Peru, revolves around a conversation with a young man of that nation who described the mere thought of a scholarship in the United States of America as his "sueño dorado." It was easy to see that the simple possibility of some academic sojourn in the land of George Washington and Abraham Lincoln gave inspiration and meaning to the work he was doing in his own country. The fact that intellectual achievement had brought cultural fortune to other boys and girls kept him at his books and in his laboratories when others, less thoughtful, were devoting their afternoons and evenings to idle pleasures. This happened before the invention of the card game Canasta. It is pleasant to record that the young man from San Marcos won his chance to specialize in engineering at a United States institution of learning and that, today, he is superintending the operation of airports in the Republic of Peru. Among his fellow citizens there is no more enthusiastic promoter of inter-American good will.

Another case is equally illuminating. While engaged in the Cultural Relations Department of the United States Embassy in Quito, Ecuador, I was approached by two religious of the Order of St. Dominic. One was the mother superior of the convent in Cuenca, a city notable for culture throughout the Republic of Ecuador. The other was the mother superior's assistant. Both had as their most cherished ambition the desire to study hospital administration and educational methods in North America. Thanks to Rev. Mother M. Gerald, O. P., prioress general of the Dominican Sisters of Siena Heights College, Adrian, Mich., it was possible to translate the dream of the Ecuadoran nuns into golden reality. When the expert on hospital administration and the specialist on educational methods returned to Cuenca, they carried back with them an abiding affection for the people of the United States. Their influence in Ecuador today extends over an entire region as well as throughout an important religious community.

Not long after this adventure in inter-American cooperation, Mother Gerald, who had become fired with the desire to expand the Dominican tradition of cultural interchange, founded a college for girls in Ciudad Trujillo, the Dominican Republic. The establishment has been a brilliant success. As a token of appreciation and, still more, of understanding the four-centuries-old University of Santo Domingo, last year, conferred upon the prioress general of the Dominican Sisters of Adrian, Mich., the degree of doctor of philosophy, honoris causa. It was the first time in the history of the institution that an honorary degree had been awarded to a woman. Naturally the whole Dominican family in the United States looks upon this gesture as another precious tie in the inter-American system. Educational links are more important than, and, often enough, rise superior to political agreements, or disagreements.

It is interesting to note that a South American as prominent as President Galo Plaza of Ecuador has long been active in this sphere of cultural interchange. When Señor Plaza was serving his country as Ambassador in Washington, he constantly found time to consult with, and, if necessary, to extend help to, Ecuadoran students who had come to North America in search of education. One case I recall with special interest was that of Alejandro Villavicencio, the son of a famous Quito physician. This young South American, whose father had died before the son could visit the United States, discovered in Ambassador Plaza, himself a product of American education, a second father. Although Alejandro came to this country determined to study medicine, he was advised in the Embassy that the real need of his own countrymen was for farmers and engineers. Consequently, Alejandro, with the good counsel and encouragement of Ecuador's representative in Washington, took up these subjects at the University of Notre Dame. Prior to the conclusion of his studies, he waxed so enthusiastic about the United States that he persuaded his mother, sisters, cousins, and other relatives to make extended visits to North America.

Now the family is reunited in Quito, where the Villavicencios are ardent admirers of American democracy. Furthermore, Ambassador Plaza, as Candidate Plaza, gave Ecuador its first taste of a political campaign without partisan politics. Running as the head of a new group, the National Civic Movement, free from any dependence upon the old-line conservatives and liberals. As a result, the Republic of Ecuador, despite stratagems and plots, is enjoying a period of genuine representative government, under a President who studied in two United States institutions—the University of California and the University of Maryland. Perhaps the day will come when a President of the United States of America may boast that he went to school in Quito, or Lima, or Rio de Janeiro, or Port-au-Prince. Such an event would mark the dawn of a new era in inter-American understanding.

Another Ecuadorian who can be cited as a worker in the cause of truth in inter-American affairs is Dr. Miguel Albornoz. The latter, after a 2-year course in journalism in the Pulitzer School, Columbia University, effected an immense improvement in the make-up and content of the leading Quito newspaper, El Comercio. This organ, prior to the United States educational experience of Dr. Albornoz, had been almost violently anti-United States of America. Fortunately, the change I mentioned took place during the war when we needed exponents of the true facts in every capital of South and Central America. Dr. Albornoz, patriotic Ecuadorian to the core, insisted upon objective presentation of the news at a critical moment in history. It was no accident that Dr. Benjamin Cohen, Assistant Secretary-General of the United Nations in charge of Public Information, invited Dr. Albornoz to join his staff at Lake Success, where he continues to put his inter-American principles into daily operation.

In view of the imminent visit of His Excellency President Gabriel González Videla, of the Republic of Chile, it is useful to recall that a United States citizen, Dr. Gustave Weigel, acted for many years as dean of the faculty of theology in the Catholic University of Chile, a pontifical institution in Santiago de Chile. In this post, Dr. Weigel distinguished himself by his mastery of the Spanish language and by his familiarity with every phase of Chile's culture. Unlike many another North American resident in a South American capital, he understood that his vocation required that he know and like the Chileans, not simply the socially conscious members of the English-speaking colony in his community.

Dr. Weigel became an adopted son of the Republic. Moreover, when World War II broke out, he was able to serve the broad cause of hemisphere defense by a lecture tour which took him to many important Latin American centers. Both by his personality and by the breadth of his ideas he contributed to victory in South America. Although now on the faculty of Woodstock College, Md., he is known as an honorary Chilean and an active figure in the inter-American movement. It was about 1 year ago that Dr. Weigel was awarded the Order of Merit of the Republic of Chile. No North American ever did more to deserve the honor. And President González Videla, whose friend he is, would be the first to acknowledge this fact.

It may be added that Father Weigel was big enough to recognize the United States intellectual who was the first recipient of the gold medal awarded by the Pi Alpha Sigma Fraternity. As dean of the faculty of theology, Dr. Weigel recommended Dr. Joseph F. Thorning, founder of the Inter-American Seminars in the University of Habana, the University of San Marcos, and the Nation University of Mexico for the first honorary doctor of divinity degree ever granted to a North American by the Pontifical University of Chile. Since your own distinguished chairman of the department of romance languages in St. John's University, Dr. Nick Sallese, is a friend and coworker of Dr. Thorning, he no doubt could relate much more about the wartime service of this apostle of the good-neighbor policy. I myself, as a product of the Inter-American Seminars and subsequently director of the Seminar in the University of Mexico, can testify to the respect in which Dr. Thorning is held in all cultural and religious centers in the other American Republics.

It is with a sense of joyful privilege, therefore, that I accept the Our Lady of Guadelupe Medal for 1950. Relatively insignificant as my contributions have been, they have brought me to the attention of Pi Alpha Sigma. Consequently, your decision and your award may serve as an encouragement to young people throughout the Western Hemisphere who look to our universities and colleges for Christian principles and ideals of public service. As a graduate of Mother Elizabeth Seton's College, St. Joseph's, Emmitsburg, Md., and one who has been a beneficiary of the spirituality and culture of the Fathers of the Mission as well as of the Daughters of Charity of St. Vincent de Paul, a saint well beloved throughout Latin America, I am happy to be with you today in your pan-American festivities, and to accept from the hands of your officers the accolade of Our Heavenly Mother, Our Lady of Guadelupe, whose Son is the Christ of the Andes.

The Ferguson-Mundt-Nixon Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 11 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "Why the Ferguson-Mundt-Nixon Proposal Should Be Defeated by the Congress," which I delivered last night, and which was broadcast over the Mutual Broadcasting System.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHY THE FERGUSON-MUNDT-NIXON PROPOSAL SHOULD BE DEFEATED BY THE CONGRESS

Not long ago President Truman took occasion to compare the national hysteria prevalent in our country with that which prevailed at another time in our history which we all recall with shame. He indicated that the hysteria reminded him of the time in 1798 when the infamous alien and sedition laws were enacted (press conference, June 16, 1949). For a time those laws blotted out freedom in our land. What caused the enactment of these unconstitutional laws?

Why, France had gone through a revolution. The Federalist Party, then in power in the United States said the French Government was spreading revolutionary propaganda in America through paid agents, just as they say Russia is doing today. To meet these alleged dangers they passed these laws.

The Alien Act gave the President power to expel from the country any alien he believed to be plotting against the Government. The Sedition Act forbade the publication of any false, scandalous or malicious writing with intent to incite sedition, defame the Government, or aid any hostile design of any nation.

Whom do you suppose the Federalists prosecuted and sent to jail?

All of the prosecutions under these repressive laws were against Republicans. The accused included a Republican Member of Congress and the proprietors, editors, and chief writers of the Republican press.

It was Thomas Jefferson and James Madison who led the battle to wipe out those laws. Both declared the Sedition Act to be unconstitutional, and therefore null and void. In the election of 1800 this act was the major issue. Jefferson was overwhelmingly elected President. The Federalist Party was destroyed, never to reappear again. Those imprisoned were released. Their fines were remitted. The alien and sedition laws were ignored as null and void.

In his inaugural address March 4, 1801, Thomas Jefferson said, "If there be any among us who wish to dissolve this Union, or to change its republican form, let them stand undisturbed as monuments of the safety with which error of opinion may be tolerated where reason is left free to combat it."

The principle thus stated so eloquently lives to this day in our law. The Supreme Court has said, "The very purpose of the first amendment is to preclude public authority from assuming a guardianship of the public's mind through regulating press, speech, and religion. In this field every person must be his own watchman for truth, because the forefathers did not want any government to separate the truth from the false for us." (*Thomas* v. *Collins* (323 U. S. 511, 545).) And Mr. Justice Jackson in an opinion, made it clear that freedom of thought is a substantial right. He said, "Freedom to differ is not limited to things that do not matter much. That would be a mere shadow of freedom. The test of its substance is the right to differ as to things that touch the heart of the existing order." (*Board of Education* v. *Barnette* (319 U. S. 624, 642).)

This principle of freedom of speech and press from governmental interference is the very foundation of democratic government. This is true because the people can only govern themselves, if they can get all the facts. You cannot make up your mind what you want of your Government unless you can first hear every point of view. You cannot get your Government and Representatives in Congress to know what your will is unless you are free to speak your mind; and associate together with others of like mind to further your common will.

I regret to say that these great American principles are more threatened today than at any time in our history. A bill has been reported favorably to the Senate by the Senate Judiciary Committee (with myself alone dissenting) which, if enacted, would undermine dangerously or entirely destroy the substance of freedom of speech, press, and association in the United States.

I, WILLIAM LANGER, alone, wrote a minority dissenting opinion. It is a good one. If you wish a copy write me here at Washington.

Like the alien and sedition laws these bills are the product of hysteria, of frantic, unthinking fear of ideas. Like those bills they merit the vigorous opposition of all of you who cherish liberty.

Under the guise of protecting our democratic institutions against an alleged threat of subversion from foreign agents who seek to overthrow our Government by coercive means, it is proposed by this bill to regiment the thinking of the American people and to impair or prevent the free exercise of constitutionally guaranteed rights.

It is proposed to confer on a politically appointed board vague and, therefore, unrestricted power to outlaw associations of citizens whose views and policies are considered by it to be dangerous.

If this political board of three members considered that a group of citizens or an organization supported some policies which were similar to policies supported by Communists; or they included some Communists in their group, or they failed to disclose information about themselves, they would have to register with the Attorney General as Communist organizations. The bill defines such organizations as conspiratorial agents of Moscow seeking to overthrow our Government by coercive means, and to set up in its place a totalitarian dictatorship controlled by Moscow. Obviously no group could continue to exist with that label pinned on it. Its members would be hounded and cast out as outlaws. Who would employ members of groups hounded by the Government in that way? The victims would have little chance of earning a living after their names were registered.

Yet, it is not necessary under the bill to prove that the organization or any of its members, ever did a single thing to overthrow our Government, or establish any kind of a dictatorship here, or ever had any such idea in their minds. Moreover, these people, good American citizens, likely often veterans of World Wars I and II, could suffer these awful penalties, without ever having a trial before a court or jury. Proof beyond a reasonable doubt according to our American judicial standards would also be dispensed with.

Just think of that. Talk about a bill conferring arbitrary power. Here we have it. In North Dakota, if they do not like the Nonpartisan League, they could bar it. Many people do not like the Nonpartisan League because we were successful in promoting measures whereby the State owns its own bank, writes its own insurance, and owns its own State mill and elevator, and has operated all of them successfully for 30 years, it can be readily understood why certain people do not like a political organization of that kind. Here it is proposed to give the political board power to outlaw the Nonpartisan League.

Under these vague powers trade-unions and other organizations which may seek to alter the status quo or oppose this or that governmental policy, by lawful means, with no evil intent, could be branded as traitorous agents of foreign governments or movements. Their members could be relegated to the position of second-class citizens—made subject to economic and social outlawry.

In the effort to avoid obliteration, voluntary associations of citizens would be compelled to conduct witch hunts to determine the views and associations of their members—to fear to express their views on any controversial questions, to encourage their members to spy and inform on each other.

It is proposed to punish as a crime mere membership in an organization which has failed to destroy itself by registering when ordered to do so.

It is proposed to make criminal the agreement to do any act, however innocent and lawful, which a court might find would substantially contribute to the establishment within the United States of a totalitarian dictatorship.

Who can say with any certainty what agreement or act might be held to substantially contribute to a totalitarian dictatorship?

Would an unbalanced budget, compulsory health insurance, Federal low-rent housing, or the Brannan farm-subsidy bill substantially contribute to the establishment of such a dictatorship?

If some group opposes the peacetime draft or the North Atlantic Pact or huge military appropriations, can a court which considers these measures necessary for the defense of our country against alleged Russian designs, hold that such opposition substantially contributes to the establishment of a totalitarian dictatorship in the United States?

What about peaceful advocacy of socialism? Would an American still have the right to be a Socialist if he wanted to be one?

How would a court answer these questions? No one can tell. The answer would actually rest to a large extent on political opinion. Our courts would soon lose the respect they now enjoy if judges decided cases on such a basis. And, under our Constitution, all accused persons are entitled to due process of law. When men must guess at the meaning of a law—if they cannot know with reasonable certainty the conduct it would punish, they are clearly denied that due process.

It is for such reasons as these that I have concluded that the American tradition of freedom could only suffocate and die in the atmosphere these bills would create.

Attempts to overthrow the Government, sabotage, espionage, treason, armed civilian groups must be stopped, and proven foreign agents should be required to register. Any forcible resistance to law should be punished. Attempts to undermine the loyalty, discipline, or morale of the armed forces should be a crime. But all of these are now punishable as crimes, or required under existing law.

No emergency can be pointed to as a justification for this departure from our great heritage of freedom. By honoring that heritage we have met all threats to our national security. While preserving liberty, we have become the strongest nation on earth. We can never hope to maintain our democracy

by resorting to measures which strike at its very foundations.

In these troubled times only a people vigilant and active in the cause of liberty can hope to maintain their freedom. The alien and sedition laws were canceled because the people met the challenge. They showed how they cherished liberty by joining the good fight. May history repeat itself, and now, in time to stop the enactment of these bills.

I fervently hope that reason will prevail over hysteria in the Congress of the United States when the time comes to vote on these measures. In that case, I am confident that these repressive measures will meet the resounding repudiation they deserve.

ECA's New Strategy for a New Europe

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, April 11 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article by Mr. Paul G. Hoffman, Economic Cooperation Administrator, which appeared in This Week magazine on April 2, 1950, having special reference to the second anniversary of ECA. I commented on the floor of the Senate 2 weeks ago that ECA had "perhaps the most brilliant leadership of any operating department of our Government." I was, of course, referring to Mr. Hoffman and the many outstanding men, both here and abroad, which he and his deputy, Mr. William Foster, have brought into the administration of the ECA.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ECA's NEW STRATEGY FOR A UNITED EUROPE

(The Marshall plan is 2 years old tomorrow. With two more years to go, its Administrator sets forth a new policy. Up to now ECA has helped nations to their feet; now it will get them all to join hands.)

(By Paul G. Hoffman, Economic Cooperation Administrator)

WASHINGTON.—After 2½ years in the struggle for European recovery against a cold war of mounting fury, we are, this week, halfway through the Marshall plan. Can we foresee final victory on June 30, 1952? Or, as ominous headlines sometimes seem to indicate, are we being drawn into an unending battle against communism of which no man can predict the outcome?

I am not a prophet, but I know that we can see the shape of our problem far more clearly than was possible 2 years ago when we opened our first ECA "office" in my room at the Statler Hotel here in Washington.

The vortex of today's struggle is in western Europe, where the Kremlin is attempting to wreck European recovery and to set back the European self-generated movement toward unity. Moscow knows that if it can halt recovery and gain control of western Europe piecemeal, its schemes for world domination will be given terrible impetus. Moscow also knows that failure to halt European recovery and win western Europe will block its ambition to dominate the world.

"A NEAR MIRACLE"

At the halfway mark we can look back on the strategy by which we have made progress so far and outline the somewhat different strategy necessary from now until 1952.

The first half of the Marshall plan was necessarily devoted to overcoming economic collapse within each nation, raising production and restoring the financial stability of each government. We had to start with existing economic modes and machinery.

And what has been accomplished, largely on a country-by-country basis within 2½ years, has been spectacular.

The recovery of European industry, literally built up from the rubble of World War II, has been a near miracle. Less than 5 years after the end of the war, industrial production has been lifted 20 percent above its prewar level. In contrast, after World War I in which the destruction was not nearly so bad, Europe needed 7 years just to regain her prewar level.

Hard-coal production is up 17 percent above prewar, steel, 52 percent; electric power, 21 percent; cement, 58 percent; and cotton yarn, 31 percent. Farm production has lagged somewhat behind but is now almost back to prewar levels.

Now that production is restored about as far as it can be within the existing economic framework of western Europe, we are ready to go beyond this opening stage of the struggle.

Congress has stated it to be the policy of the people of the United States "to encourage the unification of Europe." As the program has gone forward during its first 2 years, we have come to appreciate more and more the wisdom of our Congress in emphasizing the importance of this goal.

A united Europe means an economically stronger Europe. Against a strong, united Europe, Stalin and his Russian cohorts will not march.

BACKGROUND TO CHAOS

What are the basic causes of European disunity? To see the roots of chaos in western Europe we must look back even beyond the First World War.

In 1900, the American worker and the western European worker produced and lived about on the same scale. But since 1900, the United States has been growing because of our one big market and free competition across State lines. We have seen the dawn of the highway age.

Western Europe meanwhile slipped into narrow compartments. Fifty years of wars and preparation for wars, cartels, tariffs, import quotas, exchange controls and other devices of economic nationalism have choked free competition at its source—and made mass production for a big market impossible.

Last year, the United States, with 150,000,000 people, turned out a gross national product of about $260,000,000,000. Western Europe, with its 270,000,000 people, had a gross national product of $160,000,000,000.

If European per capita output had been on a par with ours, their gross national product would have been $470,000,000,000 instead of $160,000,000,000. Of course Europe hasn't the raw materials, horsepower, or other resources for production at this level. But she doesn't need to equal American per capita production, in order to get an expanding standard of living which will lift her people above the threat and wiles of aggressive communism.

The obvious need is for Europe to develop her own program for taking fuller advantage of the great potentialities for prosperity and security that lie in closer cooperation. Unless she does move in this direction, and move fast, the recovery so far achieved within the individual nations cannot stick.

STEPPING OFF ON THE RIGHT FOOT

Marshall plan countries were the first to recognize that Europe has got to attain a broad, freely trading market so it can take advantage of large-scale, low-cost production. Also, they know such economic integration will provide the means to bring the new German Republic fully into the western European family of nations—an essential condition for a peaceful and prosperous western Europe.

Integration has already started. Since last fall, the participating countries have removed quota restrictions from 50 percent of their trade which had previously been restricted. They are working to reduce these restrictions still further and have made some progress toward ending dual pricing—the system of charging one price for goods on the domestic market and up to 40 percent more to a neighbor. They took a vital step in naming Dr. Dirk Stikker, the able Foreign Minister of the Netherlands, to a new high-level post within the Organization for European Economic Cooperation (OEEC) to help speed the necessary political decisions that must accompany economic policy.

Thus, the OEEC, originally formed as a means to determine how to divide American economic aid, gives promise of evolving into a permanent force for European integration. And from now until June 30, 1952, the Marshall plan will be helping Europe unify herself more rapidly. Accordingly, there will be some changes in the ECA operation.

Early in the Marshall plan, an intra-European payments plan was worked out which operated on the principle of "forgive us our debts as we forgive our debtors."

Norway, for example, had a terrible housing shortage because the retreating Germans had blown up thousands of homes. She had the lumber for new construction but lacked the nails. Belgium had the nails—but Norway was out of francs.

Marshall plan credits were therefore extended to Belgium on condition that she extend an equivalent credit in francs to Norway. The Norwegians bought the nails and built the houses by last Christmas.

A BOOST OVER THE FENCE

But this plan, even with some modifications to increase the flow of intra-European trade, still left the existing currency barriers about where they were. It gave a boost over the fence but did not tear it down.

Marshall-plan countries are now negotiating a new European Payments Union which, with the help of the Economic Cooperation Administration, will help tear down this fence.

The new payments union will act as a clearinghouse for the nations of western Europe in settling their debts with each other and also, to some extent, as a bank to finance a deficit country—so long as that country is making every effort to put its financial house in order and increase exports to its neighbors.

Henceforth, each country will receive a pro rata allotment of Marshall-plan funds based on the previous divisions of aid.

We plan to withhold at the start not less than $600,000,000 from the total 1950–51 ECA appropriation, which can be available to the payments union to encourage the program of liberalized trade. Only as an effective payments union is put into operation will the full amount of the 1950–51 appropriation be made available to all the participating countries.

The United States is asking a great deal of western Europe. The steps we are asking amount to forcing in 25 months a process which might normally take 25 years. But I am not discouraged because I believe that the job can be done and is beginning to be done.

Meanwhile, there are some adjustments we shall have to make ourselves.

MORE DOLLARS NOW

In financial terms, it was the dollar gap which was Europe's trouble in 1947, when Gen. George C. Marshall first proposed the plan which bears his name. Europe simply

didn't have the dollars to buy the essential things she needed for survival, and she had no way to earn those dollars.

The dollar gap between Europe and America has been narrowed from about $7,500,000,000 in 1947 to some $4,000,000,000 in 1949–50.

The dollar gap actually has a long history, and unless we take steps on our side of the water, it may persist after June 30, 1952, with results very damaging to the cause of freedom. In every single year from 1914 to the present, part of western Europe's trade with the United States has been on the cuff.

AMERICANS PAID

We have sold more abroad than we bought in return, and the American taxpayers have paid for most of the difference through a long series of peacetime loans and grants amounting to some $52,000,000,000.

I don't think the dollar gap can be completely closed by June 30, 1951, but I believe that with strenuous efforts in Europe, and if Americans are willing to take more imports, we can reduce it to manageable proportions.

Most of the gap can be closed with noncompetitive goods and services—American tourist travel to Europe, materials for national defense, noncompetitive luxuries which enrich our own lives. Yet there will have to be some competitive imports if we are going to close the gap.

Perhaps by 1953 Europe will be in a position to sell us close to a billion and a quarter dollars' worth of goods competitive with our own.

DROP IN THE BUCKET

Accepting these imports—which will be only a drop in the bucket compared with our own production in this country—will be essential to our strategy for total victory. By enabling a strong, united Europe to earn dollars to pay for what she buys we can help Europeans raise their own living standards. Thereby we can defeat communism on its home and neighboring grounds.

In buying more from free Europe we strengthen ourselves, and eventually reduce and eliminate the need for our staggering load of armaments.

If we are willing to lead the world along the better way of expanding living standards and free institutions, we can end the threat of communism.

Slavery behind the iron curtain must eventually break down as democracy in free Europe proves its greater benefits to the average man. If we are determined and unafraid, we can answer our questions about the hazardous future after June 30, 1952.

A Free Press as First Line of Defense

EXTENSION OF REMARKS
OF
HON. GEORGE W. MALONE
OF NEVADA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 11 (legislative day of Wednesday, March 29), 1950

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Our First Line of Defense: A Free Press," delivered by Martha Rountree, director of the Meet the Press radio program, at the twentieth annual joint luncheon of the Alliance of Business and Professional Women of Chicago, and Chicago Association of Commerce and Industry, held in Chicago on March 15, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR FIRST LINE OF DEFENSE: A FREE PRESS

I feel very honored to be here today—I really mean it. I think you have paid me a great compliment and I hope I live up to your expectations. My invitation came from a most charming and persuasive lady. When she asked what my subject would be, the very first thing that came to mind was a free press, which I consider America's main line of defense. That, to me, is the most important issue in the United States today.

Spending as much time in Washington as I do as producer of a news program and working as an editor of a national magazine—I have become very conscious of our free press, of the importance of a free press and the dangers to it. Without a free press, the magazine I work for could not exist, because the American Mercury magazine is a magazine of opinion which never hesitates to speak out against those in power; without a free press the radio program to which I devote a great deal of my time and energy could not exist. On Meet the Press top figures in the news accept the challenge of four trained and top newspaper reporters each week in an unrehearsed, probing, on the record press conference.

The press conference is an American institution. Meet the Press brings it to the whole Nation. It is in the press conference that men in public life have the opportunity to advance their ideas informally and to champion their activities. Here also newsmen have an opportunity to exercise their right to information. They question searchingly. From these free exchanges the public gets a better insight into leaders in public life and the course they pursue.

From the center of the news front, in Washington, Meet the Press brings these exchanges to millions of listeners throughout America. Nothing is off the record. The newsmen in their questioning do not always indicate their opinions. They take different ways of digging for information. They explore the criticism others have voiced. The people being interviewed speak extemporaneously, replying to unrestricted questions. They are courageous men, ready to meet the challenge of a free press and free radio.

Through sharp questioning and unprepared answers we try to get the story behind the story—to uncover hidden facts and information for the American public. Usually we succeed in getting a story or some aspect of a story which has not yet been told. Most frequently we come up with a story that clarifies the news—which is our main objective—and on many occasions we come up with a story that makes sensational news. For example, when we interviewed Senator Bilbo some years ago, the whole country was shocked when he boldly admitted under the persistent questioning of the newsmen participating on Meet the Press that night, that he was a member of the Ku Klux Klan. His admission was largely responsible for the senatorial investigation to unseat him.

It was on Meet the Press that Whittaker Chambers accepted Alger Hiss' challenge to call him a Communist without congressional immunity. As a result of this broadcast Alger Hiss sued Whittaker Chambers for libel. The rest of the story you know—the pumpkin papers, the indictment for perjury, and finally Hiss' conviction.

I could go on citing many other instances where Meet the Press has served to bring before the public the true facts. One of the most interesting aspects of the program is the kind of mail we receive. We get thousands of letters from people in all walks of life and from all parts of the country. Among these there are hundreds which could be summarized this way, "Meet the Press is democracy in action." That, to me, shows how vividly alive the American public is to the importance of ungarnished news. Where else in the world will a man subject himself to questioning by leading newsmen, experts in their own fields? Where else can we sit down and listen to this give and take and be permitted to arrive at our own conclusions? But Meet the Press is only one small facet of our great press in the United States. And it is not my purpose to talk about my own work exclusively. But because of my work it has been brought home to me that a free press is not just a natural occurrence—not something that can be taken for granted. It is something for which we have to fight now as our forefathers fought throughout the years. At the very roots of our union lie the struggles and victories of the men who formulated our Constitution and Bill of Rights.

Today we are apt to look upon the habeas corpus law, trial by jury, the Magna Carta, freedom of speech, freedom of the press, as things that grew on trees and our natural right and forget that they have had to be fought for every inch of the way and that this fight is by no means over. There are many forces at work which will whittle away and destroy these hard-won rights if we don't exercise constant vigilance.

No tradition is more sacred in this country than that of the free press. The very first of the original 10 amendments to the Constitution deals with the free press. Even before the Constitution was adopted, virtually all Americans agreed with Jefferson when he said, "Our liberty depends on the freedom of the press, and that cannot be limited without being lost." Virtually all Americans agree today with what Jefferson said. Yet few things have been taken more for granted. All through history attempts have been made by powerful forces to curtail that freedom.

In the earliest years of this country, the greatest danger to a free press came from the newspaper profession itself. The American press of a hundred years ago was, with very few exceptions, unspeakably shrill and vulgar. It was chauvinistic and libelous. By its excesses, it came close to digging its own grave. But fortunately, as the country matured, the press matured with it, and developed a sense of responsibility.

The American press not only cured itself, it surmounted the threat of domination by special interests. Anyone who doubts that has only to look at a newsstand or turn on the radio. He will speedily find that no opinions are excluded. Everyone, including the avowed enemies of our form of government, has the opportunity to state his case. Liberals and conservatives, Fascists, and Communists, are all permitted to speak out and to be heard. There can be no question about it: the American press is the freest as well as the ablest in the world. It does a magnificent job in gathering and sifting the news and in presenting it to you in a way that makes the most sense. But let's not get smug about that. The press is in real danger today—in greater danger, it seems to me, than ever before. And that danger comes from the very people whose job it is to protect it: our Government officials—our powerful bureaucracy that believes it knows best what should and should not be told to the people.

Just the other day I read that there are approximately 48,000 propagandists on our Federal pay roll—a great many of these are known in Washington as PR's, in other words, public-relations experts. No matter what you call them, propagandists or public-relation experts, I do not believe the American people need 48,000 interpreters to manipulate the news and tell them what to think. The press is dependent upon that bureaucracy for a great deal of information. No one can compete with the Federal Government when it comes to accumulating information. Every American embassy throughout the world, the FBI, the agents of every department are constantly sending on-the-

spot reports of importance. Too often, however, these reports are kept secret, are doctored, or released at the wrong time. That information belongs to the American people. It should be available ungarnished, unadorned by public relations experts. To delay it, to twist it, to make it more or less palatable depending upon the purpose to be served, is to exercise a subtle and dangerous censorship. And that, unfortunately, has been happening in Washington for a great many years.

On May 6, 1949, the United Press reported that the President had instructed Government officials to notify the Democratic National Committee whenever they planned to make a speech. Just what was the purpose of that? When the question was asked, the answer was that no censorship was involved, just exploitation. But why should a speech on foreign policy by the Secretary of State be put on the same level with an address to a political rally? Why should a report by the Secretary of Defense to the Nation on our defense policy be made to serve the purposes of the Democratic National Committee? All things must have a beginning—political manipulation of information is a beginning, but a party line may be the end. And a party line is a threat to free democratic institutions in America whether it be a Communist Party line, a Fascist Party line a Democratic Party line, or a Republican Party line. There is no excuse for that kind of exploitation by any political party, of information that rightfully belongs to the American people. It has been demonstrated too often that it is a short step between exploiting a speech for political purposes and censoring or twisting it for the same reason.

There was some excuse for controlling information at the source during the war. There is no excuse for it today.

Let us examine in detail the major issues of national defense. Do we know what our strength is today? Are we told exactly wherein we are weak? One day Secretary of Defense Johnson says we are prepared "to lick the hell out of Joe Stalin"—the country is in grand shape militarily. The clear implication is that we have nothing to worry about, that it is unnecessary to increase our military budget. But almost the very next day, Secretary of the Air Symington says Russia "has the world's largest army, the world's largest air force, and the largest submarine force"—and we have no sure defense if that enemy should launch a surprise atomic attack against any part of the United States.

Both men can't be right. One of two things must be true: Either someone knows the truth and is hiding it from the American people, or those in charge of our defenses are incompetent and should be replaced. The press, of course, can only report the opinion of those who have access to the facts—and it cannot say whether the facts thus reported are accurate and complete. In this instance, someone, for reasons best known to himself is obviously withholding some facts. It is no excuse to say that we cannot tell the American people the truth because we want to keep it from the enemy. If the enemy has been successful in stealing our atomic secrets, surely he has been smart enough to spy out the state of our defense. How simple the problem would be if those who knew told us the whole truth—told us how strong the enemy is—how weak or strong we are. Once the American people knew that, they would do what was necessary to place the Nation in an impregnable position. But they cannot make a sensible decision on the basis of conflicting opinions—especially when they suspect that some of these opinions are influenced by political considerations.

Know the truth, and the truth shall make you free—know the truth and the truth shall keep you free.

The problem of getting information from those who know it is by no means a new problem. It has long been with us—when we fail to solve it the results are always serious and sometimes disastrous.

In December 1941 we suffered a catastrophe at Pearl Harbor. That, and our state of unpreparedness, can be traced directly to those who were running our Government. By 1936, as we know now, our embassies and private informants told our leaders that Germany was preparing for war. They knew that Hitler was building the most powerful war machine in history. They knew that this war machine was to be directed first against Europe, and later against the rest of the world. They knew from every fact that was available to them that this country was in great danger. But they kept the information to themselves. They never gave us the facts—they gave us only opinions about the facts—often contradictory opinions, as they are doing now. While their sources from all over the world sent in a steady stream of warnings, they continued to talk out of both sides of their mouth. When President Roosevelt delivered his famous "Quarantine the aggressors" speech in 1937, it was pretty late to set the record straight. The American people had been led to believe that Europe was not our problem, that we could stay out of the mess. And when, as was to be expected, we did not react as he hoped to his speech—the administration returned to the cheerful optimism of the early thirties. The facts continued to be the exclusive property of a small group in the administration.

It is interesting, in retrospect, to look at the 1940 Presidential campaign in this country. In the course of that campaign, Wendell Willkie said: "Freedom of the press is the staff of life for any vital democracy." President Roosevelt matched this when he said that all of our freedoms "would be nullified should freedom of the press ever be successfully challenged." But both of these leaders were guilty of deceiving the people—both of them ran on a platform to keep the peace. Both of them pretended that this country could be kept out of the war. Both of them knew that it could not.

We never would have been so unprepared if the experts at the top had taken the public into their confidence, had given them facts rather than opinions, had confirmed what so many journalists had been shouting for years. We know what happened when the American people finally did learn the truth at Pearl Harbor. Their doubts and confusions were dispelled overnight, and they reacted, as they always have, with intelligence, determination, and courage.

When Germany and Japan had been defeated, however, the bureaucrats reverted to type. They once again withheld from the American people the most important information about our national security.

In this case, they withheld information about Soviet Russia. We were again allowed to develop a false sense of security. During the war and for more than a year after the end of the war, our Government fed us on a diet of pious optimism concerning Russia. Here again, the men at the top knew the facts. They knew that Stalin was not demobilizing his army; they knew that he was creating a war machine even mightier than Hitler's. More to the point, they knew that he was dealing with us as a potential enemy, not as a friend and ally. And yet, those who ran our Government fed us propaganda about the Russians, made us believe in spite of what many of our newspapers said, that we were on the road to one democratic world.

And what was the result of this deception? One result was the cry to "bring our boys home" immediately. The cry was certainly a natural one under the circumstances. We are not an aggressive Nation; we would be perfectly happy if we never had to keep a single tank in operation. And so we broke up the mightiest army and the mightiest air force the world had ever seen. We weakened our defenses to the point of near disaster. Once again, a bureaucracy had placed the Nation in danger by withholding important information and feeding us misinformation.

It seems to me that our free press, and our democracy, have reached something of a crisis. In each decade, our Government grows bigger and bigger. It has acquired facilities which no private concern can hope to match. It is the biggest employer in the country, the biggest producer, and the biggest spender. And it is also the biggest news gatherer in the country. No publisher has such a tremendous staff of experts to lean on. No publisher has such highly organized sources of inside information all over the world.

That information belongs to the American people. It should be made available to the American press, uncut and unedited by public relations experts. Withholding and editing such information is a subtle and dangerous censorship. And those officials who condone such practices have no understanding of democracy—or the dangerous game they play.

One more example of the bureaucratic censorship of important news, with its disastrous results: Consider the history of our policy in China. For years Chiang Kai-shek and the Nationalists were our friends. We praised their courage and their high resolve. We helped them in their uphill fight against the Japanese. When we entered the war, they were our allies. President Roosevelt made an address in which he said: "China likewise expresses the magnificent will of plain people to resist the dismemberment of their nation. China, and General Chiang Kai-shek asks our help. America has said that China shall have our help." When he returned from the Cairo conference, President Roosevelt said in a speech, "Today we and the Republic of China are closer together than ever before in deep friendship and in unity of purpose." We recognized China under the generalissimo's leadership as one of the five great powers, gave China a permanent seat in the Security Council. Was that the whole truth about our relationship with China? Not by any means. We discovered too late to do anything about it that a secret agreement had been made at Yalta by which China was sold down the river to Stalin. From that point on, conditions grew worse and worse for the nationalist government and better for the Chinese Communists. The full force of our official propaganda turned on Chiang Kai-shek after our attempt to get him to work with the Chinese Communists. Clearly the American people were officially told a series of lies about China and the Chinese Communists, while the situation deteriorated to a point where it could not be saved. China was lost to our camp—and our State Department issued a white paper—or rather a whitewash paper. Had the people been told the truth about China, had they known what was actually happening there, they would have insisted on the kind of action that kept Greece from falling into the hands of the Communists—of that I am sure. If the Government had spoken up, if it had released the documented truth about the Chinese Communists, the whole ghastly mess might have been avoided. The American people would have recognized the Chinese Communists for what they were, and would have insisted that steps be taken to prevent their enormous conquests. Our Government kept us in the dark, and Stalin has won another great victory in the cold war.

This bureaucratic policy of censoring news at the source makes freedom of the press pretty much of a mockery. How can the

American people make intelligent decisions on any policy when the Government withholds the necessary information? The answer is that they cannot. Slowly but surely we seem to be moving into an era of government by administrators. James Burnham called this phenomenon "the managerial revolution," a phrase which refers to the making of high Government policy by an elite group of administrative experts. Whatever you call it, it presents a grave danger to American democracy.

What I have been saying adds up to this: Our security and our future happiness are threatened by censorship that is hard to recognize and difficult to deal with. This censorship withholds vital information from the American people when they need it most. Until we master this problem of censorship at the source, our press cannot be truly free—our people cannot be accurately informed—our democracy cannot function effectively.

Displaced Persons Legislation

EXTENSION OF REMARKS
OF
HON. MILLARD E. TYDINGS
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, April 11 (legislative day of Wednesday, March 29), 1950

Mr. TYDINGS. Mr. President, editorial expressions from various newspapers throughout the country seem to give general approval to the final action taken by the Senate on the displaced persons legislation.

I ask unanimous consent to have inserted in the RECORD excerpts from the editorial of the Baltimore Evening Sun of April 6, together with an editorial on the same subject from the New York Times of April 7.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Baltimore Evening Sun of April 6, 1950]

TO ADMIT MORE DP'S

Thanks to Senator O'CONOR, Senator KILGORE and Senator FERGUSON, who led yesterday's fight in the Senate for a liberalized DP bill, one of the most shamefully petty policies in recent years will soon be corrected. That is the narrow and discriminatory displaced persons law we have had since 1948. * * *

In more than 13 hours of steady work, these 3 Senators led a bipartisan majority successfully through voting on a series of amendments designed to kill any fair and honorable program and finally secured the adoption of a bill that corrects most of the inequities in the old one. Gone are the provisions that worked to exclude large numbers of Catholics and Jews. Also dropped are certain exclusive claims given to Balts and agricultural workers that had the effect of defeating the purposes of the DP program.

The time limit is properly extended from June of this year to June of next year. * * * Some 200,000 more people will be eligible under the new bill, including a selected group of expellees—ethnic Germans forced out of their homes in eastern Europe—and 20,000 war orphans.

These are all reasonable and desirable corrections, and it seems incredible that they could not have been accepted long before this. * * * At issue were such fundamental questions as these: Was this country to lay itself open to a charge of inconsistency, cooperating with other nations of the world in major policies and refusing to go along in some minor ones? Was this country to lay itself open to a charge of aloof charity, giving billions in material foreign aid and declining to help actively in the desirable relocation of DP's? Were we to abandon even a gesture to an honored policy of providing haven for those who needed it? And were we to permit a small group of prejudiced and narrow men to impose their pettiness upon the majority?

Fortunately, the answer has now been given. Those who helped to clear the record deserve a vote of thanks, from Americans as well as from the DPs who will now be able to enter.

[From the New York Times of April 7, 1950]

THE DP BILL

For the first time since the question of displaced persons arose to plague the world at the close of the war, the United States is to have adequate legislation to deal with this terrible problem. It has been a hard struggle, waged against prejudice, parochialism, and ignorance, as well as against honest confusion. But with the Senate's action Wedensday night in approving the Kilgore bill, the battle has to all intents and purposes been won. The differences between Senator KILGORE'S measure as it passed the Senate and H. R. 4567, which the House adopted over 10 months ago, are not of great importance, and no difficulty is anticipated in reaching a conference agreement.

The most important features of the legislation are these: (1) It increases by 139,000 the number of DP's who may enter this country, and makes a year's extension of the time within which they can be admitted; (2) it eliminates the requirements that 40 percent of the DP's be Balts and that 30 percent have agricultural experience; (3) it shifts from December 22, 1945, to January 1, 1949, the date by which DP's must have arrived in the western occupied zones. Many more thousands of victims of religious and political persecution will now at least be eligible.

Equally important, perhaps, is what the Senate did not do. It rejected the attempt to wreck the entire program by indiscriminately opening it to the German ethnics. It also apparently refused to take too seriously the wild and irresponsible charges flung in the direction of the Displaced Persons Commission, which actually has been doing a capable and conscientious job in the face of serious difficulties. And of course it must be remembered that the employment, housing and security guaranties of existing law are all retained, even in some respects strengthened.

Certain features of both the House and Senate versions are open to criticism. But the bills are on the whole very satisfactory; and we congratulate the devoted legislators who have finally succeeded in redeeming on this question the honor and good faith of the United States.

Informational Media Guaranties Program of the Economic Cooperation Administration

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Tuesday, April 11 (legislative day of Wednesday, March 29), 1950

Mr. CAIN. Mr. President, as a result of some observations I offered yesterday about Time magazine a number of my colleagues have indicated that they are desirous of securing additional information to cover the status of information media guaranties which have been issued by the Economic Cooperation Administration. I ask unanimous consent that an ECA statement on the subject, together with an annex which provides the names of applicants and the sum of guaranties issued up to December 31, 1949, be printed in the Appendix of the RECORD. It will be noted that applications which were pending for magazine projects as of January 31, 1950, amounted to $1,380,555. Time magazine has applications pending for $248,500 out of this sum.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

ECONOMIC COOPERATION ADMINISTRATION—STATUS OF THE INFORMATIONAL MEDIA GUARANTIES PROGRAM AS OF DECEMBER 31, 1949

1. Guaranties issued: Up to December 31, 1949, 90 guaranty contracts (including renewals) had been made for informational media projects. The aggregate face amount of these guaranties was $2,823,291, divided among types of projects as follows:

Magazine projects	$753,765
Book projects	692,047
Motion-picture projects	1,163,539
Newspaper and news agency projects	213,940
Total	2,823,291

Contracts made in the fiscal year ended June 30, 1949, accounted for $1,867,004 of this total; those made in the 6 months ended December 31, 1949, accounted for the balance, $956,287.

A detailed summary of the guaranties made up to December 31, 1949, is given in Annex A. Approximately 90 percent of the total was for projects in western Germany, where there is both a large demand for American informational media and also an acute need for assistance in effecting dollar transfers.

The dollar conversions actually made by the ECA up to December 31, 1949, under all informational media guaranties, amounted to $525,421. There is naturally a substantial time lag between the making of each guaranty and the completion of all sales, collection of receipts in foreign currency, and actual conversion.

2. Applications denied: Six applications in the aggregate amount of $485,120 had been denied up to December 31, 1949.

3. Applications pending (as of January 31, 1950): Applications pending as of January 31, 1950 aggregated $10,308,152, calculated on the basis of estimated requirements for a 12-month period of operations in each case. The total of pending applications was divided among types of projects as follows:

Magazine projects	$1,380,555
Book projects	1,220,471
Motion-picture projects	7,661,626
Newspaper and news agency projects	45,500
Total	10,308,152

While it is difficult to estimate the exact amount of the guaranties which may be made on the basis of these pending applications, it is believed that the total will probably not exceed $5,500,000, allowing for a 12-month period of operation for each project. The total would include about $3,500,000 for motion-picture projects in western Germany and about $1,500,000 for book and magazine projects in western Germany, the Netherlands, and certain other countries. It is possible that a major portion of the total may be issued before June 30, 1950.

Informational media guaranties issued up to Dec. 31, 1949

Applicant	Media to be distributed	Face amount of guaranties issued					
		Western Germany	Netherlands	Austria	Norway	Italy	Total
A. MAGAZINE PROJECTS							
McGraw-Hill Publishing Co., Inc.	22 technical, industrial, and trade periodicals	$30,000					$30,000
The Crowell-Collier Publishing Co.	Collier's, American Magazine, and Woman's Home Companion.	36,640	$4,460	$2,400			43,500
The Curtis Publishing Co.	Saturday Evening Post. Ladies' Home Journal, and Holiday.	28,000	20,800			$7,500	56,300
The Reader's Digest Association Inc.	English or German edition or both	202,000	3,620	22,950	$3,000	3,670	235,840
The Yorke Publishing Co., Inc.	American Journal of Surgery, American Journal of Medicine.	3,000					3,000
Time, Inc.	International edition of Life or Time or both	243,900	34,300	21,000	44,600		343,800
Weekly Publications, Inc.	International edition of Newsweek	41,325					41,325

Congressional Investigations

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Tuesday, April 11 (legislative day of Wednesday, March 29), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the first two of a series of three articles entitled "When Congress Fumbles for Facts," written by Lindsay Rogers, Burgess professor of public law, Columbia University, and published in the New York Herald Tribune on Wednesday, March 29 and Thursday, March 30, 1950. I think they are worthy of consideration by Members of the Senate.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

WHEN CONGRESS FUMBLES FOR FACTS

SENATOR M'CARTHY'S CHARGES SUGGEST NEED FOR EXPERT COURSES OF INVESTIGATION

(By Lindsay Rogers, Burgess professor of public law, Columbia University)

I

Once more public opinion is shocked by grotesque proceedings before a congressional investigating committee. Senator JOSEPH R. MCCARTHY, Republican, of Wisconsin, makes loud but vague charges of Communist infiltration in the State Department. A subcommittee of the Senate Foreign Relations Committee listens to his allegations, and, when it endeavors to find out what supporting evidence he has, Senator MCCARTHY cries out that the Senators on the Democratic side who interrogate him are tools of the State Department and are endeavoring to cover up.

The Senator demands that the President permit the inspection of the Department's loyalty files and thus risk the smearing of persons whose probity has been fully established. If the President refuses, Senator MCCARTHY can claim that his charges are not disproved. If the President agrees and the charges blow up, Senator MCCARTHY can boast that he, single-handed, has won a victory in a battle that Congress has consistently lost since its defeat by the first President, George Washington: right of access to executive papers when the President thinks that their disclosure would be incompatible with the public interest.

A spectacle such as this, unfortunate under any circumstances, becomes appalling at a moment when the State Department, facing tasks as delicate and important as ever before in its history, needs the full support of American public opinion, the complete confidence of friendly states and the healthy respect of the Communist bloc. Moreover, when the subcommittee concludes its investigation, any report that it makes is not likely to be unanimous. Representatives and Senators, though they pose as judges, are still politicians who are mindful of advantages for themselves and their

political parties. If, after a committee has affrighted underlings and angered persons in high places, it reports that all the smoke came from a very small fire, some will suspect political whitewash. If a committee ferrets out and proclaims wrongdoing, some will refuse to believe that there was no more and some will cry "foul."

The plain fact is that congressional investigations do not command public confidence. They are indispensable in the absence of something better, but something better should take their place. This is not only because investigations are partisan but because they are incompetent. By insisting on their right to compel disclosures by executive departments and by citizens, Anglo-Saxon legislatures have been less craven and have proved more vigorous protectors of the public weal than their European counterparts, like, say, the Chamber of Deputies under the Third Republic or the Weimar Reichstag. It is the legislature which, in Woodrow Wilson's phrase, must demand the examination of "corners suspected to be dirty" even though to draw the public eye it must "magnify and intensify the scandal." Congress must not shirk its duty. When the reasons seem to it to be good and sufficient, it must demand and secure complete disclosures.

But the business of inquiring into dark corners is not a simple one, and part-time amateurs cannot handle it successfully. Investigations must be speedy so that witnesses have less time to plan dissimulations. Inquisitors must deal with masses of factual detail so complicated that their mastery requires not only conscious thought in the hearing room but subconscious thought in moments of leisure. Cross-examination must be carefully prepared and ruthlessly conducted. "The many possible deficiencies, suppressions, sources of error, and untrustworthiness which lie underneath the bare untested assertion of a witness may be best brought to light and exposed by cross-examination," wrote John H. Wigmore, the authority on the law of evidence. "Cross-examination is beyond doubt the greatest legal engine ever invented for the discovery of truth."

How can Senators or Representatives be efficient inquisitors when, save exceptionally, they are able to devote only parts of mornings to the job and then must turn to legislative tasks and constituents' entreaties? They never have the time to master the detail of any but the simplest kind of case, and hence with rare exceptions cross-examination is ludicrously feeble. In the five-percenter inquiry, for example, the committee allowed counsel to do most of the questioning of the less prominent witnesses. He had not had sufficient time to prepare himself fully, but so long as Senators did not interrupt, his cross-examination was workmanlike. When Maj. Gen. Harry H. Vaughan, the President's military aide, was the witness, larger headlines were naturally in prospect. Counsel was told to take a rest, and six Senators questioned General Vaughan extemporaneously and repetitiously. At one point Senator MCCARTHY said that it was unfair to the other members of the committee for him to take up so much time. He had planned on asking the junior and senior lady in the Senate to take over before (Senator MARGARET CHASE SMITH, of Maine). "I think we will continue to rotate," said Senator HOEY, the chairman, "and see if anybody on this side [that is, the Democratic side] wants to ask questions."

What a way to conduct an inquiry. And what a lack of dignity to disclose to witnesses and to the public the chief interest—that is, publicity—of at least some of those whom the Congress permits to conduct in its name investigations into matters of urgent public importance. The day following his examination of General Vaughan, Senator MCCARTHY had to apologize for addressing him as Mr. Maragon. The Senator also said he had mixed up two different distillers corporations. "It was not done purposely," he explained to the committee. "I just have an inexcusable habit while I am cross-examining the witness of concentrating all my thoughts and my thoughts apparently sometimes get ahead of my tongue, which is bad."

It was the House Committee on Un-American Activities, first chaired by Martin Dies, and later by J. Parnell Thomas (both happily no longer in Congress), that raised serious questions as to whether congressional inquisitors were not too disdainful of private rights. Responsible Senators and Representatives have been uneasy. The press has been critical. Bar associations have discussed improved procedures. Bills seeking to protect those whom committee members may acccuse have been introduced in Congress. Reforms of procedure are certainly desirable, but my point is that even if congressional inquisitors never allowed their consciences to be subservient to their cravings for headlines and to release them from the obligations of procedures prescribed by law, Congress should still wonder whether, when it acts as a high court through the agency of a committee, it is playing this role with the sureness and competence that are essential.

For many years Senators and Representatives insisted that they were competent to draft the laws Congress passed. "I am unwilling to make the admission," cried a Representative only 25 years ago, "that if I have a piece of legislation that I think ought to become the law that I am incapacitated, that the people who are elected in other districts are incapacitated, to do their own thinking and prepare their own bills. I am unwilling to make the admission that the House of Representatives must have an expert legislative bill drafter to whom to go to draft bills."

But even the lawyers in Congress began to realize that drafting required a particular kind of competence. At first Congress was willing to authorize only a skeleton staff, whose senior members had to be trained in the Columbia University legislative drafting bureau by my colleague, Prof. Joseph P. Chamberlain. Now the National Legislature is well served by draftsmen and no Senator or Representative would dream of trusting his own skill in preparing any important bill that he hoped to have enacted into law.

Congress should now decide that it wishes investigations handled more competently. In determining the kind of agency it deems best suited for the purpose, it should look at practices in Albany and London, which never witness the abuses that are complained of in Washington. Moreover, New York's Moreland Commissioner and the British Tribunal of Inquiry are able to convince the public that they are reporting accurately on what they have found in the dark corners that they investigate.

The Moreland commissionerships have worked sucessfully since 1907. The British substituted tribunals of inquiry for select committees of the House of Commons after there was general criticism of the investigation of the Marconi scandal. In 1912 there were allegations that members of the Liberal Cabinet had speculated in shares of the Marconi Co., which was expected to profit from a contract that the Government was negotiating with it. The House of Commons appointed a select committee to investigate, but its procedure and reports were subject to criticism. Members of the committee were partisan—they protected and attacked when they questioned witnesses. There were majority and minority reports. The public was not satisfied.

Neither the Moreland commissionership nor the British Tribunal of Inquiry is a plant which would thrive in Washington's political climate. But by taking heed of the procedures used in Albany and in London, Congress should be able to determine on an agency in which it would have confidence and which would fit smoothly into the Federal framework of government.

WHEN CONGRESS FUMBLES FOR FACTS

HOW THE PROBLEM OF EXPERT INVESTIGATION IS MANAGED IN NEW YORK AND GREAT BRITAIN

(By Lindsay Rogers, Burgess professor of public law, Columbia University)

II

Only rarely do the citizens of New York State have the spectacle of a legislature investigating committee fighting to peer into dark corners of an executive department, crying that there is wrongdoing, calling for resignations and demanding information that the Governor refuses to give them. This is not because there are no situations which make the legislature wish for disclosures, or because the matters in question are unimportant. The chief reason is section 8 of the executive law commonly known as the Moreland Act.

This empowers the governor, whenever he so desires, to appoint a commissioner or commissioners "to examine and investigate the management and affairs of any department, board, bureau, or commission of the State." The commissioner can subpena persons and records and swear witnesses. He can employ counsel and investigators. The legislature assures the governor a free hand by making continuing appropriations for the payment of the commissioners and the expenses they incur. Reports go to the governor for submission to the legislature.

Since 1907, when the act was passed, there have been more than 70 commissions issued to more than 60 different persons (some served as commissioner more than once). Rarely, if ever, has the legislature been able to charge that the governor selected as commissioner a partisan or a nonentity to criticize the methods of investigation or to maintain that a report did not carry conviction. Practically all of the commissioners have been men who had reputations that they wished to preserve. They have been judges like Frederick E. Crane and John V. McEvoy; journalists and educators like John H. Finley, Henry L. Stoddard and Edward Lee Thorndike; lawyers like George W. Alger and George Gordon Battle, and public servants like Robert Moses and John H. Delaney. Such men were careful to provide themselves with efficient investigators and counsel and did not seek headlines.

Hostility on the part of the legislature has been rare. Indeed, there have been cases when legislative committees which had already started to probe matters yielded the field to a Moreland commissioner. The "absurdities and difficulties which inhere in a race to subpena witnesses and documents," said the assembly speaker on one occasion, "require us to restrict our activity." This forebearance no one appreciated more than myself, for I was then (1928) a Moreland commissioner investigating widely publicized charges of fraud in the Bureau of Workmen's Compensation. If there were a Federal Moreland Act, Senators and Representatives might in time be willing to restrain themselves in the same fashion and to wait for a report. But Congress is not likely to want a Federal Moreland Act. Nor is it likely to copy the British Tribunal of Inquiry, which I describe by recounting the circumstances under which it was last used.

During the summer of 1948 rumors began to circulate in Great Britain that ministers of the crown and other government servants had received or had been offered bribes in respect of withdrawals of prosecutions and the granting of various licenses. As soon as Parliament met in October, the Prime Minister moved that the matter be referred to a tribunal of inquiry which, under an act passed in 1921, can be called into existence by a resolution of both houses of Parliament and then has "all such powers, rights

and privileges as are vested in the high court." The House of Commons acted promptly and in a manner that will seem incredible to Senators and Representatives—without partisan debate. The leader of the Conservative opposition, Winston Churchill, counseled that until the tribunal had finished its investigation and made its report members of the House should abstain from gossip.

The home secretary appointed a judge of the high court as chairman of the tribunal and associated with him two well known barristers. Precedent was followed when the treasury solicitor put his services at the disposal of the tribunal to take such steps as they may direct him to take for the purpose of bringing before the tribunal all the evidence which the tribunal think is relevant to the inquiry. The attorney general (with two learned friends) acted as counsel, called the witnesses and cross-examined them. Statements were taken from all prospective witnesses before determining whether they should be called. The attorney general led the witnesess through their statements (which were available to the tribunal) and then conducted his cross-examination. Nineteen different counsel representing witnesses were permitted to cross-examine on evidence directly affecting their clients.

After its first (organization) meeting the tribunal adjourned for a fortnight. It did not wish to hear any witnesses until all of them had made statements and counsel had his case prepared and knew what he hoped to bring out. Following the fortnight of preparation the tribunal sat for 26 days between November 5 and December 21. Four days were allowed counsel for their arguments. One month later the tribunal made its report.

In introducing his resolution in the House of Commons, Mr. Attlee said that the Government's attention had been drawn to four specific matters but that he desired the tribunal to have wide terms of reference. Hence the resolution instructed it to inquire whether there is any justification for allegations that payments, rewards or other considerations have been sought, offered, promised, made or received by or to ministers of the Crown or other public servants in connection with licenses or permissions required under any enactment, regulation or order, or in connection with the withdrawal of any prosecution, and if so, in what circumstances the transactions took place and what persons were involved therein.

The tribunal's report—it is hardly necessary to say it was unanimous—was a document of 80 pages that made a detailed analysis of the evidence and in measured words inculpated some officials and exculpated others. The case the tribunal had heard was tawdry but fascinating. Some Labor politicians had been moving in moneyed circles that were unfamiliar to them. State controls were pervasive and irked or even threatened disaster to merchants and builders. Hospitality and presents might accelerate and influence departmental decisions when there were reasonable grounds for the use of discretion. But the story is pertinent here only to the extent that it discloses how a British Tribunal of Inquiry can carry conviction when it announces what in its view merits the attention of the public prosecutor; what for holders of public office or civil servants has been culpable conduct; and what actions have been innocently indiscreet or entirely blameless.

In the tribunal's view, two individuals who had given presents to the parliamentary secretary to the board of trade had done so without corrupt motive. A liquor merchant had made presents of wine and spirits "for the purpose of securing favorable and expeditious treatment by the board of trade for his applications for a license to import sherry casks"; and the parliamentary secretary had received these gifts "knowing the purpose for which they were made and in return for these gifts intervened to secure the grant of the licenses." From the most prominent figure in the case—an undischarged bankrupt who had gone under several names and who was subject to a deportation order—the parliamentary secretary had accepted a gold cigarette case, a suit of clothes, and much hospitality, knowing that the benefactions had been made "for the purpose of securing expeditious and favorable consideration" of applications made by any person whom the donor might introduce.

A prominent trade-union official who had become a director of the Bank of England had been offered the chairmanship of a proposed new company as a consideration to induce him "as a public servant to assist in obtaining from the Treasury, upon the recommendation of the capital issues committee, permission for a public issue of the shares of the new company." "We are satisfied," said the tribunal, "that the person in question did this in the hope of material advantages to himself, although in fact all that he received, apart from some trivial gifts, was a present of a suit of clothes." In respect of other ministers and certain civil servants who testified, the tribunal, after reviewing the evidence affecting them, expressed itself as "satisfied that there is no foundation" for allegations or suggestions of wrongdoing.

The parliamentary secretary resigned without waiting for the report of the tribunal and vacated his seat in the House of Commons. The director of the Bank of England resigned. Moreover (there may be no connection), two men whom the tribunal cleared and who were reelected to the House of Commons were dropped from the Labor government when Mr. Attlee reorganized it after the February election. The men who were blamed by the tribunal did not like its report, but there was no criticism of its proceedings or its findings from any other quarter. An efficient body had inquired into a dark corner of British politics and had closed the door on it.

What should Congress do to make its investigations more efficient and conclusive?

Support for the Economic Cooperation Administration

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, April 11 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter by Mr. Bernard Weitzer, national legislative representative, Jewish War Veterans of the United States of America, which appeared in the New York Times last week.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FULL SUPPORT OF ECA URGED

To the EDITOR OF THE NEW YORK TIMES:

What a magnificent tonic to all Americans Senator VANDENBERG has provided in his timely and masterly letter of March 25 to Paul G. Hoffman, Administrator of ECA. The Senator said exactly what needed to be said at this time when irrationality, irresponsibility, and ignorance are guiding much of the comment on all of our foreign policy.

Whatever fair criticism there may be of the handling of our foreign affairs, there can be no question of the desirability of "going down the line" for the ECA program. As Mr. VANDENBERG emphasizes, that program (of which he was the major architect) was conceived, formulated, and has been carried out as an unpartisan enterprise. The ills at which it was directed are, in large measure, on the way to being cured as a result of the soundness of the remedy and the skillful administration of ECA. Surely it is a wise course to follow through with his suggestion that the same careful studies which preceded ECA be initiated now to map the policies which will be needed when ECA comes to an end in 1952.

But right now it is urgent to keep on with appropriations for ECA which will not hamstring its efforts. Those who are advocating cuts in the proposal submitted by Mr. Hoffman should pause, for they will effect no real savings by such cuts. Any diminution in the effectiveness of the ECA program, which has been our most successful weapon in the cold war, will cost us more than the illusory savings of the proposed cut in the appropriation. Nothing could be more welcome to the Soviet Politburo than a weakened ECA.

BERNARD WEITZER,
National Legislative Representative, Jewish War Veterans of the United States of America.
WASHINGTON, *March 27, 1950.*

John Crown's Legacy

EXTENSION OF REMARKS
OF
HON. MILLARD E. TYDINGS
OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, April 11 (legislative day of Wednesday, March 29), 1950

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a tribute to a veteran, John Crown, by Howard A. Rusk, M. D.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

JOHN CROWN'S LEGACY—VETERAN LEAVES AN EXAMPLE OF COURAGE AND A PLEA THAT LOVE SUPPLANT GREED

(By Howard A. Rusk, M. D.)

(In 1946 a letter was published in this column from a young veteran in Halloran Hospital, a letter created by suffering, anguish and bewilderment. Last week, after 4 years of struggle, the writer, John Crown, died. His legacy to the world was an example of courage and a philosophy of life which, in these troubled and uncertain days, plead even more eloquently for the necessity of understanding than the day on which his letter was written.

(In this era of precocious technology, hydrogen bombs, guided missiles and all the additions to the horrors of war that have caused an epidemic of anxiety and tension throughout the world, this pain-wracked boy's prescription for peace among men merits thoughtful rereading.)

My name is John Crown. I am a paraplegic at Halloran General Hospital. My physical wounds are very small in comparison with my spiritual wounds. I have come back from death to a world that I no longer care for. I, who have been engaged in the great struggle to save the world from tyranny and having seen my comrades die for this cause, can now find no peace in the world or in my country.

Having lived close to death for 2 years, the reasons why there is no peace seem infinitesimally flimsy. Russia wants the Dardanelles. Yugoslavia wants Trieste, the Moslems want India, labor wants more wages, capital wants more profit, Smith wants to pass the car in front of him, junior wants more spending money. To these, I say, is it necessary to kill and cripple human beings for these petty gains?

Anyone who thinks a human body is so cheap that it can be traded for a tract of land, a piece of silver, or a few minutes of time should be forced to listen to the moans of the dying night and day for the rest of his life.

All the troubles of the world originate in the common man. The selfish and greedy ways of nations are just the ways of each individual man multiplied a hundredfold. When the morals of the common man drop, so do the morals of the Nation and of the world.

As long as our individual morals remain at a low ebb, so will be the world. Until each of us stops hogging the road with his car, stops fighting over the seat on the bus, stops arguing over who is going to cut the grass, there will be no peace in the world. If man wishes peace again, he must return to the great commandment, "Love thy neighbor as thyself for the love of God."

Jim Farley's Philosophy

EXTENSION OF REMARKS
OF
HON. GUY M. GILLETTE
OF IOWA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 11 (legislative day of Wednesday, March 29), 1950

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Jim Farley's Philosophy," which was carried in the Davenport (Iowa) Democrat of March 5, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JIM FARLEY'S PHILOSOPHY

It was a pleasure indeed, to read extracts of the address James A. Farley delivered before the Atlanta, Ga., Rotary Club. He is chairman of the board of the Coca-Cola Export Corp.

We have always considered Jim Farley to be one of the best informed, most reliable, and conservative of Americans, whether in the role of statesman or business man, in both of which he fits to perfection.

We can hardly forget the recipe he gave some years back for taming Stalin and the Russians. "Give them not vodka, but Coca-Cola to drink," he declared. In view of past events we fear "Uncle Joe" and his fellow Commies failed to take this sage advice.

In his Atlanta talk Mr. Farley observed that the economic prospect for 1950 was very good, and he sees no reason for any change in his optimism. He held that free trade was the key to peace, declaring that goods made in the United States are found in all parts of the world.

And, he emphasized, "American goods abroad everywhere carry with them a feeling of integrity and good faith." Giving a strong endorsement to the Marshall plan, Mr. Farley declared, "It is doubtful whether without American aid, this world reconstruction could take place at all. When the announcement was made more than 2 years ago that this Nation was considering the Marshall plan, it was 'like turning on a light all over Europe.'"

Turning to Russian communism, Mr. Farley said the threat of the spread of this ideology may be fought with words, the atom bomb, or with trade.

The first is insufficient, the second is repulsive to us, but the third is the middle way and the one that should ultimately be successful, he declared. "Trade leads," he contended, "to an intermingling, interdependence, and understanding between peoples."

Looking toward this end, Mr. Farley concluded, this Nation should promote world trade continuously and as fully as possible, "for where American products go, understanding of what they stand for will not be very far behind."

The American Merchant Marine

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, April 11 (legislative day of Wednesday, March 29), 1950

Mr. O'CONOR. Mr. President, yesterday I asked unanimous consent to insert in the RECORD the first of a series of four articles on the American merchant marine appearing in the Baltimore Morning Sun under the authorship of Miss Helen Delich.

So vital is it, I believe, that our people be made aware of the situation confronting the merchant marine today, that I now ask unanimous consent to insert in the RECORD the second article of the series, which appeared in today's Baltimore Morning Sun paper.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of April 11, 1950]

SHIP-SUBSIDY BACKERS CITE FARM AID, TARIFF—AMERICAN WAGES AND TAXES NOTED AS BASIS OF NEED, RECAPTURE RULE AS UNIQUE SAFEGUARD

(The following article is the second of a series of four by Miss Delich on the condition of the American merchant marine.)

(By Helen Delich)

American shipowners and operators are seeking additional Federal subsidies to keep them on a par with foreign competitors and to salvage the American merchant marine.

Otherwise, they say, "We will soon have a merchant marine without ships to sail." This description first was offered at the Senate subcommittee's maritime hearings by John Green, president of the CIO shipyard workers.

The increasing disparity between American and foreign costs has widened the difference between American and foreign merchant marines.

American ships cost more to operate because of higher wages, higher safety standards demanded by the Government, and taxes collected by the Federal Government.

SEAMEN'S WAGES COMPARED

American seamen's wages are the highest in the world. An American able-bodied seaman receives $226.01 basic pay a month; Canadian, $170 (before devaluation); British, $76.80 now; Norwegian, $74.59; Danish, $46.67; and French, $39.78. The overtime and penalty pay, and even a war bonus of $2.50 a day in some areas, paid to Americans are not received by the foreign seamen.

On a round trip from the United States to France via the northern route on a ship of the same size, an American operator would pay $24,201 in total wages; a Frenchman, $7,626; Greek, $7,352; Swede, $6,680; Dane, $8,190; British, $5,868; Norwegian, $5,263; and Italian, $5,647.

In shipyards the average English worker receives $14 a week.

The average American shipyard workers draw $59 a week, if he works 5 days.

American shipyard owners, however, have stated that they approve of their employees living according to the same standard as other wage earners in this country today.

ONLY ONES WITH RECAPTURE

Because ship owners must compete with foreign companies continuously, subsidies to American shipping serve the same purpose as protective tariffs do to many of our domestic industries.

However, under the Merchant Marine Act of 1936, if a shipping line earns more than 10 percent profit, one-half of such excess must be returned to the Government up to the whole amount of the subsidy.

Thus ship owners are the only recipients of Federal subsidies subject to recapture.

The Maritime Commission reports that two-thirds of the operating differential subsidies have been repaid to the Government. Five of the 13 subsidized lines have paid back in full. The others are still in the process.

Last year the Maritime Commission turned over to the Treasury of the United States $330,920,330.21 obtained from subsidized lines, ship-chartering proceeds, and the sale of war-built and Government ships.

Altogether, the Maritime Commission on its war surplus has showed an average return of 65 cents for every $1 spent on a ship. The War Assets Administration returned only 12 to 13 cents per dollar.

RATIO OF ALL SUBSIDIES

The National Federation of American Shipping says that the total net operating differential subsidy payments to American ship owners have been less than seventeen-one hundredths of 1 percent of all Federal subsidies paid to business and farmers from 1934 to 1948.

From 1936 to 1946, the total subsidy payments to shipping, including construction and operating payments, was $297,018,000.

There are about 250 modern ships in the American merchant marine to show for this subsidy. All can be requisitioned by the Government at any time.

The Department of Agriculture and the Commodity Credit Corporation from 1934 to 1946 paid out subsidies of $9,713,012,114 to farmers.

FARM-MORTGAGE SUBSIDIES

The Treasury provided subsidies of $334,151,000 from 1934 to 1946 to banks and lending institutions which lost money on farm mortgages.

The Reconstruction Finance Corporation allowed subsidies of $3,266,729,000 to businesses from 1941 to 1946.

In 1947 Norway spent $150 in operating aid to its merchant ships for every $1,000,000 of its national income; in 1949 Spain spent $26 of every $1,000,000 on operating aid; the United Kingdom spent $1.90; the United States spent 6.6 cents out of every $1,000,000 of national income on operating aid for its merchant ships.

Sweden, in computing taxes, does not limit the amount of depreciation on a ship. It can be as high as 100 percent the first year a ship begins operating.

ITALIAN AID TO SHIPPING

Italy, using a counterpart of $12,600,000 of ECA funds allotted to aid Italian merchant-ship construction, has a new law making direct contributions and direct subsidies for materials and amortization not in excess of 33 percent of the cost of the vessel.

In addition, the Italian Government guarantees 40 percent of the cost of the ship. This 73-percent total means the shipowner is required to provide only 27 percent of the cost of a ship directly. Italy also exempts from taxation all earnings from ships for the first 3 years.

The Italian luxury liner, Conte Biancamano, which arrived in New York recently, was reconstructed with $3,500,000 of ECA money. The 650-foot 25-year-old liner will operate on a run in competition with American lines receiving some subsidy assistance.

BRITISH TAX ALLOWANCES

Great Britain recently increased the depreciation allowance on ships from 20 to 40 percent in the first year of operation. On taxes, British shipowners also may carry losses forward for 6 years, so they can average good times with bad.

Denmark allows a 50 percent depreciation on a ship the first year and 25 percent thereafter.

The United States permits amortization of 4 to 5 percent per year and taxes are paid by shipowners on the same basis as any other corporation.

To give an insight into what the merchant marine means to the United States Government in tax revenue, the National Federation recently hired a special tax-accounting firm.

ESTIMATE OF TAX RETURNS

They used as a basis the nonsubsidized owners who operate 4,700,000 tons of shipping today. To keep this shipping at peak efficiency, it would be necessary to replace 235,000 tons annually for 20 years at a cost of $70,500,000.

The shipbuilding costs each year would be $64,091,000.

The following taxes would be derived only from the shipbuilding activities: On shipbuilders' profits, $2,435,000; income taxes from shipyard labor, $923,000; social-security taxes, $923,000; taxes on material, men and subcontractors' profits on materials, $1,151,000; income taxes by recipients of wages and salaries at subcontractors and suppliers, $436,000; social security on these, $436,000, and taxes on small business supported by wage earners, $1,495,000.

These tax recoupments would be $7,799,000 annually for 20 years under present conditions from the shipbuilding end.

ITEMS NOT INCLUDED

They do not include the taxes the shipowners pay from profits in operating their ships.

The accountants also point out that they do not include various other transactions which would be generated by the construction program and which would provide "substantial" Federal income taxes. For example, neither taxes on the wages of employees of suppliers of items purchased by wage earners nor taxes on profits of manufacturers and middlemen supplying the retail stores are included.

"We also made no provision for State taxes, Federal amusement, transportation taxes, Federal incomes on dividends paid by corporations benefiting from the above, or savings in unemployment benefits which result from work."

The Joint Chiefs of Staff and the Maritime Commission in 1947 requested $50,000,000 to repair 258 of the best ships in the inactive fleet to be held ready to meet an emergency.

REDUCED REQUEST FAILS

After that request was denied, they pared their costs to cover a bare minimum of 134 vessels they considered essential. Last year they failed to get the $25,000,000 asked from Congress. The issue is up again.

The predicament of the merchant marine today is a repetition of past history.

Back in the Civil War days, many ships shifted to foreign registry to lessen the war hazards and to avoid the exorbitant insurance rates. They were not permitted to return to United States registry later.

When the steel-hull steam-propelled ships were developed, the United States took a back seat in comparison with England because Great Britain was able to produce the vessels cheaper. Industrialization was advanced in England at that time and products were cheaper there.

The higher operating costs in this country did not attract private capital to shipping and the American merchant marine declined in 1913–14 to a level at which only 9 percent of our foreign commerce moved in American bottoms.

As soon as World War I broke out in Europe and the foreign nations pulled their ships home, American ports found themselves jammed with export cargo and no ships to move it.

The Shipping Act of 1916, providing aid for private construction, finally was passed, but the United States was in the war before the program was started. The ships were too late to be effective for that conflict, but the American merchant marine did grow from 8 percent of the world's total to 22.2 percent in 1920.

Various methods were used to sell the war-built ships, primarily to private American operators.

ACT OF 1936 AND WAR

However, the foreign competition was almost too much and American ships became less and less evident on the high seas. In 1939, 3 years after the passage of the act of 1936 to save the industry, this country had only 13.9 percent of the world's ships on the seas.

The 1936 legislation provided for the construction of 50 ships a year over a period of 10 years to rehabilitate the dry-cargo tonnage of the merchant marine through various subsidies.

From 1939 to 1946, American shipyards built 5,600 ships, 60 percent of the world's total. These were built at excessive costs and still were not enough to handle the war needs.

PRESIDENT'S ATTITUDE

On August 20, 1949, President Truman wrote the Maritime Commission:

"An adequate appreciation of the importance of the merchant marine to the Nation is lacking and is much needed today. Not enough of our people seem to realize the United States is a maritime Nation. I hope the Commission will take the lead in a program to correct this situation."

Despite this statement, it was pointed out at the recent Senate hearings, Mr. Truman appeared to disapprove of the requested operating-subsidy allowance of $90,000,000 to cover a 3-year period (subject to recapture through profits above 10 percent) because it was so much higher than the prewar level.

At the same time, he is recommending that the Maritime Commission—the only independent agency the merchant marine has to fight for it—be absorbed into the Department of Commerce.

Brand Names Day, 1950

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

N THE SENATE OF THE UNITED STATES

Tuesday, April 11 (legislative day of Wednesday, March 29, 1950)

Mr. WILEY. Mr. President, I have in my hand the text of an outstanding address delivered by one of our foremost American citizens, Mr. Louis B. Mayer, vice president of Loews, Inc., on the occasion of the celebration of Brand Names Day at a luncheon in the Hotel Waldorf-Astoria, New York. I am happy to call this address to the attention of my colleagues and of the American people, because not only are Mr. Mayer's comments on the subject of motion pictures of tremendous interest, particularly in these days of the cold propaganda war throughout the world, but because the organization which he addressed—the Brand Names Foundation—is one of the most vital elements in the American system of private enterprise.

This twentieth century is an age of brands, not only in the field of motion pictures, but in practically every field of production and consumption. The stability of entire industries, the continuance of millions of jobs, of hundreds of thousands of small retail and wholesale businesses, depend on the protection of brand names.

I ask unanimous consent that a few observations which I have prepared regarding both this eminent American and the noble organization to whom he spoke be inserted in the Appendix of the RECORD.

There being no objection, the statement by Senator WILEY was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR ALEXANDER WILEY ON BRAND NAMES DAY PROGRAM

Mr. President, the Brand Names Foundation is a nonprofit educational organization whose membership constitutes a roster of great American industries, newspapers, radio stations, magazines, and other enterprises. Looking down the membership list I was happy to see a long series of fine Wisconsin companies whose names denote quality not only in the Badger State but throughout the Nation.

Brand names day is an annual affair, and this year the occasion affords a splendid opportunity for more than 1,000 business leaders, who have, like the rest of us, a stake in the brand system, to exchange ideas and discuss mutual problems. Since 1943 the foundation has dramatized the brand story to consumers and distributors at national and community levels through a broad public-relations program.

COMBATING COLLECTIVIST POISON

The foundation combats the collectivists in our country who would like to destroy trade-marks, who would like to destroy the brand-name system. Why?

WHY THESE COLLECTIVIST PLANS?

In order to regiment American industry into producing uniform items with uniform packaging and qualities based on the whims and the phony slide-rule notions of some bureaucratic alleged "master minds."

IMPORTANCE OF TRADE-MARKS

I am delighted that the foundation has carried on this public-relations program, because I know from my experience as chairman of the Senate Judiciary Subcommittee on Patents, Trade-marks, and Copyright Laws, how crucial the trade-mark protective statutes are to this Nation. Without those statutes a tiny minority of business pirates could steal the fruits of hard-won brand loyalties which honest, industrious Americans have put a lifetime of work and effort to build up.

ROSTER OF BRAND NAMES FOUNDATION

To indicate the broad basis on which the Brand Names Foundation is built, I should just like to include at this point the names

of the 1949–50 officers and their companies which read as follows:

Officers

Chairman of the board, Donald B. Douglas, vice president, the Quaker Oats Co.; president, Henry E. Abt; treasurer, Gavin K. MacBain, treasurer, Bristol-Myers Co.; vice chairmen of the board, Maj. Gen. Julius Ochs Adler, vice president, the New York Times; W. T. Holliday, president, the Standard Oil Co. (Ohio); chairman of the executive committee, John W. Hubbell, vice president, Simmons Co.

I should like to follow that list with the distinguished board of directors of the foundation—names which are readily identifiable as being among the civic leaders of this entire nation:

Board of directors

Maj. Gen. Julius Ochs Adler, vice president the New York Times, New York, N. Y.; Frank Braucher, president Periodical Publishers Association of America, New York, N. Y.; A. O. Buckingham, vice president Cluett, Peabody & Co., Inc., New York, N. Y.; John R. Christie, Dan B. Miner Co., Inc., Los Angeles, Calif.; Donald B. Douglas, vice president the Quaker Oats Co., Chicago, Ill.; Frank M. Folsom, president Radio Corp. of America, New York, N. Y.; George E. Frazer, president National Transitads, Inc., Chicago, Ill.; Robert M. Ganger, vice president Geyer, Newell & Ganger, Inc., New York, N. Y.; W. T. Holliday, president the Standard Oil Co. (Ohio), Cleveland, Ohio; John W. Hubbell, vice president Simmons Co., New York, N. Y.; Charles T. Lawson, vice president Nash-Kelvinator Corp., Detroit, Mich.; Richard H. Lippincott, vice president Holeproof Hosiery Co., Milwaukee, Wis.; George S. McMillan, vice president Bristol-Myers Co., New York, N. Y.; Theophil H. Mueller, president Julius Kayser & Co., New York, N. Y.; Roy W. Peet, manager Association of American Soap & Glycerine Producers, Inc., New York, N. Y.; Edward S. Rogers, chairman of the board Sterling Drug Inc., New York, N. Y.; Donovan B. Stetler, vice president Standard Brands, Inc., New York, N. Y.; W. W. Wachtel, president Calvert Distillers Corp., New York, N. Y.; William G. Werner, manager division of public relations the Procter & Gamble Co., Cincinnati, Ohio; Paul West, president Association of National Advertisers, Inc., New York, N. Y.; Paul S. Willis, president Grocery Manufacturers of America, Inc., New York, N. Y.; Mark Woods, president American Broadcasting Co., Inc., New York, N. Y.

NEW YORK PROCLAMATION

I am glad to say that the mayor of the Nation's largest city, New York, more than fully appreciated the significance of April 5 as brand names day, and he issued a special proclamation of invitation and greetings which I should like to have reproduced in the RECORD at this point:

CITY OF NEW YORK,
OFFICE OF THE MAYOR,
New York, N. Y.

Proclamation

Whereas the American standard of living is recognized as the highest in the world, and is due, in great part, to the abundance and high quality of the products of our free competitive enterprise system and their forthright and responsible identification by trade-marks submitted to the choice of the consuming public; and

Whereas the city of New York, because of its pool of highly skilled workers and technicians and unsurpassed manufacturing and distribution facilities, provides a great share of our Nation's products; and

Whereas New York welcomes the representatives of the firms associated with the educational organization known as Brand Names Foundation, Inc., whose members are dedicating their conference to the furtherance of our traditional free enterprise and brand competition system;

Now, therefore, I, William O'Dwyer, mayor of the city of New York, do hereby proclaim Wednesday, April 5, 1950, as brand names day, and urge all residents of this city to support the aspirations of this vital division of our industrial life, the success of which will guarantee greater employment here and throughout the Nation.

In witness whereof I have hereunto set my hand and caused the seal of the city of New York to be affixed this 28th day of March 1950.

[SEAL] WILLIAM O'DWYER,
Mayor.
WILLIAM J. DONOGHUE,
Secretary to the Mayor.

VARIED APRIL 5 PROGRAM

I wish that it might have been my opportunity and the opportunity of Members of this great body to be on hand at the April 5 luncheon. The committee for brand names day was headed by the regional manager of Hearst Advertising Service, Mr. H. James Gediman. He received able assistance from the following business leaders: Harry B. Carpenter, vice president, Young & Rubicam, Inc.; George Fotis, director of sales promotion, Remington Rand, Inc.; Ivor Kenway, vice president, American Broadcasting Co., Inc.; Albert L. Morse, vice president, Goodall-Sanford, Inc.; H. Ford Perine, director of merchandising, Time, Inc.

Of course, there were so many memorable features of the program that to mention any one might be to slight unintentionally the others. Suffice it to say, however, that one of our great American scientists, Dr. Robert A. Millikan, of the California Institute of Technology, addressed the assembly and there were many other fine and enjoyable parts of the program.

ADDRESS BY L. B. MAYER

Without, however, detracting in the slightest from those other phases, I should like to invite the attention of my colleagues to what observers consider to have been probably the outstanding occasion of an outstanding day, the address by the vice president of Loew's, Inc., Mr. Louis B. Mayer.

This great citizen certainly needs no commendation in detail on my part because his contributions to the American free-enterprise system and because his very life itself are parts of an epic even greater than any of the cinema epics which his world-famous company has produced. Here is an American whose biography is the Horatio Alger sort that would inspire any American youngster. Here is a man who has literally pioneered in the creation and development of one of our greatest industries—motion pictures. His service to that industry alone merits warm praise and appreciation of the movie-going American people, because he initiated a whole host of motion-picture techniques and programs which have since become the accepted standards and, indeed, the ideals of the industry. But, over and above his contributions to that industry, a look at the record will show that he has always more than fulfilled his patriotic obligations as an American, as has the industry itself.

These are no mere empty words of passing tribute; I assure you they are my sincere convictions which I offer publicly in justified endorsement of this splendid American.

Since the memorable day in 1907 when Louis B. Mayer opened his first nickelodeon in Haverhill, Mass., he has been the acknowledged pacemaker in a pacemaking industry. For 25 of those 43 subsequent years he has been the production head of the consistently successful Metro-Goldwyn-Mayer Corp., the film producing subsidiary of Loew's, Inc.

Naturally the major elements in Mr. Mayer's comments were devoted to the crucial role of motion pictures in the twentieth century world. But I think that any American will also profit from reading Mr. Mayer's sage comments on the trade-mark system in general, because certainly, the head of the company which offers Leo the Lion—an international symbol of cinema quality—has more than an ordinary right to speak on the importance of brand names.

I also invite attention to Mr. Mayer's other comments on such subjects as the sterling American patriot, Mr. William Randolph Hearst, Sr., and on such themes as the present crushing burden of Federal taxes and related matters.

Motion pictures to quote Mr. Mayer are "The most powerful ambassador of Americanism we could have." And, it is men like Mr. Mayer who are in themselves great ambassadors of the American system.

TRIBUTE TO MR. MAYER

I have in my hand the text of a very fine letter that was addressed by the chairman of the committee for brand names day, Mr. H. James Gediman, to Brig. Gen. Julius Klein. Mr. Gediman stated that thanks to General Klein's untiring efforts the annual affair acquired even more than the customary significance because of Mr. Mayer's presence. I should like to quote at this point Mr. Gediman's letter because I think that it eloquently bespeaks the admiration which his audience rightly had for Mr. Mayer.

HEARST ADVERTISING SERVICE,
New York, N. Y., April 6, 1950.

Brig. Gen. JULIUS KLEIN,
Public Relations, New York, N. Y.

DEAR SIR: I can now understand the depth of your regard for Mr. Mayer. He is a wonderful person.

It was a real privilege to meet him because he exemplifies a favorite notion of mine that "the bigger they are—the nicer they are."

His address is the talk of the town. He had one of the most sophisticated and distinguished audiences I have seen in a long time and he held them absolutely spellbound.

While the Brand Names Foundation was outstandingly the chief beneficiary of Mr. Mayer's visit, may I say that in my opinion the whole occasion reflected very constructively on Mr. Mayer personally and on Metro-Goldwyn-Mayer.

We are all deeply indebted to you.

Sincerely yours,
H. JAMES GEDIMAN.

Mr. WILEY. Finally, Mr. President, I ask unanimous consent that Mr. Mayer's address be printed at this point in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

YOU AND MOTION PICTURES

Mr. Chairman, members of the Brand Names Foundation, it is not only a genuine privilege to be invited to join with you today, but I am honored, indeed, to be on the same dias with this great American, Dr. Millikan.

The presence here of the learned Dr. Millikan brings promptly to mind the great debt we owe to our American scientists. Surely, there is scarcely a moment in our everyday lives that is not made more comfortable, efficient, and happier, by their achievements.

But let us not forget, that without the enterprise of the manufacturer, and the creation of markets for new products by advertising, much of the advancement offered by science would remain hidden within the confines of the laboratory.

Yes, Mr. Abt; I am very aware of the value of brand names. I recall that shortly after Metro-Goldwyn-Mayer had become established as a successful studio, I made a trip

to Europe. I met all kinds of people, on the trains, waiters in the hotels, businessmen.

But they didn't seem very impressed by the name of Mayer when I was introduced. Then somebody would mention something about my connection with American films. "Herr Mayer of the cinema?" they would repeat. "Oh yes, the Lion pictures!"

That, gentlemen, is how we became famous. We started out with a trade-mark people the world over remembered.

Yes; we of the motion-picture industry are in a brand-name business too. We have our brand names, in our trade-marks, and also in the names of our stars. These are the products we have to sell. Let us suppose, for example, that we were to advertise a picture starring Spangler Arlington Brugh, Judy Gumm, and Jeanette Morrison. I doubt if we would sell any tickets. But give these stars their brand-name identifications, Robert Taylor, Judy Garland, and Janet Leigh, and the box office would do very well, indeed.

There was a time, some of you may recall, when motion picture actors had no identity. Their names never appeared on the films Those were the days when feature pictures were only a few hundred feet long. You saw five or six subjects in an hour. Today's single feature runs an hour and a half or more. As motion pictures developed, so did the curiosity of the public. They wanted to know who the players were. And so our box office names were born. Today it is not infrequent that the title of the picture itself is of secondary importance. How often have you been asked a question like, "Have you seen the new Lana Turner picture?"

In 1924 when Metro-Goldwyn-Mayer came into being through the merger of three separate producing companies, we determined to make our trade-mark really stand for something, to be the first in motion-picture entertainment to produce the best pictures humanly possible, and to live up to our advertising. We have tried, very conscientiously, to fulfill that promise.

We know, as you do, that popular demand must be created for any product. Public appetite must be stimulated. There are, of course, popular favorites in commercial products as well as in motion-picture stars. I could not tell you why one person will walk up to a counter and ask for one brand of tooth paste while a second customer demands a different kind. And I cannot tell you why a theatergoer will walk past one box office and pay his money at another down the street. We are a people of free choice, and thank God that it should be so. And I know of no greater illustration of our system of free enterprise than that there exists such competition for the choice of the individual, be it for a brand of mattress, a motion picture, or a candidate for the Presidency.

There is a certain psychology about the brand names. I want to confess that I am a victim of this phenomenon. If you advertise a product successfully, I find myself buying it, and liking it. Some other product might be just as good, might be exactly the same, but the special brand psychology has convinced me that product is the best. Nothing else could taste as good to me.

In the motion-picture industry we believe in advertising. We spend many millions every year to advertise our pictures. We know as you do that a fine product is not enough. It must be merchandised and advertised so attractively and cleverly that it develops its own brand-name appeal.

Our problem of advertising and merchandising is made difficult as no two pictures are alike. Every picture is a fresh creation.

In most businesses when you gentlemen originate and establish a brand-name product, that merchandise is set. Your package, your ingredients, will be the same tomorrow as they are today.

To create and then introduce to the public hundreds of new and different products each year is a formidable task indeed.

But necessity is the mother of invention and our sales and advertising departments have met the challenge.

It has been said that everybody has two businesses, his own and motion pictures. Motion pictures are our business but they are really yours, too. For I am certain that no medium has been so instrumental in popularizing commercial products as has the screen. Wherever our films are shown, there are also demonstrated the products of American industry. I suspect this may be why you invited me here today.

I recall that shortly after the merger that created Metro-Goldwyn-Mayer, I went to Italy to look after the production of Ben Hur which we had inherited. Upon my return to this country I stopped in Washington to see my very dear friend, then the Secretary of Commerce, Mr. Herbert Hoover. He had requested my report on a question he asked before I went to Italy, could so gigantic a production be successfully made, far from its home base of supply, under the social and economic conditions existing under the Fascist regime. I had to report that it could not, that we were bringing the company back to Culver City to finish the picture.

Mr. Hoover took me to see the President. I felt very sentimental about visiting President Coolidge, especially since he was from Massachusetts, where I began my career. I was flattered, too, that anything I might have to say should interest the President of the United States. I was surprised how important he considered motion pictures. Mr. Hoover told him, "Mr. President, our commerce used to follow the ships carrying the American flag into foreign ports. Today it follows our motion pictures."

He told the President how the fad of bobbed hair, popularized in our films, had spread throughout Europe, how the styles in clothing, the many comforts and conveniences of American life, household appliances and kitchen utilities were being demanded in foreign markets following their introduction through our motion pictures.

Some 20 years ago our gifted art director, Cedric Gibbons, tried a startling idea in home design for the settings used in Our Dancing Daughters. He called it moderne, simple, clean of line, functional, beautiful, and comfortable. Certainly a far cry from the stuffy, dust-catching type of much home decoration. Well, you know how popular moderne has become. You see its influence on every hand today. A little later, Gibbons introduced another vogue, the charming early American farmhouse sets for When Ladies Meet. I could not begin to tell you how many people wrote in for plans or how many times this particular set was copied in real life. You can scarcely go through any American community without finding a counterpart in design.

Such influence on the living and purchasing habits of people throughout the world is beyond estimate. If a motion-picture scene shows a refrigerator, washing machine, a new type of furniture, a spring style, a trinket, novelty, something new in electric razors, or whatever the product may be, the resultant demand, the appetite and desire to possess is overwhelming. You advertise. We dramatize.

We were made very aware of this screen potency when Clark Gable and Claudette Colbert made It Happened One Night. There was a scene, you may recall, where Clark Gable removed his shirt. You probably do not recall, however, that when he took his shirt off his torso remained bare. No undershirt. Well, it wasn't long before we heard the screams of the underwear manufacturers. It seems that male America was following the no-undershirt style inspired by Mr. Gable. Let me assure you gentlemen, particularly those who may be associated with the manufacture of undershirts, Mr. Gable has kept his on ever since.

Then there was our young Dr. Kildare, who discovered that goat's milk had caused undulant fever in one of his patients. We heard from the Goat Milk Producers Association. Believe me, gentlemen, I had no idea of how many thousands of people there are in this country who raise goats.

This far-reaching influence of the screen is not entirely appreciated in certain countries. There has been, in recent years, an intensified resistance in some foreign nations. Barriers have been set up against us. Must stop the showing of American pictures, they say, or their people will become too Americanized. That would be a tragedy, now wouldn't it?

Russia is not the only place where our films are barred. There are other countries, too, that do not want their people to see the happiness and prosperity of America. They want to keep their people in ignorance, so that the lies and misconceptions our enemies tell about us can be believed. The United States spends billions of dollars to help the economy of the nations of people who are still free. But what is more important than to bring them enlightenment, information, the truth about the freedom of our democracy, so that they, too, shall not yield to pressure and become enslaved.

Our newspapers, magazines, and radio do not enter these countries to a sufficient degree. But, even so, the language is foreign to them. But for our foreign markets, we see that our motion pictures speak the language of every country they are shown in. Think what it can mean to show these people how our American workers live, the automobiles they drive, their sons and daughters attending our institutions of higher education, all the benefits and opportunities that exist in our paradise of democracy. Yet our Government allows barriers to be erected against us.

Yes; it would be good business for the motion-picture industry if these foreign markets were all open to us—yes; and it would be good business for all American industry as well—but, most important of all, it is the best way to show to the people of the world what America stands for and has to offer. Our motion pictures, gentlemen, are the most powerful ambassadors of Americanism we could have. I believe it is the responsibility of our Government to send them into every nation on earth if, for no other reason, than that there are countries who want to keep them out.

I don't have to tell you of the great part our motion pictures played in the war. Ask General Eisenhower, General MacArthur, Admiral Nimitz. Ask any of our soldiers, sailors, marines, airmen, what motion pictures meant to them behind the battlefronts, on the ships, in the jungles, wherever they served. We are very proud of this record, grateful for the privilege to have served our country. Let me ask you this, what do you suppose any other nation would give to have a motion-picture industry like ours?

Gentlemen, the industries you represent here today are the backbone of our Nation's economic life. We have built together, prospered together. We have much to be grateful for, much to be proud of, and much to protect, and I cannot help but think we should take time out right now, that we put aside for the moment thoughts of business gain, and devote ourselves to fortifying the foundations of our democracy with new cement and new steel. Let us profit by the lessons of yesterday. Let us not wait too long. Let us not leave it to others. Most of all, let us think.

You remember how prohibition came about. We all laughed at it. It couldn't happen here. But while we were busy with our jobs, it did happen.

We didn't take Hitler too seriously at first either. And I am mindful of the indifference

that greeted the first warnings against communism sounded by my dear friend, a truly great American, William Randolph Hearst. He had the foresight, the courage, the patriotism. Most people thought him an alarmist, didn't pay very much attention to what he had to say about this menace to our freedom. There are many today who wish they had given more heed.

It is difficult, of course, to understand that there could be those who call themselves Americans and yet would destroy everything for which it stands. We know of children who have a beautiful new toy, how they worship it for a moment, and then tear it apart to find out how it works and to see if they can't make it better, only to find they've destroyed their prized possession. But those are children. We never had any idea there could be grown men who could do that to their country. Thank God for the vigilance of the American press and radio, that they awakened us, I hope, before it was too late.

Yes, my friends, this is a time for thought and deliberation. We must make certain our ship of state is headed on the right course, sailing in safe waters. We have seen how helpless is the mightiest of battleships once she veers from the straight channel and mires on a shoal.

Another great danger we must all face realistically is taxation. There are Government taxes, State taxes, county taxes, city taxes and taxes on practically everything that is purchased—yes—even death and inheritance taxes. The tax situation is a problem, and a very great problem, to all of us. We need the help of the press and radio to give the people the truth about who is really paying these taxes, that it is not only big business and those in the high income brackets, but everyone.

How many housewives do you think know how much of the price of a loaf of bread goes for taxes. We must show them just where, and how, and for what, this tax money is spent.

The cry today is to balance the budget by raising taxes. Keep raising taxes. I haven't heard very much about balancing the budget by not spending so much. By not wasting so much. What if a wife told her husband she couldn't do anything about balancing her household budget, unless he went out and made a lot more money? What would that husband be likely to say—or do?

We are a very fortunate people. There are few countries left in this world where exist such opportunities to be enjoyed. Only under a system of free enterprise, such as ours, could there be the constructive spirit of competition, that has provided the incentive which is responsible for our incomparable productivity. Let us guard this well, let us protect it with all our strength. Let us not be too occupied with our own individual interests that we have no time to look out for the perilous shoals ahead. It may be later than we think.

I thank you.

Radio Program for Democracy

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, April 11, 1950

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a broadcast over the American Forum of the Air on March 25, 1950.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

ANNOUNCER. The National Broadcasting Co. presents the American Forum of the Air, founded by Theodore Granik and dedicated to the full and public discussion of all sides of all issues, which today starts its 22d consecutive year and comes to you from the NBC Theater in Washington, D. C.

Before we present our moderator, Theodore Granik, here is Senator EDWIN C. JOHNSON, of Colorado, chairman of the United States Senate Interstate and Foreign Commerce Committee.

Senator JOHNSON.

Senator JOHNSON. I have had the pleasure of appearing many times on the American Forum of the Air as a participant. Today I am here to speak not on the Forum, but about the Forum and its moderator, Ted Granik.

This program and its founder today observe their 22d year of service to the American people, and what a service.

In 22 years the Forum has presented speakers on every conceivable issue of national and international importance to American homes through the medium of radio and now through the scientific wonder of this age, television. I wish it were in the power of the Congress of the United States to award an Oscar, an award for democracy, an award to my friend, Ted Granik, and to this program which has brought speakers of all political persuasions squarely before the citizens of our Nation for public inspection of their views.

The April 1 issue of Collier's magazine salutes and pays tribute to the American Forum of the Air in an article entitled "It's a Radio Program for Democracy," written by the distinguished journalist and dean of radio reporters, Ben Gross, of the New York Daily News. My congressional colleagues and I join with this noted editor in calling the American Forum of the Air our unofficial Congress. It typifies to me the very best example of democracy in action. It is truly a tragedy that there are nations of this world where such a program could not exist today.

President Truman some time ago said: "Mr. Granik's program, the oldest forum on the air, has been outstanding in its field. In the finest American tradition of freedom of speech, week in and week out, it has presented to the American people discussions of vital concern."

Thus spoke the President.

To Ted Granik and to the National Broadcasting Co., which makes this program possible, I would like to convey the congratulations and thanks of my colleagues, and I feel most certainly of the American people, for a program which continues to serve the highest interests of the public after 22 exciting and eventful years.

Chairman GRANIK. Thank you ever so much, Senator JOHNSON, for your very kind and generous remarks. On behalf of my wonderful staff and my grand NBC colleagues, all of whom cooperate so heartily in planning, arranging, and producing these programs, and who worry with me each week, we are all very deeply grateful to you and to the other distinguished speakers who have participated in these forums.

[From Collier's magazine for April 1, 1950]

IT'S A RADIO PROGRAM FOR DEMOCRACY

(By Ben Gross)

Several weeks before VJ-day Theodore Granik, founder and moderator of the American Forum of the Air, scheduled a debate on the subject What Should We Do With Japan After We Win the War? Setting August 14 as the date for the broadcast, Granik called the State Department to see if it would furnish one of the debaters.

Less than an hour later Under Secretary of State Joseph Clark Grew telephoned Granik and asked him to come to his office at once. "If that program goes on," Grew confided, "you might embarrass certain negotiations now in progress. It would be particularly bad if one of your speakers offended the Japanese Emperor."

Granik, of course, promptly canceled the debate. At the same time, he became privy to one of the greatest bits of inside information of the time: That negotiations were under way for Japan's surrender, and that with the surrender Hirohito would remain on his throne.

This is not the only occasion on which Granik, a genial, balding 6-footer with a perennially naive expression, has been a party to Washington's top secrets. His forum, oldest show of its kind on the air, now heard and seen weekly on the NBC radio and television networks, has regularly floated trial balloons for critical changes in administration policy and has provided both "ins" and "outs" with a sounding board on which to test public sentiment on major issues.

Thus, it was that Marvin McIntyre, secretary to President Roosevelt, phoned Granik to suggest "an interesting show"—a discussion of the possibility of swapping some old United States destroyers for British bases. Granik complied with this suggestion, which was made before Roosevelt formally presented his destroyers-for-bases proposal to Congress, and the thousands of letters which poured in from listeners added to F. D. R.'s assurance that most Americans would favor the swap.

Because more than 90 percent of the membership of Congress has appeared on the forum, it is known on Capitol Hill as "the unofficial Congress of the United States." It is the only broadcast reprinted each week in the CONGRESSIONAL RECORD. Cabinet members have also appeared on the program, as have leaders of industry and labor, President Roosevelt when he was New York Governor, and President Truman while he was Senator.

In the forum's 22 years, the transcripts of its debates have piled up into a lively political history of the times. From the Hoover-Smith campaign to the Truman administration, hardly an issue of public controversy has gone unaired on the program. In 1928 forum debaters were threshing out "Should We Have Joined the League of Nations?" In the early thirties, "Is the NRA a Menace?"; several years later, "Is Appeasement the Right Policy?"; in 1944, "What To Do With Germany;" and, by last year, "The Welfare State."

The American Forum of the Air came into being accidentally. In 1925, Granik, Brooklyn-born son of a dry-goods store owner, was attending City College and at the same time working as secretary to Lee Adam Gimbel, vice president of Gimbel's Department Store. On the store's eighth floor the Gimbels had set up a small radio station, WGBS, mainly as a curiosity to lure customers to the piano department hard by. Ted was soon spending more of his time at the studio than at his secretarial duties, writing minstrel shows and filling in with Bible reading when a performer failed to show up.

While still at WGBS, he began to study law at night at St. John's University. His mind torn between Blackstone and Marconi, he finally persuaded members of the St. John's faculty to launch a weekly program called Law for the Layman, a discussion of legal topics in popular language, over the Gimbel station. The program was set up with the young law student as moderator, and such was its success that when WGBS was sold, Granik was invited to bring his show over to WOR.

At that time the repeal of prohibition was one of the most bitterly contested issues of the day. Granik invited Congressman EMANUEL CELLER, of New York, to discuss the legal

aspects of the problem. Mrs. Ella Boole, president of the Woman's Christian Temperance Union, read an announcement of this in the papers and immediately demanded air time to answer. "Why don't you put her on with us?" Ted suggested to WOR executives. "It might make a hot show."

It was then almost unheard of to permit a speaker on a controversial issue to go before a microphone without a carefully censored script. But Granik's was an ad-lib program.

After considerable argument, and despite Mrs. Boole's reputation for rhetorical vitriol, the station's bosses agreed.

The youthful moderator strove mightily to preserve some semblance of order, but a rough-and-tumble soon ensued. Mrs. Boole grew so excited that when she reached for a glass of water her hands trembled and she drenched herself. Madder than a wet hen, she let go with an astounding charge. She informed her listeners that some of the highest Government officials in Washington were such scofflaws they had built subterranean passages between their offices and nearby speakeasies.

Mrs. Boole's accusation hit the front pages and inspired hundreds of editorials. With the blessing of WOR, Granik's program became a regular forum for the presentation of both sides of public issues.

DEFICITS MET FROM LAW PRACTICE

Granik estimates that during the past 22 years he has dug into his own pocket for more than $250,000 to carry on his show, pointing out that the weekly stipend paid him for the program has not sufficed to meet expenses. He has been in a position to foot the difference because of the handsome yearly income he nets from his law practice, with which he kept up during the years that the forum was advancing to national fame.

From 1934 to 1937, Granik served as assistant district attorney to New York County and from 1937 to 1941 as counsel of the United States Housing Authority. In 1941 he was civilian aide to Maj. Gen. Lewis Hershey, head of the draft, served as special adviser to Donald Nelson on the War Production Board, and after the war contributed his services to the Belgian Government. Through his contacts with Washington officialdom, he was able to cut red tape and rush relief to that distressed nation, for which he recently received one of its highest awards.

Today Granik has law offices in both Washington and New York, acting as legal adviser on Government matters to banks, steel companies, steamship lines, and other large industrial and financial outfits. But the forum remains the major interest of his life. He and a staff of secretaries, researchers and clerks devote as many as 50 hours a week to planning the program.

Granik's preparations for his show also include the buttonholing of Senators and Congressmen in the Capitol dining rooms regarding topics to be discussed. He entertains them on his yacht on the Potomac and relentlessly pursues them via long-distance telephone to all parts of the country and sometimes even to Europe.

Granik, whose long-distance bills average around $2,000 a month, is regarded as such a good customer of the telephone company that once last year, when he was abed with pneumonia, a Washington phone supervisor called in great concern, saying: "We're worried about you. Two days have passed and you haven't made a single long-distance call."

Despite the financial licking Granik has taken in his broadcasting activities, he has been amply compensated in other ways. His show is a past winner of the George Foster Peabody award, regarded as the Pulitzer prize of radio. And Harry S. Truman himself, while Vice President, in 1945 paid tribute to the forum for its adherence to the finest traditions of American free speech.

It was in 1937, when Granik moved the broadcast from New York to Washington, that it began to attract national attention. Many Congressmen and Senators were at first reluctant to appear, fearing the program's ad-lib format and off-the-cuff debate, which permitted no prepared script save for each speaker's 1-minute opening statement.

But when word got around of the surprisingly large mail response received by Congressmen who had ventured onto the show, Capitol Hill hesitancy vanished. First a mere trickle of legislative eloquence flowed into the National Press Club auditorium and later to the Shoreham Hotel, where the broadcasts were staged. Then it became a flood. By 1941 all doubts had disappeared. In that year, a debate on lend-lease, in which Senator C. Wayland Brooks, of Illinois, argued for the negative, brought him 18,000 letters.

Today, the forum broadcast and telecast stems from the Wardman Park Hotel, and draws an audience comprised in good part of Government officials. The procedure of the program is simple: Each debater delivers a brief prepared statement. From then on it's give and take. Next come questions by the audience, and finally 1-minute summaries by the participants.

On the whole, Granik has successfully maintained decorum during the frequently torrid discussions. Sometimes, however, the partisan or personal emotions of the participants prevail.

During the Roosevelt era, for instance, Senator Sherman Minton of Indiana, now on the Supreme Court, debated the rights of labor with Congressman CLARE HOFFMAN of Michigan. In the heat of debate, HOFFMAN resorted to name calling. Minton became so enraged that he lifted his opponent from the floor and was about to hurl him into the audience. With frantic cries of "Shay, Shay" (the Justice's nickname) Granik managed to stop him.

The late Gen. Hugh Johnson, NRA boss and a man of easily aroused temper, lost patience with his forum opponent, Senator CLAUDE PEPPER of Florida. The fiery soldier, no longer willing to rely merely on his corrosive vocabulary seized the mike and tempted to hit PEPPER on the head. Granik again played referee and the discussion proceeded to an orderly end.

Such sensational outbursts are, of course, the exception. Usually the forum debate runs a lively but dignified course.

Government leaders, aware of this, often use the forum to tee off headline news on major changes in policy. January 1949 provided such an instance. The night before President Truman delivered his state of the Union message to Congress, one of its most important points was revealed to forum listeners by J. Howard McGrath, then chairman of the Democratic National Committee, during the debate with Senator ROBERT A. TAFT. McGrath made it plain that the President would ask authority for stand-by price controls and allocation of scarce materials.

Occasionally, top officials go out of their way to seek debate with more caustic opponents of the administration. Not so long ago Secretary of Commerce Charles Sawyer had Granik book him against Henry A. Wallace to argue on How Can We Keep America Prosperous?

Wallace refused to speak in any place which barred Negroes, and so the broadcast took place in the Department of Commerce auditorium. The debate was a tense one. The climax came, when, according to the transcript, Wallace said "* * * the reason I am on this program is to try to needle this depression—needle this administration—into taking action which will prevent that depression."

Sawyer snapped, "You were right the first time."

Wallace angrily demanded the withdrawal of that remark. Sawyer deliberately removed his glasses and pugnaciously announced he wasn't taking anything back. "The guilty flee where no man pursueth," he added.

Once during the Presidential campaign year of 1948 an unexpected news development forced Granik to change a topic already booked for airing. As on other occasions, he was thereby tipped off to a big "secret." But, this time, like most Washingtonians, he did not take much stock in the accuracy of the tipster's information.

AN UNWISE CHOICE OF TOPIC

At the suggestion of Congressman HUGH SCOTT, then chairman of the Republican National Committee, Granik had lined up for the week after election a discussion on "What Will Be Dewey's Policies?" He telephoned Democratic Senator JOSEPH C. O'MAHONEY in his home State of Wyoming, asking him to participate in the program. O'MAHONEY refused. "I'll be glad to go on your show, Ted," he said, "but not with that topic. There are some strange winds blowing out here, and I tell you right now that the election is going to surprise a lot of people."

O'MAHONEY did appear on the scheduled date—to discuss the meaning of the surprising political upset.

The GOP chairman, on the other hand, had a melancholy look as he reported for the broadcast. Calling O'MAHONEY aside, he said, "Just before coming here, I stopped at my headquarters for a few minutes. The boys and girls up there are so gloomy that even the china elephant on my desk is dropping his tail between his legs."

O'MAHONEY offered the proper condolences and SCOTT continued: "Do me a favor, will you? Don't become offended if tonight I become overaggressive. I want to use this broadcast as a pep talk to my fellow Republicans."

As Granik recalls it, "We had a humdinger of a show."

One of the virtues on which Granik prides himself is his absolute impartiality as a moderator. "Naturally, I have my own opinions," he says, "but I challenge anyone to know what these are from my conduct on the air. I bend backward to assure both of my speakers an equal hearing.

"The importance of this was impressed on me during my early years in Washington. One evening, Marion Martin, then assistant chairman of the Republican National Committee, came to our studio with a stop watch, a pencil, and a pad. She used these all during the early portion of our broadcast. Later, she told me that she had suspected me of partiality for the Democrats. But she soon quit her checking up when she found that during the first portion of the program she, as Republican spokesman, had actually consumed more time than her Democratic opponent. Of course, this was evened up during the latter part of the show."

One of the most important ways to preserve impartiality, according to Granik, is to match speakers of equal debating ability. Often a certain Congressman or Senator will suggest that he would like to debate another. But Granik never pits them against each other, unless he's certain they're in the same class as speakers.

Sometimes a public orator has a poorer opinion of his abilities than Granik has. Some years ago, Martin Dies, of Texas, then chairman of the House Committee on Un-American Activities, was scheduled for a debate with Morris Ernst, the New York lawyer representing the American Civil Liberties Union. Although Ernst has a reputation as a formidable antagonist, Granik felt that Dies could make a good showing.

On the evening of the broadcast, Congressman Dies sent a substitute speaker. His excuse was that he had a communicable illness. The sub proved no match for Ernst.

The next evening, as Granik tells it, he ran into Dies at a party. "Thought you were in quarantine," said Ted.

"I fooled you!" Dies winked, and confessed that he had decided it was the better part of valor to forgo a session with Ernst.

"It's the only time a congressional speaker has ever run out on me," Ted says.

MRS. LUCE WAXES EMOTIONAL

One of the most troublesome problems of a moderator is the speaker who insists on interrupting the opposition. Former Congresswoman Clare Boothe Luce, during an argument with the Communist leader, William Z. Foster, on "Communism Versus Democracy," was so eager to rebut his statements that she broke into almost every sentence he uttered. She waxed so emotional that Granik had to grasp her gesticulating arm in order to bring her under control.

"But Clare is a wonderful speaker to have on a forum," Ted adds. "She has such zest—and what an ad-libber." He recalls a debate in which she was paired with William B. Ziff, the publisher, against Admiral Jerry Land, Chairman of the Maritime Commission, and J. Carter Forte, general counsel of the American Association of Railroads. The Connecticut Congresswoman brought down the house with her crack to Ziff: "You take the Land, Bill, and I'll hold the Forte."

Granik frowns on his debaters smoking during the broadcast. Not that he has any prejudice against tobacco. It's just that he remembers what happened to Congressman SAM HOBBS.

"A crackajack speaker," says Ted, "but he lost out in one debate because of his deliberate manner while smoking. His opponent would fire a question at him and before Sam could remove his pipe from his mouth, his antagonist had already started answering the questions he himself had asked."

Some of the most dramatic developments in the program's long history have been the several occasions when forum speakers have actually converted their opponents while the program is on the air. Clarence Streit, head of the Union Now movement, had the satisfaction of converting an isolationist Congressman during a broadcast. On another occasion, Mrs. Irving Berlin argued a woman opponent into resigning from the America First Committee.

His 22 years of experience with nationally famous political figures have given Granik some emphatic ideas about public speakers and their complex art. Basing his judgments on the showings they have made on the forum, he names among the best debaters of these times Norman Thomas, the Socialist leader; Senators ROBERT A. TAFT, CLAUDE PEPPER, and OWEN BREWSTER; Secretary of Agriculture Charles F. Brannan, and former Secretary of State James F. Byrnes. "Senator TAFT is not only an outstanding debater," Ted says, "but, contrary to general impression, also a talented ad-libber."

The famous names which have appeared on the Granik show have provided him with a unique file of historical footnotes on oratorial mannerisms.

TRUMAN THE PERSISTENT ONE

Of President Truman, Granik reveals, "The one quality I recall about him as a forum speaker is a certain bulldog-like plodding ahead despite opposition. As a Senator 11 years ago he debated on America's railroad problem speaking on behalf of a bill he had sponsored with Senator Burton K. Wheeler to reorganize railroads in financial difficulties. And he simply refused to budge in his arguments.

"Incidentally, when Mr. Truman was Vice President, I phoned him one Sunday afternoon. He was his usual homey self. He said, 'Ted, what are you doing? The Mrs. and Margaret have gone out. I'm sitting here in my dressing robe; so why don't you come over and we'll "schmoose" awhile?'

"President Roosevelt, who spoke on our program while he was Governor of New York, impressed us with his ease of manner and the way he marshaled his facts into line. His written script for his formal opening statement on the forum taught me many things. For example, I noticed that he placed just one thought on each page and that his words were underlined for emphasis and for pauses.

"Mayor LaGuardia of New York City was one of the most vivid speakers our show has ever presented. He had quick, lightning-like movements and grimaced without inhibition."

Granik has formulated his own commandments for public speakers. He advises making speeches short, using down-to-earth language, translating abstract arguments into terms of common experience, avoiding statistics as much as possible, and, above all, keeping your temper regardless of how much your opponent needles you.

Granik confesses that although he has been on the air for 22 years, he himself has yet to master all these precepts.

But for a boy from Brooklyn, he has done all right nonetheless. In the swank Westchester Apartments, near the Washington Cathedral, where he lives with his wife and two children, William, 12, and Marion, 8, virtually every householder is a Senator, Congressman, Cabinet Member, or other high Government official. Granik hobnobs with them and has become a Washington celebrity in his own right.

Recently he invested $50,000 in an FM radio station, WHMB, representing the initials of his wife and youngsters. But it is safe to say that the forum will remain the great love of his life. Granik devoutly feels that the show furthers the democratic way of life because it brings to the public the livest topics of the day discussed by leading legislators and enables the people in the studio audiences to question them face to face.

"It give me," he happily confides, "the consciousness of participating in the making of history."

Shadow of the Censor

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Tuesday, April 11 (legislative day of Wednesday, March 29), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Shadow of the Censor," which was published in the Washington Post of today. The editorial relates to radio broadcasting.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHADOW OF THE CENSOR

A hearing of great importance to the radio industry and the public has recessed in California. It involves charges of bias and news-slanting against George A. Richards, the owner of KMPC in Los Angeles and two other powerful radio stations. Three former employees of Mr. Richards charge that he ordered them to distort and color the news so as to discredit some individuals and groups and to reflect credit upon others. Since the Federal Communications Commission has no powers of censorship, the issue boils down to whether or not the licensee is a fit person to operate radio facilities subject to regulation in the public interest.

Of course, no broadcaster is free to operate his station, using public facilities, solely as he may see fit. In the broad sense of the word he must serve the public interest or give way to someone else who can. But the public interest thus to be served necessarily has a very broad meaning. The FCC is not at liberty to put a broadcaster off the air because it may disagree with his viewpoint or because he may fall short of perfection in the management of his broadcasts. The history of broadcasting in this country shows relatively few abuses of the freedom that Congress has granted to the licensees in shaping their own programs. That record is not such as to warrant the disciplining of broadcasters by the back-door method of finding them unfit persons to operate a radio station, unless their activities fall hopelessly below the minimum standards of public service.

If the Silver Shirts, the Communist Party, the Ku Klux Klan, or a gang of outlaws were operating a broadcasting station to further their own interests, there would be no question about the necessity of withdrawing their license. But these are extreme cases. It would be a very different matter for the FCC to undertake to discipline a broadcaster because of the manner in which he "played" the news. If Mr. Richards should be put off the air for trying to slant the news against the persons and groups that are anathema to him, where would such a policy end? To be consistent the Commission would then have to withdraw the licenses of stations slanting the news against other political figures and organizations. We do not believe that the Commission has any standards that would be a safe guide in such a venture, and if it did, the enforcement of such a policy would go seriously against the grain of our traditions.

Every decision as to what shall go on the air and how it shall be "played" is likely to be influenced by the broadcaster's or the newscaster's prejudices. The best radio stations and the best newspapers hold these prejudices in check, struggling for fair and unbiased presentation of the facts. But it is common knowledge that slanted newspapers flourish, presumably because the people wish to read them. Would it be feasible for the Commission to put off the air a broadcaster catering to prejudices that were common with big metropolitan dailies in the same city? To be sure, the number of broadcasting channels is limited, but so are the opportunities for publication of a daily newspaper. We doubt that the FCC can apply stricter policies in the regulation of broadcasting than the press generally applies without taking upon itself an unmanageable problem of censorship. The public interest demands a wide range of freedom on the air as well as in the press. The danger of the FCC embarking upon a policy of censorship seems to us much greater than the occasional abuse of freedom by licensees whose prejudices color their judgment.

The National Hymn

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 11 (legislative day of Wednesday, March 29), 1950

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD a letter signed by several young people from Indianapolis regarding a proposed change in the name of the national hymn.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

INDIANAPOLIS, IND., *March 30, 1950.*

DEAR SENATOR JENNER: Our fifth grade class, room 24, school 70, Indianapolis, Ind., would like to have our national hymn, not our national anthem, but our national hymn, changed from America to America the Beautiful.

America is originally an English tune, God Save the King.

America the Beautiful describes our Nation very well. If you could see Warner Bros. picture America the Beautiful I think you would agree.

Many other Americans feel just the same as we do.

You, as our Senator, could give this idea a great boost.

Sincerely,

Tom Reilly, Harry Jennings, Alice Broadbent, Tom Osborne, Barbara Shook, Nancy Fowler, John Brennan, Douglas Branch, Charles Allen, Jim P., Douglas Burns, Gary Williams, Jimmy Fiege.

Here Is an Accomplished Fact—Not Hope, but History

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. MURDOCK. Mr. Speaker, statistics are not always dull and uninteresting. Some tabulations which I want to furnish herein contain a thrilling story of man's conquest of nature in converting deserts into gardens. Since my great interest and duty in national legislation is to promote the cause of reclamation, it might be assumed that I have in mind at this moment some future reclamation project. Not so. Just now I want to tell you very briefly in recorded statistics the last 10-year story of one of the oldest reclamation projects in the West. In other words, this is what happened in Yuma County, Ariz., instead of what we might hope will happen.

More than a third of a century ago enterprising farmers in Yuma County, Ariz., began to develop farm lands along the Arizona portion of the Yuma Valley below the town of Yuma, extending southward to the Mexican border. The United States Bureau of Reclamation developed their project. The Laguna diversion dam was built on the Colorado River a few miles above Yuma, and water for the project was diverted from the Laguna Dam and carried in a canal on the California side of the river, because the physical obstructions were less on the west side at that point than on the Arizona side. The canal came down opposite the city of Yuma and was brought under the Colorado River through an inverted siphon. In this way, water was brought to about 45,000 acres of desert land in the extreme southwestern corner of the State of Arizona in Yuma County. The project is known as the Yuma Valley project and is one of two Federal reclamation projects in Arizona which have been very successfully functioning more than a third of a century.

According to official reports, the average gross crop value per acre on this project has been greater than any other project in the entire Pacific Southwest. To illustrate, in the year 1948 the average gross crop production per acre on that project was a little over $300. While I do not have the record on this project for 1949, it is known to be correspondingly high. What is the reason for this phenomenal yield? Undoubtedly it was because of a fortunate combination of rich soil, plenty of water, and, above all, a climate furnishing the very best possible growing season throughout 12 months of the year. It happens that specialty crops, not of a competitive nature, are grown in this area. Such crops as may be said to be moderately competitive, as, for instance, head lettuce, are carefully timed for the produce to be ready for the market on a time schedule that will not bring such produce into competition either with the Imperial Valley in California or the Salt River Valley in Arizona. Thus, these three great garden spots in the Pacific Southwest grow their produce almost by the stop watch so that the produce is not harvested simultaneously from the three, but harvested tandemlike, in order that the market demand will be greatest.

Another reason why the gross crop production is so remarkably high is that this area is a veritable hothouse or sun parlor, not glassed in. During the six cooler months which are called winter, valuable seed is grown and harvested early in time to produce quantities of seed for seed markets to be used in other areas during the following 6 months. Perhaps no equal area in the country produces such great quantities of seed as does the Yuma Valley. Naturally, such seed brings higher prices than could otherwise be obtained. Below is a tabulation showing cultivated acreage, gross crop value, gross crop value per acre, and the gross crop value annually per acre-foot of water used:

Data on Yuma Valley, Ariz.

Year	Cultivated acreage	Gross crop value	Gross crop value per acre	Gross crop value per acre-foot of water
1939	44,493.00	$2,014,952.00	$45.29	$10.48
1940	44,445.00	1,971,604.00	44.36	10.49
1941	45,627.00	3,385,280.00	74.19	19.17
1942	45,567.00	5,646,638.00	124.41	29.48
1943	45,662.00	8,487,639.00	185.88	42.93
1944	45,077.00	6,682,266.00	148.24	36.51
1945	44,763.00	6,811,119.00	152.16	36.14
1946	45,700.00	10,379,312.00	227.12	49.92
1947	45,435.00	12,600,027.00	277.32	56.94
1948	46,265.00	13,971,371.00	301.99	59.56
Total	453,034.00	71,950,208.00	1,580.96	351.62
Average	45,303.40	7,195,020.80	158.10	35.16

I cannot study this tabulation and view the amount of wealth created by a given quantity of Colorado River water without extreme regret that about 40 times that amount of water during the same 10-year period flowed past Yuma, Ariz., without being used and was wasted in the Gulf of California. Was that tragic fact because there was no other land on which the water could have been used? No; that was not the cause. There were 10 times that many acres of just the same kind of land in the State of Arizona that might have produced the same aggregate wealth if 10 times that amount of water had been put upon such land—but why speculate? It is useless to cry over spilled milk. However, it is not necessary to spill some more milk because some has already been spilled. The thing I want to emphasize is the sobering fact that 8,000,000 to 10,000,000 acre-feet of water have been flowing, are now flowing, and may continue to flow for a good many years to come, past this very spot without being used, only to be wasted in the Gulf of California unless Congress wisely acts.

The Road to Nowhere

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, April 10 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD an article from the March 18, 1950, issue of America, a national Catholic weekly review, entitled "The Road to Nowhere." This article presents an analysis of the book entitled "The Road Ahead" by John T. Flynn.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ROAD TO NOWHERE

A physician has sent us a paper-covered edition of John T. Flynn's book, the Road Ahead. He probably got a mailing from the Committee for Constitutional Government, according to official report the second most expensive lobby in Washington.

Its mailing of February 9, for example, To All Dentists—A Call for Action Now, urged the immediate distribution of five enclosed postcards entitled "If You Want To Stop Socialism in U. S. A." If you want to stop socialism (most good people do) you will buy, preferably in bulk orders, John T. Flynn's book at the special February-March introductory price of 50 cents per copy on orders of two or more from the Committee for Constitutional Government. Hundreds of doctors have purchased as many as 25, 50, and 100 copies, some 5,000 in all. One Indiana surgeon bought 1,100 copies. * * * The Oregon State Medical Association purchased 8,000 copies for distribution to individuals across the State.

The Road Ahead, a book whose significance has been compared to the written Word of God, has a chapter on the "Kingdom of God" (quotes are Mr. Flynn's, presumably as evidence of his sense of irony). Protesting, too much, that "this is not an attack on religion or on any organized church," he sets himself to expose the organization of a clique of Christian ministers and laymen to poison the minds of the Christian churches in America with the principles of radical socialism.

Mr. Flynn fearlessly supplies immediate identification of this portentous camarilla. It is the Federal Council of Churches of Christ in America, described five pages further on in the same book as "the greatest religious lay body in America," an organization of 25 Protestant denominations, representing 142,354 local congregations with a membership of 27,000,000.

Mr. Flynn disapproves to use a euphemism—of the pronouncements of the Council on social and economic questions. He really disapproves of the effrontery of any religious group in impugning the sanctity of the uncontrolled capitalism he advocates. His explicit indictment is tamer and slicker than that, of course. The Federal Council is beguiling simple pious Protestants into socialism. Mr. Flynn documents his case—in part by a quotation from the Council's Social Creed of the Churches that is simply not in the document. The author of The Road Ahead courteously acknowledges in a footnote that he took the nonexistent quotation from a book by Carl McIntire, the unfrocked Presbyterian minister, a promoter of the superfundamentalist American Council of Christian Churches, who went to Amsterdam to steal the headlines from the First Assembly of the World Council of Churches and to Bangkok to disrupt the International Missionary Council Conference.

Such fervid advocacy is pure Blanshardism. There is the same pretense of impressive documentation, the same astute selectivity of sources, the same ill-concealed resentment of any expression of the social role of religion. Dr. Samuel McCrea Cavert, general secretary of the Council, is prepared to supply on request (address: 297 Fourth Avenue, New York City, 10) a detailed answer to the "misunderstandings, misrepresentations, and falsities" in Mr. Flynn's chapter. Dr. Cavert's conviction that Mr. Flynn's background unfits him to write "about a field with which he is wholly unfamiliar" should serve as a caution to Protestants gulled by Paul Blanshard's seeming knowledge of catholicism.

Mr. Flynn's genial lumping together of England and Russia as equally socialist, his insistence that we must stop spending money on "What we are told is a 'cold war,'" manifests a mentality confidently awaiting word of McKinley's election. Mr. Flynn is hardly to be thanked that he strangely omitted quotations from Catholic sources on economic and social problems of the day. Perhaps he anticipated the judgment, say, of the Rev. George G. Higgins, assistant director of NCWC's social action department, who tagged The Road Ahead as "the most emotional, illogical, inaccurate, and probably even libelous book which we have ever been foolish enough to purchase."

Policies of the Department of Agriculture

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 11 (legislative day of Wednesday, March 29), 1950

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from a businessman in Indiana which appears to me to be a masterpiece of satire on the foolish policies pursued by the Department of Agriculture in its destruction of perishable foodstuffs.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SEYMOUR, IND., *March 25, 1950.*

The Honorable WILLIAM E. JENNER,
Senate Office Building,
Washington, D. C.

DEAR MR. JENNER: I am in the furniture business and am writing this letter to request that you obtain for me a subsidy on our platform rockers. We are now making about a thousand a year and are eager to step this production up to 50,000 as soon as possible. With so many people in the country getting rockin'-chair money we feel that the market is unlimited for our product. Since you are voting money for potatoes, cotton, tobacco, railroads, aviation, and many other industries I see no reason why we in the furniture business should be slighted. Now we would like a guaranteed price of $50 each for these rockers. In the event we are unable to sell all of them we will arrange to burn them right here at the factory rather than go to the expense of shipping them somewhere else to be destroyed. I notice that you paid $2.90 a bag for potatoes in Maine and then shipped them to Chicago which raised the cost to $4 a bag, then sold them to farmers for 1 cent a bag. That sort of thing is pretty expensive so we will gladly arrange to destroy any surplus of our rockers right at the factory.

It should be an easy matter for you to get the above-mentioned program through Congress since I see that last year you boys voted to spend twenty-nine billion without even a roll call. Perhaps you can get one of Harry's boys to enter our rocker program in the budget. I realize that it will be small potatoes to the billion-dollar programs you are accustomed to, but perhaps you can start a new bureau or something to raise the ante and get it in the billion-dollar bracket. I certainly cannot see that I am asking anything unreasonable as I have paid taxes all my life and have never received a check from my Government. You paid some of the boys in Maine as much as $450,000 for raising potatoes which the Nation could not possibly consume, so why not a few bucks for the underfed furniture business.

We are in a position to provide some pretty expensive lobbyists with a pocket full of money to spend on the program if you think that is necessary. There must be some secret to getting those big spending programs, which benefit a particular group, through Congress, and we are eager to obtain the secret. Any information regarding the same will be gratefully appreciated.

Please let me hear from you as soon as possible regarding the above-mentioned rocker program as we are eager to get the Government checks started rolling in.

Yours most respectfully,

HARRY BOLING.

National Cancer Drive—Addresses by Hon. Warren G. Magnuson, of Washington, and Award to Walter Winchell

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, April 11 (legislative day of Wednesday, March 29), 1950

Mr. MAGNUSON. Mr. President, I ask that there be printed in the Appendix of the RECORD a statement I made on April 2, 1950, in New York, when the national cancer drive was inaugurated. On that occasion I had the honor to present, as I have on other occasions, the Clement Cleveland medal, which is a medal presented by the American Cancer Society for outstanding work in cancer research during the previous year. The medal was awarded to Mr. Walter Winchell, the noted columnist, for his work in connection with the Damon Runyon Cancer Fund. At the banquet Mr. Winchell donated to the American Cancer Society a quarter of a million dollars to start the drive. I made some remarks in presenting the medal to Mr. Winchell, which I ask to have incorporated in the RECORD.

Mr. President, at the same meeting to which I have referred I delivered an address on the problem of cancer. I should like to have that inserted in the RECORD also.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR MAGNUSON IN CONNECTION WITH CLEMENT CLEVELAND AWARD TO WALTER WINCHELL, APRIL 2, 1950

No history books that I can recall ever referred to the 1880's in America as "the dark ages," but regarding the problem of cancer, that term may well apply.

For it was only 67 years ago, here in New York, that Mrs. John Jacob Astor offered to add a wing to the Women's Hospital in New York, stipulating only that it be called the Cancer Pavilion. The hospital's answer, astonishingly enough was a resounding "No"—one of the few cases on record where a hospital, no matter how wealthy, ever turned down a gift of money.

The hospital's reasoning was this: "We couldn't get a patient to enter a section of the hospital with such a dismal name."

Fortunately, Mrs. Astor consulted a physician who was doing tremendous work as a cancer specialist—Dr. Clement Cleveland. He persuaded her to build a whole new hospital and call it frankly the New York Cancer Hospital. But, Dr. Cleveland was a little ahead of his time—the hush-hush attitude toward cancer was not to be broken down that easily. The New York Cancer Hospital was forced to change its name to stay in business.

Such experiences made a lasting impression on Dr. Cleveland's daughter, Elsie. Over and over again she heard her father and other doctors say: "If the patient would have just come to us a little earlier—last year, last month, last week—we could have saved his life." She realized that doctors alone could not win this battle. The people themselves must learn to face cancer facts squarely and openly. It was Dr. Cleveland and his daughter—then Mrs. Robert G. Mead—who brought together top professional and lay leaders in 1913 in a historical meeting which saw the birth of the American Society for the Control of Cancer—now the American Cancer Society.

In 1913, the society operated on a budget of $10,000. Last year the public contributed $14,000,000 to the cancer crusade. Through every medium of public communication we see and hear the word "cancer," and learn the facts which can save lives. Cancer control is a reality—a tribute to such pioneers as Dr. Clement Cleveland.

Dr. Cleveland died in 1934. Three years later the New York City Cancer Committee established in his memory the annual Clement Cleveland Medal for outstanding work in the campaign to control cancer.

Year after year this award has gone to outstanding men and women—research scientists, administrators, physicians, lay-

men—who have dedicated themselves to the all-out fight to lick cancer.

The New York City Cancer Committee has chosen as the recipient of the Clement Cleveland Medal for 1949 a man who has probably done more than any other single human to drive home to the people of the world the meaning of the word "cancer," and the necessity of sparing no effort in seeking out its cause and cure. In the memory of a friend, whose life cancer took, he launched the Damon Runyon Memorial Fund for cancer research, and we all have seen what this great voluntary effort has achieved. Now in its fourth year, the fund has spurred some $3,000,000 in contributions from the public, and in turn has put this money to work through grants to 77 institutions in 35 States. It has worked hand in hand with the American Cancer Society and its local affiliate, the New York City Cancer Committee, in giving to science the equipment and the manpower this fight against cancer demands.

As a great molder of public opinion, he has aroused a whole Nation to action. He has helped influence Government, as well as private spending, in a great coordinated fight against cancer.

It is my pleasure to award to Walter Winchell the New York City Cancer Committee's Clement Cleveland Medal for 1949.

ADDRESS BY SENATOR MAGNUSON

If any of you like old stories, you will relish this one. It made the rounds over and over again during the war, but I still like it. Perhaps some of you saw the signs that were posted in the offices of the military establishment's top-secret experimental laboratories. "The difficult we do immediately," said the signs, "the impossible takes a little longer." Similar signs could be posted today in laboratories throughout the country where top-flight researchers are fighting another war—the one against cancer.

Not too long ago an open discussion of cancer would have appalled you because so little was known about it and because people had an aversion to the very word cancer. Today we have been able to erase from our minds much of the false stigma attached to this disease and we know a great deal about cancer—that early detection and early treatment can cure many cases.

This has come about principally because of the American Cancer Society, an organization of laymen and doctors who are devoted to stamping out cancer as a major killer among the diseases of mankind.

Research

The search for new knowledge in the medical sciences is being expended daily. American investments in research have produced a body of knowledge which if fully applied, would advance human health immeasurably. The health care of the American people cannot and must not become a monopoly—either of governments, private enterprise or charitable institutions. Each of these have made great contributions to American health. Each must grow and endure in wisdom, strength and efficiency; and all must work together.

The crisis in America's professional schools is most serious. Many medical and other professional schools have fallen into serious financial straits. Present high standards must be maintained and raised as rapidly as possible. Expansion of educational facilities is essential if the demand for trained personnel is to be met.

During the last 5 years, the American Cancer Society, having recognized the importance of intensified investigative efforts through its 61 chartered divisions and more than 2,600 county branches, has allocated over $13,000,000 for research from the money contributed by the American people. The society spends 25 percent of its income in the support of studies in the field of growth and in the training of young scientists to carry it forward.

Control of cancer eventually will come through an understanding of cancer's causes, the means of prevention, and effective treatment methods. This knowledge waits on research. The path of research is long and hard. Cancer is as mysterious as life itself. Scientists may have to uncover the secret of growth in the individual cell before they can learn why and how it starts, how it grows, and what will stop it.

As time is measured in research, we are progressing rapidly. Each year more progress is made in organizing cancer research than during any previous year, but none can tell how long a time must pass before cancer is beaten. But the search goes on. Thousands of substances are under test to find one powerful enough to destroy cancer without harming normal cells.

Progress has been made in the standard methods of treating cancer. Surgery and radiation. New antibiotics, like penicillin. Improved anesthesia and surgical techniques enable us to excise cancer from parts of the body that were formerly inaccessible.

X-rays are being directed with increasing success at hidden cancers, and radium focused upon many tumors. And the possibilities of radio-active isotopes—byproducts of atomic energy are being explored. Noteworthy among the research advances made in 1949 were several facts:

1. New evidence relating to changes in blood serum in cancer patients, opening up the possible development of a practical blood test for cancer.

2. Evaluation of antifolic acid compounds as a treatment of definite but limited benefit in treating acute leukemia.

3. Discovery of the vast potentialities of the hormones, ACTH and cortisone, in treatment of rheumatism and other diseases, and preliminary testing of these drugs in cancer, particularly leukemia.

4. Discovery that a new chemical compound—guanazolo—will inhibit the growth of certain types of cancer in mice without apparent toxic effects to the animal.

5. Further evidence that chemical agents which produce environmental cancer also cause changes in the hereditary pattern of the body's cells.

Research gets 25 cents of each dollar to hire laboratory technicians, buy centrifuges, electronic microscopes, experimental animals, and other equipment needed to track down and destroy the disease. Modern research, bit by bit, is exposing cancer's secrets. It is learning slowly but surely the relationship between cancer and the hormones our glands secrete, the food we eat, the rays of the sun, the biochemical reactions in our body and the chemicals in our environment. The research program of the American Cancer Society with its interest and money may make it possible to beat cancer in our time. The once narrow horizon of the scientists who worked on cancer has been broadened beyond belief.

During the current fiscal year the American Cancer Society has financed research projects by more than 240 scientists and teams of scientists. It has financed additional work by other hundreds of scientists with grants to 26 large research institutions in 20 States throughout the Nation. The total expended on cancer research by the Society for the year is more than $3,500,000. It can be said truly that never in history has an investment brought a greater return. The threat of cancer is worth the mobilized effort of our scientists, for after all, cancer costs more American lives than combat exacted during the most destructive years of World War II. It's up to us, the citizenry, to get behind our scientists to give them the time, manpower, equipment and the experimental materials they need to find the cause and cure of cancer. In 1913, the American Cancer Society operated on a budget of $10,000. Last year, the public contributed $13,600,000. Today cancer control is big business. It has to be in order to curb the disease that is one of our most serious and most baffling national medical problems.

With painstaking care, scientists are tracing the basic biological processes of life—to determine where they vary in people with and without cancer. And in this maze of biochemical and physiolcgical reactions they are finding threads of evidence which eventually may indicate the origins of cancer. Certain patterns of hormone production are proving peculiar to some kinds of cancer. Enzymes, those substances whose presence are essential to normal cell chemistry—the building and break-down of living tissue and the generation of energy—have been found to have bearing upon the development of cancer. Even the B-complex vitamins in the food we eat are now known to have some influence on the disease.

The physicists have discovered that ultraviolet rays can cause cancer—even habitual overexposure to the rays of the sun. Geneticists are trying to determine how much of a part inheritance plays in susceptibility and resistance to cancer.

In a hundred strategic sectors, the counter-attack against cancer is being perfected. These points, of course, are laboratories in universities and hospitals where our greatest research scientists work. The weapons they forge against this disease are made available to all of us—everywhere. The hormones found in Boston to help breast cancer patients are being used in Butte and San Diego. Substances used in Berkeley are being tried in Kansas City and New York. New methods of detecting cancer in body fluids are developed in Portland, Oreg., and used in Portland, Maine. Surgical techniques perfected in New Orleans are saving lives in Washington and Wisconsin. A day after a Chicago scientist announced a possible blood test for early cancer, hospitals from Bangor to Seattle and Miami to Los Angeles were clamoring for the information. The scientists who learns in a laboratory at the University of Washington that certain drugs may cause cancer and the scientist who works in a massive, marble building in New York on chemicals that kill cancer are working for us—each one of us right here. They are trying to find out how to prevent our getting cancer or—in case it should happen—how to cure us.

Whether we like it or not—whether we choose to be or not—we are in this cancer fight—every last one of us. Our lives and the lives of our loved ones are at stake. We cannot dodge the cancer draft. We cannot go AWOL from the cancer fight.

Now that we are in this cancer war, let's fight it with all we have, and let's win it. This year the scientists who equip us with weapons against cancer are working with the $3,500,000 we gave them through the American Cancer Society. They could use at least twice that amount. They need at least twice that amount. They need it for research beds which cost as much as $12,000 a year, so they can study the effect on humans of promising experimental chemicals. They need as much as $25,000 for electron microscopes which enlarge the cells 300,000 times and enable them to study viruses which may cause some cancers. They need countless rats and mice and guinea pigs for experiments with new compounds—to find one which may save our lives. They need massive and delicate instruments, like the mass spectrometer costing $15,000, which can tear apart and identify the fragments of infinitely small bits of matter.

Many of us here tonight are familiar with the work of Dr. Vannevar Bush and the organization he directed during the war.

The Office of Scientific Research and Development gave us the atom bomb, the proximity fuse, rockets, and guided missiles. I had the good fortune to meet with Dr. Bush and one of his aides, Mr. Teeter, at the close of the last war. Out of that meeting, I sponsored a National Science Foundation

bill, which has now passed both Houses of Congress.

National Science Foundation

The primary purpose of the establishment of a National Science Foundation is to develop and encourage the pursuit of a national policy for the promotion of basic research and education in the sciences and correlate its scientific research programs with those undertaken by public and private research groups. The institutes of health are concerned with health and man in the field of applied science. The National Science Foundation is concerned only with basic medicine. The National Science Foundation will only implement programs already going and in no way restrict the activities of institutes of health. All agencies will and can cooperate together.

The Division of Medicine of the National Science Foundation will be the medical scientists' right arm in wrestling with the basic problems of medicine. It will seek solutions through basic research in the hope that by pushing back this frontier the answer to specific diseases will be revealed. From the National Science Foundation it is hoped will come ideas to nurture and provide life blood to institutes of health and the American Cancer Society.

Cancer will be more difficult to solve than the atomic bomb was to build. We know the basic science of the bomb. We do not know the secret of growth in man. However mechanical we men may seem to the ladies, we are not so easy to understand as a machine. Machines are built by men and we inherit human beings by accident of birth. The complicated mechanism of man is not entirely understood. The female of the species is never understood.

American Cancer Society and the Damon Runyon Memorial Fund

Incorporated in the spring of 1947, the Runyon Fund, largely through the efforts of Mr. Winchell, its treasurer, and his associates, Dan Parker and Leonard Lyons, has raised over $3,000,000 for cancer research. All of these funds are allocated for cancer research, including fellowships. Some $2,700,000 has been allocated to 70 institutions in 35 States, a substantial portion of which is for research in New York City where you fortunately have outstanding facilities.

The relationship between the Damon Runyon Fund and the American Cancer Society is a superb example of two partners working together for a common goal. The American Cancer Society carefully screen research projects, the money for which is provided from funds which you volunteers raise which go not only for research, but for the education of the physicians and the individual, and service to cancer sufferers. The Damon Runyon Fund provides additional funds so that the Nation's cancer research program may go on without interruption and without lagging.

I could not close without paying tribute to you who are here, who are dedicated to the proposition that no problem, not even cancer, is too difficult to tackle.

Food for Thought

EXTENSION OF REMARKS

OF

HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 12 (legislative day of Wednesday, March 29), 1950

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Food for Thought, delivered by me on April 6, 1950, at New Orleans, La., before members of the Council of the Chamber of Commerce of New Orleans.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FOOD FOR THOUGHT

Today, April 6, marks the thirty-third anniversary of our entry into World War I. When President Wilson in April 1917 asked Congress for a declaration of war, so that we might join our friends in that great struggle, he said:

"The world must be made safe for democracy."

And so, it came to pass, that we did dedicate our lives, our fortunes and all that was near and dear to us, so that our way of life could be preserved—or may I say, so that democracy might live. America had chosen to spend her blood and exert her might for the principles that gave her birth and for the preservation of the unbounded freedom she has always enjoyed.

Less than a quarter of a century later we were forced into another cruel conflict, World War II. Here again we dedicated our lives, our fortunes and all that was near and dear to us, so as to save a great and precious form of Government for ourselves and for the world. A few days after Congress declared war, President Franklin D. Roosevelt said:

"We covenant with each other before all the world, that having taken up arms in the defense of liberty, we will not lay them down before liberty is once again secure in the world we live in. For that security we pray; for that security we act—now and ever more."

We risked our lives, we dissipated our God-given natural resources in those two devastating wars, so that our country could continue to protect and preserve our cherished liberty. As a free people we have developed a matchless private enterprise system that provides us with a standard of living unequaled, in fact, far superior to that of any other country on earth. That I know, for I have learned it from actual observation and experience.

Under that system we were able to create almost overnight the greatest war machine that was ever assembled to give battle; to direct it across two oceans and through almost 4 years of grueling war, and to drive it to ultimate and unconditional victory. Last, but not least, we have been able to produce ample food and manufacture sufficient industrial equipment to materially assist a war-torn world to get back on its feet.

We were willing to sacrifice our all so that we could continue to enjoy the blessings of freedom. And yet, today, we have certain elements in our scheme of society that are advocating plans—and some are actively sponsoring legislation—that bid fair to destroy our way of life. Others are openly defying the law and are getting by with it. Need I emphasize that law and order must be maintained at all cost—political expediency notwithstanding—lest we may be subjected to mob rule.

Our system of private enterprise has become most complex during the past generation. There has developed an unhealthy amount of antagonism between labor and capital. I am not entirely satisfied with the existing method of handling labor-management disputes. The cause should be explored. There is room for improvement. The Senate adopted several amendments to the existing law but the House of Representatives has failed to follow through as a result of pressure from labor czars. If only the labor leaders would cooperate with the Congress, our task would be greatly simplified. Instead, they are advocating a return to the lopsided Wagner Act. Thus far they have met with little success. In passing, may I point out that not very long ago it was management that was in control and labor suffered considerably. It was management that defied Congress at that time and as a result the one-sided Wagner Act was passed. If management had then cooperated with the Congress the Wagner Act would never have become law in its present form. Today both sides have had their fling and it is to be hoped that more cooperation will be forthcoming between the two groups constituting our private enterprise system. I firmly believe that labor and management should be kept in balance and that neither should be given an advantage over the other.

The rights of our sovereign States, those rights that played such an important part in the formation of our Union, are being increasingly circumscribed by a bureaucracy that believes in a powerful centralized government. The Tidelands question, with which all of you are familiar, is a good example of that trend. The big arm of the Federal Government is reaching out to control the vast oil and gas resources lying beneath our coastal waters, all in contradiction to established customs and well-settled jurisprudence. Next will come Federal control of our fisheries and other resources of the sea.

Only last week it was necessary for Congress to act in order to prevent power-crazed bureaucrats from usurping the States' jurisdiction over the production and gathering of natural gas. Not content with the power to regulate the sale of gas when it is transported in interstate commerce, these bureaucrats sought the authority to regulate the exploration and the drilling for gas in a sovereign State. Not only that, but they also sought to regulate the extraction of butane, gasoline, and other byproducts of natural gas, notwithstanding the fact that those operations are performed entirely within the confines of a sovereign State.

I could dwell on other phases of the plan, such as socialized medicine, the classification of jobs in industry, and the fixing of wages beginning with the minimum established by law, all of which I have opposed. Time will not permit me to discuss all of them.

I should like to now discuss briefly some of the iniquitous civil-rights bills advocated by the President. This attack upon constitutional government has been fostered by both of the great political parties and for purely political reasons. The head of the Democratic Party is bending every effort to beat the Republicans to the draw, and the South has been forced to wage a strenuous fight to uphold the Constitution and to maintain its traditions and customs. The civil-rights legislation is a disguised attempt to create a central bureaucracy, in which the traditional and constitutional rights, both of the States and of the people, could be disregarded at the whim of an all-powerful Chief Executive.

We in Louisiana dislike the poll tax. As a former member of the Louisiana Legislature I helped to pass a law to abolish it as a prerequisite for voting. Other States have done likewise until today the poll tax exists in only seven States. Repeal movements are now under way in those States, and within 4 or 5 years the poll tax will be a thing of the past. In spite of this, however, the civil-rights advocates would have the Congress usurp a State's constitutional authority to establish the qualifications of its voters.

We of the South condemn lynching for what it is—murder. We are dealing with lynching through State police systems, through education, and through other methods. We are coping with it most effectively. There is no offense in the history of criminology that is more on the way out than is lynching. It is almost extinct. Let the civil-rights advocates desire legislation enacted to make lynching a Federal crime, so that the Federal authorities could go into any sovereign State where a lynching is sus-

pected, supplant the local officers, prosecute those officers, and even bring civil suits for damages against the local government itself. Such a law would invade the domain of powers reserved to the States by the United States Constitution. Antilynching legislation could not possibly be enforced and I fear that it would do serious harm to the very people it is designed to help—the southern Negroes. Its enactment would set off a chain of violent reaction toward them.

I now come to the most far-reaching and dangerous of the civil-rights proposals, commonly referred to as the FEPC bill. It is my understanding that every effort will be made to push that nefarious piece of legislation through the Congress. I propose to speak against its enactment as long as God gives me breath.

The FEPC proposal would establish a vast Federal bureaucracy, with regional, State, and local officers to supervise the daily operations of every sizable business in the United States, dictating to every employer whom he can hire, fire, transfer, or promote. Should the day ever come when the Federal Government can interfere with an employer's free judgment in the selection and maintenance of an efficient force of employees, we might as well hang black crepe on the doors of private enterprise.

The bill is a serious and indefensible denial of the liberty to contract. It substitutes governmental judgment for personal judgment as to the qualifications and desirability of persons for employment and for advancement. It imposes arbitrary restraints on freedom of association.

The bill attempts to create a civil right which is beyond the scope of Congress. Such a right has not been delegated to the United States, but has been specifically retained in the States.

Aside from its unconstitutionality, the legislation ignores social patterns. Legislation cannot create tolerance and good feeling. Nor can it erase differences in attitude, outlook, or human behavior. The bill ignores established social patterns based on law and customs. Its operation would inevitably tend to undermine those local patterns, thereby setting the stage for untold strife, dissension, and fierce resistance to enforcement of the law.

Whether segregation is right or wrong has no place in the argument. Segregation exists. Mark Ethridge, publisher of the Louisville Courier-Journal, is well known for his liberal views. While a member of the wartime Fair Employment Practices Commission, he said this:

"There is no power in the world—not even in all the mechanized armies of the earth, Allied and Axis—which could now force the southern white people to the abandonment of the principle of segregation."

Such a law would be a tremendous step in the direction of governmental control not only of private management but also of every phase of human endeavor and human relationship. It would eventually destroy the cherished liberty which we fought two Global Wars to preserve.

I should like your indulgence for a few more minutes to discuss a problem that is undermining our financial structure and eating into the strength and vitality of our National Government. Unless checked, it will destroy our democracy, by leading us straight into national impoverishment. I refer to deficit spending. Whenever a nation, like a person or a corporation, goes on, year after year, living beyond its means, it can only end in bankruptcy. I ask: If the United States Government cannot balance its budget even in these times of relative prosperity, what is going to happen if and when hard times come along? During this period of prosperity we should be not only paying our way, but also cutting down on our national debt. Instead, we are adding to it at the rate of $5,000,000,000 per year. Deficit spending must come to an end, and soon. We must balance the budget, and steer away from the perilous tendency now prevalent among our Government planners, that of spending more money than the Federal Treasury takes in. Each and every departmental head should be instructed by the Chief Executive to effect substantial economies in the interest of national solvency.

As the spokesmen of our international policies, members of the State Department in particular might well heed my words in this respect. As chairman of a special Senate Appropriations Fact-Finding Subcommittee, I made a round-the-world trip last fall; I visited most of the nations that are now receiving American aid, or are looking to us for help. I was amazed to find that the leaders of those countries believe that we live in a land of unlimited milk and honey, and that our resources are inexhaustible. They believe, too, that we should open our treasury to them to prevent the Communists from taking over their countries. I can assure you, that however backward they might be in other respects, they are not backward in asking for financial assistance from their generous Uncle Sam.

The State Department should brief our representatives abroad as to our financial condition, and in turn have them enlighten these people on the cold facts. If that were done, I am certain that the demands upon us might be tempered with reason. The State Department should tell our friends across the seas that every dollar we give them or lend them is borrowed money; that in order to assist them we are placing ourselves deeper in debt. In other words, if our representatives would present a realistic version of our economy—talk po'mouf as we say in the South—instead of presenting the lush picture that is usually painted of America, we might find these dependent nations less aggressive in their demands.

When I was abroad recently, I told the rulers of several governments in the Middle East and Far East about our debt situation. I informed them that the interest of our national debt amounted to more than was required to run our Government in 1934 and 1935. They could not believe that we had permitted our country to drift into such a situation. All of them were laboring under the impression that our Goverment can spare with ease all the goods and moneys we are handing out. In most cases, after I made known our financial condition, the response was unanimous that America must conserve its resources and remain strong financially in order to prevent the further spread of communism throughout the world.

Need I further emphasize to you that unless the trend that now prevails in Washington is arrested, we are apt to lose our way of life—a way that has enabled America to achieve undisputed world leadership. It would be a sad paradox if, in order to avert communism among our friends, we should exhaust and impoverish ourselves and in so doing invite communism to our own shores.

It is necessary that our people interest themselves in government and keep abreast of what is going on and make every effort to stem the tide lest it engulf us. So long as Americans keep awake, so long as they are vigilant, so long as they remain on guard for the preservation of their individual liberties, I have no fear of the consequences. A story I heard recently might better illustrate what I am trying to emphasize.

There was once a minister of the gospel who had engaged sea passage from England to Norway, and having never traveled by sea before, he was somewhat apprehensive of the perils of ocean travel. He asked the ticket agent if there were any danger in his crossing, and the agent told him that so long as the sailors were a-fussin' and a-cussin' they were not frightened; it was only when they were too afraid to fuss and cuss that the ship would be in serious trouble.

While they were in midpassage a terrible storm hit the ship, and it began to pitch and roll. The minister peeped out of his cabin, and the sailors on deck were fussing and cussing, so he went back relieved. The storm grew worse, and again the minister peeped out. Sure enough, the sailors were fussin' and cussin' above the roar of the winds. A little while later the minister again listened, fearful that the severity of the storm had finally frightened the seamen, but they were still fussin' and cussin'. The clergyman retired to his room, but he had lost confidence somewhat in the ticket agent's admonitions, and he felt that he had best resort to prayer. He knelt on the rolling deck of his stateroom and prayed, "O Lord, if in your infinite wisdom you must keep this tempest howling outside and this ship pitching and tossing, just please, O Lord, also keep those sailors fussin' and cussin'."

So long as we as Americans can keep a-cussin' and a-fussin' we shall be able to exercise our freedom to speak, our freedom to complain, and our freedom to choose. It is when the gloom of discouragement settles over us that we will no longer assert ourselves. Then either we will no longer care to preserve our personal liberties, or we will realize too late that they have been lost forever.

Let us make every effort to maintain ourselves free—free of foreign "isms," and as well, free of the creeping tentacles of an omnipotent Federal bureaucracy. I shall continue to fight against both. Perhaps I am old fashioned, but I believe that it is old-fashioned Americanism that our country has been built upon and stands for today. Only by fighting for our system of free incentive and free enterprise can we hope to preserve it against the onslaughts of those who would tear it down and subject our people to the oppression of complete state control. In closing I ask only that each of you go forth determined to promote the resurgence of the Americanism that has made our country the finest, the strongest, the most prosperous land in the world.

Address by Hon. Herbert H. Lehman, of New York, on the Occasion of the Presentation to Him of the Annual Award of Metropolitan Conference of Temple Brotherhoods

---

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Wednesday, April 12 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by the distinguished Senator from New York [Mr. LEHMAN] to the Metropolitan Conference of Temple Brotherhoods in New York on April 9, 1950. I was deeply moved by the scroll which was presented to our eminent and world-famous colleague. I am sure the Senate as a whole will respond similarly to it. It pays high and deserved tribute in the following eloquent words:

TO HERBERT H. LEHMAN, first man of our people, Governor of our State, and Senator, you have wielded the power of high office for the betterment of mankind. Because of your striving toward the brotherhood of man,

its goal approaches near to reality. You have honored and glorified the name of Israel.

On this Passover, day of memorial for the deliverance of our people, we remember that you, too, are blessed, like Abraham of old, who withheld not his son from the altar of freedom but gave him, your own heart's blood, in supreme sacrifice for human liberty. When the evil was overthrown, you, one of the driven and oppressed, were chosen, as by an act of God, to feed the hungry, clothe the naked, shelter the homeless, and comfort the distressed among all peoples. May the days of your years exceed the fourscore and ten, with the grace of God and the love of all men.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I feel honored and proud to be invited here this evening to accept this scroll—the annual award of the Metropolitan Conference of Temple Brotherhoods. At the same time I feel a deep humility, because I know that whatever small contribution I might have made to my fellow men is insignificant in the face of the terrible problems that confront us today.

There has been much talk in recent years about a return to God—a return to belief in basic values and basic concepts. I hope and pray that this is more than talk. The need for a true moral revival has never been greater than it is today. In a world where an atomic bomb or a hydrogen bomb can destroy a life or a civilization, we must reinvigorate our spiritual values if we are to avert total catastrophe. This is the only sound course for all mankind.

We here in the United States, of all faiths and all religions, must show the way. Here in the fresh climate of freedom and democracy, man can turn to his God without fear.

So while our faith in God must be revitalized, our faith in our own democratic institutions, too, must be renewed and strengthened. If our democratic institutions are permitted to fail by our own indifference, we cannot hope to retain the freedom which those institutions are designed to serve. And where there is no freedom there is no God.

In the final analysis the outcome in the struggle for peace lies in the hands of every one of us as individuals. We must strive increasingly to maintain the climate in which democracy can survive and grow.

And democracy must stand up to the critical task of providing greater security for all people while defending without compromise the rights of the individual.

There is one major obstacle to our winning this struggle which is not presented by either the Communists on the left or the reactionaries of the right. It is not that obstacle that is in our own hearts and minds. It is fear. We must overcome our sense of personal fear which is today impeding our efforts to keep democracy a living and dynamic force here at home and throughout the world.

Our fear takes many forms. The most prevalent is our fear and suspicion of each other. This fear leads us to question the sincerity and the morality of all our fellow citizens.

It is a good thing for men to be temperate in their judgments. There is also the danger, however, that we will be restrained in our actions not through judgment but through fear. There is a growing tendency to be restrained by the fear that what we are going to say is going to make the wrong impression on somebody else. Our reticence can easily become a mark of cowardice as well as of wisdom.

It takes courage to live fully in these times and to speak out against those who are assailing the character and patriotism of our neighbors. It takes courage to overcome our complacency in the face of economic and social injustices and demand equality and freedom for all our fellow men, not for just some of them.

In spite of the obvious disappointments and discouragement which today beset us, I believe with all my heart that world security and a lasting peace can be provided if we show enough patience, good will, and understanding. In a democracy it is the responsibility of the individual to work toward this end. While collectively we have a great blessing in our wealth and freedom, individually we have a great responsibility for the outcome of the ideological conflict which today divides the world.

In many other nations this idea of individualism has never taken root. But we in America should never forget that the rights which we call inalienable can only be preserved by the most unceasing vigilance on the part of each and all of us. We must hold to our faith in freedom even in the valley of fear through which we now walk. We must confront and defeat the forces of fear and evil which press hard for our surrender.

To overcome our fear we must bulwark our faith: our faith in God, in our own capacities, and in our fellow man.

But even democracy is mere form without content, unless it bears at its center an inner faith in the goodness of God, in the sanctity of the human soul, and in the brotherhood of man under God. First we must be loyal to these concepts, or our devotion to democracy is tinsel and dross. If our spiritual faith is weakened, we will not prevail in the struggles ahead.

If we let down our defenses in our democratic practices, if we permit the rights of some of our people to be denied or withheld, for any reason, if we deny equal justice to any in our midst—even to those who would deny it to us—if we do any of these things, we invite defeat and disaster. The fortress of democracy is only as strong as its weakest point. Our Nation is weakest where its democracy is weakest—in the partial denial of rights and privileges to racial minorities, and in the withholding of full social justice from vast numbers of the underprivileged.

Democracy, like religion, is an expression of faith, a call to duty from which no man may draw back. Democracy must be supported by a militant faith, and by a willingness to crusade for that faith, and to abide by it in all ways and in all relationships. Democracy is not a habit to be worn only on fair days. Sometimes democracy is awkward, and uncomfortable. Sometimes it involves danger. But if it is good at all, it is good all the time.

So, in accepting this award today, I accept it as an honor, but also as a challenge. It is a challenge to me personally, and to all of us who are gathered here tonight. Let us demonstrate that faith which has made our religion a symbol of survival through the centuries of persecution and disaster. Let us strive for the concrete manifestations of brotherhood to which this great temple is dedicated. Let us hold fast to our faith and cherish each other, not in fear but in love.

Let us emerge from the shadows of doubt into the light of confidence and courage. We are strong in our ideals, and our strength is multiplied tenfold by tolerance and understanding.

In this green and pleasant land of ours, let us show the world that love and devotion are our watchwords. Under these brave banners, we will prevail.

Happenings in Washington

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 12 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD program No. 22 in my broadcasts to the people of Pennsylvania on Happenings in Washington. This broadcast was on April 10, 1950.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON

(Program No. 22)

This is ED MARTIN, speaking to you from the Nation's Capital, and bringing you another discussion of happenings in Washington.

I want to talk to you about social security. This is one of the most important of all subjects to millions of our workers, to millions of their dependents, and to those past the age of 65 who have retired to live on the benefits.

The Federal social security law came into being in 1935. Naturally, as with any new law, the test of time and operation pointed out its weaknesses and strong points. Some glaring weaknesses were shown up. Some drastic changes were indicated. Today we are working on the first major revision since 1939.

Last year the House of Representatives, by an overwhelming vote of 333 to 14, passed a bill to amend the old Social Security Act.

The new bill would extend social-security coverages to about 11,000,000 people not now covered. It offers coverage to millions of self-employed men and women in certain classifications who were not provided for in the original act. It provides an average increase of 70 percent to present beneficiaries and a new category to cover total and permanently disabled persons regardless of age.

Other new provisions would give a wage credit to veterans of World War II for time spent in service. It would include State and local government employees on a voluntary basis. Also it would increase the total annual earnings on which contributions are made by employees and employers from $3,000 to $3,600.

At the very end of the 1949 session the bill was sent to the Senate. Early this year the Senate Finance Committee—of which I am a member—went to work on the bill.

We held almost daily hearings for 9 weeks. Two hundred and seventy-five witnesses appeared before us. They presented a great variety of views and opinions. Many were experts on various subjects. They included representatives of State governments and officials of State and national organizations. Many citizens testified as individuals, offering their own ideas on social security. Our committee heard them all.

In addition, we received for study and consideration about 250 briefs and statements, and thousands of letters from all parts of the country. So, you see, this matter is receiving deep and detailed consideration from the Senate Finance Committee.

We have finished our hearings. Now we are meeting regularly in executive session to study the vast mass of information, and to consider such changes as the committee

members believe would make the bill stronger and better.

As I have stated before, I believe in social-security legislation for our older citizens and to protect the surviving widows and dependent children of workers.

So naturally I am for the principle of the law and will vote for the measure as finally drafted.

But, in the meantime, it is my intention to fight—and fight hard—to make this the strongest and soundest possible system.

That, my fellow Pennsylvanians, will be a tough battle. And I am afraid it will be a losing battle. For I believe that Congress will refuse to take the all-out step necessary to make our social-security system basically sound.

Let me tell you now what I think is wrong with the system and what should be done to rebuild it on a firmer foundation.

First, I want to point out the difference between the Federal system and the kind operated by the great insurance companies in which many of you have policies.

When you take out an insurance policy, the company puts your money to work in productive enterprise—let me repeat—productive enterprise. It also sets up a reserve fund to meet emergencies and to guarantee enough cash to pay out benefits to you in the form of an annuity, an endowment, or to your survivors if you die. In general the payments made by the policyholders each year are sufficient to cover the needs of that year and to build protection for the future.

But this does not happen under the Federal social-security system. The money taken from your weekly pay envelope and the money paid by your employer, is not handled that way by Washington.

Instead, this is what happens. Your money, out of your pay roll, goes to the Social Security Board. Then Uncle Sam dips his hand into the till, takes the money out, and spends it for the high-priced business of running the Government.

He leaves an I O U in the till. It is a bond, paying 2½ percent annually. At present, about $10,000,000,000 of your money has been removed and the 2½ percent I O U's left behind.

Well, you might say, that sounds like a good, sound investment—2½ percent on our money from the Government. But first, consider this:

Where will Uncle Sam get the 2½ percent interest? The same place he gets all of his money—by taxing you and the other citizens of this country, including those who are not covered under the social-security law.

Keep in mind that when you pay your money into an insurance company it is invested so as to produce earnings. But Uncle Sam has no earning capacity. He can use only what he takes from the people in taxes or borrows from your savings.

Now a lot of people start reaching age 65. They have paid into the fund for years. They want their social-security benefits. How do they get them?

Well, remember that the bureaucrats in Washington have spent the pay-roll contributions. Nothing is left in the till but IOU's. So your Government has to get the money to pay your social-security benefits by levying taxes against all the people.

The man who is over 65 and is no longer employed is taxed to pay part of the cost of the social-security benefits he thought he was paying for during his younger working years.

The man under 65, making his own social-security payments, is also taxed to pay part of the older man's benefits. Both categories, are in fact, paying twice for their social security. They were promised by their Government that they would only pay once. But they are paying twice.

I believe that system is wrong, unfair, and unsound. We can and we should put our social-security system on a sound, solid basis.

And I say this emphatically—most emphatically—if our Federal social security system is to survive, sooner or later we must put it on a sounder basis than it is today.

Let me explain that. Today about 35,000,000 active workers pay contributions into the fund in an average week. About 2,700,000 are receiving benefits.

That means much more money is going into the fund than is coming out each year. So there is plenty left over for Uncle Sam to take from the till—leaving behind those IOU's.

But this picture is changing.

More and more of our people are reaching the age 65—the age at which social-security benefits begin—and are living on for many years afterward. In 1935 when the social-security law was passed, there were only 7,800,000 persons over 65 in the United States and none of them was entitled to a nickel of benefits.

Today there are 11,500,000. By 1975, according to the Government statisticians, there will be 19,000,000 persons over 65 living in the United States and most of them will be on social security.

That means that more and more must be paid out until the amount going out will exceed the amount coming in. The Social Security Administration statisticians have estimated that 50 years from now—in the year 2000—the annual benefit payments will run from over $13,000,000,000 to twenty billion and a half. Nongovernmental experts, also estimating the cost for the year 2000, say these figures are ultraconservative. The nongovernment experts say they will go over thirty billions a year.

Well, the system will be in trouble long before that. Billions a year must be paid out and there'll be nothing in the cash drawer but those I O U's. So billions of dollars in new taxes will have to be levied on the American people each year to meet the cost of the payments. After a time these taxes will become oppressively heavy.

Then and there the system will break down.

So, I repeat, we must have the best possible social-security system. We must have a sound system, one that will survive. Such a system must have real reserves and real money at real work.

I believe that a system—actuarily sound and on a pay-as-you-go basis—should be created for managing the money paid into the Federal security system.

Otherwise there is grave danger that this social-security system will not be able to keep its promise to pay to you and your children in your old age.

Yes, I am for social security, and I want our system to be made as sound and solid as can be done.

At the beginning of my talk I mentioned to you that the Senate Finance Committee heard the testimony of 275 witnesses. Some of them represented the splendid retirement funds maintained by school teachers, policemen, firemen, and other groups of State and municipal employees.

You will be interested in what they testified.

The bill which passed the House of Representatives provides that all State and local employees may voluntarily come under the Federal social-security system.

Let me assure you that these groups want no part of the system—and for the reason I have mentioned above. You see, most of these firemen, policemen, and school-teacher funds are set up on an actuarial basis. Their retirement systems are built up upon soundly invested funds.

They fear that political pressure in their home States might force them to get into the Federal system. So they came to us. They urged and begged our committee to eliminate from the bill the language which might result in forcing them into what they say is an unsound pension system.

For many years I have been fighting for national solvency as the best and strongest defense of the American system of government.

A government that is not sound financially can give no assurance that its citizens will enjoy any kind of security.

Freedom of the individual cannot be maintained in a nation which spends beyond its income year after year.

The Government's promise of security is of no value whatsoever if those in charge of its affairs take a wasteful, spendthrift course which must end in national bankruptcy.

If we are to have a strong, sound, social-security system we must first return to strong, sound fiscal policies. That means we must put an end to deficit financing. We must balance the budget. We must put an end to wasteful and extravagant spending that means higher taxes and bigger debt.

Above all, we must stand firm in opposition to every socialistic scheme that promises something for nothing.

I ask you to join in the fight for those objectives because they mean so much to your security, your children, and to the future of the American Republic.

This is ED MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

Congressional Investigations

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Wednesday, April 12 (legislative day of Wednesday, March 29), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the third of a series of three articles entitled "When Congress Fumbles for Facts," written by Lindsay Rogers, Burgess professor of public law, Columbia University, and published in the New York Herald Tribune on Friday, March 31, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHEN CONGRESS FUMBLES FOR FACTS

THE SUGGESTED REMEDY IS AN INVESTIGATING COMMISSION APPOINTED BY THE CHIEF JUSTICE

(By Lindsay Rogers, Burgess professor of public law, Columbia University)

III

Neither the New York State nor the British method of conducting investigations would be satisfactory to the Congress of the United States. In New York State the initial responsibility is largely the Governor's, but I can recall no instance of his refusing to act when the legislature wished him to. In Great Britain, while it is Parliament that calls a tribunal into being, the executive appoints its members and the law officers of the Crown place themselves at its service. Congress is too distrustful of the President to consent to either arrangement. I think that Congress is probably too suspicious. A President would surely realize the risk of losing public esteem by appointments which Congress (and the country) could not applaud, and that if he did make such appointments, Congress would be able to humiliate him. Congress, however, takes a different view of the matter. What, then, is possible?

I suggest a statute modeled in part on the British Tribunals of Inquiry (Evidence) Act of 1921 insofar as concerns the powers to be given an investigating body. The statute could provide that whenever Congress by a concurrent resolution (which does not require Presidential approval) declared that it wished an inquiry into a matter that the resolution defined, a congressional investigating commission should come into being having all the powers, rights, and privileges that are vested in a district court of the United States. I say concurrent resolution because the commission should be the representative of Congress and not of a single branch. Senate and House committees sometimes investigate the same scandals concurrently and even compete with each other to subpena witnesses first. But if the investigating process were handed over to a servant of Congress, it is not likely that either House would refuse to consent to the appointment of a commission that the other House thought necessary.

A congressional investigating commission should have the power to enforce the attendance of witnesses, examine them on oath and compel the production of documents. If witnesses refused to attend or produce documents, or answer any question to which the commission could legally require an answer, or if they did any other thing which would, were the commission a court of law having power to commit for contempt, be contempt of court, the commission would initiate contempt proceedings. Witnesses would have the same privileges as witnesses in the district court—that is, they could not be sued for defamation.

The commission should meet in public unless it thought that because of the subject matter to be inquired into, or the nature of certain evidence to be given, it should meet in private. It would authorize representation by counsel of any person appearing to them to be entitled to counsel, or it could refuse such representation. There should be no controversy over the necessary powers of a congressional investigating commission. They should be as complete as possible.

But how should the members of a commission be appointed? Congress is too suspicious of the President to give him the responsibility the British Executive has. Appointment by the President, by and with the advice and consent of the Senate? That was the arrangement when Congress had no confidence that the Department of Justice (Harry M. Daugherty was then Attorney General) would prosecute fearlessly persons involved in the Teapot Dome scandals. Congress passed a statute under which the President appointed Owen J. Roberts and Attlee Pomerene as special prosecutors, and the Senate confirmed them. But the necessity of Senatorial confirmation would probably make service on a congressional investigating commission unpalatable to some men who had no real desire to serve but who were willing to undertake a public duty if it seemed to them that they should.

Why could not the members of a congressional investigating commission be appointed by the Chief Justice of the Supreme Court of the United States? It could be left to the commission to determine what counsel and other assistance it needed. The fees to be paid persons who served on commissions or to counsel could be stipulated in the law on a per diem basis or could be subject to approval by the Chief Justice or by the Speaker of the House and the President pro tempore of the Senate. Commissioners would be under an obligation to leave their private undertakings for the duration of investigations and to report to Congress. What possible objection can there be to such a proposal? Its advantages are many.

Senators and Representatives would be freed from tasks that reduce the amount of time available for their legislative work, which is always in arrears. During the present session of Congress the Senate has authorized 15 committee or subcommittee investigations and the House has authorized 20. Funds currently available to the investigators amount to more than $1,500,000. To be sure, some of these investigations are directly connected with the preparation of legislation that is under consideration. In large part, however, they are inquiries into administrative practices and performances and into large problems—for example, crime (interstate and in the District of Columbia), lobbying, the Immigration Service—which congressional committees are not always competent to explore. It should be remembered that the Moreland Act has been used to inquire into controversial questions of public policy. For example, Commissioner Robert M. Benjamin's report on administrative adjudication in the State of New York (1942) is a more informing document than all the committee reports on the many bills introduced in Congress to regulate procedure before Federal administrative tribunals, and the New York Legislature accepted the Benjamin report as authoritative. Many Senators and Representatives would sigh with relief if they did not have to spend wearisome hours in hearing rooms listening to discursive discussions of matters in which they had no real interest.

Few more than the publicity seekers in Congress relish the sensational aspects of inquisitions into alleged wrongdoing, and for this kind of inquiry, as I have already said, thoughtful Congressmen have been endeavoring to devise better procedural safeguards. Thus Senator SCOTT W. LUCAS, Democrat, of Illinois, and majority leader in the Senate, wants a person under attack before a congressional committee given the right (a) to appear personally before the committee; (b) to compel the committee to subpena up to four persons to testify in his defense; (c) to cross-examine witnesses personally or through counsel; and (d) to secure stenographic transcripts of testimony at cost. All these safeguards would automatically spring into being if Congress handed over its investigating power to congressional investigating commissions and there would be a complete elimination of an evil which will exist so long as congressional committees function and which no legislation can eradicate: the committee accusers later become committee judges.

There was one British tribunal of inquiry which found itself embarrassed by the necessity of seeming hostile to the witnesses who appeared before it. In 1936 budget secrets leaked (the "Jimmy" Thomas case) and it was alleged that some friends of the Minister had insured themselves against losses as a result of tax increases which the Cabinet contemplated but which had not been announced. A tribunal was appointed and felt it necessary to proceed very quickly. In its report it lamented the fact that because there had been no counsel to prepare the case, "the testing of the witnesses' stories by way of cross-examination or otherwise has necessarily been undertaken by the members of the tribunal themselves, with the resultant possibility of creating the impression that they were from the start hostile to some of the witnesses who appeared before them."

Moreover, because the outlines of the case were not known in advance, "it happened that persons whose conduct was the subject of the closest scrutiny were not represented before the tribunal until some days had elapsed," and counsel "who appeared to represent such persons were hampered by their inability to object to the reception of evidence in the nature of hearsay and prevented from presenting the case of their clients in the manner in which they would ordinarily have presented it before a court of law in this country." No legislation that Senator LUCAS can devise will prevent a congressional investigating committee from being the accuser before it becomes the judge and from receiving evidence which it would not wish to receive were its character known in advance.

Most discussions of the way in which Congress uses its inquisitorial powers stress unfairness to innocent persons and obscene hungering for newspaper headlines. These discussions have point, but my principal point is that Congress, when it acts through investigating committees, acts incompetently and frequently fails in its important task of compelling disclosures. It fails completely in convincing the public that the disclosures are complete. Hence Congress should employ competent agencies to investigate and should not delay doing this as long as it delayed employing competent people to do its legislative drafting.

Baylor University Browning Library

EXTENSION OF REMARKS
OF
HON. TOM CONNALLY
OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 12 (legislative day of Wednesday, March 29), 1950

Mr. CONNALLY. Mr. President, at Baylor University, in Waco, Tex., there has been established what is known as a Browning Library, a unique undertaking, which has been growing over the years. Dr. A. Joseph Armstrong, who is chairman of the department of English at the university, has been a prime mover in this project, which is now approaching completion.

I hold in my hand a letter from Mr. Douglas Hammond, of Ensley, Ala., addressed to me, with respect to Dr. Armstrong and his achievements. I know Dr. Armstrong personally, and have known him for a great many years. He is a very distinguished English scholar, and has attracted international attention. I therefore ask unanimous consent that the letter from Mr. Hammond, in the form of a tribute to Dr. Armstrong, be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Hon. TOM CONNALLY,
United States Senate,
Washington, D. C.

DEAR SENATOR CONNALLY: At Christmas time 1948, in his annual Christmas message, Dr. A. Joseph Armstrong said: "After long years in the land of dreams, the Baylor Browning Library is gradually becoming a beautiful reality. The war has delayed our project, but now the war has ended and the campaign has been given new impetus. The end is in sight. Our present plans are tremendously more ambitious than our first ideas. Today we are building for eternity. The actual foundation is being laid; the concrete is pouring into the wide, deep hole that is soon to rise as the long cherished Browning Library. Just a little more of that long pull, strong pull, and pull all together and the financing will be completed. Are you listening, friend"?

Baylor University, Waco, Tex., with its modest income and even more modest endowment could never have built the Baylor Browning Library. The love that Dr. Armstrong, chairman of the department of Eng-

lish, has for Baylor University, Texas, and the world, has raised this magnificent monument. The Baylor Browning Library, which is to be completed this year, bears a message of such import and majesty that it should of a certainty be the epicenter of this Nation's eyes as those eyes with hesitency turn toward the enigmatic future. Here, in this majestic, magnificent temple of beauty, a cloistered retreat, students will be invited to a place of quiet meditation; to stimulate creative thinking on intellectual and spiritual objectives * * * a retreat of such compelling beauty that reverence and prayer shall ever, consciously or subconsciously, abide in the souls of those who enter here.

The Browning Library is the fulfillment of the dream of one man: A. Joseph Armstrong. As early as 1935 Lilian Whiting credited this visionary man with creating the most magnificant outward memorial of a poet that the world has known. Through his indefatigable efforts and undaunted purpose these treasures of priceless Browningiana are housed in an exquisite library whose beauty and service pay lasting tribute to the poet Robert Browning.

As a young professor in 1912, Dr. A. Joseph Armstrong returned to head Baylor University's English department, where he had formerly served 1 year as an interim professor. Behind him was an enviable record of scholarship and literary contacts: bachelor of arts degree from Wabash College in 1902, followed by a master of arts in 1904; doctor of philosophy from the University of Pennsylvania in 1908, where he won the friendship of the great Shakespearean scholar Felix E. Schelling; a student at the British Museum, 1909–10.

For 30 years Dr. Armstrong has allowed his imagination to build up a glorious shrine in the form of a library and museum dedicated to Robert Browning. All through these years he has added valuable material to the collection until it stands now the greatest and largest collection of Browningiana in the world. His travels have carried him around the world more than a dozen times, and always his foremost thought was "will I be able to find something for the Browning Library? And, if I find it, will I have enough money to purchase it?" Often the material was found, but his own personal savings had been depleted time and time again in purchasing Browningiana, and pleas had to be issued to former students, friends, students in his current classes, and ever so often funds from his own meager store. All he had was a pocket full of dreams, a pocket which had been bulging for years, and a firm belief that all honest labor will be rewarded. And it was rewarded. Each year saw continuous contributions from friends the world over, and each year saw the addition of more priceless works of art, literature, etc., to the Browning collection.

In order to get money for the Browning Library, Dr. Armstrong brought, at his own expense, many brilliant artists, lecturers, authors, poets, musicians, actors, world travelers, and explorers, to Baylor University, and the visits of such notables as Carl Sandburg, John Erskine, Katharine Cornell, Edwin Markham, Edna St. Vincent Millay, Robert Frost, Helen Hayes, Alfred Noyes, Amy Lowell, William Lyon Phelps, Prince William of Sweden, Tagore, John Masefield, Vachel Lindsay, and so many, many others, laid the foundation of the Browning collection.

At the ceremony held to lay the cornerstone on February 25, 1950, many noted Texans took part, and were present to pay tribute to this outstanding achievement. Dr. Pat M. Neff, former Governor of Texas and a past president of the university, Dr. William R. White, president of Baylor University, and many other prominent Texans were present. Miss Frances Winwar (Mrs. Francis Lazenby) of New York and Chicago, noted biographer of literary folk, presented the original manuscript of her latest biography, The Immortal Lovers, depicting the lives of the Brownings, which is to be released by Harper & Bros., New York, on April 26 next.

The Browning collection now includes first editions of all of the poet's works and copies of nearly every article and book that has ever been written on Browning or his poems. His writings alone fill 500 volumes. Books which Browning or his family owned will be included. Other treasures in the collection are the bronze model of the clasped hands of Browning and his wife; 160 portraits of Browning, including the seven originals done when he was alive; original letters written by the author to famous contemporaries; the clock which chimed through three generations of the Browning family; a gold brooch, his gift to his wife on their first anniversary; flowers picked by Browning, some of which were enclosed in his love letters, over 600 pieces of music inspired by Browning or his wife; his snuff box; silver and china used by the poets; two of his passports; a New Testament given the writer by his Aunt Arabella; a shawl worn by his wife; and a lock of Browning's hair taken after his death. These, and many other valuable collector's items are to be included in the Browningiana to be placed in the library.

Today, Dr. Armstrong holds court as he likes to call it, in his office on the third floor of Pat Neff Hall, and looks across the campus and sees the naked girders of his dream being covered with white Indiana limestone. The long, hard years of effort are as nothing to him, and he has said, "If we can create * * * a place where young people can meditate on great thoughts, and by that means give the world * * * another Dante, another Shakespeare, another Browning—we will count the cost a bargain."

World renowned scholar and a friend of the famous—authors and nobility the world over—he most certainly would say with Wordsworth: "If I am remembered, it must be as a teacher."

Sincerely,

DOUGLAS HAMMOND.

Endorsement of Secretary of State Acheson by the New York Young Democratic Club, Inc.

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, April 12 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, in the face of the many irresponsible attacks that have been made upon the Secretary of State, it is most important that expressions of confidence in him by representative groups of American citizens be noted and entered upon the RECORD. I therefore ask unanimous consent that a resolution of the New York Young Democratic Club, Inc., expressing confidence in, and support of Mr. Acheson, be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION

Whereas the Honorable Dean Acheson, Secretary of State, has with great distinction and ability been furthering the democratic way of life throughout the world and has been steadfastly upholding the interests of the western democracies in general and of the United States in particular in the so-called cold war with Soviet Russia; and

Whereas Secretary Acheson and his administration of the Department of State have been unjustly maligned by certain members of the minority party in Congress and by the opposition press with unfounded and irresponsible charges of disloyalty in the Department, which charges are advanced for reasons of political opportunism and which tend to create an hysteria which hinders the work of the Department in its conduct of our foreign relations and threatens our democratic processes and civil rights: Now, therefore, be it

Resolved, That the New York Young Democratic Club, Inc., hereby condemns the utterly irresponsible attacks presently being made for reasons solely political upon the Honorable Dean Acheson, our Secretary of State, and hereby expresses its continuing confidence in and support of Mr. Acheson in his administration of the Department of State and his conduct of the foreign relations of this country.

The American Merchant Marine

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, April 12 (legislative day of Wednesday, March 29), 1950

Mr. O'CONOR. Mr. President, the third of the series of articles by Miss Helen Delich, of the staff of the Baltimore Morning Sun, published this morning, deals with the effect upon the United States merchant marine of the transfer of vessels to Panamanian registry, or to registries of other nations. It is a matter of great concern to many people, and I ask unanimous consent that the article in question be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of April 12, 1950]

FOREIGN REGISTRY CUTS UNITED STATES MERCHANT MARINE—AMERICANS OWN 52.8 PERCENT OF SHIPS SAILING UNDER PANAMANIAN FLAG

(The following article is the third of a series of four by Miss Delich on the condition of the American merchant marine.)

(By Helen Delich)

The Panamanian merchant fleet cannot be overlooked in any discussion of the American merchant marine, since 52.8 percent of that foreign fleet is owned by Americans.

Such unorthodox foreign registry is not limited to Panama, for lately the Liberia flag has been hoisted over new tankers built in Baltimore and Norfolk. In addition, the largest portion of the 75 ships registered in Honduras is owned by Americans.

RAISED TO SEVENTH PLACE

The American-owned craft have boosted Panama up to seventh place in the world's merchant marines on the basis of ships of

1,000 gross tons or more. The nations ahead of it are the United States, United Kingdom, Norway, Sweden, Netherlands, and France. Panama has more large merchant ships than Russia, Spain, Italy, or Denmark.

Labor unions the world over have threatened to boycott these Panamanian, Honduran, and Liberian ships, contending such registration is designed to avoid taxes, high wages, and safety standards, and has put many seamen out of work.

In connection with this threatened boycott the International Labor Organization conducted an investigation into the Panamanian fleet.

In a recent report the ILO committee made the following disclosures:

1. No authority from Panama ever inspects the ships as to conditions aboard, because most of these vessels never touch their country of registry.

2. Panamanian ships have no regulations to give effect to the safety of life at sea convention and the loadline convention.

3. There are no regulations concerning crew accommodations, manning requirements, hours of work and overtime in sea transport, food and catering on board ship, certification of ships' cooks, and inspection of seafarers' conditions of work. There are no remedies for enabling seafarers to recover arrears of wages and no provision for the maintenance of seafarers when repatriated.

LEGISLATION NOT BEING ENFORCED

4. What legislation exists is not being enforced due to the lack of consuls and because the owners and masters frequently are not aware of the provisions of Panamanian law and of their application to the seafarer under the law.

5. Wages and other conditions of employment on Panamanian ships are very diverse and in several cases well below international or good national standards.

Two years ago an official of the National Federation of American Shipping credited the doubling of the Panamanian-Honduran fleets since prewar days to the sale and transfers of American ships.

"The growth of these fleets has been a result of world forces," he said. "In international enterprises, such as shipping, it is often difficult to identify all the national interests involved. The nationality of a corporation, the nationality of its officers, and the nationality course of the capital involved may differ widely in any particular enterprise.

"Within the limits of these difficulties, it is clear that Greek money has been far and away the largest elements in financing private transfers of American vessels, and that several other European maritime nations have also participated."

BUILD AT SPARROWS POINT

Most of the tankers built recently at Sparrows Point are owned by foreign companies in New York. They sail under Panamanian, Liberian, or Honduran flags.

The most recent to leave Baltimore was the *Olympic Flame*, owned by a Greek who is an Argentine citizen with offices in New York, registered in Honduras, and manned with a German crew.

The Standard Oil Co. is one of the largest American concerns to operate tankers under the Panamanian flag in the name of its subsidiary company.

The transfer to Panamanian, Honduran, and Liberian flags is serious, but not as serious as the continuing drop in the American-flag fleet, the NFAS executive said when the United States tonnage was 28,000,000 deadweight tons. Today it is 14,000,000.

BLOW TO NATIONAL INTEREST SEEN

Predicting a drop in the American merchant marine to a size only slightly more than the prewar fleet, he declared:

"This drop in the size of our fleet carries serious consequences for the shipping industry, for labor, and for the national interest as a whole. Already the job opportunities in our industry have dropped from the peak of 250,000 to the present level of 140,000 and we appear to be heading for the prewar level of only 60,000 job opportunities."

L. R. Sanford, in behalf of the Shipbuilders Council of America, claims that continued and reasonably steady ship construction is necessary if the United States is to continue as a first-class maritime power with vessels at least equal to, if not better than, those of other maritime nations.

"VITAL ELEMENT OF SEA POWER

"History demonstrates that no world power can continue as such without sea power and an adequate merchant marine is one vital element of that sea power.

"Navies, armies, and even air forces are helpless and circumscribed without a supporting merchant marine. World trade cannot be achieved and maintained without an adequate merchant marine. It would be foolhardy to rely upon foreign merchant marines to operate in the interest of our foreign trade and commerce without the restraining influence of a vigorous competition by United States-flag ships.

"I should like to add another warning which naturally follows as a sequel to the last statement made. There is a school of thought, at present somewhat articulate, on the part of some of those in high places in this Government, which maintains that a merchant marine under the United States flag is not necessary in the interest of national security."

DOUBTS FOREIGN INTENT

"The State Department appears to take the position that there is no justifiable reason for the maintenance by this country of a merchant marine when foreign-flag ships, operating at lower cost, are available and could carry our exports and imports more cheaply.

"Possibly they could, but would they? Could we rely upon them to safeguard our interests? Any affirmative answer to that question would be naive indeed.

"The State Department's apparent policy is to bargain for alleged concessions from foreign countries by eliminating shipping subsidies, United States participation in ECA cargoes, and other like items which irk foreign nations. The State Department appears to think that the trading off of our merchant marine will promote the negotiation of treaties and their other ideas abroad. Experience has shown that we usually come out second best in such trades."

LUCKENBACH CITES EXPERIENCE

J. Lewis Luckenbach, chairman of the board of the American Bureau of Shipping, points out that past experience should be enough for this Nation to realize the necessity of keeping alive the industry with the employment of the men in yards to build more ships when needed and the employment of crews to operate the ships.

Both groups require more time for training than is needed for the building of a ship.

"Let us not blind ourselves with the thought that we may look to others for help in a national emergency," Luckenbach said, "as in the past that type of thinking has cost us many dollars and much human sacrifice, which cannot be expressed in dollars. Remember the old adage—'God helps them that help themselves.' "

There Are Two Worlds

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 12 (legislative day of Wednesday, March 29), 1950

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "There Are Two Worlds," which was published in the April issue of the magazine Eagle.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THERE ARE TWO WORLDS

Wendell Willkie wrote a book, and called it, "One World." It was a good book, but it had a very misleading title.

The tragic truth is that there are, and have been always, two worlds. Not only in the sense of the present gulf that divides the free world from the Kremlin-dominated areas of the world's surface. For there are also two worlds within every country, in every community, and inside every single human soul.

Mahatma Gandhi, the strange little man from India with his Christlike faith in love and nonviolence, said it best when he wrote,

"The human body is the battlefield where the eternal duel between right and wrong goes on * * *. Who is there who has not experienced within himself the daily conflict between the forces of evil and the forces of good?"

This Hindu who lived in the spirit of the Galilean saw the roots of violence in every human being and began his crusade for truth within himself. Whatever aspect of his life you study, you find it lived as a never-ending struggle to strengthen the good and subdue the bad within himself. The great mass movement that brought freedom to a half-starved, demoralized people began as a personal influence. He taught others, only by precept and example, to honor truth, to love their fellow man, and never to resort to evil means even for an intended good.

With his learning to weave and his homespun garments, he showed others that, even without great factories, they need not go naked. His going to the sea to distill a handful of salt from the ocean was stronger than a sermon to teach that God intended to provide for all. By receiving the "untouchables" into his home, and performing menial tasks for them, he demonstrated his belief that no man was so humble that he should be harmed. His fasts and imprisonments gave pride and character to the poor and demoralized for whom he was willing to suffer. Without a regiment or an atomic bomb, by the power of personal example and the force of shared faith, he helped his people free themselves and help themselves.

No wonder the Vatican newspaper said, when an assassin's bullet laid him low, "He imitated Christ in his own way. He said, 'Blessed are the peaceful,' and he was blessed in being so." For he was the one great man of our times to tell us that the struggle for a better world begins within ourselves. The world may need a new roof but its foundation will always be the quality of the people that live in it. To change the world, begin with yourself. The old Chinese Christian said it well, when he prayed, "O Lord, make my church better, and begin with me."

The Point 4 Program

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, April 12 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, in a few days we are to be called upon to consider the foreign-aid program. One of the titles of this program is that dynamic undertaking commonly called point 4. A very excellent and penetrating analysis of the point 4 program, and some of the reasons why the point 4 program is important, was recently distributed by the North American Newspaper Alliance. The article was written by Mr. Paul Manning, of New York. I commend this article to the attention of the Senate, and I ask unanimous consent that it be printed at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POPULATION GROWS, FOOD SOURCES DWINDLE, KEEP UP WAR PRESSURES, CONSERVATIONIST STRESSES: THUS TRUMAN'S POINT 4 BECOMES KEY PROGRAM, PROJECTING WORLD PEACE

(By Paul Manning)

NEW YORK, April 6.—The $45,000,000 asked of Congress by President Truman to supply technical aid to undeveloped areas of the world today was called a meritorious bit of legislation by Fairfield Osborn, president of the conservation foundation, assuming a considerable amount of these funds will be directed to the improvement of agricultural methods.

Mr. Osborn, one of America's authorities on the subject of world food, water, soil and timber conservation, remarked that the United States certainly cannot feed the world. But any money granted, such as the $45,000,000, to teach backward areas and countries how to produce more food for themselves is money well spent.

"The world today is faced with a basic problem of land depletion in the face of increasing population pressure," Mr. Osborn pointed out. "This must be corrected if a balance between natural resources and growing population is to be achieved."

The growth of the world's population in the last 300 years, from 400,000,000 people to about 2,250,000,000, is a fact which causes deep concern to conservation-minded leaders like Mr. Osborn.

In the crowded communities of the world such as Italy, many of the South American countries, and certainly India and China, the inability to produce food for booming populations without destroying the productive land areas, which are being cultivated under forced draft and by methods that destroy fertility, leads to tensions which can explode into war.

The old cry of "lebensraum"—living space—was one of the reasons advanced by Hitler, Mussolini and Tojo for embarking on military adventures which ultimately plunged most of the world into armed conflict. But, however specious the excuse, it was and continues to be a fact that dense populations which are crowded into fallow regions absorb the tensions of mass congestion and sooner or later follow any leader who promises more food and a better life.

For example, it is this problem which confronts Italy today. Neither war nor the uneasy peace of today has solved her basic difficulty; that of 47,000,000 people and an annual net population increase of 400,000 packed onto land which cannot support them all in reasonable decency.

This is the problem which has plagued economic recovery program experts in Italy from the very beginning of the Marshall plan. Their efforts even to institute land reforms have thus far failed, and as long as success eludes them in this matter alone Italy will always be ripe for communism.

The need for food also confronts Germany, a fact which the Soviet Union further aggravates by flooding the American, British, and French zones with countless refugees. United States High Commissioner John J. McCloy estimates that the saturation point has just about been reached in his zone, yet more than 1,000 refugees a day continue to stream into the western zones looking for food and a better life.

In northern China as well it has been Soviet policy to intensify local problems by draining off food surpluses to the U. S. S. R. This is the Russian strategy of mass attrition as practiced in all world areas they control. For Soviet leaders are convinced that any population which continues to live at a semistarvation level will come to regard war without disfavor. People of satellite areas who have known better days are now beginning to echo this philosophy as they declare: "War couldn't be much worse than the way we live now; and in war it is always possible to seize vast productive areas and perhaps live well again."

It is this reasoning which, if it spreads too thoroughly through the tension spots of eastern Europe, could cause a third world war. Conrad Adenauer, Chancelor of the new German Republic at Bonn, states that the way to avoid war is to convince the Kremlin that their reasoning in this respect is faulty; that the lands of western Europe would not contribute to a better life for the peoples of the East.

A new type of diplomacy might eventually change Soviet thinking. But as of today, and as long as a military vacuum exists in western Europe, the lands which stretch from the Baltic to the Mediterranean constitute a glittering prize. And now, with vast populations being convinced that only war would lead to more food and better land, the Soviets control a weapon of human desire as explosive as any hydrogen bomb.

There's no easy answer to this grave problem. The development of backward areas with United States money and technical specialists may eventually remove some trouble spots from the tensions that can lead to war.

But, as Fairfield Osborn observes, "the world will continue to be confronted with the problem of balancing supply with an increasing demand. Unless the world, tackles this dilemma with more effort and greater scientific detachment or, in turn, with better conservation methods and with recognition of the effects of population pressures, the conditions that lead to wars will still exist."

The Texas Wheat Outlook

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 12 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Texas. Mr. President, in the past several years bountiful wheat harvests have been produced in the rich grain-growing lands of the Texas Panhandle and South Plains areas.

This great region in the northwestern part of Texas has lived long on borrowed time, insofar as its supply of adequate rainfall is concerned. Citizens of the area have been acutely aware of this and have shown commendable interest in developing water-conservation programs to fit the immediate and future needs of the region.

As yet, these programs have not advanced much beyond the planning stage. There is much more work to be done and people of the Panhandle are energetically laboring on the task they have undertaken.

Indicative of the constant threat that overshadows the economic life of the Panhandle is a comprehensive survey printed in the Fort Worth Star-Telegram Sunday, reporting the dire need for rain to save the wheat crop this year. I ask unanimous consent that this survey by the Fort Worth Star-Telegram be included in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEXAS WHEAT OUTLOOK BAD, BUT SOAKING RAIN STILL CAN SAVE CROP

The Texas wheat outlook is dark but not hopeless.

Farmers say that rain within the next 2 weeks may change the picture as it exists today.

And by rain nothing short of from 3 to 4 inches is meant since the hot, blowing winds this spring have not only taken away what surface moisture there was but have reached into the subsoil.

A survey by the Star-Telegram through county agents in the principal wheat-growing counties brought almost unanimous agreement that:

GREEN BUGS ARE BAD

Green bugs are doing as much damage as the dry weather.

Summer fallowed land is withstanding the dry weather better than that which wasn't fallowed.

Irrigation brings good growth to wheat but also brings on the bugs.

If rains do not come within 2 weeks hundreds of thousands of acres sowed to wheat will be either grazed over or plowed. And if the latter practice is followed one of the largest grain sorghum crops in the history of the State may be the result.

None of the county agents would so much as hazard a guess on the probable yield of wheat, because the condition of the crop is such that there is no way of estimating.

The large infestation by green bugs, brown mites, and red spiders is due to the mild winter. The cold weather has lasted for only a day or two at a time. No snow has fallen in the Panhandle or South Plains areas during the winter, contrasted to the 1948–49 season, when most of the upper tier of counties was blanketed for 4 weeks.

Many countries report no appreciable rain since last October. Others report the last good rain—of an inch or more—in February.

The situation is not yet one of despair but is marked by a lot of finger-crossing hope for rain.

WHAT AGENTS REPORT

Reports by counties from county agents:

Armstrong: Charles O. Reed, 120,000 acres seeded, no appreciable rain in 6 months, green bugs rampant, fields too dry to plow, none abandoned so far. Rain by April 15

will save some of the grain. About 5,000 acres irrigated, but green bugs are hurting here, too.

Baylor: Roy McClung, 75,000 acres planted, fair to poor condition. Late planting in fair shape. All taken off grazing. Northwest part of county in good shape. East side of county hurt worst. Good subsoil moisture and good rain in 10 days would assure fair crop.

Briscoe: Leo White, 70,000 acres seeded, green bugs hurting, with 60 percent damaged. Could make fair yield with rain in 2 weeks, 7,000 irrigated acres in fair shape. Last substantial moisture in October.

Carson: H. M. Nichols, 150,000 acres seeded. Recent showers brought in bugs but many farmers still optimistic and believe rain by April 10 will help. Some fields plowed.

WINDS DRY SUBSOIL

Childress: Vernon Hefner, 60,000 acres planted. Had 2-inch rain February 17 but high dry winds recently taking out subsoil moisture. Ten percent damage from green bugs, about 1,000 acres abandoned and will be more if rain doesn't come soon.

Collin: Jack McCullough, 30,000 acres seeded. Topsoil dry but good subsoil. Not suffering yet. Good rain would get rid of green bugs which have caused some damage.

Cooke: B. T. Hawes, 50,000 acres planted. Have some second infestation of green bugs. If get rain soon will make fair grain crop.

Cottle: G. J. Lane, 33,000 acres seeded. Dry weather worse than green bugs. Some fields being grazed out. Three- or four-inch rain would change picture.

Crosby: W. R. Kimbrough, 81,000 acres planted with about 10,000 abandoned to grazing and plowing. The 5,000 irrigated acres of wheat in good shape. Very few green bugs in county. Need 2- or 3-inch rain in 10 days or 2 weeks.

Castro: Raymond King, 200,000 acres planted, of which 25,000 irrigated. Green bugs and dry weather about equal in causing extreme damage. Green bugs damaging irrigated wheat. Good rain would help some.

Denton: Ed McKay, 40,000 acres seeded. Green bugs getting most of wheat. Fields very dry.

Deaf Smith: H. L. Clearman, 310,000 acres seeded. If lucky will harvest 25 percent. Green bugs leaving dry land and infesting irrigated. Most of irrigated will be planted to sorghums and dry land will be summer fallowed.

Donley: H. M. Breedlove, 30,000 acres. Some green bugs damage but dry weather hurting more. Last good rain in October. Year before snow on ground 4 weeks. No snow this year. If no rain fields will be grazed and plowed.

Floyd: Robert H. Gibson, 213,000 acres. No rain since last October of half inch or more. Two-thirds destroyed, with green bugs causing greatest damage. Farmers plan to plow and put in row crops if rain doesn't come soon. Doubtful whether rain would help much now.

DRY-WEATHER DAMAGE

Foard: Joe Burkett, 77,500 acres seeded. Forty percent damage due to dry weather and green bugs. In west part of county some wheat heading prematurely. Rain would help in other sections.

Gray: Ralph Thomas, 120,000 acres planted. Some subsoil moisture. Green bugs all over county, about one-third of acreage browning over.

Grayson: Ben Cook, 53,000 acres planted. Bugs done more damage than lack of moisture. Few fields have been plowed. Moisture of substantial nature would help.

Hale: Ollie Liner, 165,000 acres planted. Dry and riddled by green bugs. Estimated 65,000 acres abandoned mostly by grazing out. The 30,000 to 40,000 irrigated acres of wheat not stooling out as it should. Didn't get rainfall when needed.

Hartley: E. L. Dysart, 112,000 acres. No green bugs, wheat not up enough but fields have greened up last 2 weeks. No appreciable moisture since last summer. Only two-one-hundredths of an inch moisture from snow this winter. Even rain now would not help much.

Hansford: Jack Jaggers, 265,000 acres seeded. Green bugs, brown mites, and red spiders. None abandoned, but picture will be different unless get rain in 10 days.

Haskell: Frank Martin, 80,000 acres planted. Fair to poor condition. Number of farmers turned stock back in for grazing. Rain would help late planted wheat, estimated at about two-thirds of total.

Hemphill: Walter Grist, 50,000 acres. "Nothing wrong that a good rain wouldn't straighten out." Ladybugs killing green bugs. Ten thousand acres abandoned, to be put in legumes, clover, and barley. Very few green bugs.

CROPS ARE SPOTTED

Jones: William H. Lehmerg, 80,000 acres planted, slightly over allotment. Northeast and northwest sections of county still in good shape. Central part of the crop gone. Some premature heading and few green bugs, spiders and aphids. Very small part of acreage abandoned.

Lamb: David Eaton, 30,000 acres seeded, including 10,000 irrigated. Green bugs damaging irrigated wheat, dry land holding its own. Not much blowing. Rain would still help.

Lipscomb: Martin Gossett, 150,000 acres. Situation "looks rough." Only four-tenths of an inch rain in February, first since last October. Fifty percent of acreage hurt by green bugs and dry weather. About 10,000 in summer fallow would be helped by rain in 10 days.

McCulloch: A. R. Grote, 30,000 acres. Some green bugs. Might make average crop if get rain in 10 days. However, farmers already plowing up some wheat.

Ochiltree: Hood Wills, 260,000 acres. Good subsoil moisture although no rain since October and no snow during winter. Bugs doing more damage than dry weather. None abandoned so far.

Oldham: Roy Ivy, 80,000 acres. Dry land wheat about gone. Fifty percent of acreage would make wheat if rains come in 10 days.

Parmer: Joe Jones, 190,000 acres planted. Green bugs hurting irrigated wheat. Some has been grazed out. Last rain in August. Fallow-land wheat looks good.

Roberts: Victory Joyner, 50,000 acres. Green bugs have hit pretty hard. Rain wouldn't help much.

Sherman: E. Goule, 230,000 acres seeded. No green bugs except nuisance. One-third of acreage planted didn't come up. Only 150,000 acres have any prospects of making anything. If don't get rain by April 10 will be plowed and put to row crops. Summer fallow land in good shape. Driest wheat season in 52 years.

HALF ABANDONED

Swisher: C. D. Holcomb, 223,000 acres. Estimated over half been abandoned, of which 50 percent be summer fallowed and rest put to grain sorghums. Very little irrigated because of green bugs.

Taylor: Horace Stanley, 83,000 acres. Very little abandoned, only about 5,000 grazed. Had only 1.43 inches rain this year. Good rain by Easter would make from 5 to 10 bushels. Very few bugs.

Throckmorton: George Blackburn, 38,000 acres. Some wheat looks good but moisture needed. Late planted grain hasn't suffered too much. Some early wheat heading. Some been overgrazed. Rain soon would help.

Tom Green: Paul Newton, assistant, 5,000 acres. Burning from dry weather. If no rain in 2 weeks most will be plowed and put to row crops.

Young: R. O. Dunkle, 60,000 acres. Dry weather and bugs hurting. Could make 35 percent of normal on late planted wheat if rain within week. Rest of wheat almost beyond help.

Wichita: Max Carpenter, 79,000 acres. Wheat good along Red River Valley. Rest suffering. East part green bug damage heavy. Estimated one-eighth being grazed or plowed. Northwest section of county got 3-inch rain February 12.

Wilbarger: Frank Wendt, 85,000 acres. Green bugs stunted growth. Rain still would insure average crop of 12½ bushels.

Wise: Tom Roof, 18,000 acres. None abandoned. Very few green bugs. Farmers plan to wait 2 or 3 weeks for moisture, then will graze rather than plow. Some will be seeded to hay.

Natural Gas Legislation

EXTENSION OF REMARKS
OF

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 12 (legislative day of Wednesday, March 29), 1950

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial regarding the bill recently passed relating to the production of natural gas. The editorial is entitled "CROSSER and YOUNG Lack Faith in Free Enterprise," and is from the Cleveland News of April 4, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CROSSER AND YOUNG LACK FAITH IN FREE ENTERPRISE

Sometimes our Democratic friends in Congress get their signals mixed and come up with mighty strange formations.

For instance, it was a bit difficult for Ohio's Congressman STEPHEN M. YOUNG to maintain his argument that the Kerr natural gas bill is a "billion dollar steal" when a principal advocate of the measure was his Democratic leader, Speaker SAM RAYBURN.

Congressman YOUNG professed to believe that, if the bill passed by both Houses becomes law, consumers will pay through the nose to the extent of $100,000,000 a year.

Speaker RAYBURN followed Mr. YOUNG to the floor to remind Congressmen of his long record on behalf of Fair-New Deal legislation. Then he appealed successfully for passage of the bill, asserting flatly that "this will not raise the price of natural gas to any consumer in the United States one red penny."

You can take your choice of RAYBURN or YOUNG. We don't think a Speaker of the House would be caught out on a limb without complete assurance that it wouldn't crack under him.

The "billion dollar steal" cry had no more basis than the imagination of Congressman YOUNG and his associates. They had nothing to base it on except their own mistrust of the traditional free-enterprise system. They just prefer Government regulation to free competitive operation.

Speaker RAYBURN put his finger on their real objective when he said in reference to the position of another Clevelander:

"If I felt, as my distinguished friend from Ohio [Mr. CROSSER] has indicated he feels, that the Federal Government should own and control all the natural resources of this country, then my position on this and much other legislation certainly would be changed."

But Speaker RAYBURN hasn't let his affection for the New Deal send him scurrying to embrace every move toward nationalization that turns up. That is what inspired opposition to the Kerr bill, we believe. That's what Congressman YOUNG was suggesting in arguing that "the Almighty has given this (gas supply) to us for the benefit and general welfare of all our citizens."

An awful lot of bunk was written and said about the Kerr bill steal. You didn't hear as much about its recommendation by the Department of Defense, that the effect of the bill should be to encourage the development of oil and gas resources and thus to benefit the national security.

No; most of what you heard were the shrill cries that the wicked gas producers would rob the consumers without a shred of evidence to support the charge.

Actually the Kerr bill provides for continuing study to see that such a thing doesn't happen. If the producers were short-sighted enough to take such a course, they have had ample warning that Congress will consider the situation again.

Job for Everyone

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1950

Mr. REED of New York. Mr. Speaker, the editorial which I am inserting as a part of my remarks appeared in the Wall Street Journal of Monday, April 10, 1950, entitled "Job for Everyone." It ought to challenge the thinking of the businessmen of this country.

If the representative form of Republican government is to survive each citizen who is a sovereign in his own right will have to make use of the ballot which is the instrument which places in the citizen the power to govern. Too long the public has been under the seductive influence and the resulting stupor which, like the lotus eaters, dulled the effect of the drug of excessive spending. Great segments of society have been bribed with their own money until now the bureaucrats are spending as they see fit the hard-earned money of the taxpayers. The businessmen, along with others, have been getting their hand-outs, including the magazines and the press. Now we see the representatives of the people who have been responsible for excessive spending rushing into the headlines as the champions of economy.

It is time for everybody to get down to earth and realize that this Government cannot spend itself into solvency. I have had my share of criticism because I have opposed the boondoggling spending both here and abroad. I was chairman of the National Debt Policy Committee, made up of some of the most conservative men in the House, which made a report in 1939 predicting accurately what the result of this spending program would be on our economy. In the wild and reckless era of spending under the Roosevelt and Truman regimes such a report as this committee made was not considered, and therefore, its praises were unheralded and unsung.

I am glad to see men like Mr. Elmer L. Lindseth, president of the Cleveland Electric Illuminating Co., and also president of the Edison Electric Institute, make the forthright statement which is mentioned in the editorial which I am inserting as part of my remarks, under unanimous leave to extend, heretofore granted:

JOB FOR EVERYONE

All those people alarmed by the idea of a Socialist state agree on one thing: They'd like to halt this country's trend in that direction. For most of them, however, the problem is how to do it.

In Cleveland the other day one businessman, who obviously has been doing some thinking about that problem, offered some specific proposals. He is Elmer L. Lindseth, president of the Cleveland Electric Illuminating Co. and also president of the Edison Electric Institute.

Said Mr. Lindseth: "The American people are being sold the socialistic furore by one of the most skillful sales campaigns ever conducted. While we on the other side are doing a great job selling the products of our factories and in raising the standards of living of our people, we are shamefully neglecting the obvious job of selling the system that makes it all possible."

Many advocates of the hand-cut state are living comfortably in Washington on taxpayer money. Some of them are in positions where they can devote their full energy to plotting an economic revolution.

"By contrast," as Mr. Lindseth emphasizes, "most of us (businessmen) devote a pitifully small share of time to combating the forces we despise or selling the public on our ideals."

A part of this can be explained by the fact that businessmen are busy men. But part of it is due to the strangeness of the job of selling free enterprise, or freedom. So Mr. Lindseth proposes a six-point plan of action.

1. Get informed on the free American economic and political system so you can explain it clearly.

2. Recognize that many reform proposals stem from real human problems. The desire for a fuller life and more security is very strong, so we must sell to it.

3. Be for progress and change. Stress the better standard of living, security, independence, and freedom that our system has brought—but stress, too, that it can and will be improved.

4. Spread the story of the superiority of the American system, in terms everyone can understand.

5. Take a more alert personal interest in government.

6. Deserve the confidence of the people in business.

Those are Mr. Lindseth's six points. We'd like to add one of our own: Assume that the vast majority of the American people are on the free-enterprise side but need weapons to battle the social propagandists.

As the Cleveland utility man says, there are people everywhere to listen to the story. Customers, employees, and just plain friends are among them. Almost any business firm has many mediums of communication; employee publications, worker meetings, foremen's sessions are some.

The important thing: Don't sit idly by and "let Joe do it." This is a job for everyone. Otherwise, as Mr. Lindseth says: "We shall awaken one morning and find socialism is an accomplished fact."

Let Us Study This Opposition From Southern California

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. MURDOCK. Mr. Speaker, very few bills have met with such bitter opposition as has S. 75, the central Arizona project. It has been a determined opposition, obviously well financed and very cleverly conducted. Somebody has a powerful interest in attempting to defeat this measure. Who is it and why? What are some ostensible objections broadcast against it so freely by the opposition? Could there be other reasons, hidden but nonetheless real, prompting the opposition? Well, let us look at some of the reasons expressed.

California men have voiced opposition to Senate bill 75 on several grounds, one of which is their claim that it would take 1,200,000 acre-feet of water into Arizona which is needed in Los Angeles and other southern California cities containing a total population of 5,000,000 souls. This, whether true or not, is one of their most telling and effective points of argument in opposition, because it has human appeal. While I emphatically declare that it is Arizona's water asked for in the bill, I will lay aside for a moment the question of who has the legal right to use that 1,200,000 acre-feet annually and ask that we consider the question whether that water would be taken away from Los Angeles if diverted into Arizona. I deny that Los Angeles would be deprived of one bucketful if the diversion into Arizona were made under Senate bill 75.

The reason for my statement is the fact that Los Angeles has not been using even a fifth of her quota of water out of the Colorado River during the past 9 years which she might have used. The metropolitan water district has built an aqueduct large enough to carry this same quantity of water to Los Angeles and neighboring cities from the Colorado River, that is, about 1,000,000,000 gallons daily, but that aqueduct has been very slightly used—only to the extent of 7 percent—during the 9 years of its existence. The water has been in Lake Havasu on the Colorado and might have been drawn on had there been imperative need of it in the west coast cities. Therefore, it is plainly a mathematical fact that there is little present need of Colorado River water in Los Angeles and any propaganda to that effect does not square with the facts. It is quite clear that S. 75 does not seek to take any presently used water needed today by Los Angeles or the metropolitan water district. Any claim to the contrary is highly deceptive and misleading. Most protests against this legislation, the central Arizona project, on the ground that it would take water away from Los Angeles come from individuals who have been misinformed on this matter.

Could it be, as they say, a future need of water that it threatens? That idea I emphatically deny. The best engineers have shown conclusively that Los Angeles and the surrounding area have sufficient total water resources, including, first, local supply; second, Owens River Aqueduct supply; and third, Colorado River aqueduct supply, adequate to maintain a population for a larger city than any to be found in the world today and for a larger population than Los Angeles can possibly be expected to have in the foreseeable future.' This presupposes, what is a fact, that the present Colorado River aqueduct can furnish about 1,000,000,000 gallons daily from Lake Havasu on the Colorado River. The water for such a supply is unquestionably in the Colorado River physically and legally, and will be there even after S. 75 is enacted and 1,200,000 acre-feet, the quantity called for from Lake Havasu, is diverted into Arizona. Therefore the present facilities and water supply of Los Angeles are not jeopardized by this legislation.

How about any possible future need of Los Angeles for the Colorado River waters beyond the billion gallons daily? I do not believe that the time will ever come in this or any following century when Los Angeles will need more water out of the Colorado River than the present metropolitan aqueduct will carry. I have never heard any responsible official in California speak of building another aqueduct as large or larger than the existing metropolitan aqueduct. Since it has been built now a decade and has been used to only 7 percent of its capacity, obviously it is going to be many years in the future before the one now built will be needed to its full capacity. To build another one like it today would cost a half a billion dollars and call for such great quantities of operating power that the need would have to be very great indeed any time in the indefinite future to justify the thought of another such aqueduct. Why is the need for operating power so great? Because every drop of water going to Los Angeles from the Colorado River in the present aqueduct has to be lifted more than 1,600 feet in that aqueduct. This tremendous pump lift, nearly four times the height of the Washington Monument, makes it very improbable that Los Angeles even though it were four times as large as New York City would get its water supply from the Colorado River.

If, however, it eventually used its present big aqueduct to the full capacity and drew a billion gallons daily from the Colorado River and then years hence felt the need of building a second such aqueduct, to carry an additional billion gallons daily from the Colorado River, even then the metropolitan water district would be consuming only half of the water in the Colorado River allotted by law to California without any legal question raised by Arizona. No, it is preposterous to assume that the Los Angeles city water supply at the present time or in any foreseeable future would be cut short by diverting water into Arizona under the terms of S. 75. To tell the truth, I just do not believe that Los Angeles is putting up this fight because of any danger to her present or future water supply. There must be another reason.

What other reason could there be? Senator MCFARLAND with penetrating insight summed it up when he said:

Mr. President, what is this argument all about? It has become abundantly clear during the course of this debate. It is simply a question of whether southern California power users shall receive cheaper power or whether the people of Arizona will be able to survive. If proof was needed, it was revealed this afternoon by the introduction of a power company telegram. They admit they are willing to construct the power end of the project. They say, "Just take the irrigation off, and we are willing to let it go. Let our power users in California have cheaper power."

Undoubtedly, the real opposition put up by the propaganda machines in Los Angeles to Senate bill 75, is because if this measure is enacted and the project is carried out, there will be less hydroelectric power for southern California and any available will not be so cheap as some of the power which Los Angeles is getting from other dams on the Colorado River. Why will that be the case? Because the central Arizona project calls for a third of any power to be produced at the power plant at the Bridge Canyon Dam to be used for Arizona's purpose in pumping water for this diversion and therefore there would be only two-thirds of the total production of power available to anyone for commercial purposes. Incidentally, the Arizona Power Authority has made application for all of the commercial power to be produced there and is willing to contract for the other two-thirds of the power so that there need not be a kilowatt from the Bridge Canyon Dam go out of Arizona. They do not like that in Los Angeles, for they would like to get all such power and want it at the cheapest possible rates.

Why would any commercial power that might be available to Los Angeles at the Bridge Canyon Dam under S. 75 not be as cheap as some of the power the, are presently getting from the Colorado River? This is why. Under the terms of S. 75, power is called on to subsidize irrigation to a reasonable extent which is also true today of every other big project in the West. In this bill, the subsidy for irrigation has been computed by the Bureau at seventy-two one-hundredths of a mill, which is much less of a subsidy than is being computed in many other irrigation projects. Now, obviously, if there were no irrigation for Arizona tied to this project the commercial power might be available at a somewhat cheaper rate.

Los Angeles needs more hydroelectric power and they want very cheap power so as to attract industry. That is the crux of their opposition to S. 75. If we do not subsidize irrigation and specialized food production in Arizona with power produced at the Bridge Canyon Dam, we would surely be subsidizing the building up of industry at or near Los Angeles. Is that what Congress wants to do in the complete development of the Colorado River?

Holifield Attacks Waste and Red Tape in Government

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. HOLIFIELD. Mr. Speaker, Government reorganization for greater economy and greater efficiency has become a watchword of the American people. They want Uncle Sam to put his house in order.

The Federal Government is big business—the biggest of its kind on the face of the earth. The American people as taxpayers, as stockholders in that business, want it to be well run. They demand that modern businesslike techniques of management be applied. They insist that the structure of Government be simplified and that lines of authority be clearly drawn, so that we can hold our public servants fully accountable for their actions.

In other words, they want an all-out attack on inefficiency, waste, and red tape in their Government. Beset with heavy taxes and a national budget deficit, the American people are right in making these demands. There is no excuse for a government structure that is too sprawling and cumbersome to be well managed. There is no excuse for wasteful duplication of agencies and activities.

I am glad to report, Mr. Speaker, that this Congress is alert to the problem. Without fanfare, without headlines, we are moving steadily forward in reorganizing the executive branch of the Government under the guiding hand of the Hoover Commission recommendations. Uncle Sam is taking firm steps to put his house in order. Mr. Hoover himself recently testified before a Senate committee that "astonishing progress" has been made. Experts say that we have accomplished more in the past year than in any like period in our history.

As the ranking member of the House Committee on Expenditures in the Executive Departments, which handles all the President's reorganization plans and a major part of the legislation growing out of the Hoover Commission reports, I am privileged to take part in this vital task. Particularly as chairman of the Subcommittee on Executive and Legislative Reorganization, I have made careful and extensive studies of the various reorganization plans and bills. With pardonable pride I can say, Mr. Speaker, that a primary part of my legislative work is directed to making our Federal Government less costly and better managed.

The Federal Property and Administrative Services Act of 1949, which I sponsored and which was unanimously approved by the Congress, has been called one of the greatest consolidations of government agencies in history. This law provides the framework for sweeping improvements in the so-called housekeeping activities of Government—the

purchase, storage, use and disposal of property, the keeping of records, the management of Government buildings, and the like. The Citizens Committee for the Hoover Report estimates that $250,000,000 yearly will be saved, when this act is fully in operation.

With the administrative tools provided by the new Federal property law, the Government will be able to search out waste and inefficiency in every corner of the Federal establishment. It will cut down the huge inventory—estimated at $27,000,000,000—of goods now stocked in Government warehouses throughout the land. It will reduce costly paper work and the multitude of forms now used in buying small items. It will catalog the millions of items now bought by the Government, so that one agency knows what the other is buying, and can take advantage of the best price. It will assure that Government buildings and property are put to full use. It will, in short, make its operations more efficient and businesslike, more understandable to the average citizen, and more economical for the taxpayer.

Speaking as a legislator who has served his district continuously for 8 years, as a businessman with 25 years of successful experience, and as an individual citizen who wants his Government to be sound and strong and prepared to meet the problems of the atomic age, I sincerely believe that thoroughgoing Government reorganization along the lines proposed by the Hoover Commission, ranks as one of the crucial problems. We must solve it; we will solve it, as our progress today demonstrates. In so doing, we must rise above narrow partisan or private interest; good government comes first.

Those of us who are concerned about our country's welfare realize how important is the need for overhauling the machinery of Government. We cannot travel the modern highway to peace and prosperity with a vehicle handed down from the horse-and-buggy days.

Democracy faces the challenge of a totalitarian ideology. To resist it successfully, our Government must be streamlined and organized to render efficient service. Every ounce of fat must be trimmed off. Its muscles and sinews must be strong.

Our Department of Defense is now vigorously engaged in the process of trimming the fat. The military unification law passed by the present Congress has given Secretary Johnson the administrative weapons to mop up pockets of inefficiency, to clean out superfluous activities and idle personnel. With our military services spending almost one-third of the total Federal budget, large economies can be expected in this field. Secretary Johnson estimates that $1,500,000,000 can be saved through military reorganization during the current fiscal year.

Of course, in putting our great departments of Government on a diet of expenditures, we must take care not to injure their body health. We want the most security and the most service we can get for each tax dollar; but we do not want our security to be weakened, nor the essential services of Government to be curtailed.

When our work of Government reorganization—now at the halfway mark—comes close to fulfillment—possibly three or four billion dollars in yearly savings will result. This will do away with a substantial part of the budget deficit. It will bring within reach the goal of a balanced budget. More than that, it will mean a better Government and a healthier democracy.

Mr. Speaker, 21 Presidential reorganization plans and many important legislative proposals are now before our committee. Every member of the Committee on Executive Expenditures is pledged to the task of eliminating the waste and inefficiency in our Federal Government.

I predict that over 90 percent of the Hoover Commission recommendations will be found worthy of acceptance, and the economies resulting therefrom will be reflected in lower taxes.

World Federation Resolution Would Strengthen United Nations

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1950

Mrs. DOUGLAS. Mr. Speaker, as a member of the Committee on Foreign Affairs, it was my privilege to give consideration last fall to the world federation resolution, House Concurrent Resolution 64. Because of the pressure of immediate legislative items such as ECA extension, the committee has not yet reported the world federation resolution. I hope that it can be reported favorably within the very near future.

The gravest problem which confronts us all today is the problem of how to avoid war and promote freedom and security. I believe that we can avoid war, but to do so will take the combined wisdom and efforts of all of us. It will take, too, a combination of many different actions and programs. There is no single solution or panacea for the complex and dangerously explosive situation in which we find ourselves.

It is crucial, however, in our search for the right programs and policies for our Nation to follow, that we have an over-all objective in which we believe, in which we have faith, and in which the other peoples of the world can have faith. It is not enough to say, "We want peace with freedom." The Soviets say this, too. It is not enough to say, "We believe in the United Nations." The Soviet says this, too, although I think it is perfectly clear that Soviet actions belie Soviet professions and protestations. We must be sure that United States actions are actually in keeping with our professions; we must be sure that we have a well-defined goal which offers some promise of peace, a goal toward which our every interim action can be directed, a goal which can win the support of other peace- and freedom-loving peoples everywhere.

I believe that the time has come when it is necessary for the United States to reaffirm its determination to make the UN the core of our program for peace, and to state our determination to work for its development into the kind of peace-keeping organization which the nations of all the world can confidently entrust with the responsibility for assuring their security from aggression.

For this reason I support House Concurrent Resolution 64 as a step toward the crystallization of United States support for a stronger and more effective UN.

Soviet Control of United States Fur Markets Blow to Northwest

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks I include an article by Fred Niendorff appearing in the Seattle Post-Intelligencer calling attention to the fact that imports of raw furs from Russia are destroying Pacific Northwest fur business. Most certainly this calls for some action by the Department of Commerce.

SOVIET CONTROL OF UNITED STATES FUR MARKETS BLOW TO NORTHWEST

Of more than 200 fox fur farms doing a thriving business in the State of Washington a few years ago only three are left.

Four hundred mink farmers still are struggling on, but they cannot be sure for how long.

In Alaska, wild fur trapping has shrunk to a mere shadow of its former robust self.

In brief, the once lusty Pacific Northwest fur industry, wild and domestic, is sick.

Hope that the wartime excise tax on retail furs might be cut or removed has had its influence recently on retail sales.

But the real villain in the piece is Soviet Russia.

She has gone on a wild fur export spree and today dominates the raw fur markets of the United States.

The authority for that statement is the National Board of Fur Farm Organizations. It includes the Puget Sound Fur Farmers Association, the Northwest Fur Farmers Association and the Inland Empire Fur Breeders Association.

The national board has devoted months to investigating what has happened to American fur growers since the war. And according to Michael Dederer, president of the Seattle Fur Exchange, it is now prepared to insist upon defensive tariff action.

Its investigation disclosed that United States imports of furs have expanded from an annual average of $51,000,000 before the war to $167,000,000 since the war.

Russian imports increased 800 percent, those from all other countries, 300 percent. By contributing 30 percent to the import total, the Soviets in fact, the board contends, control the United States raw fur market.

The board makes this finding, which it is submitting in its plea for a tariff wall:

"Domination and control of the American raw fur market by the Soviet Union is crushing the American fur producer and is also causing hardships to other friendly countries which have, for years, depended on our market for sale of their furs."

Sixteen countries getting American Marshall plan aid have not been able to increase their fur exports to the United States, the board found.

In fact, the board asserts, the Marshall plan countries, in order to compete with Russian prices, "have had to place into operation export subsidies, compensation rebates, dollar discounts, barter programs, and every other device known to international trade."

How, the board challenges, is the open door to Soviet furs contributing to the economic stability of Marshall plan countries in the fur trade? It asserts the very opposite is true and that their only recourse is "to sell their furs to the United States at a loss and ask for more Marshall plan aid."

"Russia knows that by reason of her slave labor and state-trading program she can undersell every country in our free market," the relief petition asserts.

It goes further:

"While we (the United States) have been drifting on 'no look, hands off' policy, Russia has successfully demoralized our own industry and taken control of the raw fur market."

Dederer, who knows more about furs than the animals they grow on, contends that unless tariff relief is forthcoming the Pacific Northwest fur growing and fur trapping industry faces extinction under the heel of the red bear—total extinction, that is.

Condition of the American Merchant Marine

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. O'CONOR. Mr. President, the serious plight of the United States merchant marine warrants and demands the immediate attention of the Congress. In the Baltimore Sun of this morning the fourth and concluding article of a series on this present-day problem is published and is well worth the reading and attention of the Congress and the American public. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of April 13, 1950]

PORT OF BALTIMORE FEELING SLUMP IN MERCHANT MARINE

(The following is the final article of a series of four by Miss Delich on the condition of the American merchant marine.)

(By Helen Delich)

The steady decline of the American merchant marine is reflected clearly in the vessel-arrival figures in the port of Baltimore, the Nation's second foreign-tonnage seaport.

Last year 1,374 American ships in foreign trade visited this port, as against 1,898 foreign-flag craft.

In 1940 there were 1,272 foreign, 1,644 American. In 1946 the figures were 685 foreign and 1,644 American; 1947 showed 1,416 foreign and 1,728 American, and in 1948 there were 1,476 foreign and 1,500 American.

EFFECTS ON CITY

The sharp contrast between 1948 and 1949 in foreign and American shipping arrivals has affected the port—and, therefore, the city—as follows:

1. About 5,000 seamen are "on the beach."

2. About 3,000 longshoremen and shipyard workers are drawing unemployment compensation. Another 3,000 are working only 1 and 2 days a week.

3. The steamship agency which had the largest operating force in Baltimore had to cut its staff in half and return nine chartered vessels to the Government because cargoes were not available. This also means that 333 seamen, most of them Baltimoreans, were put out of work.

4. A typical ship-maintenance company that deals exclusively with American ships dropped 123 employees last year and decreased its pay roll $255,000. Many of the present 256 employees work only 1 or 2 days a week.

REPAIR YARDS LAY OFF MEN

5. Ship-repair yards have reduced until they work only about 1,800 men a day and still are cutting their pay-roll forces. Some of the men laid off have had from 10 to 25 years' experience.

6. The Sparrows Point shipbuilding yard faces a complete shutdown early next year.

7. A paint concern, one of the many industries not thought of normally in connection with the maritime world, cut its staff 25 percent because orders had dropped that much.

8. A stevedoring concern that deals exclusively with American deep-sea ships reported its pay roll for the first 9 weeks of 1950 was $30,000 less than in the comparable period in 1948.

9. Baltimore no longer has a single ocean shipping line with headquarters here, the Baltimore Mail Line and the Merchants and Miners being among the firms never recovering from the war.

(The ships owned by these companies were among those diverted to the British for use in supplying their troops in the battle against General Rommel in Africa.)

SHOWS IN COASTWISE LINE

10. The intercoastal and coastwise decline is indicated by the Quaker Line, which has cut its staff in half and runs only two ships a month from here instead of its prewar weekly service.

11. Although the number of foreign-trade ships in port in 1949 exceeded the number for 1948, the money spent was considerably less because foreign vessels cannot receive extensive repairs in this country, nor do they buy many of their supplies here.

The 5,000 seamen "on the beach" in Baltimore are a segment of the 40,000 lying idle around the Nation waiting for their turn to ship out. Some are drawing unemployment compensation; others are working at odd jobs a day or two a week when such jobs are available.

AFFECTED BY NATIONAL FIGURE

The national figure for men on the beaches affects Marylanders more than the 5,000 in Baltimore, as the unions estimate about 18 percent of all seamen come from this area. Seamen ship from the port they believe will give them the best opportunity to get a trip.

The ship-repair and building industry is one of the saddest in the entire merchant-marine picture, as the skilled men are turning to jobs with more security.

The CIO Shipyard Workers Union said that now is one of the times when the seniority privilege has backfired somewhat, as the first men to lose their jobs—the younger ones—were able to get located within a short period of time.

However, today, the older men—ranging in age from 35 to 45 and holding experience ratings of 10 to 25 years—are having difficulty finding other work because jobs are scarcer and older men are not wanted by new companies, the union said.

FEARS LACK OF SKILLED MEN

J. M. Willis, general manager of the Bethlehem Steel Baltimore shipbuilding division, fears for the industry's future because of the lack of skilled workmen.

"When we built the night boats New York and Boston back in the 1920's, we imported English and Scotch skilled workers under the more lax immigration laws," Mr. Willis said. "We didn't have many American workers left over from the first war, as the merchant marine then also was permitted to decline. These immigrants, many of whom are now dead or retired, served as the nucleus in the last war.

"There's nothing today to entice a young man to enter the industry. I've spent 52 years in this business, but I'm not going to permit my grandson to enter the business. There's no future here.

"It's no longer an industry which is passed on down from generation to generation in America. They're still doing it abroad, though, because they know the importance of a merchant marine."

CALLS CRISIS EXTREME

"We've had our ups and downs before, but there has always been hope ahead. This is the most pessimistic I've ever been, as the crisis is more extreme than any the American shipping world has ever faced."

At Sparrows Point each time one of the tankers—for foreign interests—is finished another crew of workmen is laid off. This tanker program will be completed next year, when the yard is slated to be shut down because American shipbuilding does not even appear promising.

The world monetary situation struck Sparrows Point directly when contracts for the construction of two 25,000-ton ore ships were canceled and transferred to England. After deflation abroad, Republic Steel figured it could build the ore ships in that country, pay the 40 percent duty charged by the United States and still save $2,000,000 per vessel.

NOTED IN PORT SURVEY

The importance of the shipbuilding and ship-repair business to the port of Baltimore, listed as the city's chief asset, was cited in the recent port survey as follows:

"Baltimore's extensive shipbuilding and ship-repair facilities have made this port one of the leading marine construction and repair centers of the world, and, because of the excellence of the repair services offered, have been influential in establishing Baltimore as an important port of call for the vessels of many of the world's leading shipping lines."

Besides the paint industry, the decline in marine repair and building work affects leather, wood, glass, glue, canvas, gear manufacturers, boiler producers, to mention a few.

The stevedoring company said that if this port did not have the bulk cargoes provided by the chemical plants in Curtis Bay, its pay roll would have dropped considerably more than the $30,000 for the 9-week period.

MONEY IN GENERAL CARGOES

"There isn't any money in bulk cargoes," the president said, "but it gives us something to do. The money is in the general cargo, which is going more and more to foreign vessels."

One American steamship company, which operates both coastwise and foreign-trade ships, reported that it didn't take it long

after the war to learn it couldn't compete with the foreign-flag ships and had to retrench its activities on those lines.

However, that firm is carrying considerable cargo coastwise—of the 292,000 tons it handled last year, 178,000 was for the domestic service. What it lost in the foreign trade it gained in coastwise cargoes. It is the only company operating between United States ports to claim a gain.

The Bull Line never replaced its coastwise service. Others which are operating, but to a lesser extent than before the war, include Pope & Talbot and Calmar.

AFFECTED BY DOLLAR SHORTAGE

The dollar shortage in South America has had its mark on shipments from Baltimore to South America. In outbound general cargo, the Moore-McCormack Lines dropped 39 percent from 1939 to 1949.

But there are more foreign lines operating out of Baltimore to South America today than in 1939.

On the European end, the Moore-McCormack Lines showed a 199 percent increase in the 10-year comparison because of the Marshall-plan consignment. These lines, imports from Norway, Denmark, Sweden, Finland, and Poland declined 40 percent.

Ore importation to Baltimore from Brazil, Norway, and Sweden had held up the inward tonnage, for it jumped 100 percent from 1939 to 1949.

MORE DOLLARS FOR CITY

An American ship in port means more to the city in dollars than a foreign ship, because the latter is not permitted to obtain extensive repairs here nor to purchase other than necessary supplies. Foreign ships also do not pay their crews off here.

Where a 10,000-ton American ship loading grain for Germany recently spent $43,000 in port, a foreign-flag ship under similar circumstances spent less than $20,000.

The American expenditures included: Pilotage, tugboats, watchmen, crew payoff, food for 60 days, deck and engine stores, fuel bunkers, fresh water, incidental supplies, stevedoring, voyage repair bill, custom-house fee, line handling, consul's fee, doctor for crew, supplies, labor, underwriter's fee, and agent's fee.

Not included in the $43,000 is the money spent for the grain, nor the amount earned by the railroads for the grain's transportation.

Indirectly almost every type of business in the city received a certain portion of that $43,000, as well as of the $20,000.

East Texas Chamber of Commerce Silver Jubilee

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have included in the Appendix of the RECORD a statement I have prepared relative to the silver jubilee of the East Texas Chamber of Commerce.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR JOHNSON OF TEXAS

Mr. President, today and tomorrow, April 13 and 14, members of the East Texas Chamber of Commerce are meeting in Tyler, Tex., to celebrate the silver jubilee of their organization.

The East Texas Chamber of Commerce has for 25 years effectively represented the determined spirit of Texans who have developed one great new industry and re-created older industries. Within the span of the chamber of commerce's life this region has become the oil capital of the Western Hemisphere. Its very name is synonymous with oil. More than 5,000,000,000 barrels of petroleum has come out of the ground of east Texas since the discovery of the Spindletop gusher half a century ago.

The combined efforts of many outstanding Texans, directed and inspired by one of the South's outstanding citizens, Ernest Kurth, of Lufkin, has helped convert the bountiful pine forests of east Texas into a major source of wealth. Each year a $135,000,000 cash crop of lumber is harvested in the more than 10,000,000 acres of east Texas timber lands. In addition, 47,000 Texans are employed in the woods and mills and factories which process the timber and produce famous east Texas newsprint.

Since the end of World War II, industry has focused its attention more and more on this rich and growing region. More than 1,000 new industrial plants have been started within the last 5 years in east Texas. More plants are still to come.

All this is quite a different picture from the east Texas of the early 1930's. In those days the region was poor, hampered by a one-crop economy, threatened by worn-out soil, slowed down by incredibly bad roads, and suffering from the lack of hope. Wise leadership of native east Texans has brought the region out of the mud, literally as well as figuratively. There are now more than 10,000 miles of good hard surface roads and highways through the piney woods of east Texas, more than 3,061 miles of this total in farm-to-market roads, so badly needed for so long by east Texas farmers. There is still much to do, of course, but east Texans can be justifiably proud of what they have done for themselves and for their State.

The East Texas Chamber of Commerce members and leaders deserve a great deal of the credit for the advancement that this region has made. This organization, perhaps more than any other, has kept initiative alive when spirits sag. It has directed capable talents into productive channels. It has wisely endeavored to develop the whole region.

I congratulate the East Texas Chamber of Commerce and its president, Mr. Henry Bell, of Tyler, on this twenty-fifth anniversary. I sincerely hope that the organization will continue its tireless labors for the progress of east Texas.

Excise Taxes

EXTENSION OF REMARKS
OF
HON. GEORGE W. MALONE
OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a release from the office of the junior Senator from Nevada, relative to excise taxes.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C., April 12, 1950.—" 'Soak the poor,' is the principle of our wartime nuisance taxes," United States Senator GEORGE W. MALONE, Republican, Nevada, declared today in a statement demanding that Congress immediately eliminate nuisance taxes.

"The low-income groups are the ones hardest hit by the excise or nuisance taxes," the Nevada Senator said, "because these taxes represent a proportionately bigger part of their cost of living." To illustrate this, Senator MALONE said, "To a rich family the nuisance tax on a can of baby powder does Senator MALONE said, "To a rich family the extra pennies must be counted. Uncle Sam exacts his 20 percent, and this, on top of all the hidden taxes, makes a 29-cent can of baby powder cost 47 cents."

Continuing, Senator MALONE said: "If a member of a family lies dying and a telegram or a phone message must be sent to a relative, Uncle Sam taxes that message 25 percent, calling it a luxury. If a trip must be made and pennies counted in order to get together train fare, Uncle Sam demands a tax of 15 percent.

"If a man must buy an automobile in order to keep his job or for the well-being of his family for a price of, say, $1,500, $105 must be scraped up for Uncle Sam before he takes possession. In every family budget, particularly those of low income, movies is an item. A luxury, you say? Who is to say what is a luxury and what is a necessity? When the poor family sets aside money for the movies, they must add 20 percent for Uncle Sam's excise tax.

"The imposition of nuisance taxes and the increase of former excise taxes, falling hardest on the poor, was a wartime measure, to be withdrawn when the war ceased. The CONGRESSIONAL RECORD is full of pledges to remove the nuisance at the end of the war.

"The chief purpose of the excise taxes was not for revenue, so we were told, they were to cut down consumption. Are we still trying to cut down consumption?

"To correct the unfair burden imposed by nuisance taxes, I introduced a bill, S. 2751, in October 1949. The bill was referred to the Committee on Finance. While it lies in committee, the American people are clamoring for us to act now—not at some distant date in the future.

"I doubt the sincerity of those who say that this legislation to eliminate wartime excises should be made part of an over-all tax reform. When we imposed these hastily put together wartime nuisance taxes, with apologies to the people, did we say we would withdraw them only when we could substitute other taxes? Did we say they would be withdrawn some indefinite time after the war when we could all get together on the general reorganization of our tax structure? We did not. We said the nuisance would be withdrawn at the end of the war.

"Let us pass the Malone bill, S. 2751, and keep our promise to the people. The alternative is to do nothing and continue to 'soak the poor.' "

Justice Roberts Urges Union To Prevent War

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Justice Roberts Urges Union

To Prevent War," by Daniel A. Poling, published in the Philadelphia Bulletin.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JUSTICE ROBERTS URGES UNION TO PREVENT WAR

(By Daniel A. Poling)

The American people wait now for constructive, practical, and dynamic plans for peace. They are ready and eager to listen to their leaders. The proposal of United States Senator BRIEN MCMAHON even though it involves a possible $50,000,000,000, receives their serious attention. Perhaps nothing that Secretary of State Acheson has said since he assumed the responsibilities of his office has been so favorably received as his realistic comments on accords with Russia.

REDS ARE UNITED

Equally impressive and to some of us, even more convincing, were words spoken by former Supreme Court Justice Owen Roberts when he appeared before the Senate Foreign Relations Subcommittee. "The only united world today," he said, "is the Communist world." And he added, "Among the democracies each nation behaves as though it were a world unto itself." Mr. Roberts is President of the Atlantic Union Committee. Right now he is pouring his great talents with energies to match them into the forward-looking program of this committee. He believes in a federal union of Atlantic democracies with a common foreign policy, a common currency, a common defense force, and with free movements of peoples and goods. Speaking to the Senators he declared that this union "is the surest, cheapest, strongest way to stop war, stop communism, and create prosperity."

A GOOD ARGUMENT

It is difficult to meet the argument of this man that democratic unity now can prevent world war III. Also he believes that it could have prevented World Wars I and II had it been effective before 1914. There is an Atlantic union resolution before both the Senate and the House. This resolution would allow President Truman to call the democracies together that initiated the Atlantic Pact.

Justice Roberts believes that these democracies are ready to explore the possibilities of forming the federal union. Also he believes that all they need is the leadership of the United States of America. Actually the Marshall plan and the Atlantic Pact are the beginnings of just such a federal union which would strengthen, not weaken, the United Nations. These and other programs need the continuing, supporting strength of such a union.

Again and again mankind has been overwhelmed because of an insidious "too little and too late." Justice Roberts and his associates have something better for the world.

One Hundred and Fifty Thousand German Troops Organized by Russians in Eastern Zone

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "One Hundred Fifty Thousand German Troops Organized by Russians in Eastern Zone," published in the Washington Evening Star of April 6, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS CHANGING WORLD—ONE HUNDRED AND FIFTY THOUSAND GERMAN TROOPS ORGANIZED BY RUSSIANS IN EASTERN ZONE

(By Constantine Brown)

The new German Army organized by the Russians in the eastern occupation zone is estimated conservatively at 150,000 well-trained men equipped with the latest types of small arms, some artillery and tanks, but no aviation.

A portion of this force is expected to parade in full war paraphernalia in Berlin during Whitsun week next month. The size of the parading contingent depends on how strong a force the western powers concentrate in the former German capital.

If our present forces are strengthened considerably it is probable that the eastern people's army will be held to a mere parade group, designed to bolster national feeling and the self-confidence of the Germans under Soviet rule. If we fail to reinforce the meager allied detachments in Berlin, it is likely that the demonstration troops from the east will be of considerable number—probably 45,000 men.

FORMER SS MEMBERS

The new German Army, strictly controlled by the Russians, is commanded by Gen. Wilhelm Zeiser, a former German Regular Army officer who went to China after World War I and later headed the Stahlhelm, a patriotic German officers' association.

It is believed that during his stay in China he came into contact with and was converted to militant communism. Anyway his name is found again in the files of Western Intelligence Services as a commander of a Spanish Loyalist contingent under the assumed name of General Gomez.

Zeiser's deputies are reported to be a General Markgraff and a General Steiner. Both saw active service in Hitler's Wehrmacht. Markgraff at one time was head of police in the eastern sector of Berlin. He disappeared about a year ago and it was rumored then that he had been purged. Instead he appears now as one of the principal lieutenants of Zeiser. Steiner is the son-in-law of Wilhelm Pieck, puppet President of the Eastern German Republic.

The various divisions and brigades are commanded by majors and colonels in Hitler's army, including former members of the SS. All of them have been carefully screened by the Soviet MVD not for their adherence to the Communist doctrines but for their nationalism and devotion to the cause of Germany's revival as a strong military power on Russia's side.

COMPETENT OFFICERS

There is no dearth of competent officer material. Many who lived a hand-to-mouth existence in the western zones are said to be eager now to offer their services to the new "people's army."

This is understandable. While the "people's republic," that is to say, the U. S. S. R., pays as much as 2,000 marks ($500) a month to officers of the new force, former members of the Wehrmacht are starving in the western zones, particularly if they have not been denazified. The Western German Government does not pay pensions to former officers, and with relatively few exceptions, all the employment former Wehrmacht officers can find is as day laborers, domestics, or other menial workers.

These former members of the German armed forces naturally are attracted by substantial offers of good pay, special food, and other privileges which they receive from the east, provided they are in good health and have a good record in the Kaiser's or Hitler's armies.

According to reports from Eastern Germany, several units of the new forces have been sent to Hungary, where they form the nucleus of a force which may be used at a given time against Yugoslavia. These detachments have not been incorporated into the Russian divisions now stationed there, but form the shock troops which the Russians may throw against Marshal Tito when they decide the time has come to punish him.

Comparison of Benefits and Pay-Roll Taxes Under Social Security and Railroad Retirement Acts

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. BUTLER. Mr. President, on several previous occasions I have introduced in the RECORD comparisons of the respective benefits and pay roll tax rates under the present Social Security Act, H. R. 6000, which is the proposed Social Security Act, and the present Railroad Retirement Act. I now have exhibit F for insertion in the Appendix of the RECORD which makes a further comparison of certain benefits under these acts.

I want to explain that I am presenting these comparisons purely for the information of the Senate and at the request of a group of railroad men interested in the pension question. I do not claim to know the answers to all the problems involved, but I am in hope that these comparisons may shed some light on the questions with which we are confronted.

There being no objection, the comparison was ordered to be printed in the RECORD, as follows:

EXHIBIT F.—*Social security versus railroad retirement: Wage credits after age 65 if worker continues in employment, or returns to employment after receipt of old-age retirement annuity* [1]

Social security, 1950	H. R. 6000, social security, proposed	Railroad retirement, 1950
Wages count toward benefits regardless of the worker's age. Benefits may be computed or recomputed at periodic intervals to assure the highest possible retirement or survivor benefits.		No wage credits count toward retirement benefits after age 65. Upon return to railroad employment, or to last employer, after annuity has begun to accrue, it shall not be subject to recomputation.

[1] In either event, worker continues to pay tax.

Source: Rail Pension News, published by the National Railroad Pension Forum, Inc., Chicago, Ill.

The above exhibit F has been submitted to Senator HUGH BUTLER, a member of the Senate Finance Committee, with the request that same be inserted into the CONGRESSIONAL RECORD as a matter of information in connection with previous exhibits A, B, C, D, and E. It was prepared by Mr. Thomas G. Stack, president of the National Railroad Pension Forum, Inc. (a voluntary organization of union and nonunion rail workers), April 1950.

Program for Action on China Policy Adopted by United Front Action Conference on China

EXTENSION OF REMARKS
OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. McCARTHY. Mr. President, I have in my hand a letter dated March 1, 1949, on the letterhead of the Communist Party of New York State, the first paragraph reading:

Enclosed please find Program for Action on China Policy, as voted upon by a united-front action conference on China, held in New York on January 29, 1949.

I ask that the entire letter, plus the Program for Action on China Policy be printed in the Appendix of the RECORD. I call attention of the Senate especially to the No. 1 objective of the program, being to attack the so-called China lobby.

There being no objection, the letter and program were ordered to be printed in the RECORD, as follows:

COMMUNIST PARTY
OF NEW YORK STATE,
New York, N. Y., March 1, 1949.

To All Sections and Counties.

DEAR COMRADES: Enclosed please find Program for Action on China Policy, as voted upon by a united front action conference on China, held in New York on January 29, 1949.

We are sure that you will find this material not only informative, but helpful in planning actions on China in your communities.

A special outline has also been issued by the National Education Committee on Communist Policy in China. This can be secured through orders from our district education department. The outline can be used as the basis for discussion in your sections and branches.

Any inquiries in relation to further activity can be received by writing to the Committee for a Democratic Far Eastern Policy, at 111 West Forty-second Street, New York City.

Comradely yours,

MAY MILLER,
Assistant Organization Secretary.

PROGRAM FOR ACTION ON CHINA POLICY AS SUGGESTED BY THE ACTION CONFERENCE ON CHINA POLICY, NEW YORK CITY, JANUARY 29, 1949

PROGRAM OBJECTIVES

1. Demand a congressional investigation—

A. Of the Chinese lobby in Washington. One of the largest spending foreign influences in our capital; not registered as foreign agents.

B. Of the billions of dollars of private accumulation deposited in American banks and investments by Chinese officials and individuals.

2. Demand a new China policy—

A. An end to all forms of American intervention in China and of plans to aid any elements and remnants of the Kuomintang.

B. Preparation by our Government to recognize the government which the people of China are now establishing.

C. Planning now by our authorities for genuine and self-respecting cooperation with the people's government in China, including normal and friendly trade relations free of any political conditions.

3. Get the facts and implications of the Government's China policy to the American people.

IMMEDIATE STEPS FOR CARRYING OUT THE ACTION PROGRAM

1. Get your organization immediately to pass a resolution on China policy. (Use the enclosed January conference resolution for suggestions.)

Send copies of your organization's resolution to your Senators and your Congressmen; give it publicity in your organization's publication and elsewhere; send a copy to the Committee for a Democratic Far Eastern Policy.

2. Make use of the "political ammunition" of facts: The American people, if they know, will act.

A. Make a drive to get readers and subscribers to Far East Spotlight, the committee's monthly magazine. This is the indispensable tool for every fighter for a new and friendly policy toward China. Previous sources of reliable information about China and the Far East now have an NAM slant; only Far East Spotlight gives you the positive and encouraging facts about the Chinese people's great and successful fight against American reaction, and keeps you up-to-date about Washington's evil plans to go on backing reaction in China and the Far East. Subscription: $2 a year. Introductory offer: $1 for 8 months. Members of the CDFEP get this free.

B. Push the sale and reading of Anna Louise Strong's Tomorrow's China. Paper bound, 65 cents; cloth bound, $2. Organizational orders for 5 or more: 25 percent discount.

C. Have meetings on the China policy issue—

(a) The committee can furnish speakers: In the New York City area: Telephone the speaker's bureau of the committee any afternoon, BRyant 9-6343. In California, the San Francisco area: Contact Mr. William Kerner, 1841 Ellis Street, San Francisco. Los Angeles area: Contact Mrs. Jeannette Orel, 362 South Columbia Avenue, Los Angeles.

(b) Send your organization's own speakers to the briefing session on China. First session: Friday night February 18, 7:30 sharp. Telephone the committee for registration blanks; BRyant 9-6342. No fee.

You can't fight without facts. Far East Spotlight is your basic source of information. Meetings on China will bring facts to hundreds of others.

3. See to it that the President and the Members of Congress hear from hundreds of individuals on China policy right now. Order prepared postcards from the Committee—1 cent each. Write your own messages. Make calls—in person and by telephone—on your Senators and Congressmen.

4. Have your organization make an immediate contribution to the work of the committee or plan to give a regular (monthly, quarterly, or yearly) contribution.

5. Support the committee for a democratic Far Eastern policy.

A. By becoming members and by getting your friends to join. Membership includes subscription to Far East Spotlight.

B. By securing individual contributions for the committee. Your own; your friends; throw a party for the committee.

C. By doing volunteer work at the committee's office; 111 West Forty-second Street, fifth floor—any time, any day. Every Tuesday night the staff is at home to friends who come to help.

The Chinese people are defeating the American reactionaries. So can we.

China policy reveals the over-all character of Washington's foreign policy—it harms the American people.

China policy is directly related to our domestic struggle for homes, for more consumption goods, for lower prices for increased social security, for healthy international trade, for freedom from depression and militarism.

China shows up the weak spot in our reactionaries' program.

Let's fight on China policy and take advantage of the blow the Chinese people have dealt the American reactionaries.

COMMITTEE FOR A DEMOCRATIC
FAR EASTERN POLICY,
111 West Forty-second Street, New York City.

ACTION CONFERENCE ON CHINA POLICY, NEW YORK, JANUARY 29, 1949—RESOLUTION ON CHINA POLICY

This Action Conference on China Policy, meeting in New York City on January 29, 1949, and attended by 182 registered delegates and observers from 80 organizations and including 48 individual participants, voted to send to every member of the Eighty-first Congress, through the Committee for a Democratic Far-Eastern Policy under whose auspices the conference was held, the following resolution:

In view of the following facts:

1. That our Government since VJ-day has violated both the democratic objective of World War II and the Charter of the United Nations in giving support to the antidemocratic and dictatorial Kuomintang regime of Chiang Kai-shek;

2. That our Government since VJ-day has made available to the Kuomintang regime of Chiang Kai-shek over $6,000,000,000 worth of the resources of the American people for use in civil war against the people of China, who are our historic friends and allies in the task of building a peaceful, prosperous, and democratic world;

3. That American guns, bullets, airplanes, bombs, poison gas, gasoline jelly, and flame throwers have brought suffering, death, and destruction to millions of people in China, thus threatening the alienation of 1,500,000,000 people of Asia, who are our natural allies in a democratic world;

4. That we Americans whose resources have been wasted and misused in China are still waiting for adequate and decent housing, for lower prices on consumption goods and food, for increased social security, for mutually beneficial trade relations between our two countries as a factor in preventing a depression, and for freedom from militarism and for the security which only peaceful and cooperative relations among nations can give;

5. That our Government's policy toward China is causing frictions and misunderstandings that can easily lead to conflicts and even to war;

6. That the people of China have decisively demonstrated their purpose and power to rid themselves of the callous, cruel, antidemocratic and outworn feudal regime which for the past years has existed only with outside (American) support and have shown their power to negate all the military advice, training, and equipment given by the United States to the Kuomintang regime of Chiang Kai-shek, and are now establishing a functioning government of their own creating.

7. That there are nationally prominent American political, military, and publishing figures openly and secretly advocating and working for continued and intensified intervention in the internal affairs of China against the Chinese people;

8. That a strong Chinese lobby is at work in Washington (one of the biggest money-spending foreign influences in our Capital but not registered as a foreign agent) trying to influence our Government authorities to continue support of the antidemocratic and unpopular Kuomintang elements;

9. That the very Chinese officials and individuals who are urging more pouring out of the American people's money in China are known to have accumulated billions of dollars (wrung from the suffering people of China and stolen from the pockets of the American taxpayers) and now stowed away

in American banks and investments: Be it therefore

Resolved, That we go on record as demanding—

1. That there be a congressional investigation—

A. Into the activities of the Chinese lobby in this country; and

B. Into the private wealth which Chinese officials and individuals have stowed away in American banks and investments.

2. That there be an immediate end to all forms of American intervention in China including an end to any dealings with any elements or remnants of the Kuomintang regime, recognizing the right of the Chinese people to make decisions about their country free of all pressure or interference on the part of our Government.

3. That our Government prepare to recognize the government which the Chinese people are now establishing for themselves and that our authorities begin planning for genuine and self-respecting cooperation with that government, including normal and friendly trade relations free of any political conditions.

Retirement of Admiral Lewis L. Strauss

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, at the end of this week Admiral Lewis L. Strauss will retire from membership on the Atomic Energy Commission. Admiral Strauss, a close friend of mine, is a distinguished citizen of New York, of whose public service his State is proud. I ask unanimous consent to insert in the Appendix of the RECORD an editorial on Mr. Strauss entitled "A Job Well Done," from this morning's New York Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A JOB WELL DONE

The retirement at the end of this week of Lewis L. Strauss from membership on the Atomic Energy Commission will bring at least to a temporary halt a distinguished career of public service. Mr. Strauss was one of the original quintet appointed by President Truman to the AEC when that agency was organized in 1947. Before that, and following a successful career in private business, he had spent the war years in the service of the Navy, where he rose to the rank of rear admiral and received the Legion of Merit for his substantial aid in helping to build American seapower up to its wartime strength. Thus, for nearly a decade he has been almost continuously in the service of his country.

The Atomic Energy Commission operates for the most part behind a veil of secrecy, for reasons which are obvious and necessary, and the contribution made individually to its debates and to its work by the various commissioners is only infrequently a matter of public record. There is good cause, however, to believe that Mr. Strauss has been one of the most useful members of the original group of five; that the influence which he has exerted has been a steadying and constructive force, and that this vast experimental project, pushing its frontiers into new, hazardous, and vitally important territory, has gained greatly from his broad experience, his alertness, his perseverance, and his level-headed judgment. As he prepares to take leave of public office we salute him on a job well done.

What ECA Is Accomplishing in Europe

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "What ECA Is Accomplishing in Europe," by Roscoe Drummond.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE STATE OF EUROPE—WHAT ECA IS ACCOMPLISHING IN EUROPE

(By Roscoe Drummond)

PARIS.—The Congress of the United States shortly will be deciding one of the most important questions which will come before it this session—whether to approve the Economic Cooperation Administration request for a new appropriation of $2,900,000,000.

In making this decision, Congress undoubtedly will be responsive to American public opinion. As one who, for a period, is officially connected with ECA, it would not be proper for me to argue the case for the Marshall plan—and I will not do so. But I can offer a report on what is being accomplished in Europe and present the underlying facts as faithfully as I have been able to observe them at first hand during the past 8 months.

The prime task which Congress assigned to the ECA was to help the nations of western Europe achieve an economic recovery which would permit them to function without extraordinary outside aid. The purposes which motivated the Marshall plan were:

To rescue Europe from the brink of economic collapse to which the most destructive war in history had brought it.

To help rebuild a prospering and self-supporting Europe, without which a prospering and secure America would be jeopardized.

To bring about such improved social and political conditions as will enable free institutions to regain their strength and thereby resist the march of communism.

Measured in terms of the Marshall plan's basic objective and its central motives, what are the facts to report? Some of the principal facts are these:

It is accurate to say that the progress of the European recovery program—in production and trade, in expanding productive capacity, in restoring internal financial stability, and in slowly raising living standards—has exceeded the largest expectations of 2 years ago.

AGRICULTURE

When the Marshall plan started, millions of persons were going hungry. Today that menace has been removed. Today agricultural productivity as a whole has been brought nearly to the level of prewar, and, given favorable weather conditions, will reach the prewar level or exceed it during the present crop year. This means an improving diet, but still a bare diet, since western Europe has 20,000,000 more persons to feed than before the war and is putting, by necessity, a very high percentage of its income into durable capital investment rather than consumer goods.

INDUSTRY

For the Marshall plan countries as a whole, industrial production has been raised one-third higher than it was in 1937. It took western Europe 7 years to regain its prewar level of production after World War I. Today, after 2 years of the Marshall plan and less than 5 years after the end of the far more destructive World War II, industrial production has been brought to 20 percent higher than 1938.

FINANCIAL STABILITY

Until the inflation which gripped the entirety of western Europe in 1946–47 was checked and brought under control, the nations could not even begin to rebuild their industrial plants. Today the governments have put their financial houses in better order. Prices generally are being held, and the outlook is encouraging.

Under the stimulus of sounder financial conditions and mounting production, intra-European trade has improved. Total exports have risen 50 percent since 1947.

These are the facts which bear upon the question of whether a solid foundation of European recovery is being made.

Obviously, there are tough problems still to be met. To enable western Europe to close the dollar gap—or to bring it into manageable proportions—and to carry forward the essential economic unification needed to strengthen and secure the recovery already made are the two biggest jobs which face ECA during the next 2 years.

One question which frequently is asked officials of the ECA is whether the Marshall plan appropriations for the third year should not be substantially reduced, particularly in view of the need for governmental economy in the United States.

Facts rather than arguments are more useful in answering this question.

Marshall-plan aid for western Europe for 1948–49 was about $5,800,000,000, including the special appropriation for Germany.

The appropriation for 1949–50 was about $4,200,000,000.

The ECA appropriation request which is now before Congress for 1950–51 is $2,900,000,000.

The Marshall plan is premised upon the principle of reducing the aid substantially every year, and the foregoing facts show wherein the ECA itself always has initiated these reductions rather than waiting for Congress to propose them.

A Marshall Plan of Ideas

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a letter I received yesterday from Mr. Philip Murray, president of the CIO, an organization not without influence in my State of Connecticut. I read this letter this morning to the National Commission for UNESCO, which is opening its annual 3-day meeting here in Washington. The letter, in my judgment, is not only a tribute to Mr. Murray but to the intelligent and constructive interest which the great labor organizations are taking in the field of foreign policy. I had considerable background when I served as

Assistant Secretary of State with labor's development of this interest, and there are no more effective spokesmen abroad for the United States and our democratic ideals than our outstanding labor-union leaders such as Mr. Murray and many of his associates.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CONGRESS OF INDUSTRIAL ORGANIZATIONS,
Washington, D. C., April 12, 1950.

The Honorable WILLIAM BENTON,
Senate Office Building, Washington, D. C.

DEAR SENATOR BENTON: I have read with a great deal of interest the speech which you delivered in the Senate on March 22 proposing a Marshall plan of ideas.

You are to be heartily congratulated for taking the leadership in introducing your resolution setting forth a six-point program.

We cannot weaken our military power or our diplomatic influence but both could be significantly implemented by the suggestions which you make. In a world such as ours, we cannot underestimate the necessity for strength. But, unfortunately, we have been strengthening only our military power when we should also be strengthening the desire and the demand for peace in the minds and loyalties of men.

You can be assured of my personal support, as well as the support of the Congress of Industrial Organizations, for your proposals to extend freedom of information and to strengthen the United Nations Educational, Scientific, and Cultural Organization and to encourage further exchanges of scholars, students, and workers.

Sincerely,

PHILIP MURRAY, *President.*

Communists Act To Drive Public Mind Into Reaction and Intellectual Fear

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Communists Act To Drive Public Mind Into Reaction and Intellectual Fear," written by Dorothy Thompson, and published in the Washington Evening Star of April 6, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON THE RECORD—COMMUNISTS ACT TO DRIVE PUBLIC MIND INTO REACTION AND INTELLECTUAL FEAR

(By Dorothy Thompson)

Everywhere, the activities of the Communists have the same deplorable effect. They tend to drive their opponents, and the public mind, into extreme reaction and intellectual timidity, thus paralyzing all vigorous and constructive social and political thinking on either domestic or foreign policy. The extreme left and the extreme right are everywhere natural allies—consciously so on the part of the Communists, unconsciously on the part of the rightists.

It is extremely important to understand this. For the struggle against communism is futile as a struggle against isolated personalities. It is a political struggle that must be waged by political means.

MAIN TARGET OF REDS

The main target of the Communists in every country is the so-called social Fascists, those who, recognizing the dynamics of history, wish to bring about social and political reforms. If Communists cannot infiltrate to control these movements they cooperate with anybody to destroy them.

Nowhere was that clearer than in pre-Hitler Germany. In 1932, the year before Hitler came to power, a tacit alliance existed between the Nazis and the Communists. Both had the same objective: the disintegration of the republic, and the elimination of the middle.

Up until the day Hitler became chancelor, the Communist press was denouncing, in the first line, not nazism but the social democracy. They joined the transport strike staged by the Nazis in 1932 and refused to join a general strike, which the Social-Democrats wanted to call in protest against Hitler's chancelorship. And both tried to penetrate and disrupt the trade union movement.

SAME THING SEEN AGAIN

Today, in Germany, we see the same thing. Who in Germany favors a military alliance with Russia and an antiwestern orientation? Communists, of course, plus many ex-Nazis including former police spies, some former diplomats, generals bitten by the bug of the old Bismarck policy, while extreme rightists do everything possible to paralyze the Bonn government.

And we see exactly the same thing here. The anti-Communists drive is conducted by unreconstructed isolationists, enemies of all social reform, anti-trade unionists, opponents of Marshall aid, and economic imperialists who want to use Marshall aid for subsidized dumping of American products to embarrass and paralyze the administration, despite the fact that willy-nilly it must govern for another two extremely critical years.

The tragedy of our times has been a whole series of false alliances and false divisions, all of which play into the hands of those who wish, above all, paralysis of democratic government.

Rotating Internship for Lawyers

EXTENSION OF REMARKS
OF
HON. HOMER FERGUSON
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES

Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. FERGUSON. Mr. President, all of us who are members of the legal profession are interested in means whereby the high character of the profession may be preserved and promoted. Mr. Edward L. Bryant, whom I have known personally for many years as a member of the Detroit and Michigan bar, has devoted himself over a long period of years to improvement of the profession by the training of young lawyers in the field. He has evolved a program known as a rotating internship for lawyers, and I ask unanimous consent that an article by him on that subject which appeared in the Journal of the American Judicature Society for February 1950 be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROTATING INTERNSHIP FOR LAWYERS

(By Edward L. Bryant)

Even after several years of law school training and after passing of State bar examinations and admission to the bar, the young lawyer is not prepared to render services to either employers or clients.

It must be conceded that law schools cannot train students in this important phase of preparation. Law schools are doing excellent work in most cases, but after the admission to the bar, the profession must take charge of the young lawyer who wishes to engage in active practice of the law, and a rotating internship seems to be the best manner for preparing these persons.

A student of the law cannot get more than a smattering of practical experience before graduation. It is absolutely necessary to tie up the law school and the law office. There is much need for supervised activities after the admission to the bar.

The intern is more likely to become a successful practitioner if there is supervision for his first year and if the integrated bar provides a systematic and progressive program for experiences in practice work and if the progress is followed carefully until the license to practice law is granted.

What can be accomplished? Many of these things and more can be accomplished by having a rotating internship for lawyers for 1 year after admission to the bar. Some of the suggestions are:

1. Elimination of unemployment during the first year of admission.

2. Practical training in courts, departments, bureaus, offices, commissions, and penal institutions.

3. Reducing of exploitation by older lawyers and organizations because the intern and his supervisors have had a year to appraise and evaluate.

4. Eliminating those lawyers who are not likely to succeed as practicing attorneys through the aid of counseling and assistance; the intern could not be eliminated, of course, without his written consent.

5. Practical experiences in briefing, pleading, law-office management, trial work, office accounting, purchases, and abstracting.

6. Training and practical education so that sucker lists and sucker schemes would be avoided and unnecessary law books would not be purchased or contracted for and the intern would not join clubs indiscriminately. He might even be taught how to deal with insurance lawyers instead of insurance adjusters.

7. Substantial reduction of the trial-and-error system.

8. Reducing the overcrowding of lawyers in many counties and circuits.

9. Training in the manner of charging and thereby reducing failures from undercharging as well as overcharging. Also training regarding attorney-and-client relations.

10. Reducing of grievance-committee work.

11. Providing systematic opportunities to contribute articles to publications and reviews.

12. Providing of an outline in manual form with full instructions and rules and schedules similar to that used by medical interns in an accredited hospital.

13. Increase the opportunities for older lawyers and younger lawyers to become better acquainted so that successful practice would be better established after the internship.

14. Practical training in corporation and financial affairs, labor management, and special types of practice such as admiralty, tax, patent law, and workmen's compensation.

15. Elimination of all evidence of supervisory control and governing influences except by rules of the State bar and the courts, promptly upon completion of the internship.

THE PLAN FOR ROTATING INTERNSHIP FOR LAWYERS

1. When and where to begin; for how long; membership: At the time the student is informed that he has passed the State bar examination, he would file his application with the Supreme Court if he desired to become actively engaged in the practice of the law. He would then promptly become an intern for a period of 1 year. Upon completing this period of training, he would be certified as a practicing attorney.

This plan will not in any way interfere with the inactive class of membership in the State bar, such as is provided for in volume 273 of Michigan Reports for the State Bar of Michigan.

2. Headquarters: The main intern headquarters will be the headquarters of the State bar and living quarters may be established for the interns at designated places.

Administrative branches may be established in every county and circuit in the State.

3. Supervision: The State bar organization shall have complete supervision with the Supreme Court over all certified interns, and rules will be established and books of instructions prepared; the committees of the State bar shall have full authority to perform duties in connection with the supervision of the interns.

4. Compensation: Each intern would be compensated in an amount comparable to that of the first-year intern in accredited hospitals.

5. Living headquarters for the intern: These will be established and dignified and supervised by the State bar in such places as it may designate. All interns will live in these quarters for at least the first 4 months' period of the internship. The remaining period of 8 months would follow that plan used by accredited hospitals.

6. How the intern would be trained:

(a) He would first receive his manual of instructions and rules. He would be presented with a standard file, list of general conveyancing forms, and schedule of assignments. He would immediately begin active training for the practice of law by being instructed in the operation of a model law office established at the headquarters.

(b) He would actively appear in all courts in the county where the State capital is located, and he would alternate with the attorneys for the plaintiff, then the defendant or petitioner and respondent or complainant.

(c) He would work in or get active experience in the many State departments such as the attorney general's office, the corporation and securities commission, the public utilities commission, the insurance department, and all such other State offices and departments as would be designated by the State bar.

(d) He would attend legislative sessions, if possible, and learn the practical operations of both houses as to rules and procedures and the manner of drafting bills and public acts.

(e) He would actively appear in the Federal courts, including the court of the master in chancery, the bankruptcy court, the United States commissioner's court; his assignments would be alternated so that he would act for the plaintiff at one time and for the defendant in the next case.

(f) He would be assigned to agencies and offices such as penal institutions, immigration offices, the legal aid bureau, the friend of the court, and the probation departments. He would attend lectures and receive instructions on the operations of these offices.

(g) He would actively participate before the workmen's compensation court and the circuit court commissioner on reference cases.

(h) He would be practically instructed regarding the operation of bodies politic, municipal corporations, and the many departments such as the corporation counsel and the prosecuting attorney, and we would actually assist in the briefing and preparation, including the investigation, of many types of cases as well as trials.

(i) He would receive constant, intelligent instruction and hear lectures by practicing attorneys, judges, and officials.

7. How busy would the intern be? He would be busier than he was in law school and about as busy as the medical interns who are on duty from 12 to 24 hours per day.

8. What would the intern do after the opening periods of training including the period of training at the capital city, and at the largest city in the State other than the capital city of the State if he wished to train somewhere else in the State? (NOTE.—Some young men would like to go with their fathers or other relatives or in a particular office.)

(a) The intern will first select his location after getting full information from the supervisors as to the number of lawyers and the population of the county which he selects. He may go into any one of the counties of the State he wishes but only after he has had the opening periods of training, including the period of training at the capital city and 2 months in the largest city in the State other than the capital city of the State.[1]

(b) Of course, if he wishes to locate permanently in either of the cities where the training is given, he will continue his practice training in these places.

(c) If he selects a county other than the county in which he is being trained, supervision will be identical and he will still be under the Supreme Court and the State bar. The rules will be the same in all counties and his manual or guide book of instructions will be unchanged and his training and duties will be similar.

(d) In the new location his working headquarters will be those approved or established by the State bar. He will operate from the county building and he will be supervised also by the presiding judge in this circuit.

(e) He may even be allowed to work with a responsible and paying mentor, sponsor, or preceptor, or to enter where there appears to be permanent employment for him if approval is given by the State bar and the standards meet full approval.

(f) He will still continue to accept and perform all assignments, and all remuneration which is paid from any source for his work will go to the common fund of the State bar for interns.

(g) He will continue to make general monthly reports of his accomplishments and activities to the State bar as the other interns will have to do on forms provided by the integrated bar.

(h) His income will be the same as he received in the cities where he first began his training and he will receive his certificate to practice at the same time the rest of his class is so honored.

9. Money. How the internship plan would be financed: All funds would be controlled by the State bar. Funds would have to come regularly from every county and every circuit and the State bar. Some of the sources from which money could come are as follows:

(a) Increased dues of the full bar membership. [NOTE.—This will be cheap for all of the bar members in the end because of the great benefit to be derived.]

(b) Increased suit fees in all courts of record in all counties.

(c) Increased fees for defaults, decrees, and judgment orders.

(d) Salaries paid for work done by the interns.

(e) Appraiser and referee fees, administrator and executor fees, trustee and receivership fees.

(f) For briefing and other assignments of his work.

(g) From donations and wills and trophy awards (similar to the Ross trophy now competed for).

(h) From foundations.

(i) From sources similar to those which benefit hospital interns, including work at official agencies and bureaus.

(j) From intern fees paid by opposing litigants in trial work in the amount of a dollar a day each.

(k) Grand jury investigation work.

(l) Abstracting.

(m) For services rendered as public defender or amicus curiae.

There are many other sources which can be listed, of course, and which can be contemplated. To illustrate the effectiveness of increased membership dues, in Michigan there are over 6,000 lawyers who would contribute through dues.

As an example of the possibilities where the interns can earn compensation, Wayne County, Mich., has started and completed an average of 20,000 cases every year since 1940 in the circuit court alone. There have been thousands of circuit court commissioner cases, common pleas cases, criminal cases, Federal cases, and bankruptcy cases in Wayne County alone, and the total number of cases in other counties would more than double these totals. For performing many of the duties connected with cases such as these, the interns would be paid and this money would go to the common fund. Many assignments would be earmarked for the interns by the courts and department heads. The court reporters and clerks are paid large salaries. Since no one asks where the entry fee, decree fees, or the judgment or sheriff fees go, why would there be any trouble in getting these funds for the interns, which would be adequate to pay them the compensation comparable to that paid to medical interns in accredited hospitals?

10. Purpose: The purpose of this rotating internship is to have the first-year interns rotate work in as many courts and departments as possible so that they would be well equipped to enter private, ethical practice in any kind of a law office. The further purpose is to help establish a rotating internship for every practicing lawyer in the United States.

11. Will the plan succeed, and has the plan been tried? This plan will succeed. Experience has actually been had with more than 25 young lawyers who had practiced less than 3 years.

Under the supervision of the supreme court and the State bar and the judges, the interns would be very well trained and supervised. They would have their manuals and their standard files, their practice training and their lectures and abstracting work. They would have a chance to evaluate. They would be better acquainted. They would be very busy. They would not learn by trial and error alone. They would learn to try lawsuits and they would learn of the benefits of the conciliation and pretrial dockets. They certainly would be better lawyers. They would have permanent friendships. They would perhaps learn about cooperative offices and neighborhood offices and

[1] This plan is drafted with a State like Michigan, Illinois, or Louisiana in mind, when there is one big metropolitan city and a State capital located elsewhere. Adaptations would be necessary in a State like Indiana, where the two are combined, or in other States with differing circumstances.

they would make the profession almost a fraternity. They would be serious about their profession instead of just trying to get a job, and they would not be just trying to get something to do. They would all have a connection or an office at the end of the year, and they certainly would be happier.

They could now give their clients a square deal.

12. What benefit would all of this be to the State bar? The bar would be definitely improved. The law school and the office would be tied up for the first time in our history. The junior bar associations would be more powerful. The State bars would be more active and more respected. The youth would now be experienced. The judges and the lawyers as well as the teachers would all have assisted in the training of the intern so his training would be complete.

13. Conclusions:

(a) Will the rotating internship be a success? Yes, definitely, for it has been successfully tried, on a small but definite scale.

(b) Is it necessary? Yes, because there is a great need for it and most lawyers agree that an internship is necessary or, at least, that there must be some practice training after graduation.

(c) Is the period too long? No. Most lawyers flounder and waste their first year.

(d) Is this plan complete? No. Remember, the first automobile gasoline motor operated on a table before it was put on wheels, and now it travels at over 100 miles an hour. It will take a long while to establish this internship plan properly.

(e) Will it help the young lawyer's social contacts and better living? It cannot help but do so because he will fraternize with the older lawyers in a practical manner.

(f) Is it paternalistic? No, because it is an impartial, supervised training of beginners in a highly respected profession and it terminates at the end of 1 year.

(g) Will it adversely affect early establishment in special fields? No, it will broaden the specialists.

(h) Can it be comparable to the fine training young medics get? Yes, because the law profession has more courts, departments, and commissions at its disposal than the medical profession has hospitals and clinics at its disposal, and the training would be supervised by the State bar associations, the supreme courts, and judges of courts in all counties.

(i) Can we finance it? Why not? The medics do, and the young doctors survive on their compensation.

(j) Will young interns be prevented from going in offices of their choice? No, but they won't be hurried. They can now have time to appraise and to be appraised and so there will be fewer disappointments and failures and their work will be supervised constantly. They can specialize in admiralty if they wish but they must be prepared and have diversification first.

k. Are things unsatisfactory for the young lawyer now? It is apparent that they are.

l. Would this apply to all new lawyers? It certainly would, regardless of school grades, connections, or age.

14. Finally: The legal profession must be improved. The way to do it is to train the young. The experiences must not be along one line; they must be rotated. We must not leave this training to sponsors, mentors, preceptors, or professors. The State bar must tie in the law school and the law office.

The great work done at Duke University, Western Reserve, and in the great States of New Jersey, Rhode Island, and Vermont, the plan of the Legal Aid Society of New York, the operation of the Pennsylvania plan, the reports made by the Russell Sage Foundations, the establishment of the European precedent to clerkship, the mentor system of Cleveland, and the valuable guide published by Prof. John Tracy, of the University of Michigan Law School, all make valuable contributions but these are not enough, as the bar surveys have shown. The man who elects to practice law should be trained by practical men and the work must be supervised. The student is trained in law school by excellent pedagogues. When his school work is over, the State bar should take over in earnest for a period of 1 year. The training must be standardized the same as it is in law school, only it must be from a practical standpoint, of course.

Let us protect our young lawyers. Let us improve this wonderful old profession so that the general public will no longer sneeringly say "Lawyer? Did you say 'liar'?", or "A lawyer and an honest man; there must be two men in that grave."

15. Authority to establish the plan: These ideas and the plan are not copyrighted or patented. You can, in all probability, suggest something better or perhaps you can improve on these generalities. This is just a start. Fortunately, there is power to go ahead at once with a plan for rotating internship without legislation. Most State bar organizations have the power under rules or statutes to aid in the promotion of improvements in the administration of justice and the advancement of the science of jurisprudence, in the improvement of the relations between the profession and the public, and in promotion of the interests of the legal profession.

Kerr Gas Bill Only Affirms Present Law

EXTENSION OF REMARKS

OF

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Kerr Gas Bill Only Affirms Present Law," published in the Fort Worth (Tex.) Star-Telegram, of April 12, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KERR GAS BILL ONLY AFFIRMS PRESENT LAW

Never within his memory, said Representative [illegible]YLE, of Texas, during House debate on the Kerr natural gas bill, has a measure been so falsely, maliciously, and deliberately misrepresented. This widespread campaign of distortion and misstatement continues while the bill is before President Truman for his approval or veto, matched only by the vicious personal attacks directed at sponsors of the legislation, and especially its author, Senator KERR, of Oklahoma.

Chief among the misleading statements made about the bill are that its effect would be to triple the price of gas to the consumer (mainly those in northern States), unjustifiably enrich the independent producers of natural gas, and create a monopoly in that field. This it would do, according to the intemperate opponents of the bill, by killing the Federal Power Commission's rate-fixing authority over independent producers who sell g s to interstate pipe line companies.

The measure would do none of these things, as anyone ought to know who has given the bill even a cursory reading and who has even the most elementary knowledge of the natural-gas business.

As a matter of fact, the bill, if it is signed into law by the President, will not take away an iota of the authority the FPC has claimed or exercised since the original Natural Gas Act was passed in 1938. The FPC does not and never has controlled or regulated the rates at which gas is sold at the well. The Commission controls, and would continue to control, the interstate pipeline transportation of gas and its sale for wholesale purposes. State regulatory bodies control, and would continue to control, the price at which gas is sold to the consumers.

In 1947 the FPC specifically disclaimed any right to regulate the sale of gas at the well and approved passage of a bill almost identical with the present one. That proposed legislation also was approved by the Department of Defense, which said its enactment would "remove uncertainties now existing as to the extent of the application of the Natural Gas Act" and that the effect should be increased development of oil and gas resources of benefit to national security.

The uncertainties spoken of by the Defense Department were created by a decision of the United States Supreme Court which seemed to some to indicate—although it did not say so plainly—that the original Natural Gas Act gave the FPC jurisdiction over the price of gas at the well. Since then there have been signs of intent by the Commission to assert that shadowy authority. The newly passed measure would merely reassert and clarify the original intent of Congress by specifically stating that the FPC has no such authority.

That Congress never intended for the powers of the FPC to extend that far is evidenced by the legislative history of the act and the flat statement of the chairman of the House Interstate Commerce Committee, then Representative Lea of California, at the time of its passage. In response to a direct question on the floor of the House, he stated: "The bill does not apply to the production and gathering of gas."

Any fear that the price paid by the consumer for gas would triple, or even go up at all as a result of passage of the Kerr bill, is contrary to all reason and all experience. Especially preposterous are the extravagant and unsupported statements that consumers would find their gas bills increased anywhere from $100,000,000 to $500,000,000 a year. The bill does nothing more than to provide that the same conditions which have been in effect for the last 12 years shall remain in effect. And during that time, while there has been some advance in the price paid to gas producers in the Southwest, the price paid by consumers of this fuel has declined by an average of 12 percent.

The reason for the advance in the price of gas at the well is the widened market that has been created for it by construction of pipe lines from the Southwest to Northern and Eastern States. The reason the price to the consumer has declined, in spite of the increased cost in the field, is that wider markets and greater demand for gas has made it possible to deliver a higher volume at a lower price.

That process can be expected to continue if the Kerr bill becomes law, since the volume of gas transported by pipe line has more to do with its price at the point of delivery than does the cost at the well. On the other hand, failure of the bill to become law would subject producers to such rigid regulation as to discourage the expensive search for new gas sources. This is by reason of the fact that, under FPC regulation, each independent producer would be in the class of a public utility, restricted to a fixed rate of return applying only to those wells which produce gas and making no allowance for the cost of drilling dry holes and for other exploratory expense.

Thus, instead of being penalized, the consumer stands to receive a more plentiful, dependable supply of gas at lower cost if the bill becomes law. The assertion that gas producers and holders of gas reserves would be enriched by hundreds of millions of dollars a year is exploded by figures showing that total sales of the product by the Nation's independent producers for movement in interstate commerce amount to only $75,000,000 a year.

The selling of gas has developed into a competitive business. Producers of natural gas number more than 5,000. The nearly 100 pipe lines authorized in the last 8 years have contracts with thousands of producers and gatherers of gas at different prices in different fields and even within the same field. Most of these producers are bound by long-term contracts to deliver gas at a fixed price. That is just the opposite of monopolistic ability to sell gas at whatever price they choose.

The threat of Federal control from which the Kerr bill would deliver the independent producer of gas is a matter affecting not only the gas producer but all producers. No raw product is now under Federal price control in the hands of the producer. But if the price of gas at the well were brought under Federal regulation, it would be only a short and inevitable step to Federal regulation of oil, since in many cases the production of oil and gas are inseparable.

That is the foot-in-the-door method of starting with Government control of one small segment of industry and gradually extending it to include others. The ultimate result could be complete destruction of the American system of free enterprise.

The Kerr bill is fair, honest, constructive, and consistent, and will be the means of insuring an unlimited supply of cheap gas in the future. The President, in signing it, will be rendering a service to the consumers of gas and preserving the principle of free enterprise. If by any chance it should work out to anybody's detriment, a safeguard has been written into the bill in the form of an amendment which gives the President the final say.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Defend the Marshall Plan," from the Christian Science Monitor for March 20, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEFEND THE MARSHALL PLAN

The cheapest wars to win are those that don't begin. The United States has been fighting such a war for 2 years now, and winning it.

Yes; we are talking about the Marshall plan. But we are not talking about it at this moment because of its tremendous achievements. These are generally recognized. We are talking about it because, despite its accomplishments for European well-being and American security, the European recovery program is in immediate danger.

It is endangered not by any swing of majority opinion against it in the United States. The threats come from several different minority interests.

They come from Members of both Houses of Congress who know the American people are weary of many of the Government's spending policies, but who are not too courageous about tackling spending where their constituents can feel it. These legislators look on European aid as providing a field in which savings can be made without the voters feeling it, at any rate without feeling it this side of new troubles with communism involving stepped-up military preparations or maybe war.

The Marshall plan is also endangered by interests who are determined to make aid to Europe aid to themselves first. They are producers of crops and other goods in which surpluses are expected to be more burdensome in the near future.

They want more and more strings attached to the Marshall plan, strings that will force Europeans to buy certain products in American markets. These interests would, whether intentionally or not, insist on new provisions in Marshall plan legislation which would tend to perpetuate the dollar gap between Europe and the United States instead of closing it.

There is also a move afoot to alter the form of the aid from grants to repayable loans. This would intensify the European dollar problem, since the recipients of aid would have to find dollars to pay back on principal and interest, and there is no way for them to get dollars except by selling goods to the United States.

Which brings us to another less direct danger to the Marshall plan.

Now that the sellers' market is disappearing in the United States, the demand for protection against European competition could frustrate some of the important aims of the Marshall plan.

We do not believe the American people are willing to risk a failure in so important a field of their foreign policy to satisfy sectional demands for drastic cuts in money aid to Europe or for special benefits from that aid to certain American producers.

These attacks on the Marshall plan would cut severely into America's peace program just as the Soviet Union is embarking on what promises to be an unprecedented peace offensive. In the battle for men's minds one of the most important influences on world opinion will be the ability of the United States to stick to its aims. To seem to back away from the Marshall program just as it reaches half-way house can be neither good statesmanship nor sound economy. But it may take the voices of an enlightened citizenry to convince the politicians of this fact.

Oil and Gas: Curse or Blessing

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Oil and Gas: A Curse or Blessing?" published in Time magazine of the issue of April 17, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OIL AND GAS: CURSE OR BLESSING?

In a hullabaloo of argument, President Truman tried to make up his mind last week whether he should sign or veto the Kerr gas bill. The bill's opponents loudly damned it as the biggest raid by "special interests" since Teapot Dome. Just as warmly, the bill's backers called it indispensable for the further growth of the natural-gas industry.

The big oil and gas companies, who had championed oil-rich Senator ROBERT KERR's bill for all they were worth, marshaled some potent arguments on their side. Despite all the political uproar, they pointed out that the bill, which exempts "independent" gas producers from the price-fixing control of the Federal Power Commission, merely repeats and clarifies a previous congressional action. The 1938 Natural Gas Act, in their opinion, had specifically exempted the independents (i. e., those gas producers and gatherers not affiliated with interstate pipe-line companies) from FPC's jurisdiction. The United States Supreme Court had disagreed in 1947, when it ordered Lousiana's Interstate Natural Gas Co. to rebate nearly $600,000 on consumers' gas bills. It thereby virtually wrote a blank check for FPC to regulate the price of gas in the field whenever the gas crossed a State line for resale.

Instead of welcoming this power, FPC Commissioners urged Congress to pass a bill once more exempting the independents. Even the then Commissioner Leland Olds, a zealot for regulation, approved FPC's stand that it would not "assert such jurisdiction." Less than a year later, Olds and the Commission changed their minds. In October 1948 they started proceedings against the natural-gas affiliate of Phillips Petroleum Co., which has the biggest gas reserves of any independent gas producer, to test their power to fix the price of gas in the field.

CAPPED WELLS

Phillips and the other oil companies feared the threat to fix their gas prices, but what they feared more was that FPC would use the authority it won over gas as a lever to try to declare the whole oil industry a public utility—and thus control oil prices and profits also. (Since gas is a byproduct of oil development, the big oil companies are also big gas producers.) The result was that many of the big producers refused to sell gas to the interstate pipe lines. They pumped the gas back into the ground, sold it only within the State, or let it go to waste.

Although State authorities have tried to stop the waste, Oklahoma oilmen were still blowing off great quantities of gas last week rather than run what one oilman called the "tremendous risk" of FPC regulation. For the same reason, hundreds of gas wells have been capped, and new pipe-line operators have found it hard to line up contracts for sufficient gas. The majority of those who did had to agree that the contracts would be canceled if FPC got control over gas prices. One result: out of the 5,700,000,000,000 cubic feet of gas produced in the Southwest in 1948, only 1,200,000,000,000 feet went through the interstate pipe lines.

CAPPED PRICES?

Opponents of the bill, notably Illinois Senator PAUL H. DOUGLAS, argued that the lack of regulation would send gas prices soaring and boost consumers' bills $100,000,000 a year. In answer, oilmen pointed to the record. In the last 10 years the price of gas in the field has risen, in some cases quintupled (the price had been so low 10 years ago that gas had virtually been given away). Yet, the average price of natural gas to residential users had dropped from 70.9 cents per 1,000 cubic feet in 1939 to 63.5

cents in 1948. Even if the Kerr bill becomes law, the rates charged by transmission companies and utilities will still be regulated by FPC or State utility commissions.

Charles I. Francis, vice president of Texas Eastern Transmission Corp., pooh-poohed the talk of immediate price rises. Said he: "The public will benefit by lower gas prices."

As long as the current gas surplus exists, oilmen contended that gas prices, even in the field, would not rise much. Eventually, they probably would. Said Gordon W. Reed, chairman of small-sized Texas Gulf Producing Co.: "Where the price of gas will end, no one can predict right now, but it is definitely going to reach its economic level. Prices to producers in the Southwest could go up another 5 cents or 6 cents a thousand cubic feet (roughly 55 percent) without affecting consumers' prices in the North."

Address by Hon. William Benton to the United States National Commission for UNESCO

EXTENSION OF REMARKS
OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a speech delivered this morning by the Senator from Connecticut [Mr. BENTON] to keynote the 3-day meeting of the United States National Commission for UNESCO. The Senate may recall that it was the Senator from Connecticut who, as Assistant Secretary of State, sponsored the legislation which authorized our joining UNESCO, and he tells me that the pen with which the President signed the act decorates his office at the headquarters of the Encyclopaedia Britannica. The Senator handled the London Conference of 1945 for the State Department, at which the UNESCO charter was written; and he was chairman of the United States delegation at the first two general conferences of UNESCO—in Paris in 1946, and in Mexico City in 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Dr. Stoddard and fellow members of the National Commission, this will be a political talk. In my first six words, I want once more to register the fact that UNESCO is a political instrument.

The United States National Commission is a political body and the future of the United States, and the whole free world is now balanced on crucial, political decisions which will determine the fate of mankind.

There are those deeply interested in UNESCO who sincerely believe that it is better for UNESCO to remain aloof from what they regard as the sordid fingers of world politics. Dr. Reinhold Niebuhr, who represented the United States at the UNESCO meeting on German education in Paris last August, writes me that he thinks UNESCO's hesitancy on the subject of Germany is due to what he calls rather fantastic notions about the importance of the Czech and Polish adhesion to UNESCO. This is of course, politics, and let us at least recognize it for what it is.

Too many among UNESCO's constituents still cling to the idea of UNESCO as a society of intellectuals, not to be degraded by the vulgar forces of raw power. Many would have us remain, so to speak, above the battles and the bombs.

With this view I emphatically take issue, as I have so often in the past.

For what is UNESCO all about if it is not a part—and a vital part—of the world-wide struggle for survival? Show me the line today which divides culture from politics, education from foreign policy or science from war and the threat of war. At least there is no such line in the mind of Congress when it appropriates money for UNESCO. Was it not Hitler's anthropologists who showed us how to corrupt science and scientists for the political ends of a pseudo-master race. Stalin's artists are disciplined to sway elections in two hemispheres with their posters. The great Russian male choruses are trained to give an impression of immense power and vitality to the audiences in Prague and Budapest.

What is the answer of our free society to the slave cultures of the totalitarian masters? Is it not in part the dissemination of the truth by all available means?

Is not the search for truth the most democratic of all pursuits? Is not the expression of truth the ultimate goal of all art and all science? And is it not truth to which we must cling as the key to real understanding among free men and free nations?

The dissemination of truth is the counter weapon, the only counter weapon capable of fending off and neutralizing the lies and distortions of totalitarian propaganda. The dissemination of truth is the supreme weapon in the battle for the hearts and minds of men—the political battle which is enguifing the world.

How far can UNESCO reach in this struggle? Is it willing to reach? And how far? Where is the infantry of the arts and sciences marching? Is it indeed marching at all?

I have been asked to lead off on our subject: How far can UNESCO reach? I fear I shall give some of the skeptics plenty to shoot at. My answer to our subject is a double negative. First, and negatively, UNESCO can reach no further than its willingness boldly to face up to the great political issues of our times. Who was it who once said that bold generals are sometimes lucky—but that no general is ever lucky unless he is bold? Unless UNESCO boldly faces up to the political issues of war and peace, I fear that it is doomed to the ineffectuality of the Arab scribes of the middle ages.

Secondly, and still negatively, UNESCO can reach no further than we in the United States will encourage it; and support it; and help it. In this sense UNESCO's future is up to us. This is the assumption we must make. If the United States National Commission does not help provide the leadership, and does not counsel the State Department to provide the leadership—from whence will the leadership come?

This is a very heavy responsibility for you who are here today. With each passing hour, as the world moves from crisis to crisis, the responsibility grows heavier.

Both of my negative answers were implicit in the very first report issued by this Commission. This was the report of the Commission's initial meeting, held in September 1946. I want to read one of the closing paragraphs of our report to Secretary of State Byrnes:

"The responsibility of UNESCO in this present crisis is so great and so pressing that the organization should not hesitate to employ any proper means, however novel or however costly, which gives promise of success. The organization itself is a new agency, daring in purpose and novel in structure. The means it employs should be appropriate to its nature. It must serve as the cutting edge for international action. If annual military expenditures of $13,000,000,000 for the defense of the people of the United States against attack are justified, 10 percent of that amount, and far more than 10 percent, might well and wisely be expended to remove or greatly to reduce the danger of attack. It would be cheap insurance * * * The National Commission believes that a budget in the amount of a billion or a billion and a half dollars, or even more, might well be justified."

That declaration called upon the United States to measure its support of UNESCO in bold terms and in military terms. Military terms are power terms; they are political terms. Note that this declaration did not necessarily call upon the other member states of UNESCO to match 10 percent of the United States military expenditures with three to four billion dollars, on a 38 percent for 62-percent basis, or a 33–67 basis. This declaration quite properly recognized UNESCO as a potentially important instrument through which the United States can develop its foreign policy. So also is the United Nations. As I have said again and again, the United States opportunity through UNESCO is to help provide effective leadership and bold plans by which the forces of education, and science, and culture can be marshalled on a world-wide basis in the cause of peace. They are means to an end only. They are not ends in themselves. The ends of our foreign policy are peace and security.

Now I am not going to try to spell out the specific troubles UNESCO has experienced in the past 4½ years. Many of them were foreseen from the start. Many are being overcome. As George Stoddard says, "UNESCO is looking up." UNESCO has a splendid leader in Dr. Torres Bodet. We no longer have to say as one university president once put it, "We cannot allow ourselves to be discouraged about UNESCO."

In Cleveland last year I asked Sir John Maud which he would abolish, UNESCO or Oxford, if he had to make the choice—judged wholly by the present and potential contribution of either to understanding among peoples and to the cause of peace. This proved to be a tough enough question to make an Oxford man wince and duck.

Manifestly UNESCO can never equal Oxford in the things that great universities do best. It should not try to. But if UNESCO were carried forward on a scale equal to its conception, it should carry a direct impact on the issue of peace or war a hundredfold and five hundredfold greater than any single university could. The universities help tell UNESCO what to say and do. It is UNESCO's task to say it and do it, not by slow seepage from an intellectual elite down to the masses of the people, but directly and by any proper means, however novel or costly.

Perhaps we can agree that the National Commission's declaration of 1946 was at the time primarily a declaration of faith in an idea, a deliberately provocative declaration rather than the expression of a realistic hope. Yet the timing was interesting, in view of a subsequent and parallel development. It was made 9 months before Secretary Marshall's famous speech at Harvard. Within a year after our National Commission's declaration the Nation was seriously debating whether to spend $15,000,000,000 for a European recovery program—a figure which would have seemed, in September of 1946, visionary and fantastic for any international economic program. Since then we have not only created and successfully carried on a European recovery program; we

have earmarked more billions for a program of military assistance to other nations. Now we are debating President Truman's Point 4 program for economic aid to underdeveloped lands.

The people of the United States have proven themselves ready to invest heavily in such foreign programs. They have become convinced that it is our national self-interest to do so.

The American people have not yet been asked to consider whether an investment in peace by communication and by education is remotely in a class with military and economic investments. The voices in the field have been few and weak. I have much evidence which satisfies me that the Congress and the people will respond to the idea that the national defense of the United States is closely tied up with better communication and better education on a world-wide scale. Those who believe this should now step forward and provide the leadership the country and the Congress need. Is there a nation in the world that has greater faith in the power of education on a mass basis for all its people? That faith in education, if it is fortified further with the demonstration of its close relation to national defense, is valid abroad as it is at home.

I have several times urged upon this group the consideration of a world-wide broadcasting network, with time provided for UNESCO if it can learn how to do the programming job so urgently needed by the peoples of the world. Don't be alarmed: I shall not go into that again now. But I have pointed out that, if there is to be a broadcasting network for UNESCO there now seems no way of financing its construction unless the United States is willing to do it. This principle has many possible ramifications. If it is in the national interest of the United States that UNESCO become a powerful force in the world—as I believe it is—then we should not hesitate to finance it if it has the leadership and the projects with sufficient promise. It is we of the United States who have the faith in UNESCO. And it is only we who have the resources.

Now I am aware that UNESCO is sensitive to any sign of what loosely is called American cultural imperialism, and indeed this is quite right and as it should be. And I would not propose that the United States increase its proportionate contributions to the basic operating or administrative budget of UNESCO. My suggestion is that the United States offers to finance, in whole or in large part, certain extraordinary UNESCO projects which UNESCO would wish to carry forward if it had the resources and which the United States would like to see carried out. If the leadership and the projects hold promise, and great promise—let us not assume in advance that Congress will not appropriate the money.

As Secretary Barrett has pointed out, there is no conflict between UNESCO policy and basic foreign policy of the United States. More than that, UNESCO's goal of advancing, through better human communications, human freedom, human dignity and human rights, is identical with the foreign policy of the United States. For UNESCO, this is an end. For the United States, it is both a means and an end. We have been altogether too sensitive to the possible allegation that the United States might be accused of being self-seeking in strengthening UNESCO. Two weeks ago I met with the International Relations Committee of the Connecticut Council of Churches. They plied me with questions about world government, about world federation, about union now. I replied that these were all worthy objectives and that the process of discussing them was a valuable process of civic education. But I asked that they devote themselves also to problems we can do something about—ourselves—now. What I am suggesting here is something we can at least try to get done—ourselves—and now.

There is plenty of precedent for a cooperative international enterprise in which one nation bears more than a proportionate share of the cost. UNRRA was such a case. The Emergency Children's Fund of the United Nations is another. ECA is another. So also is the military-assistance program. Now comes the technical-assistance program under point 4. This is to be administered partly by the United States, bilaterally, and partly through UN. UNESCO seems delighted that it will have 14 percent of the UN funds for point 4.

I understand that Dr. Torres Bodet has asked that the Florence Conference debate the question whether UNESCO can officially ignore and remain silent on the issues in the present international crisis. My hat is off to him.

Mr. Barrett has asked me to serve on the delegation, which unhappily I cannot do as nothing in the world interests me more than the future of those activities to which UNESCO is dedicated. But I shall fly over with him for a few days if I can. I'd like to participate in that debate. I don't want to receive a cablegram from Florence reading: "Flash: UNESCO voted today (with 12 nations abstaining) that there is a world and we are in it."

I agree that there can be no conflict between UNESCO policy and the policy of the enslaved nations if there are no UNESCO policies. But who is better equipped to enunciate the hope and the policy of free men and of the free world than those who understand freedom best, and the necessity of freedom to all forms of progress—the forces of science, education, and culture?

Let me give you a single example of the kind of role UNESCO might assume which would raise it to the stature it deserves and bring it to vivid life in the eyes of the world.

The State Department has asked for $18,500,000 for fiscal 1951 for reorientation work in the American zone of Germany. This is nearly two-thirds of the total budget High Commissioner McCloy is requesting for his organization in Germany. Testifying before the House Appropriations Subcommittee last month, Mr. McCloy described this reorientation work, among his three major activities, as "in many ways the one which may offer the greatest hope for long-range success. * * * This is the program of education designed to assist, advise, and persuade the German Government and people to take the democratic road. * * * Everything depends, the whole concept of western Europe, depends on that. * * * This effort is of overriding political and psychological importance." Mr. McCloy further said, "We probably could spend $100,000,000 in this effort and still not match the resources of the Soviets, but our methods are different and our objectives are different." (Let me say parenthetically that we should perhaps be matching the Soviet $100,000,000, and that Mr. McCloy, when he was Assistant Secretary of War, would not have agreed to any such ratio if it were a matter of comparative air forces. Let me also parenthetically read the following paragraph from a letter I received from a friend of mine in the British Foreign Office in London, with whom I became well acquainted at the Geneva Conference on Freedom of Information in 1948: "Certainly everything that has happened since then has brought more into focus the priorities of the ideological struggle we talked of at that time. I thought the leakage of what Vishinsky said to the German Communist hierarchy in Berlin recently was most significant: 'We shall conquer the world, not with atom bombs but with something the Americans cannot produce—with our ideas, our brains, our doctrines'."

Now I ask whether UNESCO, rather than assuming a minor and facilitative role in Germany, cannot take maximum responsibility? Dr. Nieubuhr asks me to explore the whole possibility of turning the whole German education program over to UNESCO. If UNESCO cannot do a better job than the United States, or England, or France can alone—it, of course, can operate in all three zones, not just in one—why can't it? If it can, then in this one project alone it would gain the stature it needs.

I have mentioned President Truman's point 4. Is it not now time—and way past time—for us to recognize the need for a companion point 5? I urge point 5 upon you today and upon the State Department. Point 5 of our foreign policy would recognize that the central issue of our time is intellectual and spiritual, and that the heart of the present conflict is a struggle for the minds and loyalties of mankind. It would create a program on a scale commensurate with the problem. And it would not have a terminal date in 1952. The problem is perpetual and only the means vary. We sensed the need in our 1946 declaration, although, as so often happens among intellectuals, we were more interested in being right than in fixing responsibility for action and in seeing to it that action followed decision. Are we now ready to act?—and to bring point 5 alive?

Three weeks ago I spoke for an hour on the floor of the Senate on this general subject, and introduced a resolution through which I hoped I might focus the attention of the Congress on a grossly neglected area of supreme national importance. I believe George Stoddard has sent each of you the text of my remarks, and a copy of the resolution. The New York Times said in its editorial, "It was to be expected that Senator BENTON in his first speech in the Senate, should return to a theme he has developed before many other audiences." I quote this because you are one of the long-suffering audiences the Times refers to; and here I am again.

My resolution was sponsored by 13 Senators. I do not know how many more Senators might have joined me as sponsors if I had described it to more of them. I talked mostly with my old friends and did not seek a large number of sponsors. I did not make a point of asking the members of the Foreign Relations or Appropriations Committees because they, I hope, will consider the resolution. I have received only a single unfavorable reaction in the Senate, and I have received many expressions of enthusiasm—from very unexpected sources. My moral is that a bold program—a program that promises to make an important contribution to an important problem—a bold program has a chance of winning enthusiastic support and of succeeding; a timid program has none. I fear that some of us in UNESCO and in the secretariat of the National Commission tend to become amateur experts on what the public will accept, and on what is politically feasible, rather than concentrating on our true vocation, the discovery and projection of what is right and necessary. In so doing we underrate both the public and the politicians.

Those of you who read my resolution may recall that one of its six points calls for acceleration of the work of UNESCO to the point where, with effective leadership, it has a chance to make a significant, perhaps decisive contribution to peace. What I'd like to emphasize here is that each of the other five points could also be carried out by UNESCO, and often carried out better by UNESCO than by the United States.

Point one in the resolution calls for an intensified effort in behalf of worldwide freedom of information. This is obviously a UNESCO objective, and I hope UNESCO will do far more in this field. Point two deals with UNESCO. Point three calls for a comprehensive world-wide program of documen-

tary and educational motion pictures, for the creation of a world broadcasting network capable ultimately of reaching every receiver in the world, for an immediate expansion of our program of bringing foreign students to the United States, and for efforts to penetrate the iron curtain. Point four calls for promotion of democratic education abroad, notably in Germany and Japan. Point five proposes a conference looking toward a joint effort in the information field by the free nations; and point six invokes the cooperation of nongovernmental groups and agencies. Although I had the interests of the United States primarily in mind, there is not one of these six points that does not coincide with UNESCO's aims and program.

My final point about Senate Resolution No. 243—I trust you'll become familiar with that number—is that it is a beginning only. Many, many months may pass before it can be adopted; years may be required to put it into effect. You and the organizations you represent can do far more in its behalf than I can. But a resolution, even if it is adopted, is not a congressional authorization. And an authorization is not a plan and a program; these must be developed by the State Department and this Commission and by UNESCO itself. A plan and a program are not an appropriation. And an appropriation is not an organization or an operation.

This helps show that the road is long. It is unending. My own best role for the present—indeed the only productive role I can have at present—is with my colleagues on the Hill. Fortunately many are friends of long standing. For those of you who subscribe to Senate Resolution 243—and it is in substantial part a distillate of what I learned from you, and what I learned with you. I want to close by repeating something I said in welcoming the first group of members to the first meeting of the national commission in September of 1946:

"If we who profess a belief in education really believe the words which we so often use, namely that understanding among peoples is necessary to the maintenance of peace, then we who are responsible for this national commission face a challenge that is terrifying. But we must not admit that the challenge is beyond our group. * * * Many demands will be made upon our time and energy. I dedicate you here to hard work."

Seemingly I am here today at a rededication—to more work, harder work, the work of an age and a planet. But what task is there today which can compare with this one, the survival of freedom and the development of the spirit and the soul of mankind?

Disability Insurance

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Disability Insurance," from the Washington Post of January 27, 1950, and with it an article on the same subject which recently was published by the American Public Welfare Association.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[From the Washington Post of January 27, 1950]

DISABILITY INSURANCE

Senate approval of the bill passed by the House expanding the coverage and increasing the benefits payable under the old-age insurance system is confidently anticipated, although the Senate may make some changes in detail. However, there is likely to be a battle royal over the proposal to pension insured workers who become permanently and totally disabled before reaching retirement age. For some Members of Congress claim that it would open the way for introduction of national compulsory health insurance.

In our opinion, that assumption is quite untenable. As a matter of fact that proposal would not involve any fundamental change in the old-age insurance system. It merely recognizes the need for a more flexible retirement system providing pensions for workers forced by circumstances beyond their control to withdraw prematurely from active life. Then, too, as the Ways and Means Committee report on the social-insurance bill points out: "The worker who has paid social-insurance contributions for a number of years—perhaps over much of his working lifetime—has a real stake in the system which deserves to be recognized. He should not be required to show need to become entitled to benefits."

Yet, under the present law disabled workers who may have made regular and substantial contributions to the Federal old-age insurance system are not entitled to receive benefits until they are 65 years of age. Unless they have independent means, they are forced to rely for subsistence on public aid or private charity. Moreover, the amount of benefits to which they can lay claim eventually, if death does not overtake them before they reach retirement age, steadily declines during the intervening years of enforced idleness. This shrinkage is due to the methods employed in the computation of their average monthly wages which in turn are used to compute the amount of their annuities.

While employees disabled on the job may benefit from State workmen's compensation laws, only 5 percent or thereabouts of all permanent and total disability cases are work-connected. Consequently, the vast majority of workers have no protection against loss of earning power caused by disability. In justice to helpless men and women who have earned the right to pension protection by contributing to the old-age insurance fund and who have the added misfortune of being disabled, this gap in the insurance system should be closed.

Objections to pensions for the totally disabled based on considerations of cost ignore the fact that such pensions would reduce the pressure for public aid. Nor is there any reason to fear that malingering would be encouraged by pensioning the disabled, in view of the severely limited benefits provided under the House bill, plus the requirement of a 6-month waiting period before payments would begin. Moreover, if a pensioner is tempted to sham illness, the examining physician can usually be trusted to discover the fraud.

It is conceivable that disability pensions, once introduced, might be progressively liberalized until eventually full-fledged compulsory health insurance might be brought in by the back door. But in view of the fact that the administration is already openly working for a national health-insurance program it seems absurd to assume that the outcome of the struggle over disability pensions will influence action on the health program.

AMERICAN PUBLIC WELFARE ASSOCIATION,
Washington, D. C., January 1950.

DISABILITY INSURANCE

QUESTIONS AND ANSWERS

1. What is meant by disability insurance?

Disability insurance means cash payments to insured persons which partially compensate them for loss of earnings due to illness or disability. Public disability insurance programs (other than workmen's compensation programs which compensate solely for work-connected injuries) are of two kinds: Insurance against temporary disability, now provided by five States and [1] which is limited to illness of less than 6 months duration and so-called permanent and total disability insurance which compensates individuals suffering extended disability lasting beyond 6 months. In neither case is the problem of medical care, health insurance, or so-called socialized medicine involved.

2. What would be done under proposals for permanent and total disability insurance now pending in Congress?

H. R. 6000, the social-security bill passed last year by the House of Representatives and now pending in the Senate Finance Committee, would add insurance against permanent and total disability to the present Federal old-age and survivors insurance program. That program, administered by the Federal Government, provides cash benefits related to previous earnings for retired persons over 65 years of age and their families, and for the widows and orphans of deceased workers, out of an insurance fund built up by contributions from covered workers and their employers. Under H. R. 6000 a worker forced by extended disability to retire before 65 would draw the same primary OASI benefit payment to which he would have been entitled were he 65.

3. Who would be covered by permanent and total disability insurance?

All those workers included in the program of old-age and survivors insurance would likewise be protected against premature retirement due to extended total disability. Under the provisions of H. R. 6000 this would include virtually all working people except farm operators, farm workers, part-time domestic workers, and certain self-employed professional groups such as doctors, dentists, and lawyers. However, the advisory council on social security, appointed to advise the Senate Finance Committee in 1947–48, has recommended that all these groups be included in the social-insurance program and hence covered against loss of income due to protracted disability. This wider coverage will undoubtedly receive careful consideration in the Senate Finance Committee.

4. What kind of disability would entitle a covered worker to disability benefits?

An insured worker, to qualify for permanent and total disability benefits must be stricken with a medically demonstrable illness, injury, or other physical or mental impairment which makes it impossible for him to continue any substantial gainful activity or must be blind. The disability must have existed for 6 months before any benefit can be paid and must be presumed to be permanent by medical diagnosis. The Advisory Council recommended a somewhat more liberal concept of permanence in disability.

5. What benefit would a disabled worker receive?

Under H. R. 6000, the beneficiary of disability insurance would receive the primary benefit to which his past earning record would have entitled him on retirement, but no dependents' benefits. Thus a worker with an average earning of $2,400 a year would receive a basic benefit of $60 a month plus an additional one-half of 1 percent for each year

[1] New York, New Jersey, Rhode Island, California, and Washington.

he had worked in covered employment. The minimum primary benefit would be $25 a month; the average around $50. If the disablement were one of the relatively few covered by workmen's compensation he would receive his social security disability benefit reduced by an amount equal to one-half of whichever of the two benefits was smaller.

6. Is there a real need for protection against permanent and total disability?

Prolonged total disability is one of the chief causes of poverty in the United States. When a father is so seriously disabled that he can no longer work his children and his wife are almost always threatened with destitution. He may require considerable care, and doctor bills inevitably pile up. The mother must try to find work; perhaps older children must quit school and look for jobs. Savings and hope for the future rapidly disappear.

Moreover, it is not the individual alone who bears the burden of disablement. Over three-fourths of a million persons on the Federally aided public assistance rolls are there because of disability. An additional one-third of a million persons receive State and locally financed general assistance because the person who would normally support them is disabled. About 89,000 needy blind persons receive public aid, and private charities and relatives care for uncounted thousands more who are in need because disabilities keep them from working. It is estimated that well over 2,000,000 potential workers have been totally disabled for more than 6 months, and that only a few have sufficient resources to be self-supporting.

7. Can't workers provide protection for themselves against loss of income on account of disability?

The large majority of working people have no means of protecting themselves against income loss when they become permanently and totally disabled. Private insurance policies providing cash benefits for long-term disability are not available to most people, either because of cost or because the individuals are not first-class risks. Some union contracts include limited provisions for disability protection, and a few private employers have plans providing disability benefits, but most of the latter require many years of service before the employee is eligible. Under certain circumstances, veterans, railroad employees, and some employees in State or Federal Government work can draw cash bnefits if they become totally disabled. Most workers who are injured on the job or suffer work-connected illnesses can draw benefits under State workmen's compensation laws, but work-connected illnesses and injuries make up only about 5 percent of all total disabilities. For most workers, serious disablement means loss of savings and other assets, and, if the disability is prolonged, an eventual resort to public aid.

8. Would disability insurance be a desirable way of meeting this problem, or is it better to take care of disabled persons through public assistance?

Contributory social insurance is the best primary means of meeting the major causes of income loss both from the point of view of the individual and of economic and social factors. This view has been expressed by most people who have studied the problem. The Committee on Ways and Means of the House of Representatives, in its report on H. R. 6000, summarized its agreement with this view in the following words:

"The time has come to reaffirm the basic principle that a contributory system of social insurance in which workers share directly in meeting the cost of the protection afforded is the most satisfactory way of preventing dependency. A contributory system, in which both contributions and benefits are directly related to the individual's own productive efforts, prevents insecurity while preserving self-reliance and initiative. * * * The contributory system of old-age and survivors insurance * * * should continue to be the basic method for preventing dependency. Insurance against wage loss due to permanent and total disability will round out the protection of the insurance system."

Similarly, the Advisory Council on Social Security, in its report to the Senate Finance Committee in 1948, indicated that it was "strongly impressed with the seriousness of the problems created by permanent and total disability and with the social disadvantages of compelling the victims of this misfortune to depend upon public assistance. * * * The Council believes that the permanently and totally disabled worker—as well as the aged worker or the dependent survivors of a deceased worker—should not be required to reduce himself to virtual destitution before he can become eligible for benefits. Certainly there is as great a need to protect the resources, the self-reliance, dignity, and self-respect of disabled workers as of any other group. The protection of the material and spiritual resources of the disabled worker is an important part of preserving his will to work and plays a positive role in his rehabilitation." There is, of course, need for assistance to meet, on an individual basis, basic requirements not covered by an insurance approach, and provision is made in H. R. 6000 for Federal aid to State programs of assistance to needy persons suffering permanent and total disability. These two programs are complementary and neither can be considered a satisfactory substitute for the other.

9. If the individual paid for his benefits, wouldn't he regard them as a right, and wouldn't this encourage malingering?

A disability-insurance program administered by the Government would have adequate safeguards against malingering, including safeguards not available to private insurance. Under H. R. 6000, benefits would be paid only to persons who are dependent on regular earnings; in order to qualify, the individual would have to work for at least 5 years and to have substantial employment just prior to his disablement. Since the benefits would be considerably lower than the individual's regular earnings, there would be a financial inducement for him to return to work, and his earnings would be checked automatically through employer tax returns and income-tax reports.

Beneficiaries would be carefully examined by competent doctors and would be reexamined at frequent intervals. An individual's condition would be followed by local field offices through personal contacts and reports from local agencies. Where it appeared that the beneficiary might be retrained for work, he would be encouraged to undertake such rehabilitation; and if he refused without good cause, he would be removed from the benefit rolls.

10. Is it true that the payment of disability benefits would encourage rehabilitation?

Disability insurance and rehabilitation work hand in hand. The insurance benefits would help to lessen the worries and discouragement which usually accompany serious disability. With a small steady income a worker would be in a better frame of mind to try to fit himself for a new job. The benefits would provide basic security, but they would be low enough so that there would always be an incentive for a disabled person to try to improve his condition.

It would be possible to provide that the costs of rehabilitation would be paid out of the social-insurance trust fund, and thus the insurance would not only provide current income, but would also be used to pay for services which would fit the individual to return to work. Successful rehabilitation of disabled persons would, of course, reduce the burden on the trust fund and add to the productive capacity of the Nation. A provision of this sort was recommended by the Senate Advisory Council and was included in H. R. 2893, the social-security bill recommended by the President. However, H. R. 6000 omits the provision and leaves rehabilitation to existing State-Federal programs.

11. Would disability insurance be difficult or costly to administer?

Disability benefits have been successfully administered for years by governmental agencies, including the Veterans' Administration, the Railroad Retirement Board, Federal and State retirement systems, workmen's compensation agencies and the social insurance programs of 40 nations of the world. The machinery for administering the present old-age and survivors insurance program—including the network of almost 500 field offices for taking claims can be used to take on the job of paying benefits to disabled persons. Medical examinations would be made by local doctors, who would be paid their usual fee for such work; the arrangements between doctors and the Government would be similar to those between doctors and private insurance companies. There is no reason to believe that the program could not be administered successfully.

For More Democracy

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "For More Democracy," which deals with the Mundt-Nixon-Ferguson bill, published in the Washington Daily News, a Scripps-Howard newspaper, of April 6, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR MORE DEMOCRACY

The American Civil Liberties Union came up yesterday with worth-while comment on the Mundt-Nixon antisubversive bill.

Arthur Garfield Hays, the union's counsel, criticized sections of the bill calling for registration of Communists and Communist-front organizations.

He said that the inevitable effect of this provision would be to smear and probably endanger the effectiveness of good reform movements. The danger lies in the Commies' tactics, which are to worm into any and all possible worthy crusades in order to mislead the public and pervert the crusade to their own ends.

The facade of reform hides their real intentions.

They can, of course, take credit for the reform if it succeeds in spite of them, or have an instrument for propaganda and converts if it doesn't, which they prefer.

They invariably try to destroy the effectiveness of a reform movement, because they'd rather preserve social ills than have reforms within a social structure other than Communist dictatorship.

If they are found out in an organization and are thrown out, their classic gambit then is to try to wreck the organization.

Over and over again Commies have demonstrated that they are really for nothing that will help make our society work.

And time and time again they have proved themselves skillful camouflagers of their real intent.

All this is old hat, of course, but it's worth repeating constantly.

Therefore there is much in what Mr. Hays says; that there is danger of destroying the usefulness of innocent organizations and members by labeling them as subversive because of the Commies machinations.

One way of not having needed reforms at all is to make it impossible for reformers to reform. And that's one sure way of playing into the Commies' hands.

Says Mr. Hays:

"If it be true that our American institutions are threatened by advocacy of totalitarianism alien to our tradition, we must meet the threat not by direct or indirect repression, but by the free political discussion which is the very cornerstone of democracy. * * * It must be remembered that it was Czarist Russia in which repressive measures were first taken against Communists—and that it was Czarist Russia in which communism scored its first victory. Police state tactics will not destroy communism. Only counterpropaganda and more democracy will."

Senator Myers' Report to the People of Pennsylvania

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD my biweekly newsletter, dated April 6, on the general subject of foreign policy.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WASHINGTON NEWSLETTER—A PERSONAL REPORT TO THE PEOPLE OF PENNSYLVANIA

APRIL 6, 1950.

Peace-making programs will cost us an estimated $4,700,000,000 in the coming year—an average of about $30 per American. This is our investment in the survival and growth of personal liberty and free institutions in the world. Two world wars have taught us that our security is directly linked to that of the free world.

Economic assistance, military aid, and participation in world organizations are the tools being used to fashion the peace, and apply in two great areas—Europe and the Far East.

In Europe, the Marshall plan has stopped Communist expansion. "A near miracle" is Paul G. Hoffman's description of ECA progress in the past 2 years. Starvation has been converted into a diet adequate to grow and work on. Unemployment, in most countries, has been changed into nearly full employment. Industrial production is 20 percent above prewar. Agricultural output (after disastrous decline in war years) has been brought almost to prewar levels and is due to rise steadily. And most important—despair has been replaced by hope, and the Communists have been repudiated at election after election in the ECA countries during the past 2 years.

The 1949 Atlantic Pact signifies that the nations of the North Atlantic community will stand together against any aggressor that threatens their independence and freedom.

The military-assistance program, enacted by Congress last year to aid the North Atlantic democracies in bolstering their defenses, will give new meaning to the Atlantic Pact. This program is an extension of the 1947 Truman doctrine which furnished military assistance to Greece, enabling her to stamp out the Communist-inspired guerrilla warfare, and which, at the same time, helped Turkey fortify herself against Russian threats.

But Europe's headaches aren't over yet—and $3,000,000,000 of our expenditures are earmarked for Marshall-plan aid in the coming year. This is a big reduction over the cost of ECA last year and reflects the progress already made. However, if Europe's economy is to be put on a self-supporting basis, there can be no reduction in present efforts, because serious unemployment still exists in Italy, Belgium, and western Germany; trade barriers still hamper the flow of goods between the European countries and much more needs to be done to unite the European democracies economically; productive efficiency is very low by American standards, and much can be done through passing along technical assistance and our productive know-how; the dollar-gap, though closing, still exists, and further steps are needed to balance European exports with the things she buys from America.

In the Far East the point 4 program and military aid to countries outside the Communist orbit are the first steps to stability in Asia. Point 4—which will bring technical know-how and private investment to economically underdeveloped nations—can do much to stamp out starvation and raise living standards. This is the way to prove that democracy, not communism, is the only system which can meet and solve problems of social and economic distress.

These programs point the way to peace. ECA, the Atlantic Pact, and the military-assistance programs have halted the Russian practice of knocking off the European countries one at a time. By strengthening the economic foundations, improving the defenses, raising the living standards, and expanding trade, the democracies are daily growing stronger against Communist threats from within and without. These tested and proven methods will be extended to the economically backward countries of Asia under legislation now pending in Congress.

Peace is more than the absence of war. The ultimate success of democracy will result from proving what we in America already know—that freemen, working together, can solve the world's problems far better than any dictator. The costs of peace are great—but less than $5,000,000,000 yearly is far cheaper than a third world war when we stop to recall that the direct costs of World War II to America were more than $300,000,000,000.

FRANCIS J. MYERS.

Columbia Valley Authority

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, April 13 (legislative day of Wednesday, March 29), 1950

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Regional Authority Idea Was Born in Republican, Not Socialist, Brain," by Lowell Mellett, from the Washington Evening Star of yesterday.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON THE OTHER HAND—REGIONAL AUTHORITY IDEA WAS BORN IN REPUBLICAN, NOT SOCIALIST, BRAIN

(By Lowell Mellett)

One of the President's pet projects bogged down for the time being is the Columbia Valley Authority, for which he asked in his state of the Union message and in a later special message to Congress. Any hope for progress on this great enterprise depends on the President's ability to activate the Public Works Committees of the Senate and the House. Both have held some hearings on bills introduced last year, but the consideration given them has been desultory at best. Now it has been agreed to hold up further consideration until a joint subcommittee can hold hearings "in the field" and this junket is not to be undertaken until the rivers and harbors bill has been disposed of by the Senate.

The rivers and harbors bill, commonly called the pork barrel bill, was passed by the House last year, carrying a cost of nearly $1,200,000,000. As reported out by the Senate committee it contains projects with a total cost of $1,564,000,000. It is now at the top of the Senate calendar and may soon be disposed of.

POWER PROPAGANDA DRIVE

The foot-dragging on the CVA proposal coincides with an extensive propaganda drive by the country's private power companies against all such undertakings. By institutional advertising and other means the companies are spreading the Republican "liberty versus socialism" bugaboo far and wide, tying it directly to the public power issue. Just announced is a breakfast for Washington correspondents to be given by the National Association of Electric Companies next Wednesday morning. Purcell Smith, $60,000-a-year president of the association and popularly known as the town's best-paid lobbyist, has suggested to the correspondents that they bring along their editors or other friends who may be here for the annual meeting of the American Society of Newspaper Editors.

Opposition to all regional authorities is voiced in the platform adopted at Republican Chairman Gabrielson's February meeting. This has caused Judson King, director of the National Popular Government League and probably Washington's worst-paid lobbyist, to dig up some almost ancient history. He finds that the real father of the regional authority idea was Senator Theodore E. Burton, of Ohio, one of the great Republican stalwarts of his day, a conservative.

KILLED STATES' RIGHTS JOKER

It was Senator Burton, Mr. King recalls, who, as chairman of the House Rivers and Harbors Committee, killed a State's rights joker in a bill granting a private company the right to develop water power at Muscle Shoals. Burton's action protected the precedent of Federal authority over the rivers and made possible the later development of Muscle Shoals into the Tennessee Valley Authority. That was in 1898.

Ten years later, Senator Burton as chairman of the Inland Waterways Commission in a report to President Theodore Roosevelt, recommended the development of the Mississippi from mouth to source, with provision for flood control, land reclamation, reforestation and water power, all coordinated. The projects, he said, should be planned, built, and managed by an independent commission, exclusive of established agencies. There was the valley authority idea in its infancy.

Not at all the child of European socialism as alleged in the GOP February platform.

Mr. King also recalls that one of the stoutest supporters of Senator George W. Norris in his long battle to save Muscle Shoals for the American people was Senator Charles L. McNary, of Oregon, the Republican candidate for Vice President in 1940.

Address by Hon. Frank P. Graham, of North Carolina, on Anniversary of Birth of Thomas Jefferson

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, April 14 (legislative day of Wednesday, March 29), 1950

Mr. HOEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by my colleague the junior Senator from North Carolina [Mr. GRAHAM], before the Sons of the American Revolution, commemorating the two hundred and sixth anniversary of the birth of Thomas Jefferson.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, Sons of the American Revolution, ladies and gentlemen, April 13, 1743, Thomas Jefferson was born; April 12, 1945, Franklin D. Roosevelt died. With the birth of Jefferson began the life of one of the greatest Democrats and humanitarians and with the death of Roosevelt ended the life of one of the greatest Democrats and humanitarians of modern history. It was a source of deep satisfaction to Roosevelt that, as President, he sponsored the building of this beautiful memorial of the life and service of Thomas Jefferson.

I speak here this afternoon as the representative of a State, which at historic Halifax, N. C., April 12, 1776, was the first of all the colonies to authorize its delegates to join in the Declaration of Independence at Philadelphia, which in Jefferson's immortal words has since made July 4 one of the great birthdays of human liberty.

COMPARISONS

Along with Washington, Lincoln, Wilson, and Roosevelt, Thomas Jefferson, in competent opinions, is one of the five greatest Presidents of the United States. The Washington Monument, the Lincoln Memorial, and the Jefferson Memorial have commemorated these three, whom history has chosen as belonging to the great of all ages. With Benjamin Franklin and Theodore Roosevelt, Jefferson is one of the three most strenuous, intellectually curious, and versatile public leaders in American history. With Lincoln and Wilson, he is one of the three greatest masters of English prose. With Lincoln and Franklin D. Roosevelt, he was the consummate politician whose politics became high statesmanship. With Washington and Lincoln, he was the most reviled of Presidents. With Andrew Jackson, who carried forward to the people and embodied for the people his democracy, Jefferson has given his name to an era and a quality of democracy. Both of the great political parties have claimed him as their actual or spiritual founder. Sympathetically with James Madison and oppositely with Alexander Hamilton and John Marshall, Thomas Jefferson was the author of principles of government which have been synthesized in the American system of freedom and union, local, State, and national democracy.

UNIVERSALITY

Thomas Jefferson, son of the frontiersman, Peter Jefferson, and of the gentlewoman, Jane Randolph, was a Democrat, a humanitarian, an educational philosopher, an agriculturist, a scientist, an architect, an individualist, a champion of States' right, a nationalist, an internationalist, and a humanist, who became a universalist in the catholicity of his mind, the sweep of his humane spirit, the depth of his spiritual faith, and the immortality of his influence.

DEMOCRAT AND EDUCATIONAL PHILOSOPHER

He was a Democrat who had enduring faith in the capacity of the people for self-government. While deeply sensible of the dangers to free government lurking in the ignorance of large bodies of people, he feared their ignorance less than he feared the tyranny of the privileged power of the few. He wrote the immortal words, "All men are created equal and endowed by their creator with certain inalienable rights such as life, liberty, and the pursuit of happiness" and that "governments derive their just power from the consent of the governed." A scientific farmer, his greatest faith was in those who worked in the earth. He fought for and achieved the abolition of the laws of primogeniture and entail which had become the artificial basis for an American aristocracy of birth and privilege.

His very faith in the people, when informed, charged him with a passion for a system of public education open to all, with screening for higher talent in successive stages from the primary grades through the university. Self government of the people carried with it for him the obligation for public self-education of the people. His ordinance prepared in 1784 was the forerunner of the great Northwest Ordinance of 1787 which set aside land for the public schools. He designed, laid out the grounds and buildings, framed the curriculum, selected the faculty, championed its freedom and founded the University of Virginia. His spirit still haunts the serpentine walls and classic halls of the gracious lawn of the University of Virginia, an American temple of human freedom. He still lives as "Mr. Jefferson" to all the loyal sons of his university whose fatherhood he placed in highest honor along with the authorship of the Declaration of Independence and the Statute of Religious Freedom for Virginia. The freedom of the mind, human dignity, the education of the people, and government of the people, based on the consent of the governed, are the principles of the Western World's first preeminent democrat and still unsurpassed champion of the rule of the people.

His democratic Americanism was by his enemies called Jacobinism. He was, himself, often falsely called a Jacobin. The Americanism of his democracy, while watered from distant springs in the best English tradition of John Milton, John Locke, and the Bill of Rights of 1689, was yet self grown on the American frontier and from grass roots in the American soil.

The American Declaration of Independence has long been the bugle call of democracy to the peoples of the earth whether to the people of France in 1789, the Latin-American and European peoples in the first half of the nineteenth century, the people of Asia in the twentieth century, and the peoples of Indonesia today. Perhaps Jefferson's principles of human freedom and dignity and the consent of the governed will, with new meaning and democratic power, yet reach through the iron curtain which now hides the prison walls of the police state.

HUMANITARIAN

As part of his democracy, Thomas Jefferson, was a humanitarian, who was concerned with the welfare of Hessian prisoners of war; who fought to end the slave trade; who freed his own slaves; and who often, at the very thought of human slavery, trembled for the future of the Nation which he helped to organize with humane hopes of its meaning for the freedom of all mankind. With his strong strain of humanitarianism, went an insistence on balancing the budget and the liquidation of the national debt, as the basis of freedom and security.

INDIVIDUALIST

Thomas Jefferson was not only a humanitarian democrat with an abiding faith in the masses of the people, he was also a great individualist. He stood for the free individual with a bill of rights against the tyranny of a majority, or religious intolerance, or vested privilege, or centralized Federal power. He valiantly fought for the right of the individual to think, speak, publish, worship, and be a free person as the supreme fact and concern of democracy. He wrote the Statute of Religious Freedom for Virginia. He worked for and helped to achieve the incorporation of the Bill of Rights as the first 10 amendments to the Constitution of the United States. He swore upon the altar of God eternal hostility to every form of tyranny over the mind of man.

STATES' RIGHTS MAN

In the interest of the freedom of the individual, Thomas Jefferson was a States' rights man. He believed in the functional value of the freedom and responsibility of the locality, the States and the Nation, whose composite federalism was a guaranty against the development of the centralized power of a totalitarian state. His theory of States' rights, however, was not an end in itself, but an instrument of freedom to keep the Government close and responsible to the people.

In Jefferson's day over three-fourths of the things by which men worked and lived were produced in their own household economy and local community. The capacity and authority of local self-government and the State were sufficient for the needs of the household industry and local agrarian economy. The freedom of the individual, the freedom of speech, publication and assembly were threatened by the tyranny of the Federal Government and its alien and sedition laws. The Virginia and Kentucky resolutions, inspired by Thomas Jefferson, were assertions of the rights of the States in behalf of the freedom of the individual to speak his mind and publish his views to the people. He would not use States rights in behalf of the intrenchment of the financial power of the few or the political power of slave holders or the economic power of privilege or corporate monopoly. Nor do we believe he would advise the use of the compulsory power of the Federal Government to abolish prejudice in human relations far ahead of what is in the minds and hearts of the people in the States. A States rights man and an educational philosopher, he would wait upon the more enduring ways of education and the humane spirit of the people in the States, rather than resort to Federal coercion which would cause set-backs in the clear progress in the relation of races based on deeper religion, broader education, and wider opportunities.

NATIONALIST

A States-rights man, he was yet also a nationalist in his outlook and influence. His

stream of letters to leaders in all the States helped to unite the 13 States into a combined struggle for national independence. His vast correspondence, his genius for practical organization, his democratic idealism, and his commitment to leadership of the people against the privilege and power of the few, made him the founder of the first enduring National Party. This party was the last bond which held the Union together in bitter decades. When this party split the Union was broken and war began. This reunited party has been a strong force for nationalism to this hour.

Jefferson's purchase of Louisiana, making its wide lands a responsibility of the whole Nation, was the act of a nationalist and a force for nationalism. Reaching across the frontier of America, the vast Territory of Louisiana was a bond which bound the Nation together with common lands from the Gulf to the Great Lakes.

INTERNATIONALIST

Jefferson was a nationalist who was also an internationalist. Excepting Benjamin Franklin, no American public leader has been more cosmopolitan than Thomas Jefferson. Steeped in the classical heritage of the Greeks and Romans, the political philosophy of the British, the enlightenment of the French encyclopedists, his correspondence included some of the choicest spirits of the old world and the new. Adam Smith's Wealth of Nations and Thomas Jefferson's Declaration of Independence both came in 1776 as the birth cries of economic individualism and political freedom in Europe and America.

His Summary View of the Rights of British America prophetically envisaged the present British Commonwealth as an international union of free peoples. When he sensed that the dictatorship of Napoleon might threaten the freedom and integrity of America by his possible possession of the Louisiana Territory he declared, in that event, we would marry ourselves to the British Fleet and thus join two great federations of peoples against the threats of imperial power. One hundred and fifty years ago when the north African pirates preyed upon the commerce of nations, Thomas Jefferson proposed the cooperation of nations to enforce safety and peace upon the seas. Ahead of his times, Jefferson resorted to economic boycott instead of war against the great powers, prophetic of the sanctions for peace yet to come among the nations of the world.

THE MEANING OF AMERICA

We are grateful to the Sons of the American Revolution for reminding us today of the life and work of Thomas Jefferson, born on this day 207 years ago. The Sons of the great American Revolution will not let us in our day become the fathers of a great American reaction. We must not allow the shibboleths of human liberty, which came flaming from the soul of Thomas Jefferson in behalf of the freedom of forgotten people in the eighteenth century, to be turned in reverse against the freedom of forgotten millions in the twentieth century.

As we see these men of the United States Navy and the veterans of the world war here this afternoon, we need to remember that within the decade past the freedom for which Jefferson stood was renounced or crushed in almost half the world. The Axis powers reached in conquering might from the top of Norway to the Bay of Biscay, across Europe to the Volga and across North Africa to the gates of Alexandria; from the islands off Alaska to the islands off Australia and across Asia almost to the gates of India.

In such a world, darkening with Fascist tyranny, the allied forces bravely held on in grim desperation. The youth of America went into these embattled lines and turned the tides at last upon the seas and lands on all the farthest fronts to save freedom on this imperiled earth. As we remember Thomas Jefferson, we also remember our comrades who died that we might be free. "Lord God of host, be with us yet, lest we forget, lest we forget."

In the remembrance of our heroic dead may we have a deeper sense of the meaning of America. This strategic land of vast resources, stored up and saved for thousands of years for the development by the fresh people of the west, of an abundance undreamed of even by modern man, cannot, without losing its own soul, withhold the hopes of food and freedom from the broken and bewildered peoples of the earth. This blessed America, heir of all region and races, colors, and creeds, the haven of heretics and refugees in the years of its weakness, must not become the stronghold of bigots in the days of its power. We must not scorn or hate less fortunate people, but even while strongly guarding against totalitarian tyranny and aggression, we must have compassion for people in wide lands where dictatorships became not a transition to freedom and peace, but an inevitably cruel fixation for increasing tyranny and power.

America must be made safe for both democracy and differences, we must have compassion for people in wide lands where dictatorships became not a transition to freedom and peace, but an inevitably cruel fixation for increasing tyranny and power.

America must be made safe for both democracy and differences, where the answer to error is not terror; where democracy is achieved without vulgarity and excellence without arrogance; where the majority is without tyranny, the minority without fear, and all people have hope.

On this day and in this place may we take this commemoration of Thomas Jefferson a rededication of ourselves to carry forward the spirit of the American Revolution for that human freedom and equal opportunity to which he gave his dedicated life. As we look across the river into the historic commonwealth which gave him to the Nation and to the world, we see in our mind's eyes a tall reddish-sandy haired, sunny faced young man come down from the Virginia hills to take up his lifelong struggle for human liberty, the self government of the people, and international cooperation for justice and peace in the world.

In the face of monstrous Fascist and Communist totalitarian tyrannies, which in our day have threatened, and still threaten, to destroy the freedom and degrade the dignity of individual human beings, let us, as loyal Sons of the American Revolution, swear with him on the altar of God eternal hostility to every form of tyranny over the body, the mind, and the spirit of man. While we guard our freedom against the conspiracies, infiltrations, and aggressions of fanatical international communism, we must not, ourselves, go totalitarian and lose our own historic liberties. Freedom must resume again its upward human pilgrimage of the centuries of struggle and faith.

Jefferson still lives. America carries on. Totalitarian tyranny must sometime begin to give way to human freedom now enslaved behind the iron curtain, but never dead within the human spirit. The light of liberty will yet shine through the iron curtain of men's minds. The warmth of human brotherhood will yet melt away the iron curtain of men's hearts. The peoples' hopes of freedom and peace still fly their flags high in the western world and across the eastern seas, where people this last Sunday looked up in prayer to the Easter morning of their aspirations for one free and federated world neighborhood of human brotherhood, we all pray God in our time.

Auto Liability Insurance

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, April 14 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Auto Liability Insurance," which appeared in the Pittsburgh Press on April 6.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AUTO LIABILITY INSURANCE

(By Eleanor Morehead)

Most American motorists are driving more carefully than ever before, according to accident records.

But the 15-to-24 age group has racked up so bad a driving record since the end of World War II that most auto liability insurance firms have sharply boosted the premium rates for drivers under 25.

Youthful recklessness at the wheel of a stripped-down "hot rod" or decrepit jalopy has raised this age group's postwar auto accident death rate to 31.2 persons per 100,000—an 86 percent increase over the 1923–27 rate.

On the other hand, the Nation's traffic death rate as a whole has been cut 41 percent in the last 3 years, according to the President's Highway Safety Conference.

It dropped last year to 7.1 deaths for each 100,000,000 miles of highway travel, the lowest in automotive history. Nevertheless, 31,500 persons died in traffic accidents last year.

RESPONSIBILITY LAWS

Because grave social problems often are involved in these accidents if a driver is unable to compensate financially for the damage he has caused, 45 of the States have adopted laws on financial responsibility for auto accidents. Pennsylvania's law went into effect on February 1.

Massachusetts is the only State with a compulsory-insurance law. Connecticut, in addition to a financial-responsibility law, requires insurance of vehicles operated by drivers between the ages of 16 and 18. Texas requires financial responsibility only of operators of commercial vehicles.

Louisiana, Mississippi, and South Carolina are the only States without financial-responsibility laws.

In general, such laws call for the deposit of security and/or proof of future responsibility in the event of an accident, or upon conviction and judgment arising from an accident, or both. If these provisions are not met, the driving privilege is suspended.

INSURANCE COMPANIES OPPOSED

However, compulsory insurance is opposed by the occasional driver and by the careful driver. These complain that they are penalized for the sins of the careless driver.

It is opposed also by the insurance companies. They argue that it leads to an enormous increase in litigation; that juries are much more apt to be generous when an insurance company foots the bill; and that compulsory insurance promotes fraud and racketeering in claims.

The companies charge also that it is unfair to require them to insure drivers with bad accident records.

Because wartime gasoline rationing limited motoring, insurance rates were reduced during the war. They were quickly revised upward for all age groups after the war.

The Kerr-Thomas Gas Bill

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES

Friday, April 14 (legislative day of Wednesday, March 29), 1950

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Kerr-Thomas Gas Bill," which was published in the Montgomery Advertiser for April 8, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE KERR-THOMAS GAS BILL

It seems to us that, purely as a matter of tentative policy that could be changed, President Truman should sign the Kerr-Thomas bill which exempts natural gas producers from Federal price control.

It is a complex question because of the difficulty in determining whether there is enough true competition among producers to regulate prices. That cannot now be answered yes or no.

The situation is this. The country is going to natural gas. The gas is transported from the Southwest by pipe lines. But those that own the pipe lines are not the producers of the gas. They buy their gas and transport it across the country for sale to consumers.

The question is whether to exempt the producers' gas prices to the pipe liners. For if the producers run the price of the gas up, the pipe liners will of course pass the increases on to the public.

In the United States system, we accept the principle of controlling prices where a monopoly exists, as in the case of railroads and power companies. These controls are imposed in place of the controls that operate on prices through competition.

There is a fine point as to whether pipe lines are monopolies like a railroad. Senator DOUGLAS, of Illinois, chief opponent of the Kerr-Thomas bill, contends that pipe lines are monopolistic. He points out that they are extremely costly and an owner can go around taking them up from connection with one producer and laying them down to another with a lower price on gas.

DOUGLAS holds that it is a question of whether "the great gifts of nature, placed here we believe by divine power, are to be appropriated by the few or be administered as a trusteeship for the people of the Nation when these resources are essential to consumers but do not lend themselves to competitive methods of sales and distribution."

The proponents of the bill counter that there will be competition to restrain profiteering because there are 2,300 producers. DOUGLAS responds that this is deceptive because 3 percent of these sold 70 percent of the gas in 1947.

There is evidence to support DOUGLAS' contention that producers will get around to charging all the traffic will bear. One increase now pending would cost the consumers of four States $5,000,000 yearly.

Nevertheless, the case is not proved and wherever it is possible to avoid adding a Government control and adding a regiment of enforcement officials, it should be done. There is a provision in the Kerr bill that directs the Federal Power Commission to make a continuing study of producer prices and report to the President and Congress. If this surveillance reveals unreasonable price rises, gas production can, and should, then be placed under control.

Communists in the Government Service

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, April 14 (legislative day of Wednesday, March 29), 1950

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from Hamilton Fish, a former Member of the House of Representatives, regarding the inquiry being made by the subcommittee of the Committee on Foreign Relations, together with an editorial entitled "Cut Out Politics: Get Facts on Reds!" from the Philadelphia Inquirer of this morning.

There being no objection, the letter and editorial were ordered to be printed in the RECORD, as follows:

NEW YORK, N. Y., *April 11, 1950.*

Hon. JOSEPH R. MCCARTHY,
United States Senate,
Washington, D. C.

DEAR SENATOR: I was shocked but not surprised by the callous and unfounded statement of Robert P. Patterson, former Secretary of War, that our foreign relations "could not be in hands more capable or more trustworthy" than those of Secretary of State Acheson.

I was responsible for the appointment of Mr. Patterson from my congressional district, as a Federal judge, in the closing days of the Hoover administration. At that time he was a stanch Republican. He later joined the Roosevelt administration as Under Secretary of War, and became one of its foremost supporters on foreign and domestic issues. He supported Roosevelt openly, and ceased to enroll as a Republican in Putnam County, N. Y. In the 1948 election he told numerous friends that he intended to vote for Harry Truman for President. Not long ago, Robert Patterson wrote a similar letter of endorsement of Alger Hiss.

I in no way question his right to express his views on Dean Acheson's "keen insight and clear understanding of the aims and purposes of the Russian Government." However, I do question his right to speak as a Republican. Furthermore, Dean Acheson has been so tragically wrong on China, Germany, and Spain that he should be removed without delay. In any other country he would have been ousted long before, because of his record of blunders that will plague us for years to come. Dean Acheson has outlived his usefulness.

I doubt if there will be, or can be any unity behind his so-called bipartisan foreign policies, no matter how many Republicans are appointed to bolster his dismal failures, and also friendship for Alger Hiss, convicted of perjury, and virtually of disloyalty. There is something very rotten in the State Department. In the last 4 years 134 Communists and subversives and 91 homosexuals have been dismissed from the State Department.

Who is responsible for their appointment, and for the appointment of Alger Hiss, and Julian Wadleigh, self-admitted spy, to key positions in the State Department? The American people have a right to know. They look to you, Senator, to continue your fight to present these facts to the public, and to compel the reopening of the Amerasia case that smells to high heaven, and, if fully exposed would dwarf the Hiss conviction.

With kind regards,
Sincerely yours,

HAMILTON FISH.

[From the Philadelphia Inquirer of April 14, 1950]

CUT OUT POLITICS: GET FACTS ON REDS

By adopting an obvious politics-first approach to the serious charges against the State Department made by Senator Joseph McCarthy, President Truman, and Senator Millard E. Tydings have diminished the likelihood that the public will soon learn the whole truth about this vitally important matter.

Instead of pressing vigorously for a thorough, impartial sifting of the charges, both the President and TYDINGS have chosen to treat the whole affair as a partisan game.

And instead of getting a satisfactory, thorough, let-the-chips-fall-where-they-may report on the presence or absence of Communists in the State Department, the public is liable to witness another display of election-year politics and not much more.

This newspaper has criticized Senator MCCARTHY'S failure to back up his sensational charges with evidence and his irresponsible use of smear tactics which can have a grave effect on both the revival of bipartisan foreign policy and on our prestige abroad.

But the very seriousness of the charges, and the fact, backed up by evidence in the Alger Hiss trial, that there have been Communist agents in the State Department, makes it inexcusable for the administration to fail to get to the bottom of them and let the public know what is found.

Public confidence in the State Department won't be restored by a President who, after quite properly refusing to disclose confidential files, proceeds to join in a political row with wisecracks aimed at MCCARTHY.

Nor will it be enhanced by a chairman of the committee investigating the charges who shows more interest in the possible political gain that might accrue to an investigator, than to the man's fitness to do a fair, deep digging, honest, job of getting the facts.

That appears to be the position of TYDINGS, head of the Senate subcommittee probing MCCARTHY'S charges. He at first blocked and now has withdrawn his objection to the appointment of Frederick Ayer, Jr., of Massachusetts, as a member of the investigative staff. His objection was based on the fact that Ayer is a candidate for the Republican nomination for attorney general of his home State.

Who isn't candidate, among all those connected with the probe? Senators MCMAHON and HICKENLOOPER of the committee are, and so, for that matter, is TYDINGS himself.

This was more than a slap at Senator LODGE, who nominated Ayer. LODGE'S refusal to engage in extreme partisanship, and his insistence on facts, instead of unsupported charges, have been commendable and, moreover, merit better treatment from the committee chairman. As far as the record shows, Ayer shares LODGE'S repugnance to harming innocent persons through unsubstantiated charges.

But TYDINGS should realize that the President's refusal to turn over his secret files makes it all the more important that the committee's own investigation be exhaustive, effective, and free from any suspicion of partisanship. A staff of able investigators,

drawn from both parties, is essential to such a probe.

It is encouraging that widespread criticism, coupled with LODGE's own angry blast, has led TYDINGS to change his mind about Ayer. We hope Ayer, or someone else fully qualified, takes the job and starts digging for any facts behind MCCARTHY's accusations.

It would be more encouraging if President Truman recognized the intense public interest—and public stake—in the situation in the State Department, and aided the investigation in every way possible, instead of regarding it as simply the springboard into a political free-for-all. That recalls his now discredited "red herring" approach.

Obviously there is politics on both sides in this investigation. But the public has every right to demand that politics not be permitted to go so far as to prevent a fair and factual determination of the loyalties of the men responsible for our foreign policy.

Both sides should cut down on politics in this inquiry. Get the facts on any Communists in the State Department.

Resolution of Potato Growers of Wisconsin, Inc., on Price Supports

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, April 14 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, there has been a tremendous amount of discussion on the subject of the surplus potato problem. In the course of that discussion there has, unfortunately, been a considerable amount of unjustified criticism of the potato growers—the little fellows working on small family size farms trying to cover their costs and to meet the consumer's needs for good spuds at fair prices.

Recently a survey was made among the potato growers in Wisconsin as to whether or not they want continued supports for Irish potatoes. The results showed that two-thirds of the growers oppose potato supports.

I believe that this grass-roots survey will indeed be of interest to my colleagues and to the American public. Among the many things that are clear from this survey is the fact that the Wisconsin potato farmer believes steadfastly in the free-enterprise system and that he, like other people in our population, is deeply skeptical about Government controls.

All of us are naturally interested in a sound, healthy, prosperous agriculture, but we are similarly interested in a free agriculture and a free America.

I ask unanimous consent that there be printed in the RECORD the text of a press release which I received from Mr. Cliff Hutchinson, executive secretary of Potato Growers of Wisconsin, Inc., together with the resolution adopted by that organization.

There being no objection, the release and the resolution were ordered to be printed in the RECORD, as follows:

WISCONSIN POTATO PRICE-SUPPORT STORY

Basing their action on the results of a survey recently completed among potato growers in the State, the board of directors of the Potato Growers of Wisconsin, a Statewide association of potato producers, passed unanimously a resolution demanding that the Secretary of Agriculture abandon potato price supports in any form in the State of Wisconsin for Irish potatoes.

In the survey, ballots were sent to 1,500 growers in the State asking them if they were for or against the Government program of supporting prices on potatoes and nearly two-thirds of the growers voted in opposition to the measure.

Edward Okray, of Stevens Point, president of the association, stated that Wisconsin growers were satisfied that price supports, as an incentive for production of food during the war were necessary and that they accomplished their purpose in providing an adequate supply of potatoes for the war effort. "The war is over now," Okray said, "and it's time that we farmers got back on our own feet and paid some attention to sound principles of farming such as supply and demand. We're making a great mistake in depending upon artificial programs such as price support set up by the Government at a tremendous cost to the taxpayers."

At present Wisconsin is set up in a four-State marketing agreement with North Dakota, Minnesota, and Michigan. Efforts to withdraw from this group have been made by Wisconsin farmers as far back as 1948, but to date the Department of Agriculture seems reluctant to let them go it alone. State growers want to withdraw and operate their marketing under a local board of control whereby the potatoes can be disposed of to the consumer on a free and competitive basis without any cost to the Government and at a reasonable profit to the producer. The association has hundreds of signatures of growers on petitions asking the Secretary to allow Wisconsin to withdraw. The signatures represent thousands of acres of potatoes, but the Agriculture officials say that unless the other three States vote to allow Wisconsin to get out that it can't be done.

With the big markets so close to Wisconsin potato fields, growers here find it a great disadvantage when competing with the other States. However, when a Federal regulation is issued it automatically applies to all four States and thus Wisconsin growers are often placed in a bad position.

Most State growers are now satisfied that there is no substitute for free enterprise and that if they are to continue to operate efficiently under a system of supply and demand that the Government should now step out of the potato business and let the farmer operate his own farm.

The parade of States grows longer each day in which growers are demanding that the Government allow the farmer to carry on by himself. Resolutions asking that price support be abandoned have been passed by groups in Pennsylvania, Idaho, Florida, California, Indiana, Colorado, Nebraska, and now Wisconsin has joined the list. There are rumblings in North Dakota, Minnesota, and Michigan but the latter three States have taken no definite action as yet.

The resolution passed by the Wisconsin association board will be forwarded to Secretary of Agriculture Brannan. The text follows:

"RESOLUTION PASSED MARCH 31 BY THE BOARD OF DIRECTORS OF THE POTATO GROWERS OF WISCONSIN, INC., AT STEVENS POINT

"The Potato Growers of Wisconsin, Inc., an association of potato growers in the State of Wisconsin, on this date, through its officers and board of directors, unanimously passed the following resolution: Be it

"*Resolved*, That the Potato Growers of Wisconsin, Inc., go on record as being opposed to the continuance of the price-support program in any form for Irish potatoes in the State of Wisconsin; and be it further

"*Resolved*, That we also oppose the continuance of regulation and regimentation of potato producers by marketing agreements, marketing quotas, and other governmental controls; and be it further

"*Resolved*, That this resolution be forwarded to the Secretary of Agriculture, all Wisconsin Senators and Congressmen, and to the daily newspapers in Wisconsin and the Middle West.

"This action was decided upon after establishment of the following facts:

"1. That nearly two-thirds of Wisconsin growers voted against price supports.

"2. That the past and present potato programs set up by the Government in Wisconsin tend to place the grower under complete subservience to the Government.

"3. The present Government program gives an advantage to the inefficient grower and penalizes the efficient producer.

"4. The program has increased consumer resistance to potato purchases.

"5. The program has reduced Wisconsin's potato acreage to the alarmingly low figure of 33,900 acres.

"6. In nonwar periods, an artificial economy as typified by price support is a tremendous and unnecessary waste of the tax money.

"7. In spite of several years' trial of Government programs the crop surplus has increased each year to a point where the industry is in actual danger of destruction.

"8. The Government programs have encouraged abuses and violations that do not exist under a system of free enterprise.

"CLIFF HUTCHINSON,
"Executive Secretary, Potato Growers of Wisconsin, Inc."

Equality for Negroes

EXTENSION OF REMARKS
OF
HON. CLYDE R. HOEY
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Friday, April 14 (legislative day of Wednesday, March 29), 1950

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the Christian Science Monitor, of Boston, entitled "Separate but Equal," under date of April 12, 1950.

There is such a contrast between the tone and sentiments expressed in this editorial and the attitude of the Department of Justice in going out of its way to appear before the Supreme Court in an effort to upset a decision of another branch of the Government, the Interstate Commerce Commission, because of its violent difference of opinion with the tenor of that decision. The duty of the Attorney General was to support the decision of the Interstate Commerce Commission and to seek to make effective its judgment and decree.

Any fair-minded and unprejudiced person will see the force of the reasoning contained in this editorial and in the wisdom of the position taken by the Christian Science Monitor, which is in striking contrast to the political expediency course of the Department of Justice in response to the demand of pressure groups. After a while it may yet dawn upon the extreme advocates of antisegregation by compulsory statutes

that it is not even good politics, much less good patriotism.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"SEPARATE BUT EQUAL"

How can the American Negro be helped from what he terms "second class" citizenship to a status where equality of opportunity has genuine meaning? Opportunity is not equal when his available schooling is not. It is not equal when his advancement in job or profession depends less on merit than on racial attitudes. It is not equal where labyrinths of the law prevent him from casting his ballot in behalf of his own rights and interests.

That equality of opportunity is the goal, and that these are the chief obstacles, the majority of Americans, including, we believe, a majority in the South, will agree. The "how" represents the problem. And a most difficult and delicate problem it is:

How to approach the goal gradually enough so that the compulsions of legislation do not too far outrun emotional attachments to deep-rooted custom lest moderates be driven into the arms of the reactionaries, the flouting or evasion of law acquire social acceptance, and extremists of either side fan hatreds which only serve to turn back the clock.

How to press toward that goal fast enough so that those who have a vested interest in white supremacy in all its ancient and ugliest connotations cannot further intrench an old order against a changing world; fast enough, also, so that no militant fringe can exploit the Negro's understandable feelings of frustration to the point of irrational words and acts. That could bring the very explosive divisions among Americans that their enemies hope for.

The Supreme Court, in its disposal of three cases now before it, can either strengthen this delicate equilibrium or upset it. All three suits involve the now-famous doctrine of "separate but equal" facilities for whites and Negroes. Two involve education in State universities (Oklahoma and Texas); the third, the seating of a Negro Government official in a dining car while traveling through a Jim Crow State.

The pertinent precedents go back to 1896, when the High Court ruled that if the facilities provided were equal, the fact that they were separate did not violate the Constitution. This view was reaffirmed in a District of Columbia school case just 2 months ago. But it is contended in the three pending cases that segregation in practice makes equality impossible, and that segregation per se does violate the Constitution.

No one could establish, to be sure, that segregated facilities since the 1896 decision have been equal—far from it. But of late years lower courts have been insisting that facilities must be reasonably equal if they are to remain separate.

The effect of this has been encouraging. And the movement for regional universities and professional schools for Negroes gives hope that equality in education at the level where it is most difficult to achieve is a practical possibility.

We subscribe to no ideological or theological rationalization of segregation (some have been advanced in connection with cases now before the Supreme Court). We are concerned only that Americans may find the soundest and most workable means toward an end which needs no justification—equality of opportunity.

And it seems wise to us to leave the legal picture as it is: Permit States to maintain separate facilities if they are equal. But require that this equality be made real.

To throw out segregation bodily within States that still desire it would run all the dangers we have listed where law presses custom too fast and hard. To demand equality as the price for separateness, on the other hand, promises steady and peaceful progress.

This is, frankly, the course of gradualism. Some are always irked by the slowness of its workings. But in a social issue so intertwined with subconscious attitudes and convictions of right and wrong it is the only course which can build without destroying.

Socialism in Great Britain

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, April 14 (legislative day of Wednesday, March 29), 1950

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article relating to socialism in Great Britain, written by George Weller, and published in the Washington Evening Star of last night.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRITONS TELL US TO STOP GIBES AT SOCIALISM AND LOOK AT UNITED STATES ECONOMY

(By George Weller)

LONDON, April 13.—Britons wish Americans would stop scolding them about socialism and take a look at their own economy. If they did so, the British think, Americans would discover that the economic systems of the two nations are getting more alike daily.

Americans, without admitting it, are getting more socialist and the British are getting more capitalist.

Americans criticize the British for socialist measures like food subsidy. The British report: "Certainly we subsidize food prices, because we must to buy food abroad. But food subsidy in Britain is aimed to lower food costs, not increase them. Now you Americans subsidize dried milk, potatoes, peanuts, eggs, and fats. But you subsidize to keep prices high, and take an extra cut out of the consumer-taxpayer.

"Who has the more tyrannical form of state interference: You who subsidize to keep the cost of living up, or we who subsidize to keep it down?"

TO KEEP BALLOON TIED DOWN

Britain, like the United States, has a boom-or-bust economy that is producing far more than before the war. The Government's struggle is to keep the balloon, inflated to bursting size with easy dollars from the Marshall plan, from breaking away.

Yet, the British attitude toward the boom is the more conservative. The Americans keep on accumulating deficits and spending more. But Britain, which Americans assail for socialist free spending, has a budget surplus of nearly $2,000,000,000—one-third a gift of the Marshall plan—and is soberly paying off its debts.

Even the theme of the open door and the land of opportunity are reversed. The British have no unemployed and London's windows are full of "help wanted" signs. The British cannot get enough hands to run the big new productive plant.

The United States, however, has nearly 4,000,000 unemployed. Yet in London today, full of French, Irish, and Scandinavian new hands, you hear more foreign accents than in New York.

LOADED WITH CAPITAL

British banks are loaded with loose investment capital. The Government won't let the owners of the money put it into new business because American aid and British gumption have already built the productive plant to swollen size.

"But before you pity us for the restraints of socialism," say the British, "have a bash at the red tape hampering new investment in your own country. We are no tighter over here than your own Federal boards on securities. And at least we don't preach about an expanding economy, while tying it down with unnecessary red tape."

The British get an ironic kick out of Marshall aid being used to pay off the British debt. "If paying off our debt pushes us toward conservativism and away from socialism," they say, "you are leading us to the right. But what about yourselves?"

DEFLATIONARY IN BRITAIN

The Marshall plan, inflationary in the United States where it adds to the national debt, is deflationary in Britain where it reduces it.

A Prophecy

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1950

Mr. REED of New York. Mr. Speaker, I have had many requests for the report of the National Debt Policy Committee, of which I was chairman. This report, which was unanimously approved by the Republican conference of the House of Representatives on Tuesday, May 16, 1939, accurately prophesied where this excessive spending program of the New Deal administration—Fair Deal and Raw Deal—would land this country.

Under unanimous consent heretofore granted, I am inserting the report of the National Debt Policy Committee:

During the 6 years of the New Deal, the public debt of the United States has more than doubled. The revenue of the Federal Government increased from $3,115,554,000 in 1934 to an estimated $5,669,000,000 in 1939. During the same period, expenditures of the Federal Government increased from $7,105,050,000 in 1934 to an estimated $8,995,000,000 in 1939. The annual deficits have resulted in a total deficit of $20,889,000,000 during the 6 years and a corresponding increase in the public debt. It is, therefore, not surprising that the per capita public debt of the United States has more than doubled during the course of 8 years, increasing from $131 in 1931 to $305 in 1939.

Despite this tremendous increase in the public debt, each year a larger and larger proportion of the total national income is being devoted to paying the cost of Government. In 1913 only 6.4 percent of the total national income went for Federal, State, and local taxes. In 1930, 14.2 percent went for the payment of such taxes, and in 1938, 23.6 percent of the total income of the American people was turned over to tax collectors. The share of the national income taken by the Federal Government has been increasing more rapidly than the share taken by the States and their political subdivisions. In 1913 only 1.9 percent of the total national income went for Federal taxes. In 1930, 4.8 percent was devoted to the payment of Federal taxes, and by 1938 it had increased to 10.9 percent. State and local taxes in 1913

took 4.5 percent of the total national income, 9.5 percent in 1930, and 12.7 percent in 1938.

The increase of the Federal public debt from $20,937,000,000 on March 4, 1933, to approximately $41,000,000,000 as of June 30, 1939, does not reveal the total increase of the Federal debt. A number of Government-owned corporations have the capacity to issue bonds that are fully guaranteed by the Federal Government both as to principal and interest. In addition to this increase in the direct public debt of the United States, the contingent liabilities of the Federal Government have increased by more than $5,416,000,000. When the New Deal commenced, there were no contingent liabilities of the Federal Government in the hands of the public. As of February 15, 1939, the total contingent liabilities of the Federal Government guaranteed by it both as to principal and interest and in the hands of the public were as follows:

	Outstanding Feb. 15, 1939
Reconstruction Finance Corporation	$819,100,000
Commodity Credit Corporation	206,200,000
Federal Farm Mortgage Corporation	1,387,800,000
Federal Housing Administration	1,700,000
Home Owners' Loan Corporation	2,887,600,000
U. S. Housing Authority	114,150,000
Total	5,416,600,000

Thus, by June 30, 1939, the total debt of the United States, including these contingent liabilities, will be in excess of $46,000,000,000.

The present debt limit of the United States (not including contingent liabilities) was set by Congress in 1935 at $45,000,000,000. Of this amount, not more than $30,000,000,000 can be in bonds, and the remainder must be in short-term notes and certificates. The bill now before the House of Representatives would permit the entire $45,000,000,000 of the direct public debt of the United States to be in the form of long-term bonds. Before this statutory limitation is reached another $4,000,000,000 of direct indebtedness can be incurred after June 30, 1939.

It should also be remembered that a number of Government-owned corporations can, under existing authorization from Congress, issue additional bonds that will be fully guaranteed both as to principal and interest by the Federal Government, and that these bonds are not included in the above debt limitation. Inasmuch as a number of these Government corporations are not subject to audit by the General Accounting Office in the case of their nonadministrative expenditures, it is always possible that some of the money raised through the issuance of bonds by them could be used for purposes not contemplated by Congress. These corporations have the power, as yet unexercised, to issue more than $9,483,000,000 of such guaranteed obligations. Such authorizations and the unused balances are as follows:

	Total authorized	Authorized but unissued
Reconstruction Finance Corporation	$3,750,000,000	$2,930,400,000
Commodities Credit Corporation	500,000,000	293,800,000
Federal Farm Mortgage Corporation	2,000,000,000	612,200,000
Federal Housing Administration	3,000,000,000	2,998,300,000
Home Owners' Loan Corporation	4,750,000,000	1,862,400,000
U. S. Housing Authority	800,000,000	685,850,000
Tennessee Valley Authority	100,000,000	100,000,000
Total	14,900,000,000	9,483,400,000

Furthermore, in 1934 Congress set up an exchange-stabilization fund of $2,000,000,000, and the money in this fund can be expended by the President as he sees fit without audit by the General Accounting Office. The President could utilize the money in this fund to meet the current expenses of the Federal Government if Congress should not authorize an increase in the debt limit.

In addition, and with even more dangerous potentialities, the President has been vested by Congress with authority to resort to various inflationary devices whereby he can issue fiat money that can be used to meet the day-to-day expenditures of the Government if Congress should not authorize any additional increase in the debt. Under the Thomas amendment to the Agricultural Adjustment Act of May 12, 1933, the President can issue at any time $3,000,000,000 of United States notes secured only by the promise of the Federal Government to pay. It also authorized the Federal Reserve banks, at the request of the President, to purchase up to $3,000,000,000 of Treasury bills. Thus, in reality, the President can issue $6,000,000,000 of printing-press money that could be used by the Government to meet its day-to-day obligations if Congress should not increase the debt limit. If the Government should resort to the issuance of such paper money, widespread and devastating inflation would be the consequence.

Congress has vested in the President certain monetary powers relative to gold and silver which can be exercised in such a way as to result in a profit to the Government out of which the day-to-day deficits of the Government could be met. For example, if the President should exercise his power to devalue the dollar to 50 percent of its previous value or by the full amount authorized by statute, the profit on the increased gold stocks would be $2,762,000,000 in addition to the profit already realized in 1934.

Relative to silver the President is given the power to monetize our present silver stocks at $1.29 an ounce. If this should be done on our present holdings of over two and one-half billion ounces, the profits over the purchase price would be $1,612,000,000. Of course the President can also devalue the silver dollar to the same extent that he devalues the gold dollar. If he should devalue silver to 59 percent and then monetize it, a profit of $2,394,000,000 would result. The Silver Purchase Act of June 19, 1934, directs the President to purchase silver, both domestic and foreign, until the silver stocks shall equal one-fourth of the total monetary value of both the silver and gold stock of the country. If we should ever completely comply with this law, our total silver stock would amount to three and three-fourth billion ounces. Then, if the silver dollar were devalued to 50 percent of its present value and the entire silver stock thus acquired were monetized at $2.58 an ounce, this would result in an issuance of $9,600,000,000 of silver certificates which would be a clear profit to the Treasury at the ultimate expense of the people. Thus it appears that out of silver the Government can make a profit varying from $1,612,000,000 to $9,600,000,000, depending upon the circumstances and the extent of devaluation, and there is no question that the inflationary effects of this would be ruinous.

In summary, through direct inflationary means, the President has the following potential sources of funds which could be used to meet current expenditures of the Government: (1) $3,000,000,000 of greenbacks; (2) $3,000,000,000 of Treasury bills secured only by Government bonds; (3) a profit of $2,762,000,000 that could result from the further devaluation of the gold dollar; and (4) a profit of not less than $1,612,000,000 that could result from the monetization of the present silver stocks of the Government without devaluation.

II

The public-debt problem outlined above has resulted from varied New Deal attempts to promote a quick recovery by spending billions of borrowed money. In fact, spending, whether it is known as priming the pump, compensatory spending, or investment for the future, has been the center of New Deal thought and action ever since June 16, 1933. On that date the President approved the National Industrial Recovery Act, title II of which provided for the appropriation of $3,300,000,000 for a pump-priming program.

While this was the beginning of the world's greatest spending spree, the date has additional significance. It was also the date on which President Roosevelt repudiated his party's campaign pledge to accomplish a saving of not less than 25 percent in the cost of Federal Government and the date on which he washed his hands of his own solemn pledge and promise to stop the deficits and to force a stern and unremitting administration policy of living within our income.

Why he changed his views no one knows, but this much is certain: When President Roosevelt believed in a balanced budget he had faith in the future of American enterprise, but when he became a spender, he accepted the collectivist attitude that our economic system could no longer expand along former lines, and that unemployment and relief were permanent problems. To this he added the belief that future progress would come only through governmental action.

We have now had 6 years' experience with the New Deal pump-priming or spending theory. We believe that this is sufficient time to test any theory, especially a theory the validity of which has always been questioned, and which, if invalid, can result in economic disaster. As a result of a careful and thorough study of all factors, we reach the conclusion that a spending program, as such, has no place in a well-grounded and general recovery plan. Our condemnation is complete and emphatic.

The best proof that spending has failed to promote recovery is the fact that eleven to twelve million unemployed American workers are looking for jobs. In the face of this alone it is folly to contend that spending has worked, for in the words of the President, "to put people back to work" was the one purpose of the first spending bill as well as every bill that has since been passed.

It is equally evident that the stimulation of consumption-goods spending has not led to a revival of capital-goods spending. While there is no doubt that some stimulation of capital expenditures may be accomplished in this way, whatever amount has occurred has not been sufficient to promote a sustained recovery. Statistics contained in a study published recently by the National Bureau of Economic Research indicate that while total expenditures for durable goods and for private construction dropped from about $14,500,000,000 in 1929 to $3,300,000,000 in 1933, that they increased to only $6,000,000,000 by 1935, after 2 years of heavy spending. The figures in this study only go through 1935, but if one allows for a further increase of capital-goods spending from 1936 to 1938, it is clear that the total still remains far short of the amount spent before the depression.

In this connection it must be remembered that consumer spending has not always provided the original impetus for great periods of industrial expansion. For example, the railroads, automobiles, the telegraph and telephone, motion pictures, and radio, among countless other new products and facilities, were not the result of current spending. They happened because, as one economist has stated, "bold and enterprising men have had faith that future spending could be stimulated and that profits could be derived from such expansion."

The New Deal administration claims that the depression beginning in 1937 resulted from a curtailment in public spending, and that the soundness of the spending theory was thus proven.

The contrary is the fact. There is no better proof than the depression which began in 1937 that the spending theory is unsound because after 3½ years of spending the only result was a lopsided recovery. It was dependent on consumption-goods buying and lacked the support of capital-goods buying, without which a full and sustained recovery cannot be achieved.

Our examination reveals weaknesses in the theory itself as well as practical reasons explaining the failure of spending to produce the desired results. An analysis of the 6 years' experience reveals one bold, stark fact—that it is impossible to put men to work on Public Works jobs with sufficient speed to maximize the effectiveness of a given amount of expenditure. Another administrative difficulty involves the determination of when to spend. Since the spending theory assumes that public spending will be increased when private spending falls off, it is necessary to know accurately whether any given decline in private spending is temporary or whether the decline is to be prolonged and pronounced. It is questionable whether the art of economic forecasting has reached this highly developed stage. Furthermore, just as the spending theory involves the determination of when to spend, equally important is the determination of when to stop. Public spending, according to the theory, should be reduced when private spending is resumed. Work on large construction projects, however, cannot be stopped at will.

In addition to the above there are economic reasons why the theory failed. To a great extent these are psychological, but real, nonetheless. When the Federal Government set out to spend it fostered the rise of pressure groups, which in time have become imbued with the single objective of obtaining more and more aid. The claims of one group, if satisfied, are incitements for the claims of other groups.

As a result Federal expenditures have increased year after year; and since tax revenues failed to make up for the ever-increasing expenditures, the Budget has remained continually out of balance. Continuing deficits have made businessmen and others, especially those with funds to invest, distrustful of the future. As private spenders became fearful of the future they refused to invest, and the effectiveness of additional public spending was thereby reduced.

There were other so-called "depressents" to a resumption in public or business spending. As spending and the deficits increased, the attempt was made to lessen the size of the deficits by increasing revenues from taxation. As businessmen and others felt the increased burden of those taxes, their attention was fixed not only upon the present burden but also upon the ultimate burden of taxation as well. No one can view this situation with anything short of alarm, for business stagnates in an atmosphere of uncertainty and governmental competition and oppression.

Equally important but more difficult to overlook is the fact that other New Deal activities reduced any positive results that might have flower from spending as such. While the plan assumed that capital expansion would follow, other New Deal policies and acts have prevented this from occuring. For example, the New Deal enacted many tax measures which took money out of the worker's pocket and thus decreased his power to buy, even though the objective in the first instance was to increase consumer purchasing power. For these and other reasons we find it difficult to appraise the spending program apart from New Deal policy as a whole. We stress this fact in our report to you.

III

So far we have discussed the program only from the standpoint of how it worked and why, and have left until last our discussion of the long-term effects that will inevitably follow if we continue to spend more than we collect in taxes. We approach this particular phase with a deep sense of its seriousness, for we believe that the future of the Nation depends upon a clear understanding of these vital facts by every man and woman in this country.

We refer here to the threat of inflation. The administration earnestly professes to promote the welfare of all, but at the same time adopts a program which has always, without fail, led to enslavement and to moral and financial bankruptcy. Our study convinces us that there is no essential difference in our current financial situation and that which finally led to run-away inflation in postwar Europe. Inflation in every instance that we have examined has been the result of a government spending more than it collected in taxes, and this is true whether the inflation was generated by a currency or credit expansion.

Inherent in the very nature of inflation is its irresistible tendency to burst the bounds of all control through public panic.

We are further convinced that there are no greater hardships to be suffered by a people than those induced by such inflation. If we continue following the line of least resistance, we shall reach the limit of our credit. When this happens, all will fall before us. Savings, big and little, will lose most of their value. Insurance companies and banks will go to the wall. The endowments of our charitable, fraternal, social, religious, and educational institutions, endowments which have taken years to create, will be reduced to a mere pittance. The increase in the cost of living will put even the essentials of life—adequate food, clothing, and shelter—beyond the reach of a majority of the population. Even those yet unborn will pay the price for our folly.

No person or group of persons will escape. Wage earners will see the purchasing power of their pay envelopes shrink as inflation brings a ruinous rise in prices. As a result, the worker's standard of living will be reduced to the barest subsistence level. Salary workers will be hit even more quickly, for salaries are relatively fixed and adjustments are not made as rapidly. Those who live on pensions, annuities, or interest from lifetime savings will meet a like fate. Farmers will suffer even more than other groups, for though they might seem to gain temporarily while prices are moving up, this in the end will be an illusive gain. Recall that the source of present farm problems lies in war inflation. Should we embark upon a similar inflation, the farmer can look forward to only more of the same troubles he has been fighting for 20 years.

Furthermore it is doubtful if our system of free government and free private enterprise could withstand this shock. In this respect we call your attention to the fact that dictators now rule the peoples in Europe where government spending and inflation first ran their course. As President Roosevelt recognized in his economy message to Congress in March 1933, "Too often in recent history liberal governments have been wrecked on the rocks of loose fiscal policy." The profound truth is that a government cannot endure if through unsound financial policies and legislation it brings the nation to economic ruin. Such a condition produces all too often a man or group of men to whom the people in their despair may be persuaded to turn on the promise that economic security will be provided in exchange for their liberties.

Our present financial situation is serious. No one knows what the limit of Government credit is or when this limit will be reached. There is no exact figure for the limit depends upon circumstances and varies with conditions. Ultimately Government credit rests solely on the confidence of lenders in the taxing power and policies of the Government. There is no way to measure public confidence.

While the New Deal has been able to finance its spending at low-interest rates and without apparent difficulties to date such excessively low-interest rates are not a sign of financial stability but the sign of economic ill health.

Furthermore, the New Deal deficits have been covered principally by borrowing in the financial markets, by the process of selling bonds and short-term Treasury obligations to the banks. The process of financing deficits by the creation of new deposit credits is potentially inflationary. The fact that this process has not resulted in actual inflation is no guaranty that it will not, or that it can be controlled once it comes. Regardless of this, the New Deal has created approximately $9,000,000,000 of credit for the purchase of Government obligations and the financing of its deficits. The very fact that the banks have absorbed so large a proportion of the increased public debt has put them on a treadmill, for they must continue buying to support the market, and the more they buy the more vulnerable they become.

Also of vital importance is the question of financial preparedness, in event of emergency. The spending plan assumes that public indebtedness will be reduced during the period of prosperity that follows spending, but what happens if prosperity does not follow? In that event, or if a sufficient period of prosperity does not ensue during which the debt can be appreciably reduced, we will enter the next emergency, perhaps war, with the odds heavily against us. Wars are costly, and should we enter a great war with an impaired credit, there would be the threat of inflation to contend with from the very start. Thus a sound fiscal policy is necessary for an adequate national defense.

Unless spending is reduced our only hope is that national income will increase so that taxes will provide sufficient income with which to balance the budget. But this in itself is an utterly futile hope because under the New Deal we are relying upon spending to produce an increase in national income and spending has not worked that way, nor will it; it served only to make matters worse. It is for this reason that the monetary powers discussed earlier assume great importance, for as, if, and when it becomes impossible to force more Government securities into the banking system, currency inflation will follow. Thus, it becomes evident that sound policy involves not only a balanced budget but revocation of the monetary powers of the President.

IV

If we are to prevent the disastrous conditions that may develop as a consequence of spending more than we collect in taxes, it is imperative that Congress adopt a well-rounded program of Government action along the lines set forth below. A piecemeal program will not solve the problem. To have a maximum effect on the national welfare, all the elements herein suggested must be adopted. Above all the budget must be balanced.

(1) To accomplish this, Congress and the Government must adopt every possible means to increase the real national income. If the real income of the Nation increases, Government revenue will also increase and at the same time the alleged need for Government spending will disappear. The hindrances to production resulting from Government regulation, burdensome taxation and fear for the future have all contributed to hindering the increase in the real income of the American people.

A recent publication of the Brookings Institution has observed:

"The vital problem is to secure a great increase in national production and income. The central issue, with respect to public finance, is whether such an expansion of production can best be stimulated by extravagant Federal expenditures, increasing deficits, and heavier taxes, or by some modifications of taxes and a reduction of Federal expenditures—within the limits set by essential requirements. * * *

"Unless we can promptly secure a substantial increase in the national income it will be necessary to conclude that the United States has already reached the danger point in the growth of public indebtedness." (Taxation and Capital Investment, pp. 19 and 21.)

Real recovery in the United States will solve the problem of the public debt, but real recovery in practically every way depends upon sound Government policies.

(2) In addition, it is highly desirable that a thoroughgoing and intensive study of how the national budget can be balanced should be undertaken immediately. The budget cannot be balanced by a mere pruning of expenditures here and there. To accomplish real reductions in Government expenditures it is necessary to evaluate the functions now being performed by the Federal Government and to determine how those functions which are desirable can be most advantageously performed at the most reasonable cost. Some present functions could probably be eliminated, and other functions could be performed in a much less expensive manner.

(3) As previously pointed out, the President has been vested by Congress with the power through various inflationary devices to secure added funds to meet with the ordinary expenditures of the Government without incurring additional debt. The results of the use of such inflationary devices would be disastrous to the national well-being.

Lump-sum debt limit increases are as vicious in principle as lump-sum appropriations and blank checks.

Lump-sum debt increases offer the temptation to a gigantic political bureaucracy to spend up to the limit and ask for more.

Submitted unanimously by the Republican Conference Committee on National Debt Policy.

Austin, Connecticut, Albert L. Vreeland, New Jersey, L. L. Marshall, Ohio, Frank O. Horton, Wyoming, Charles Haws, Jr., Wisconsin.

The So-Called Equal Rights Amendment

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. MICHENER. Mr. Speaker, the so-called equal-rights amendment is now pending before the Congress. I think all organized labor, the League of Women Voters, and numerous other organizations are bitterly opposed. The National Woman's Party and a number of other organizations favor this constitutional amendment.

It is conceded if the amendment were adopted, many State laws would necessarily be changed. I am in receipt of a statement from the Women's Bureau of the United States Department of Labor concerning the laws of my State of Michigan, which is informative and pertinent to this issue. Pursuant to the permission granted by the House, I am including that statement, which is as follows:

STATE LAWS OF SPECIAL VALUE TO WOMEN

MICHIGAN

I. For wives and mothers

The primary duty of the husband to support his family (common law).

Admission of the wife's testimony without consent of the husband in desertion and nonsupport cases (sec. 17115–166).

Wife's freedom in disposing of her property by will without regard to provision for her husband (constitution, article XVI, sec. 8, Comp. Laws, secs. 13057, 13478).

Legal age of consent to marriage lower for females (secs. 12690, 12704, 12717).

Protects wife's dower (or its substitute) when the husband conveys his lands by his sole deed or mortgage, without providing a similar protection to the husband as to his wife's property (sec. 13072).

II. For widows

One year's residence, rent free, in husband's home; also 1 year's support from the estate, and an allowance up to $200 value in house furnishings and personal property (secs. 13090, 15726; 1939 Laws, act 288).

Right to select, according to the resulting best advantage to her, (1) the provision for her by the husband's will, (2) her legal share of his estate, or (3) her dower (if she is entitled to dower) (1935 Supp., sec. 13085).

Inheritance advantage in cases provided for by statute (sec. 15726).

III. For workingwomen

Hours of work: 9 a day, 54 a week (sec. 8324; department of labor and industry, regulations affecting employment of females and minors).

Meal and rest period. (The granting of definite rest periods of 15 minutes' duration, morning and afternoon or on swing shifts, etc., is a recommendation of the State labor department.)

Lifting or carrying. (The department of labor and industry, regulations on employment of women.)

Equal pay (Public Acts, 1931, act 328, sec. 556, reenacting act 239 of Public Acts of 1919).

Industrial home work (sec. 8337).

A Bill To Reduce the Debt Limit

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1950

Mr. REED of New York. Mr. Speaker, the time has come when drastic action will have to be taken by the Congress if this country is to avert the worst calamity it has ever faced during its entire history up to this time. The wild, reckless, and insane spending of the people's money, resulting in crushing taxation, must be stopped.

To this end I am inserting, under leave heretofore granted, a release as follows:

Following is a joint statement by seven Republican members of the House Ways and Means Committee—Representative DANIEL A. REED, New York; Representative ROY O. WOODRUFF, Michigan; Representative THOMAS A. JENKINS, Ohio; Representative RICHARD M. SIMPSON, Pennsylvania; Representative ROBERT W. KEAN, New Jersey; Representative THOMAS E. MARTIN, Iowa; Representative CARL T. CURTIS, Nebraska:

We have come to the conclusion that the surest way to force the Truman administration to come to its senses financially is to lower the limit on the national debt. When the House meets next week, we will introduce bills to reduce the debt limit from the present $275,000,000,000 to 257,000,000,000. On March 31, 1950, the debt was $255,622,574,315.

The Truman administration has embarked on a nonstop spending spree that can end only in disaster unless it is checked. Between March 31, 1949, and March 31, 1950, the Federal debt rose by $4,048,041,374. For the year July 1, 1950, to June 30, 1951, President Truman submitted a budget that would push up the debt by an additional $5,133,000,000.

Already the debt is equal to $6,768 for every family of four persons in the country. The interest alone comes to $152 a year for every family, and this interest is paid only out of the taxpayers' sweat.

President Truman has not demonstrated that he has even the slightest intention of ever putting the Government's house in order. He prefers the easy alternative of spend-and-borrow, hoping that he will be safely out of the White House before bankruptcy strikes. His lieutenants in Congress have shown the same unwillingness to face the cold facts of life and they have gone along with his spend-and-borrow policy.

Where there should be strong leadership on the part of the administration, there is a vacuum. Therefore, Republican Members of Congress have a responsibility to step in and force some sanity on the administration. A reduction in the debt limit would be a step in that direction.

If the measure is adopted, the Treasury will still have a margin of almost $1,500,000,000 in borrowing power to take care of unforeseen emergencies. At the same time the Government will finally be placed on a pay-as-you-go basis.

Rights of Government Employees Transferred Under Reorganization Plan No. 18 of 1950

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 4, 1950

Mr. HOLIFIELD. Mr. Speaker, Members of the House have received numerous inquiries about Reorganization Plan No. 18 of 1950, and have heard objections by employees in the custodial services of the Post Office Department that loss in pay or accrued leave rights would result from a possible transfer of such employees to the General Services Administration.

The House Committee on Expenditures in the Executive Departments, upon the call of our distinguished chairman, the gentleman from Illinois [Mr. DAWSON], held a conference in executive session on March 27, 1950, with representatives of the Government agencies primarily affected by Reorganization Plan No. 18. In a public release of the

same date our chairman listed those persons participating in the conference and summarized its achievement as follows:

It was developed during the executive session that arrangements within the executive branch are being made to safeguard the interests of the employees affected by this transfer of personnel. Assurances were made in the testimony by representatives of the Bureau of the Budget, Post Office Department, and the General Services Administration that, under proposed arrangements, transferred employees would not be reduced in salary, would receive lump-sum payments for accumulated annual leave. It was further developed that, in the case of postal employees so affected, by virtue of this transfer to the General Services Administration, they would be eligible for the more liberal annual and sick leave allowances now provided under the Classification Act of 1949 for civil service employees.

Notwithstanding this explanation, resolutions—House Resolution 539 and House Resolution 541—proposing a rejection of Reorganization Plan No. 18 were introduced on April 5. Of course, the committee will give due consideration to these resolutions and make a report to the House. In the meantime I believe it will be helpful to the Members to have a detailed summary of this problem and of the action taken following the conference held by our committee.

SALARY STATUS UPON TRANSFER

The present salaries received by all employees transferred under Reorganization Plan No. 18 will be protected.

Under the Classification Act of 1949 the Civil Service Commission is authorized to determine what pay adjustments shall be made for employees coming within the classified system for the first time by transfer. Accordingly, on Saturday, April 1, 1950, the Civil Service Commission published in the Federal Register a regulation—reproduced at the conclusion of these remarks—which insures that present salaries will be protected for all employees transferred under Reorganization Plan No. 18.

A perusal of this regulation indicates that in two kinds of cases, transferred employees might actually receive higher pay: (a) if their basic compensation was less than the minimum scheduled rate of the grade in which they are placed; (b) if their basic compensation fell within the salary range of the grade in which they are placed, but not at one of the rates prescribed therein. Upon transfer, those under the minimum would receive the minimum rate; those within the salary range of a given grade but not getting a prescribed rate would receive the next higher rate.

There will be also some employees whose maximum rate for a given grade under the postal-pay system is somewhat higher than that payable under the Classification Act of 1949. Although they will retain their rates upon transfer, for such employees the long-term salary ceiling will be limited to a lower rate in the General Services Administration.

ANNUAL SALARY INCREASES

Under the postal-pay acts all employees are entitled to an annual raise of $100 provided their service has been satisfactory during the preceding year. Under the Classification Act, however, the amount of the annual salary increases varies from $60 to $125 on an annual basis, depending on the grade. Under the Classification Act, in the higher grades, the employees receive a $200 or more salary increase every 18 months. There is no comparable provision in the postal pay system. This will mean that in some cases employees transferred will receive smaller annual increases. In other cases they will receive larger annual increases than are possible under the postal-pay schedule.

ANNUAL LEAVE

All employees of the postal field service receive 15 days annual leave a year. Upon transfer to General Services Administration they will receive annual leave at the rate of 26 days a year, which may be accumulated up to 60 days. All annual leave that postal employees have to their credit on the date of any transfers made to the General Services Administration will be paid for in cash by the Post Office Department. This will be done in accordance with section 3 of Public Law 525 of the Seventy-eighth Congress, which section reads as follows:

SEC. 3. That all accumulated and current accrued leave be liquidated by a lump-sum payment to any civilian officer or employee of the Federal Government or the Government of the District of Columbia in cases involving transfer to agencies under different leave systems. Such lump-sum payment shall equal the compensation that such employee would have received had he not been transferred until the expiration of the period of such leave: *Provided*, That the lump-sum payment herein authorized shall not be regarded, except for purposes of taxation, as salary or compensation and shall not be subject to retirement reductions.

SICK LEAVE

Employees of the postal field service receive 10 days sick leave a year with no limit on accumulation. They will receive sick leave, upon transfer to General Services Administration, at the rate of 15 days a year, which may be accumulated up to 90 days. Not to exceed 90 days of accumulated sick leave will be transferred from the Post Office Department to the General Services Administration under the authority of a regulation of the Civil Service Commission published in the Federal Register on Wednesday, April 5, 1950. This regulation is reproduced at the conclusion of these remarks.

Mr. Speaker, I have endeavored to set forth the available facts which bear upon the status of employees to be transferred under Reorganization Plan No. 18. A representative from the General Services Administration has told the committee that the GSA is anxious to have the rights of transferred employees fully protected, because of that agency's interest in maintaining an efficient and satisfied work force. I believe that the arrangements which have been worked out for the protection of these rights of transferred employees are reasonable and equitable, considering all the factors involved.

PURPOSE OF REORGANIZATION PLAN NO. 18

Reorganization Plan No. 18 conforms to a recommendation of the Hoover Commission in its report, Office of General Services: Supply Activities—pages 10–11—that the operation and maintenance of public buildings, including allotment of space, be centralized in the one administrative agency concerned with general services and supply activities. By Public Law 152 of the past session, this agency was created and titled the General Services Administration. At the present time its responsibility with respect to public buildings management is largely confined to the District of Columbia. Reorganization Plan No. 18 would broaden this responsibility, in keeping with the principles laid down in this law, by including the administration of Government office buildings in the field. The President stated in his accompanying message—House Document No. 523, Eighty-first Congress, second session:

The transfers made by this plan will promote more economical leasing, better utilization of building space, and more efficient operation of Government-controlled office buildings.

In bringing together under one responsible head the functions relating to the acquisition and control of building space, now divided in the field among a number of agencies, Reorganization Plan No. 18 specifically excludes buildings at military and defense installations and space in hospitals, laboratories, factories, and other special-purpose buildings. Also, the present leasing authority of the Post Office Department is left untouched, as well as its space assignment authority in portions of post-office buildings occupied by the Department. These exceptions accord generally with the provisos in the report of the Hoover Commission.

Because the Members are interested in the relationship between Reorganization Plan No. 18 and the Post Office Department, it is well to set forth the pertinent part of the President's accompanying message:

Also, the plan excludes the Post Office Department from the transfer of leasing authority since the Department has a highly developed organization for this purpose, and it limits the transfer of space assignment authority in post-office buildings to the space not occupied by the Department. Further, it gives the needs of the Post Office Department priority in the assignment of space in post-office buildings. Thus, the plan amply safeguards the interests of the Post Office Department while making it possible to include the general office space in post-office buildings in any given city with other similar space under Federal control in planning and executing an efficient program for housing Government agencies in that area.

The Post Office Department operates 3,300 buildings, most of which are devoted exclusively to postal purposes. Buildings so used would not be affected by the reorganization plan. In the larger cities about 250 buildings are so-called multiple-use buildings, with a relatively small percentage of space used for postal purposes. These buildings, according to Mr. Burke, employ a custodial force of approximately 10,000 persons, about half the total custodial work force employed by the Post Office Department. Although no definite allocations of buildings and personnel to be transferred have been made as yet, these 250 multiple-use buildings with their 10,000 custodial employees represent, in Mr. Burke's opinion, the maximum possible transfer under the reorganization plan.

It will be necessary to make careful studies, building by building, to determine exactly which ones are to be finally transferred. The Budget Bureau representative, Mr. Joseph E. Winslow, who acts as personnel adviser to the Bureau, estimated that possibly between 2,000 and 4,000 employees would be transferred under Reorganization Plan No. 18.

The Deputy Postmaster General, in emphasizing his approval of the reorganization plan, pointed out that it would relieve the Post Office Department from operating and maintenance outlays for buildings not primarily utilized for post-office work, thus affording a more accurate picture of Post Office Department operating expenses.

The plan would also provide a central clearinghouse for space in large cities, putting an end to the divided function and divided responsibility between the Post Office Department and the General Services Administration.

At this point I will include the texts of the Civil Service Commission regulations, printed in the Federal Register, to which reference is made in these remarks:

PART 25. FEDERAL EMPLOYEES PAY REGULATIONS

SUBPART B—GENERAL COMPENSATION RULES

1. Effective 30 days after publication in the Federal Register, section 25.103 of this subpart is amended by the addition of paragraph (d) as set out below.

"Section 25.103. General provisions:

* * * * *

"(d) Where an employee occupies a position not subject to the Classification Act, and the employee together with his position is initially brought under the Classification Act of 1949 pursuant to the Reorganization Act of 1949 or other legislation, an Executive order of the President, or decision of the Civil Service Commission under section 203 of the Classification Act of 1949, the provisions of section 25.104 (b) (1) to (5), inclusive, shall apply in determining the employee's initial rate of basic compensation. This provision shall apply only so long as the employee continues to occupy the same position.

"(1) The rate of basic compensation of a subsequent appointee to such position shall be fixed in accordance with the other applicable provisions in this subpart."

2. Section 25.104 of this subpart is amended by deleting "802" from the first sentence of paragraph (b). This change is retroactively effective as of the first day of the first pay period following enactment of the Classification Act of 1949. As amended, paragraph (b) reads as follows:

"Section 25.104. Special provisions:

* * * * *

"(b) Under the authority of sections 1101 and 1105 (b) of the Classification Act of 1949, establishment of initial salary rates of basic compensation for employees who on an effective date specified by the Commission under section 1105 (b) of the Classification Act of 1949 occupy positions under that act which immediately prior to October 28, 1949, were exempt from the Classification Act of 1923, as amended (including positions in grade 9 of the professional and scientific service or in grade 16 of the clerical, administrative, and fiscal service referred to in section 13 of such act), shall be as follows:

"(1) If the employee is receiving a rate of basic compensation less than the minimum scheduled rate of the grade in which his position is placed, his compensation shall be increased to the minimum rate.

"(2) If the employee is receiving a rate of basic compensation within the range of salary prescribed for the grade in which his position is placed, at one of the rates fixed therein, no change shall be made in his existing rate.

"(3) If the employee is receiving a rate of basic compensation within the range of salary prescribed for the grade in which his position is placed, but not at one of the rates fixed therein, his compensation shall be increased to the next higher rate.

"(4) If the employee is receiving a rate of basic compensation in excess of the maximum scheduled rate for the grade in which his position is initially placed, no change shall be made in his existing rate.

"(5) After salary rates have been initially established, an employee may subsequently receive an increase in compensation by reason of the operation of titles V and VII, section 802 (b) of title VIII or title X. An employee whose salary was initially established under the foregoing provisions in a position which is later changed to a lower grade without material change of duties and responsibilities, shall be paid at the rate he received immediately prior to the date his position became subject to the act, or at a higher rate authorized by the provisions of section 25.103.

"(6) The rate of basic compensation of a subsequent appointee to such position shall be fixed in accordance with the other applicable provisions in this subpart." (Sec. 1101, Public Law 429, 81st Cong.)

UNITED STATES CIVIL SERVICE COMMISSION,
[SEAL] HARRY B. MITCHELL,
Chairman.

[F. R. Doc. 50-2730; filed, March 31, 1950; 8:56 a. m.]

PART 30. ANNUAL AND SICK LEAVE REGULATIONS

TRANSFER FROM POSITION NOT WITHIN PURVIEW OF LEAVE ACTS TO POSITION WITHIN PURVIEW OF LEAVE ACTS

Effective 30 days after publication in the Federal Register, section 30.410 is amended by the addition of paragraph (d) as follows:

"Section 30.410. Transfer from position not within purview of leave acts to position within purview of leave acts:

* * * * *

"(d) Whenever any employee in the postal service or in any other agency or position whose sick leave is not governed by the regulations in this part is transferred to any agency or position which is subject to the regulations in this part and the transfer of such employee is an incident to a transfer of function made by or under authority of law, there shall be transferred with the employee the accumulated and current accrued sick leave standing to the credit of such employee at the time of transfer. The amount of any sick leave so transferred shall not exceed 90 days." (Sec. 7, 49 Stat. 1162; 5 U. S. C. 30e. E. O. 9414, Jan. 13, 1944, 9 F. R. 623, 3 CFR, 1944 Supp.)

UNITED STATES CIVIL SERVICE COMMISSION,
[SEAL] HARRY B. MITCHELL, *Chairman.*

[F. R. Doc. 50-2820; filed, Apr. 4, 1950; 8:52 a. m.]

Address by Hon. Edward Martin, of Pennsylvania, at Lafayette College, Easton, Pa.

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, April 17 (legislative day of Wednesday, March 29), 1950

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the Senator from Pennsylvania [Mr. MARTIN] before a student convocation at Lafayette College, Easton, Pa., on April 14, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman and my fellow Americans, it is always a pleasure to visit one of Pennsylvania's great centers of higher education.

This is particularly true of Lafayette College because here, for a century and a quarter, patriotic Americans have upheld the sacred ideals of freedom.

A great procession of young men has gone forth from its halls, imbued with the spirit of a free school, a free church, and of a Nation which recognizes freedom of the individual as a blessing bestowed by God.

It is also a pleasure to come to Lafayette because your president is a devoted Christian, an outstanding scholar, and a courageous patriot. Pennsylvania is proud of Dr. Ralph Cooper Hutchison. He has served his church, his State, and the Nation faithfully and well, as every real American should.

Here at Lafayette you are preparing to share in the unlimited opportunities that our land of freedom offers to all its sons under the American plan of government.

Equally important, or even more important, is your preparation to meet the great responsibilities of citizenship in a Republic where the people rule.

The future of the United States depends upon the spirit with which the young men and women now in our schools and colleges accept those responsibilities.

The welfare and progress of our people depends upon the moral strength and the leadership that is developed here at Lafayette and upon every other college campus in the United States.

It will be your duty to preserve and strengthen those qualities which are the foundation of American greatness.

You must take your places in the battle lines to defend and safeguard America from those, at home and abroad, who would undermine and destroy our most precious possession, freedom of the individual.

With those thoughts in mind, let us consider some American principles and some of the dangers which confront us as a nation.

First, let us take note of our individual and collective responsibilities to our country and to each other.

It can be summed up briefly as follows:

To preserve for all time the divine endowment of freedom of the individual and to hand down untarnished to future generations our rich heritage of liberty and independence.

Those words are not mere rhetoric to be spoken on occasions like this. They comprise a living precept by which every right-thinking God-fearing American should be guided in his everyday life.

They are the essence of the Declaration of Independence, the Constitution of the United States, and the Bill of Rights. Those sacred documents were conceived and drafted by men who prized liberty above life itself. They were men of deep religious conviction. They sought the truth in the teachings of the Holy Bible.

One of the great teachings of religion is "Know the truth and the truth shall make you free."

Therefore, for a moment, let us look at the real truth.

Our fathers established this powerful Nation of freedom by sweat, tears, and blood. The Republic they created has advanced, in less than 200 years, from a dense wilderness to the most powerful country in all history.

Other lands have had richer natural resources. Other nations had greater population. But through its plan of equal opportunity and the God-given freedom of the individual, the United States has produced

the highest living standard, the most advanced cultural position, and the greatest spiritual attainments of all time.

What made this unparalleled progress possible?

The answer is found in that God-given freedom of opportunity, placed in the basic law of our country, and proclaimed in our Declaration of Independence in these words:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness." That made our advancement possible.

Please note that the founding fathers, in enumerating the sacred rights of mankind, placed emphasis on the pursuit of happiness.

They did not attempt to guarantee happiness. They recognized the truth that no government since the world began has ever succeeded in giving happiness.

The founders of our Republic upheld the right of every citizen to enjoy the rewards of his initiative, hard work, sacrifice, and persistence. Our Constitution is not only a great charter of human rights but it also protects property rights. The right to possess property is one of the greatest of human rights. It creates incentive by giving the individual the benefit of his labors.

That incentive caused the pioneers of American expansion to move westward. It inspired them to found homes, schools, and churches, and to build communities where they might improve living and raise the cultural and spiritual standards.

That incentive caused men to cross mountains, rivers, and prairies to discover natural resources, which, through God-guided talent, were converted into useful things for the improvement of mankind.

This forward movement took courage, initiative and sacrifice but it finally established a country from one ocean to the other. It carved out a new civilization.

These men did not ask the Government for security. They only asked for an opportunity. They had the self-reliant spirit that comes from faith in God, faith in each other and faith in the future of the United States.

Unfortunately in recent years there has been a great change in the thinking of so many of our people. They have been misled into believing that the Government can provide security from the cradle to the grave.

They have accepted the false promise of demagogues who seek to strengthen and perpetuate their power by pretending to be the friends and benefactors of the people.

Attracted by the hope of security, the people forget the cost. They forget that it is a part of the socialistic philosophy which teaches that all powerful central government can manage the people's lives better than they can for themselves.

They forget that wherever the people looked to the Government for security individual freedom was lost.

Wherever the people abandoned initiative and self-reliance for the glamorous promise of security from the government the result has been enslavement to the government.

Without freedom there can be no security.

As early as 1755 Benjamin Franklin said, and I quote:

"They that give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety."

There is a stern lesson in Dr. Franklin's warning.

Security will not be achieved by taxing more and more of the workers' earnings.

It will not be gained by going deeper and deeper into debt or by spending ourselves into national bankruptcy.

It will not be attained through fiscal policies which deprive industry of investment capital and destroy incentive for the expansion of our productive capacity.

Real security can be created only in an atmosphere of freedom, giving encouragement to a high rate of national production.

Increased production is the result of better machinery, better living standards, better management, improved health and educational facilities, more skill among craftsmen and higher spiritual standards.

None of these things are developed where the socialistic system wipes out desire to succeed. Every socialized state has reduced the standard of living and finally made all the people poor.

The difference between individual freedom and socialism is shown by a comparison of what a week's wages will buy.

Let us compare the buying power of a Russian workingman with that of an American worker.

An American worker with his week's wages can buy 394 loaves of bread against the Russian's 32. He can buy 276 quarts of milk and the Russian can buy only 15. The American can buy 82 pounds of beef and the Russian only 8.

The time has come when Americans should wake up to the situation into which we are drifting.

We are living in a time of aggressive and confusing propaganda. Much of it emanates from men in political activity who want to be known as progressives, liberals, forward looking friends of the common man, and other names which seem to have popular appeal.

But in many cases these fine sounding titles are merely political disguises. They serve as vote-getting cloaks to cover reckless and extravagant spending schemes, and to support tricky political promises of so-called social-welfare reforms.

The free spender of other people's money is always popular, but his wasteful, spendthrift course means higher taxes, more deficit financing, and bigger debt. In the end it means national bankruptcy, the loss of individual freedom, and the slavery of the Socialist state.

Let us consider the national debt which has reached the unbelievable sum of of $256,000,000,000 and is being increased at the rate of $5,000,000,000 a year.

That huge debt is not just a bookkeeping item. It represents money that has been borrowed and spent. It must be repaid, together with interest at the rate of $5,500,000,000 a year.

The Federal debt today is $1,700 for every man, woman, and child in the United States or $5,800 for the average family of four. It means that when you go out to earn a living you will start with a mortgage of at least $1,700 against you. That is a most dangerous situation. It strikes at the foundation of our freedom.

Let us look at some other startling facts.

In 20 years the cost of Government has multiplied eight times. We pay almost one-fourth of our total income just to govern ourselves. We pay 13 times as much for Government as we spend for education and 40 times as much as we contribute to the church. We pay more for Government than we pay for food.

In 20 years the number of job holders on the Government pay roll has multiplied four times. In 1929 Uncle Sam had less than 600,000 civilian employees. Today there are nearly 2,000,000. In the same period the number of bureaus, commissions, and agencies of the Government were increased from 400 to more than 1,800.

The three levels of Government are sending out checks at regular intervals to more than 20,000,000 Americans. How long can that be continued before there will be no one on the paying side of the ledger?

Where does all this money come from? The answer is obvious. It is taken in direct and hidden taxes from the earnings of every man and every woman who works for a living.

Less than half of the Federal revenues are produced by the income tax. Over 50 percent of the income tax is paid by people earning less than $6,000 a year.

The greater part of Federal revenue is derived from taxes concealed in the selling prices of goods and services.

Those are the hidden taxes. No matter whether you pay an income tax in the higher brackets or no tax at all, you are affected by the hidden taxes that are included in the purchase price of everything you buy. They are a staggering burden on the poor, even though they pay no direct tax.

All of these facts and figures mean that government has grown too big, too complex, and too expensive.

It has been truly said: "That nation is best governed which is least governed."

Right now we need to think of America as it was really intended by the founders. It was not intended to be socialistic. It was not intended to be paternalistic. It was not intended to direct and control our lives. It was intended to give freedom and to protect opportunity.

Most of the problems that trouble us today are not the result of a break-down in the system upon which our Government was established. They have come upon us because of the weakening of the moral fiber of the people.

The destructive blight now corrupting American morality is the false hope of something for nothing.

We want security. We want our investments guaranteed. We want to borrow money from the Government. We want to sell our products at Government-supported prices. We demand new projects and new services from the Government whether we can afford them or not.

There has never been a time in the history of the United States when there was a greater need for a return to the principles of real Americanism.

The creeping paralysis of socialism is spreading through our Government. The danger of national bankruptcy hangs over our heads. Oppressive taxation and a growing mountain of debt threatens our progress and our standard of living.

To save America we must return to the fundamentals of the American way of life.

We must reestablish honesty, industry, self-reliance, thrift, tolerance, and the love of God as sacred principles to guide our daily conduct.

We must think more of the spiritual welfare of our country and less about the material things of life.

As I said earlier in my remarks, you young men must take your places in the battle lines to defend and safeguard America.

I would like to suggest some issues that are worth fighting for. They are:

1. Americanism against socialism.
2. Freedom against regimentation.
3. Free enterprise against a planned economy.
4. Solvency against deficit financing.
5. A national economy based on justice for agriculture, labor, and industry with the rights of the public paramount over all.

We must fight for these things in the political arena. The kind of government we have is decided at the ballot box.

It is a tragic fact that too many of our people take too little interest in government. They avoid participation in political affairs. Nearly one-third of our people do not even take the trouble to vote.

Remember always it is your Government. In a republic the people are the government. The share you take in government is the measure of your citizenship.

There is a great truth inscribed on the wall of the Library of Congress, from which I quote:

"Enlighten the people generally and tyranny and oppression * * * will vanish like evil spirits at the dawn of day."

Let us tell the people that living standards can only be improved by increasing earning power. This means greater skills, better management, and less Government interference.

Let us all demand that government at all levels, local, State, and Federal, avoid deficit financing, high taxes, and unbalanced budgets.

Let us tell the people that taxes are not paid by politicians who are always shedding briny tears for the ordinary man but are paid by the sweat of those who work.

Our freedom is a sacred heritage. Our forefathers fought for this freedom on the frozen battlegrounds of the Revolution. Other generations have fought to extend that freedom by bloody battles on land, on sea, and in the air.

Americans of every generation have firmly stood in legislative halls, in the courthouses, and in the pulpits to maintain our precious freedoms.

The air is now filled with new battle cries. There are men who would tear down the walls of freedom. They would raise a new flag in place of the Stars and Stripes. They would substitute a police state for our individual freedom. They would exchange the pure air of America for the unholy ideology which pretends it can plan better than God.

We must now fight to retain our God-given freedoms. We must fight against those who would centralize our government, regulate our lives, and regiment us by telling us where to work, how to work, and when to work.

We must rearm ourselves with high moral and spiritual courage, and join the men and women who are waging war for individual freedom against the socialistic police state.

Again I say the battleground is in the arena of politics.

The orders are being issued. The lines are being drawn.

Our mission is to preserve the God-given freedom of the individual.

Let us join in the fight now.

American Policy in China

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, April 17 (legislative day of Wednesday, March 29), 1950

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial of the subject of who is wrong in Chinese policy, by Daniel A. Poling, editor of the Christian Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EDITORIALLY SPEAKING

WHO'S WRONG?

On the day the press described Japanese women weeping before the gates of the Communist embassy in Tokyo, crying for their husbands, sons, or brothers held in prison work camps, the day when Douglas MacArthur denounced Russia's slave pits where more than 300,000 Japanese prisoners of war are held illegally—if they are still alive—the Michigan Christian Advocate honored me with an editorial, You're Wrong, Dr. Poling, Fifty-nine Missionaries Say So.

I am "wrong" because I advocate all-out aid to our ally, Generalissimo Chiang Kai-shek, who is a devout Christian, a Methodist. Wrong because as the Advocate sees it, I advocate outmoded methods for the new era into which the world has moved. This slashing editorial which affirms that 59 missionaries say I'm wrong does admit rather casually toward its close that not all missionaries are in complete accord.

I stand and will stand with the rest of those all.

There are two and only two dominant methods in the world today. One is anti-individual freedom, antidemocracy, anti-God. This method is communism. The other is proindividual freedom, prodemocracy, pro-God. If Michigan Christian Advocate thinks these latter are outmoded—I do not.

I stand with those who realistically strive on to defend, enrich, and perfect these. I stand with the overwhelming majority of all Christian missionaries in China and at home who disagree with the 59. I stand with Generalissimo Chiang and Madame Chiang and many other Methodists in China, as well as with the considerable number of the bishops of Chiang's church. I stand with those of my own blood who have given a total of more than 200 years to Christian missions in China.

I stand with Methodist Bishop Arthur J. Moore, who writing in the Wesleyan Advocate from Formosa, in December, has this to say: "Why America would fail to support him (Chiang) as he struggles against atheistic communism and thus allow the Soviets to overrun all of China is a question to which I have no answer. To fight communism in Europe and give it no opposition in Asia looks to me like stupidity. Democracy and Christianity will have to fight for their very existence in Russia if allowed to consolidate her gains in China. I came back to our boat wishing desperately that even yet England and America might be more realistic about affairs in China."

At two points I agree with the Michigan Christian Advocate editorial. I agree that "communism cannot be beaten by military might" and that "the only way to defeat it is to remove the conditions that foster its growth." I give a 100-percent yes to all that.

Then how?

By withdrawing before the military might of communism? By standing in silence before the slave camps of communism? By failing to denounce the liquidation of Christian populations in the Baltic countries by communism? By issuing a white paper which betrayed a faithful ally to communism?

And how may we remove conditions which foster communism? If by weakness, then Lithuania, Estonia, Latvia, Poland, Czechoslovakia, Hungary, and the rest should be now the most democratic and Christian countries in the world.

"But wilt thou know, O vain man, that faith without works is dead?"

Imagine New York, Chicago, or San Francisco without a police force or less than an adequate force. The world today without the comprehensive strength of America, including military might, would be a Communist world, a totalitarian world, a slave world, an atheist world.

At the moment we have lost both the moral and political battle in China. Now, immediately, and against whatever odds, we must make the defenses of freedom in the Far East impregnable. How? The answer is still a MacArthur plan for the Far East.

I am for peace—I know war. I am for peace, the peace of Christ which is the peace of freedom, democracy, brotherhood, and sacrifical love. By all these tests communism has within itself the seed of death. That seed germinates. It needs only time. The realistic formula for this peace of Christ is strength with patience.

Here alone lies man's justified hope for world security. Here and here only is the promise that war shall not come again.

Here then I stand, so help me God.

DANIEL A. POLING,
Editor of Christian Herald.

Method of Election of President and Vice President

EXTENSION OF REMARKS

OF

HON. HOMER FERGUSON

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, April 17 (legislative day of Wednesday, March 29), 1950

Mr. FERGUSON. Mr. President, I offer for the RECORD an item published in today's Washington Post which treats with the Lodge-Gossett joint resolution for the reform of the electoral college system. This item is a two-column communication to the Washington Post from Prof. Lucius Wilmerding, Jr., of Princeton University. It proves convincingly to my mind that the electoral reform proposed by the Senator from Massachusetts [Mr. LODGE], and which is still pending before the House, has as its underlying principle the principle of proportional representation. At the time of the debate in this body I stated this view affirmatively, and offered clear logic to support it. The Senator from Massachusetts did not agree with me. I am pleased, therefore, to offer for the RECORD today further confirmation of the point I made. This proof should substantially contribute to the House consideration of this electoral reform measure.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROPORTIONAL REPRESENTATION IN THE LODGE-GOSSETT AMENDMENT

(By Lucius Wilmerding, Jr.)

Senator LODGE has recently taken me to task for asserting that the Lodge-Gossett amendment, changing the mode of electing the President and Vice President, is based on the principle of proportional representation. He says: "The proposed constitutional amendment has no relation whatever to 'proportional representation.' It could not have * * *. Proportional representation cannot be applied to the election of a single official. It is impossible to take one man and divide him up proportionately—or otherwise—and expect him to live."

My answer to this statement is brief. I have never accused Senator LODGE of proposing to divide up the President, proportionately or otherwise. When I say that he proposes to apply the principle of proportional representation to the electoral voting system, I mean that he proposes to divide up the 531 electoral votes according to that system. In this I am saying no more than was said by Messrs. Hoag and Hallett of the Proportional Representation League in their book Proportional Representation. Under the caption, "How proportional representation should be applied to the presidency," they write: "Obviously we cannot have proportional representation in the Presidency because it is a single office, but we can have it in the electoral college or in the distribution of the electoral vote."

Now I submit that Senator LODGE's proposal is to have proportional representation in the distribution of the electoral vote. His amendment provides that in electing the President and Vice President the electoral vote of each State shall be counted in proportion to the popular vote. Take a State with 16 electoral votes and assume that there are four candidates for President, A, B, C, and D. A gets 40 percent of the popular vote; B gets 30 percent, C gets 20 percent and D, 10 percent. Under the Lodge amendment A, B, C, and D would be credited with 6.4, 4.8, 3.2, and 1.6 electoral votes, respectively.

What principle is this if it is not the principle of proportional representation? Let us suppose that the congressional delegation of this same State were to be elected by the list system of proportional representation and that the popular vote followed the same pattern for Congressmen as for President. The number of seats to be distributed would be 14 instead of 16, since each State has two less Representatives than it has electoral votes. Do the arithmetic and you will find that the four parties would be entitled to 5.6, 4.2, 2.8, and 1.4 seats, respectively. Since fractional seats and fractional votes are unknown in the House of Representatives you might give the two seats represented by the sum of the decimals to parties A and C, since they have the two highest fractions. The final result would be that parties A, B, C, and D would be allotted 6, 4, 3, and 1 seat respectively.

Anyone who thinks about this will see that the Lodge formula is the same, both mathematically and in design, as the formula of proportional representation; in each State the popular vote for candidate A is to the total popular vote as the electoral vote for candidate A is to the total electoral vote; in each State the popular vote for party A is to the total popular vote as the representation in Congress for party A is to the total representation in Congress. The mere fact that in one case you find the answer integers while in the other you figure three places of decimals can hardly be thought to affect the principle.

I might add that the principle advocated by Senator LODGE for counting the electoral votes has for many years been identified with the principle of proportional representation. If you trace the proportional features of the Lodge amendment backward through history you come eventually to the Maish amendment of 1877. This amendment was described by one of its sponsors (Senator Buckalew) in the North American Review for July 1877, under three heads of remarks: "First, it provides for a direct vote by the people for President and Vice President; second, it retains electoral votes as at present, while dispensing with electors and electoral colleges; and third, it assigns to candidates electoral votes from each State in proportion to popular votes received by them therein."

The only difference between the Maish proposal and the Lodge proposal is that Maish would have awarded the votes represented by the sum of the decimal to the candidate having the largest fractions—that is to say, he would have made an integral distribution of the electoral vote. In the same year an exact counterpart of the Lodge proposal, even to the three places of decimals, was contained in an amendment introduced by Representative Cravens. In 1878 a similar proposal was reported by a committee of the House of Representatives.

The Maish amendment was described by J. Hampden Dougherty in his book on the Electoral System (a work to which Representative GOSSETT is much indebted) as embodying some of the principles of the Hare plan for minority representation. H. V. Ames, in his Proposed Amendments to the Constitution, praises this same amendment as an application of the system of proportional representation to the election of President and Vice President.

But let us come down to more recent times. The immediate predecessor of the Lodge-Gossett amendment is the Lea-Walsh amendment of 1928 and subsequent years. According to Representative GOSSETT, "Mr. Lea is really the father of the particular proposal under consideration." The Lea amendment was indorsed time and again by the Proportional Representation League as an application of proportional representation to Presidential elections. Nor was Senator Walsh, of Massachusetts, cosponsor of the amendment, in any doubt as to its true nature. Pending a change in the Constitution he called upon the Senate to adopt proportional representation in the electoral colleges of their own volition. On May 29, 1928, he introduced Senate Concurrent Resolution 32 which read in part as follows: "Whereas, proportional representation * * * has proved to be easily workable, satisfactory to the voters, and just to all parties. * * * *Resolved,* * * * that the legislatures of the several States should establish by appropriate legislation proportional representation in the choosing of Presidential electors."

Finally I would call Senator LODGE's attention to the June 1948 issue of the National Municipal Review. In its department called proportional representation the progress of the Lodge and Gossett resolutions in Congress is reported under the caption "Proportional representation for Presidential electoral votes advances."

It seems to me therefore that it is by no means a play on words to use the term "proportional representation" in connection with Senator LODGE's proposal. When two principles are exactly the same, why not call them by a single name? The real difference between Senator LODGE and myself is not one of terminology but of opinion. I think that the application of his principle (by whatever name he calls it) to the distribution of the States' electoral votes would increase the likelihood of the same principle being applied to the representation of the States in Congress. Senator LODGE thinks otherwise.

PRINCETON, N. J.

A Timely Revised Gettysburg Address

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES

Monday, April 17 (legislative day of Wednesday, March 29), 1950

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a 1950 version of Lincoln's Gettysburg Address, whose author is unknown but which was forwarded to me by Mr. Barry Yutzi and Mr. Eugene Wollaston, students at the University of Delaware.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

A TIMELY REVISED GETTYSBURG ADDRESS

One score and sixteen years ago our fathers brought forth upon this Nation a new tax, conceived in desperation and dedicated to the proposition that all men are fair game.

Now we are engaged in a great mass of calculations testing whether that taxpayer or any taxpayer so confused and so impoverished can long endure. We are met on form 1040. We have come to dedicate a large portion of our income to a final resting place with those men who spend their lives that they may spend our money (politicians).

It is altogether anguish and torture that we should do this. But in the legal sense we cannot evade—we cannot cheat—we cannot underestimate this tax. The collectors, clever and sly, who computed here, have gone far beyond our power to add and subtract.

Our creditors will little note nor long remember what we pay here, but the Bureau of Internal Revenue can never forget what we report here. It is for us the taxpayers rather to be devoted here to the tax return which the Government has thus far so nobly spent. It is rather for us to be dedicated to the great task remaining before us—that from these vanished dollars we take increased devotion to the few remaining; that we here highly resolve that next year will not find us in a higher income tax bracket; that this taxpayer, underpaid, shall figure out more deductions, and that taxation of the people, by the Congress, for the Government, shall not cause our solvency to perish.

Texas Tech Studies Dust Storms

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Monday, April 17 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD an article appearing in the April 16, 1950, edition of the Lubbock Avalanche.

This interesting article by Avalanche reporter, Kenneth May, tells of the work now being carried on at Texas Technological College in Lubbock studying the dust storms which are again blowing over the western half of Texas.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TECH STUDY SHOWS TONS OF DUST CARRIED IN MORE INTENSE BLOWS

(By Kenneth May)

A half million tons of sand is a lot of dirt, but that much can pass over Lubbock within an hour's time during an intensive dust storm, experiments at Texas Tech have indicated.

G. Frederick Warn, associate professor of geology, and William C. Irvin, instructor, directing the research, said that an estimated 500,000 tons of dirt will blow over the area of Lubbock within 60 minutes when the wind velocity is 45 miles per hour or faster.

Such, at least, are the indications of the Tech project. So far as Warn knows this is the first time such an estimation has been attempted in the Lubbock area.

STUDENTS COOPERATE

Four students of geology, physics, and biology are cooperating in the experiments, which include different phases of research ranging from a study of conditions generating dust storms to a determination of the harmful bacterial content of the dust particles.

Wind turbulence, or vertical movement, and the air moisture, as well as the horizontal wind velocity, have a bearing upon

dust storms and their intensity, Warn said. Low relative humidity prevailing in the South Plains area recently reached an all-time low of 6 percent on March 25, he said, the same day the barometric pressure here reached a record low of 26.05.

Until now most of the experimentation and writing done concerning dusters has been directed toward the phase of soil erosion. Although the current Tech research is studying that side of the question, laboratory tests delving into possible disease-spreading aspects of the high winds are being undertaken also.

NO RESULTS YET

Warn said the tests along that line have not progressed sufficiently to report any results. Germs picked up by the wind from human or animal wastes would be the most likely to be found in dust particles, he said.

Recent storms in west Texas have sent dust spiraling to a maximum height of 17,500 feet (about 3 miles above sea level) and over an area of 85,520 square miles during the early stages. Winds up to 70 miles per hour have whipped the dust, which ultimately reached as far northeastward as the Great Lakes, Warn asserted.

Generally, most of the dust which whips along close to the ground has been picked up locally, the geology professor said, while a larger percentage of that high in the air comes from greater distances. A high percentage of South Plains storms, especially the more intense, have their beginning in New Mexico, he said, where unploughed and uncovered wastelands lie as easy prey to rollicking winds.

TRAPS DUST PARTICLES

In carrying out the Tech experiments a boxlike contraption with baffle plates to trap dust particles has been erected 60 feet above the surface. Additional tests are to be made with the trap only 5 feet above the ground, Warn said. The trapped dust not only gives an indication of the amount of dirt in the air, but provides particles for laboratory analysis.

Particles twenty-five one hundredths of a millimeter in size have been caught 60 feet above ground, and about 1 percent of the particles included were organic matter such as leaves, straw, or grass, according to undetailed analysis. Warn said a more minute study will probably reveal a much higher organic matter content not immediately visible.

Is there ever any good generated by a dust storm? "Not that I can see," says Warn. He conceded that a particular farm might have dust carrying beneficial organic matter or fertilizing properties, come to rest on it and thus be enriched, but he hastened to point out that alkali dust might also settle on the farm, as well as the seed of infectious weeds.

A determination of the size and amounts of particles which will probably be carried by the wind at a given velocity is another aspect of the Tech experiments. No conclusive results have been reached along that line as yet, according to the geology prof, but so far tests show correlations between particle size and wind velocity and direction have run true to form.

There is little possibility that minerals carried along by the dust will lose any of their chemical characteristics, Warn said, but it is quite likely that physical wear and destruction will occur. Through the tests underway at Tech, students hope to determine pretty closely what the mineral composition of the sand will be when blowing from a given direction.

GIVE PREVENTIONS

About the only preventions Warn could give for the dusters were deep listing of ground, sowing of cover crops, and artificial rain making. The latter feat must be accomplished when temperature and moisture content of the air are in rain making condition, he said, however, and such a condition has existed very few times over the South Plains during the last 6 months of drouth.

Students carrying on the experiments are enrolled in a meteorology and sedimentation course at the college. Included are William B. Cox of Monahans, a graduate student in geolcgy studying eolian sedimentation and weather conditions associated with sand storms; Dewain Cox, of Monahans, a physics student studying weather conditions on the South Plains and the use of recording instruments; Jack Pales, a physics student from Lawton, Okla., studying special types of fronts and storms; and John C. Porter of Lubbock, graduate student in biology, running culture studies on air-borne particles.

Study of dust storms was first undertaken at Tech in 1935 and 1936 under direction of Dr. Raymond Sidwell, now head of the geology department. Warn and Irvin said that need for such studies is evidenced by the fact that an estimated 850,000,000 tons of southwestern dirt passes over the Mississippi River during an average year. Many of the small lakes formed on farms in the South Plains region owe their existence largely to wind erosion, they added.

The Way

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, April 17 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD lines by one of my constituents, the eminent historian, Mr. James T. Shotwell, published in a recent issue of the Saturday Review of Literature. I commend this poem to the reading of all those who delight in fine and meaningful poetry.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

THE WAY

(By James T. Shotwell)

I

Harp of the wild old ages, of the music of the spheres,
Strummed for the dance the worlds began when they circled their first careers,
O harp of the world! What visions appear as we stoop to play
Seeking the mystic rhythms, the spirit of song for aye.
The echoes of mighty masters on the strings are vibrant still,
Homer and Dante and Milton, and those whose touch can thrill,
With the drama of human passion and the lyric's birdlike flight.
Let not the vulgar touch profane, where these have greatly wrought
The lasting harmonies of life, or, by creative thought,
Have opened the ways of the universe to follow questing light,
Or plumbed the depths of the atom beyond the range of sight.
Thine is the cosmic note that lies in all enduring song,
Whether in choral harmony, solemn and vast and strong,
Or the still, small voice, when the spirit wakes from life's enthralling dream,
To find that it and the world are one, with one enduring theme,
And that the hands of mortals can touch eternal strings
When the mind, triumphant, beats its way through all opposing things,
Measuring space and mastering time, forcing matter to yield
The mysteries of the starry way and the force in the atom congealed.
Yet, as at last with godlike power we move through matter and mind,
Darkly we grope on the ways of death for ourselves and all mankind.
Here is the greater challenge, the greatest and the last,
To bring the variant breeds of men out of their variant past,
Holding secure the heritage of the things they richly prize,
But seeing the future through the light of justice's unbound eyes,
With war and violence banished; it can and it must be done.
For the world itself will not endure unless mankind is one.

II

The past is more than prologue to the drama of human fate,
The ice-age minds are with us still, with their iron claws of hate,
But the sword of the Lord and Gideon their forces can withstand
Until we build Jerusalem in every pleasant land.
For, rising through sorrow and suffering, the central theme grows clear,
Welding peace and justice, freedom from want and fear.
Not by wishful thinking can the task be carried through,
Nations have still to learn their part that never freedom knew;
Not by a code of rigid law, enforced by a world police,
With nations surrendering freedom in the search for lasting peace.
The key to the plot was given on a sunlit mount by a sea
The only guidance the world has yet to make men safe and free.
Not to Caesar alone we turn to meet the threat of war,
His militant scepter cannot reach where the springs of action are;
But the mind that has ranged the universe must now itself control.
For the force in the mighty atom is less than the human soul;
And simpler than any equation are the words forever true:
Do ye unto others as ye would they do by you.
This is the missing fulcrum for Archimedes' pry
To lift the weight of ancient hate, so the peoples that pass by
May reach together the shining goal which none can reach alone,
Helping each other along the way that each can make its own,
By joint consent surrendering the ancient right of war,
Alert to thwart betrayal, aware where dangers are
That lie in differing loyalties, where bickering conflicts run,
But offering charity to all, with malice toward none.
Then undismayed by the powers we wield, steady we stand and strong,
As the harp of the world keeps measure to life's triumphant song.

Local Control of Valley Projects

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, April 17 (legislative day of Wednesday, March 29), 1950

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Utah Senator Proposes a Plan for Local Control of Valley Projects," from the Salt Lake Telegram of April 13, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UTAH SENATOR PROPOSES A PLAN FOR LOCAL CONTROL OF VALLEY PROJECTS

Utah's Senator ARTHUR V. WATKINS has offered a bill, and elaborated upon it in a lengthy speech on the Senate floor, which would authorize large-scale regional water and power projects with grass-roots management rather than tight Federal control.

Senator WATKINS' bill is in answer to the admitted problem of constructing great river development projects in the face of the artificial limitations imposed by State lines. The answer proposed by the administration to this problem is the creation of regional valley authorities like the Tennessee Valley Authority, with broad powers affecting not only irrigation, flood control, navigation, and electric power production but also including such things as manufacture and distribution of fertilizer, building parks and playgrounds, fish culture, etc.

Most of the activities undertaken by these valley authorities are legitimate governmental tasks, but the imposition of a new supergovernmental system under tight Federal control on top of the State system is a matter which has aroused grave concern in America among Americans of both parties.

Many thoughtful students of the question see the proposed development of the entire Nation into a series of valley authorities crossing State lines as the beginning of the end for local government and the kind of local responsibility which is the essence of our democracy. They see this encroaching Federal control over so many aspects of our economic life as a long stride in the direction of nationalized industry and state socialism.

Whether or not this fear is entirely justified, the fact that there is such fear warrants careful study of any alternative plan which promises to accomplish the admitted good of great regional water and power developments without risking a socialistic Federal domination over our lives.

Senator WATKINS thinks he has the answer. He says he recognizes that from here on western reclamation development is largely a program of giant projects on interstate streams, such as, for example, the Colorado development in which Utah is so much interested. He wants to build these projects but without creating a giant Federal utility bureaucracy. He believes the answer is a scheme for a combination of Federal aid and local automony. He would have the United States Bureau of Reclamation plan and build the projects, but an interstate agency retaining local control would operate and maintain the projects once they were constructed and sell the power and water.

The bill proposed by Senator WATKINS goes into much more detail, but the fundamental point is the substitution of a locally controlled regional agency to operate these huge projects for the federally controlled agency set up under the valley authority idea.

We do not know whether Senator WATKINS' scheme will work. We do agree with him, however, that some means for regional development on a broad basis is necessary if there is to be further progress in the fullest utilization of the basic land and water resources of this Nation. We also believe that the more government can be kept close to the people the better. City government run by the people of a city is better than city government run from a State capitol. Utah government is better run by Utahans than by bureaucrats in Washington. Likewise regional governmental activities will be better if they can be kept under control of the people of the region.

If it will work, it's a good scheme. We hope the Congress gives Senator WATKINS' proposal the most careful consideration.

French Ask Fusion of Atlantic Aims in a High Council

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, April 17 (legislative day of Wednesday, March 29), 1950

Mr. KEFAUVER. Mr. President, one of the most constructive and worthwhile suggestions I have seen from any of the officials of this country or of the nations with which we are associated, for uniting our efforts among the North Atlantic nations comes from French Foreign Minister George Bidault in a speech which he recently delivered at Lyon. The speech is carried in an article published in the New York Times of today, which I ask to have printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FRENCH ASK FUSION OF ATLANTIC AIMS IN A HIGH COUNCIL—BIDAULT URGES STUDY OF PLAN TO KNIT TREATY POWERS IN ECONOMICS AND POLITICS—HOPES FOR A REPORT SOON—PREMIER TO SEEK LONDON ACTION IN MAY—PROPOSAL IS HELD RESULT OF BRADLEY TALK

(By Harold Callender)

PARIS, April 16.—Creation by the North Atlantic Treaty nations of an Atlantic High Council to coordinate their strategic, economic, and political policies was urged today by George Bidault, Premier of France.

M. Bidault, speaking in Lyon, asked the nations concerned to study this French proposal for knitting together the Atlantic community in more than a merely military sense. He said he hoped that when they met in London May 8, the Foreign Ministers of the Western powers would name a committee to report by a fixed date on the composition, powers and functioning of such a council.

The Premier suggested that the proposed council should deal first with two fields of activity, defense, and economic relations, which he described as corresponding to two dangers—aggression and depression, as he said Gen. Omar N. Bradley, Chairman of the United States Joint Chiefs of Staff, had defined them. But he added the hope that before long the council could deal also with the political problems of the Atlantic coalition.

SEES NO MONOPOLY ON PEACE

M. Bidault suggested that the council be entitled "Atlantic High Council for Peace," so as to forestall perverse interpretations. He said there was no reason to let the term "peace" be monopolized by "those who have annexed it, among other things, and who call us the camp of aggression."

Referring to Secretary of State Dean Acheson's decision a few days ago to create a stratgic committee to coordinate United States foreign policy in the diplomatic and economic spheres, M. Bidault explained that the French proposal was to create a similar executive organism on the scale of the Atlantic alliance.

Discussion not only of some new central mechanism for the Atlantic Treaty but of giving it greater and broader content as the nucleus of a more closely linked western world has taken place privately here ever since Foreign Minister Robert Schuman dropped a cryptic hint of the new French proposal. M. Schuman did this in a speech on March 27 to the national committee of the Popular Republican Party, to which he and M. Bidault belong. All he said was that the Atlantic community might deprive the Atlantic Pact of its exclusively military character.

COST CONCERNS FRENCH LEADERS

Those who sought elaboration of this phrase discovered that high French officials were greatly concerned by the enormous cost of the defense of western Europe, as contemplated by the defense committee under the Atlantic Treaty, since neither France nor any other continental country could begin to finance its share.

The French and other continental leaders were likewise disturbed by the effect that this rearmament might have upon economic recovery since it would entail additional budget expenditure and a diversion of productive resources to uneconomic ends.

It was therefore thought necessary for the Atlantic Treaty nations as a whole to consider not only the division of responsibility for defense but the division of the economic burden involved in defense. This burden was calculated by some experts as likely to reach proportions comparable to those of the dollar aid under the Marshall plan. The conclusion reached was that only by further United States economic aid could western Europe provide anything like the defenses called for in the blueprints of the military leaders.

There was much speculation in western Europe whether the United States would extend substantial aid to Europe after the end of the Marshall plan in 1952. Encouragement was found in President Truman's appointment of Gordon Gray, former Secretary of the Army, to study what the United States could do after that portentous date and in the apparently growing conviction that, as General Bradley expressed it in Chicago on Friday, the "American people have decided to hold and save western Europe for the free world."

PLAN CALLED LOGICAL EXTENSION

The assumption that General Bradley's statement is correct is the basis for the carefully considered French proposal put forth by M. Bidault today.

M. Bidault said that this proposal was "the logical extension and linking" of what had gone before—the Brussels Treaty, the organization of Europe, and the foundation of the Atlantic community. M. Bidault added that "Europe is still in the process of gestation" but that this process could be favorably affected only by "the broadening of the prospect to Atlantic dimensions."

The Premier therefore explained that the French Government's new proposal was not meant to dissolve the united Europe that awaited birth but to enable it to fit into the wider unity "while retaining its originality and its integrity."

For the benefit of those who fear that Europe's originality and integrity might be endangered by being merged in a wider community, M. Bidault added that the Atlantic

consolidation should leave no room for any fear of dependence or of ingratitude—the first fear being in Europe, the second in the United States.

The economic cooperation on an Atlantic scale should, he said, exclude the idea of displacement and the fear of exploitation. By the first of these two phrases, M. Bidault apparently meant the displacement of national economic interests by other interests.

The Premier said that if each nation tried to build its own defenses in isolation, the machinery of security would break down and liberty and peace would find defeat in the ruined countries.

In view of the probable assumption in some quarters that the motive for the French proposal is simply to get more United States economic aid, it is no more than objective to point out that the French Government has had a hard time selling the Atlantic Treaty to the French people, many of whom still wonder just what good it will do them in terms of defense against an invasion of their soil. This question has been asked more frequently since the United States apparently ceased to have a monopoly of the atomic bomb. These doubts have been engendered not by the Communists, who have adroitly exploited them, but by the strategic circumstances.

Black Land Experiment Station in Central Texas

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, April 17 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD an Associated Press article, date line April 8, reporting on the valuable work being carried by the Black Land Experiment Station in central Texas.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEMPLE, April 8.—What good is a gully-washing rain? Plenty, you soon may be saying, all because of tests made at the Black Land Experiment Station near here.

The tests, if black-land soil farmers are guided by them, may mean that topsoil stops washing, crops roots will have plenty of moisture through the dry summers, water wells will fill again and long-dormant springs bubble.

There's no reason why 7 or 8 inches of rain within an hour can't be kept in black-land soils, the experiment indicate. It's moisture that has been running off but which should be stored in the ground and used by crops during hot summer months when growth is most important.

If black-land farmers use the new information, you'll quit calling them downpour gully washers. The rain will soak into the soil, with no surface run-off.

The Temple Telegram, reporting on the Black Land Station experiments, indicates how these heavy rains can be harnessed.

The newspaper reports that in Austin clay soil, which had been in continuous cultivation for the past 70 years, only .0004 inch of rain can be absorbed in an hour. The rest runs off, generally taking topsoil with it. And that figure applies only to the first 4 inches of soil. The soil between 8 and 10 inches absorbs no water at all. Houston clay soil up to 4 inches absorbs .73 inches of rain an hour, and, like the Austin clay, absorbs none on the 8- to 10-inch level.

Land continuous in cotton does a little better. Austin clay will absorb .32 inches of rain in an hour, at both the 4-inch and the 8-10-inch level.

It hasn't always been that way. Experiment-station workers found that native meadow which never has gone under the plow absorbs 5.5 inches of rain an hour for the first 4 inches. But absorption slows down sharply when the 8-10-inch level is reached. Only 0.29 inch an hour is taken up at that level.

Dr. J. R. Johnson of the experiment station, believe recent tests point the way to making the dream of an abundant moisture supply come true.

Suppose a gully washer of 6 or 7 inches of rain an hour—an extremely heavy rainfall almost anywhere—struck these soils. Most of it would run off, carrying topsoil with it.

But the experiment station started rotating cotton and Madrid clover. And the scientists found that Austin clay soil rotated with these crops will absorb rainfall at the rate of 7.54 inches an hour. Houston clay soaks up 4.9 inches of rain an hour.

That is, the first 4 inches absorb that much.

What about that vital layer at the 8-10-inch level? Grass and Madrid clover roots rarely go below 4 inches. And it's the growth of the roots that loosens the land and makes it porous.

To answer the 8-10-inch level question, Doctor Johnston points to a big picture on his desk, showing the root system of an evergreen clover plant. The roots of this plant reach deep into the soil, going beyond 36 inches.

This may solve the problem of getting rain to soak all the way into the soil with no run-off? Rotation of grass and Madrid clover would loosen the top 4 inches. Fitting evergreen clover into the rotation might crack that crucial 8-10-inch layer.

This, the experimenters believe, will take care of all the water from just about as heavy a rain as ever falls in central Texas. It would leave the rainwater down in the ground where crop roots could use it during the dry summer months.

The Temple Telegram brings up the possibility that there will be other benefits. "How about these wells which are going dry all over central Texas?" asks the newspaper. "Isn't it possible that putting all of our rainfall into the soil would bring them back? Isn't it possible that we might build up our supply of ground water to the point where springs which once bubbled out hundreds of gallons a minute would flow again?"

The Murders in Kansas City

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, April 17 (legislative day of Wednesday, March 29), 1950

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very recent editorial entitled "Fetters on the FBI," from the St. Louis Star-Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FETTERS ON THE FBI

Presidential Press Secretary Charles Ross says that the Star-Times' copyrighted story Saturday about how, shortly before he was murdered, gangster Charles Binaggio tried to make a political deal with President Harry Truman is a "lot of hooey."

Several previous discrepancies between Mr. Ross' statements and the facts could be cited. A recent example occurred last week. As Drew Pearson points out in his column on this page, Ross denied that John Foster Dulles was appointed to the State Department even though the appointment was already a fact and was announced the next day. Incidentally, in the Binaggio case, Ross was denying a scoop by the Star-Times over his old employer, the Post-Dispatch.

In 1934 Harry Truman was hand-picked for Senator by Boss Tom Pendergast in much the same way that Harry Truman is now trying to hand-pick Emery W. Allison.

When Maurice M. Milligan, United States district attorney at Kansas City, probed the vote frauds and sent Boss Tom to jail, he made an implacable enemy of Harry Truman. When Mr. Truman was Senator in 1938, first he tried to smear Milligan's reputation. Then he opposed, unsuccessfully, his reappointment for another term.

Early in 1945 when "Boss Tom" died, Vice President Truman flew to his funeral in Kansas City. A few months later Harry Truman successfully used all the influence of his high office to block the reappointment of Milligan.

One year later President Harry Truman tried to handpick Enos Axtell for the House. Axtell won in the primary but lost in the general election. Proof of widespread frauds in the primary voting was uncovered. In sharp contrast to the energy with which Maurice Milligan had pushed the probe against Tom Pendergast, in this instance the FBI moved very slowly. Finally, one night in May 1947, the safe in which the evidence was being held was blown and the evidence was stolen. The frauds had taken place in the districts controlled by Charley Binaggio. One of Binaggio's lieutenants, Henry McKissick, was indicted, but, thanks to the theft of evidence, not convicted.

On the night of May 27–28, 1947, President Truman was sleeping several blocks from the courthouse where the theft occurred. The area must have teemed with Secret Service agents. The leads were many. No fewer than 17 men had keys to the vault room. Yet the usually swift and brilliant FBI has let the sands of time run nearly out without exposing the guilty parties. One of the key witnesses, Joseph Falco, died in July 1947. Charley Binaggio was another key witness. Unless the FBI solves the case within the next 45 days, the statute of limitations will intervene.

Now the same pattern seems being repeated in the Binaggio and Gargotta murders. The Binaggio machine opposed the Pendergast machine as revived by James Pendergast. Harry Truman is trying to get Emery W. Allison nominated as United States Senator. Charley Binaggio opposed the nomination of Allison.

In several ways Charley Binaggio was put on the spot. He had persuaded various gangsters and gamblers to support the candidacy of Forrest Smith for Governor with the promise that Missouri would be opened up to them. He failed to produce. Then last September a Federal grand jury began to investigate organized crime and gambling in Kansas City. Immediately it involved Binaggio and his crew. The Government began looking into Binaggio's income taxes.

When Binaggio and Gargotta were murdered Gov. Forrest Smith, who had been supported by Binaggio, immediately wired the FBI for "all-out assistance."

Yet, yesterday, 5 days after the request, the Attorney General's office told the Star Times it had not found any legal authority as yet for Federal participation in solving the murders.

Binaggio and Gargotta had both been witnesses before the Federal grand jury, and one

theory of their killing is that they were "rubbed out" to keep them from giving information. Binaggio's Federal income-tax returns were being checked. On February 15, 1950, both President Truman and Attorney General McGrath had promised to throw the weight of the Federal Government behind community drives against organized crime, particularly gambling. Yet, while the trail in Kansas City gets cold, Attorney General McGrath can find no legal authority for ordering the FBI to pick it up.

The highly trained agents of the FBI, their scientific methods, their vast Nation-wide resources are being held in leash. Why?

Fair Play in Committee Hearings

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1950

Mr. KLEIN. Mr. Speaker, under leave, I am inserting, with one minor excision out of deference to comity between the Houses of Congress, an editorial from the Washington Post of April 11, 1950, on the subject of procedures in congressional committees in regard to investigations and hearings where adverse testimony may be produced against a third party.

Obviously, the whole question of committee procedures can be examined critically with advantage to the public interest; perhaps the present lack of delimitation can be successfully defended in the forum of public debate, and perhaps it can be found that the respective Houses should lay down some definite lines of demarcation.

When it comes to privileged defamation of individuals there can be no question of the glaring faults which accompany the anarchical device of giving each chairman just as much latitude as he cares to take. I should like to remind the House that I have pending H. R. 3443, which has as its purpose the amendment of the Legislative Reorganization Act to provide a fair procedure in investigation. I am also including the text of that bill in my remarks.

RULE OF FAIR PLAY

Creeping progress is being made toward the establishment of a fair code of procedure for congressional investigators. The Labor-Management Subcommittee of the Senate Committee on Labor and Public Welfare, of which Senator MURRAY is chairman, has adopted a set of rules to govern all its future hearings. It is the third congressional group to take such action since our Turning on the Light series of editorials 2 years ago. The first was in the Bender subcommittee of the House during the Eightieth Congress and the second the Senate Investigations Committee, then under Senator FERGUSON'S chairmanship.

The new rules of the Murray subcommittee, like those previously adopted by other groups, are admittedly a compromise. Sworn testimony may not be taken by staff members unless at least one member of the subcommittee is present. All hearings will be public except that the full Committee on Labor and Public Welfare may authorize the subcommittee to hear public officials in executive session when the public interest warrants such a deviation from the normal course. At least two committeemen and a staff member must be present for any examination of witnesses behind closed doors. Recorded testimony must be made public when any part of such testimony has been released by the subcommittee or when it has been made the basis of a report by members of the subcommittee. Witnesses may obtain a transcript of their testimony at nominal fees.

Every witness will have the right to file a sworn statement for the record and to read a summary of it before the subcommittee. Other persons believing that their reputations have been adversely affected by testimony before the subcommittee may also file sworn statements for the record, the subcommittee reserving the right to decide whether such statements are relevant and to require conciseness. All witnesses may be accompanied by counsel. The subcommittee may not publish any report until it has been approved by a majority of a quorum present at a duly called meeting.

We do not suppose that these rules are an absolute guaranty against abuses even in the subcommittee to which they apply. But they are a long step in the right direction. The difficulty with this piecemeal adoption of rules is that the committees needing them most are left free to continue operating without rules or any sense of self-restraint. Another powerful argument for the adoption of a general code of fair procedure is to be found in the decision of the Supreme Court yesterday not to review the conviction of John Howard Lawson and Dalton Trumbo for contempt of Congress. That ruling confirms the power of Congress to compel a witness to testify whether or not he is a member of the Communist Party. We think the ruling is right. But it throws upon Congress a tremendous responsibility to prevent the abuse of its sweeping investigative powers by setting up rules of fair conduct by which all its committees would have to abide.

H. R. 3443

A bill to amend the Legislative Reorganization Act of 1946 by adopting principles of procedure in investigations by committees of the Senate and the House of Representatives.

Be it enacted, etc., That section 134 of title I of the Legislative Reorganization Act of 1946 (Public Law 601 of the 79th Cong.) is amended by adding a new section reading as follows:

"(d) (1) The subject of any investigation in connection with which witnesses are summoned shall be clearly stated before the commencement of any hearings, and the evidence sought to be elicited shall be relevant and germane to the subject as so stated. In cases of special investigations authorized by congressional resolution, the subject of the investigation shall be so stated in the resolution and, in the case of investigations initiated by the committee, the subject shall be so stated by the committee and announced before the commencement of the hearings.

"(2) Any witness summoned at a private hearing and, unless the committee by a majority vote determines otherwise, any witness before a private hearing, shall have the right to be accompanied by counsel, who shall be permitted to advise the witness while on the witness stand of his rights.

"(3) Every witness shall have an opportunity, at the conclusion of the examination by the committee, to supplement the testimony which he has given, by making a written or oral statement, which shall be made a part of the record; but such testimony shall be confined to matters with regard to which he has previously been examined.

"(4) An accurate stenographic record shall be kept of the testimony of each witness, whether in public or in executive session. In either case, the record of his testimony shall be made available for inspection by the witness or his counsel; and if given in public session he shall be furnished with a copy thereof if he so requests, and if given in executive session he shall be furnished with a copy thereof in case his testimony is subsequently used or referred to in a public session.

"(5) No photographs, moving pictures, television, or radio broadcasting of the proceedings shall be permitted while any witness is testifying.

"(6) Any person whose name is mentioned or who is specifically identified and who believes that testimony or other evidence given in a public hearing before any committee or comment made by any member of the committee or its counsel tends to defame him or otherwise adversely affects his reputation, shall be afforded the following privileges:

"(i) To file with the committee a sworn statement concerning such testimony, evidence, or comment, which shall be made a part of the record of such hearing.

"(ii) To appear personally before the committee and testify in his own behalf.

"(iii) To have the committee secure the appearance of witnesses whose testimony adversely affected him, and to cross-examine such witnesses, either personally or by counsel; but such cross-examination shall be limited to 1 hour as to any one witness unless the committee votes to lengthen the period.

"(iv) In the discretion of the committee, by a majority vote, to have the committee call a reasonable number of witnesses in his behalf. The extent to which this privilege may be availed of shall be left to the discretion of the committee.

"(7) These principles shall apply to investigations by all committees of either House of Congress, including standing committees, select and special committees, or joint committees of the two Houses, and a duly authorized subcommittee of any of the foregoing."

Secret of the Continuous Vitality of Hon. Ralph E. Flanders, of Vermont

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, April 17 (legislative day of Wednesday, March 29), 1950

Mr. KEFAUVER. Mr. President, all the Members of the Senate have received a letter from Vrest Orton, secretary of the Vermont Guild of Oldtime Crafts and Industries, Inc., of Weston, Vt., which explains the magic of the continuous vitality and eagerness of our distinguished colleague the Senator from Vermont [Mr. FLANDERS]. We have received, also, samples of the product which the Senator's good health so highly recommends. We trust that it may be as beneficial to us as it has been to the distinguished Senator from Vermont.

I ask unanimous consent that the letter may be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

VERMONT GUILD OF OLDTIME
CRAFTS & INDUSTRIES, INC.,
Weston, Vt.

DEAR SENATOR: Some years ago your distinguished colleague and my good friend RALPH E. FLANDERS, established the Vermont

Guild of Crafts and Industries in this Vermont hill village, the chief exhibit being a 150-year old stone grist mill turned by waterpower.

Knowing you must have admired the constant and ever increasing vitality of our good friend the junior Senator from Vermont and assuming you will be glad to have the secret of his power, I am now revealing that the Senator eats Vermont Guild wholegrains.

Since for some years during the late war I observed for the War Department the hearings of your eminent body on the hill and was therefore in a position to know what extraordinary strength a Senator has to have, I have now concluded that it is my bounden duty to make some slight contribution to the well-being and vitality of the Senate.

It is therefore with extreme pleasure and honor that I am sending you today, with the compliments of Senator FLANDERS, a gift of a wholegrain sampler which I trust you and your good wife will relish and enjoy.

With every good wish, I am,

Cordially,

VREST ORTON.

Dealing With Unemployment

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 5, 1950

Mr. SADOWSKI. Mr. Speaker, although most business reports point to another good year, nevertheless, it is a fact that unemployment has made itself felt in many homes. Those people past 45 years of age, and those young folks recently graduated from colleges are the ones having difficulty finding employment. From everywhere come reports that good-paying jobs are scarce. Labor leaders and Congressmen representing industrial districts are anxiously looking for means to prevent any large or serious unemployment situation.

In normal times, before the war, we would export about 10 percent of our production. Today if friendly arrangements for trade and commerce and the exchange of credit could be worked out, the United States would enjoy an export-import trade of boom proportions. This, in turn, would mean millions of well-paying new jobs and new sources of profit for industry, and additional revenue for the United States Treasury.

According to recent reports, foreign markets are being supplied more and more by German, Japanese, and English goods. There are many United States items which could not be labelled as war material, and yet cannot be sold for export, because of licensing restrictions. At the same time we learn that the same goods and material is being manufactured and sold by Germany, Japan, England, and other nations to our former allies and former customers. Our export business has degenerated into a free hand-out, Santa Claus affair. The only export business we have today is on those goods which are going out under the Marshall plan. If we were to stop taking money from the United States Treasury to buy these Marshall-plan goods which we give away for free, we would have practically no export business whatsoever.

A healthy and genuine export-import program is vital to the welfare of the Nation. It is one of the programs that must be developed if we wish to provide full employment for our people.

At this point I wish to include an article written by Maurice J. Tobin which appeared in the American Federationist dealing with unemployment:

DEALING WITH UNEMPLOYMENT

(By Maurice J. Tobin, Secretary of Labor)

The problem of unemployment is one of the Nation's foremost problems.

The Nation's employment in 1949 continued to be very high, averaging close to the 59,000,000 average of 1948. But this past February, at a seasonal peak of unemployment, there were almost 4,700,000 unemployed.

The Nation's labor force has been expanding more rapidly than our economy. The problem we are confronted with is: How are we going to get more jobs—more jobs for those who are unemployed and for the new entrants into the labor market?

As a result of accumulated information concerning the seriousness of local problems of unemployment, both from the standpoint of the effect of joblessness on communities and the national economy, I recently asked all governors of States to take the lead in establishing State-wide and local maximum employment committees.

I urged that organized labor, management, civic groups, and local government sit down in the local communities and plan action which would alleviate unemployment. My reasoning was and is that here in America we have a long heritage of working out our problems in a spirit of fruitful cooperation.

It seems obvious to me that action to solve unemployment—especially in those areas which now have high unemployment ratios—should start in the local communities themselves.

A majority of the governors responded favorably. There are now State-wide committees in 14 States and 1 Territory. Local committees have been established in many communities, according to reports to the Bureau of Employment Security, and are attacking community unemployment problems with varying degrees of success.

State and local full employment committees offer trade unionists an exceptional opportunity for participation and leadership in State and community employment planning. These State and local committees need not be only temporary or emergency bodies. They might well be continuing bodies to explore and plan new ways to expand economic activity and employment. I can well imagine that the very existence of such committees and the wide knowledge of such plans would challenge entire communities to make greater contributions in the building of a better America.

One way we can demonstrate our devotion to the democratic ideal is to throw the vast resources of our States and our communities into the common effort to find productive and rewarding jobs for all workers.

It is poor business to wait until the local economy becomes so disorganized that workers lose their skills and subsistence relief is necessary for workers' families before positive community action is taken.

I feel sure that governors and mayors will welcome the participation of State federations of labor and central trades and labor councils in the work of full employment committees already established or which may be organized.

I am also sure that State and local offices of the State employment services will be glad to furnish economic facts concerning communities in which unemployment is currently high or is a threat. The local offices of the employment service usually maintain data concerning economic trends and the size and availability of the local labor force, as well as the occupational characteristics of unemployed men and women.

Just what can community full-employment committees do? The activities of community committees already at work include studies of means to expand existing industry, attraction of new industry, financial assistance to industry, public works, vocational training and retraining, placement of workers, and other projects. Committees should be sure to have basic information about the community, its workers, its trade and industry, its employment trends, its resources, and its economic potential.

One community found that a public-works program would not correct unemployment, because the unemployed were factory workers and not construction workers. On the other hand, a construction program might be the need in another locality.

It would be unwise to encourage the bringing into a community of a new firm which would employ chiefly women when the unemployed for the most part are men.

But experience shows that training, experience, and availability of workers are not the only factors to be considered in a community full-employment program. It is also necessary to consider what can be done through business or industrial expansion which will iron out seasonal fluctuations of employment and otherwise stabilize employment—at high levels.

As I have indicated, the primary responsibility for solving local unemployment problems rests in the beginning, at least, with the community. Of course, there may be limitations to what a community may do, since its principal markets may lie outside its boundaries or its unemployment may be due in part to national business conditions.

Even so, the community can make a start by finding out what its own resources are and what help it may need. Where community efforts cannot alone solve local unemployment, it may become necessary for more comprehensive measures to be taken.

At the present time the Federal Government is doing what it can to help areas of substantial unemployment. For example, it is encouraging business firms in such areas to bid on Government contracts. This help is often of limited nature, however, since the Federal Government is required by law to award contracts to the lowest bidder.

I am confident that we can and will ward off the threat of Nation-wide unemployment—that full employment and a high standard of living can and will be maintained. But the solution of unemployment is everyone's business. It is the responsibility of everyone, including responsible organized labor such as the American Federation of Labor.

Some people believe that all American frontiers have been crossed and that our future progress will be limited. Probably not very many of our citizens believe that. I am sure that such a man as Samuel Gompers, if he were alive today, would not believe it. He would undoubtedly believe that the pioneering American spirit in which he played such an important part still has the vitality and the courage upon which to expand community and Nation-wide business and industrial activity for many generations to come.

Today there are forces loose in the world, as A. F. of L. members well know, which would destroy our democracy and our free labor movement. We must constantly be on guard against those forces. We must be on guard at the grass roots—in the local community.

It is there that the cure for unemployment must be sought first.

Need for Legislative Reorganization

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, April 17 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD excerpts from an article by Mr. Albert L. Warner, which appeared in the March 1950 issue of Harper's magazine.

Members of the Senate will recall that on January 11 I placed in the Appendix of the RECORD a letter signed by Mr. Robert Heller on behalf of the National Committee for the Strengthening of Congress suggesting a program for further legislative reorganization. At that time I announced that I was planning to introduce legislation toward that end. I hope very soon, Mr. President, to have a resolution prepared and introduced to establish a Joint Committee on the Reorganization of Congress.

There being no objection, the article was ordered to be printed, as follows:

THE CHAOS OF CONGRESS

(By Albert L. Warner)

Three and a half years ago a congressional reorganization law "modernized and streamlined" Congress. Now it is all too easy to see that nothing was done to improve either chassis or engine. Some chromium and a couple of bug-eyed headlights may have been superimposed, but it is still the same old model-T rattletrap.

One might almost say that the only tangible result of the congressional reorganization act was to raise the pay of Congressmen and to provide retirement pensions for them. In all fairness, certain improvements and reforms were made; but they are less conspicuous than the creaking and swaying of the lumbering congressional vehicle.

Take, for instance, the utter lack of financial responsibility in Congress. The last session demonstrated it appallingly. So complete was the financial chaos that the average Congressman in the week before adjournment had no idea how much of a Government-spending program he was voting, or whether the deficit would be two or twelve billion dollars.

The reorganization law of 1946 had attempted to set up a legislative budget. It directed that the appropriating and tax-raising committees in Congress were to estimate on February 15 of each year the total projected expenditures for the next fiscal year and the total expected revenue. In 1947 and 1948 a Republican Congress gave this provision of the law a half-hearted and disdainful recognition. The Democrats of the Eighty-first Congress threw it in the ashcan. They considered it unworkable, and perhaps it was, in part; but at any rate even the spirit of the law was flouted.

Appropriation bills came along by fits and starts. A chamber would economize one day and go on a spending spree the next. It would cut out $3,000,000 for a fair in the District of Columbia to celebrate the sesquicentennial of the Capital City, and then authorize $40,000,000 for the construction of new post offices or Federal buildings in every Congressman's district, whether needed or not. And the scales were so loaded against economy that the friends of the District fair could come back three times to the House of Representatives—and make the grade the third time. The House reversed itself and gave the money.

The old back-slapping process, you-help-me-and-I'll-help-you, operated without hindrance on the time-honored pork-barrel bill for rivers and harbors and flood control. The House approved a generous appropriation of $593,000,000; then the Members of the House rushed over to the other side of the Capitol to join their Senators at committee hearings and urge still bigger appropriations, till when the bill passed the Senate it had reached $751,000,000.

The old congressional system of first authorizing a program entailing the spending of money, and then in separate action making the appropriation, lent itself to confusion as usual and played into the hands of the spendthrift. Representative CLARENCE CANNON, chairman of the House Appropriations Committee, sought to stop an appropriation for drawing up plans for a small dam at Gavins Point on the Missouri River. The dam, he said, should not be built for 13 years and might never be needed—depending on the effectiveness of other dams under construction. But the House is always sensitive to local projects, and the theory that it was already committed to this one carried the day; the blueprinting of the dam was upheld.

It would have been reasonable to expect all the appropriation bills for the new fiscal year to pass before it began, on July 1. But so dilatory was Congress that it had to adopt five stop-gap resolutions to allow Government pay rolls to be met while it continued to fumble over bills for weeks after the deadline. On October 1, when a quarter of the fiscal year had elapsed, five appropriation bills were still stuck in the works; and not until October 17 was the vital defense appropriation bill passed—more than 3½ months late!

Not only did the average legislator during the session have no idea of what the appropriations were totaling—according to Representative MIKE MONRONEY, the able Oklahoma Democrat who fathered the reorganization law—but when the session was over even the financial leaders of Congress differed as to what they had done. Representative CANNON, House Appropriations chairman, and Representative JOHN TABER, ranking Republican Member of the committee, were about $2,000,000,000 apart on the total of the appropriations they said had been voted.

It is evident that in fiscal matters Congress at the outset of a session doesn't know where it is headed, during the session doesn't know where it is, and at the end doesn't know where it has been.

II

It was the optimistic thought of the sponsors of the reorganization law that they were improving the committee system of Congress. It is true that they reduced the number of standing committees, equipped them with professional staffs, and put a brake on the creation of special committees. But consider the duplication and confusion that still remain.

The duplication of testimony before congressional committees is an indecent waste of time and of officials' energy. The House Foreign Affairs Committee holds hearings on the bill to extend the Marshall plan for another year. Then the Senate Foreign Relations Committee hears the same men and raises the same questions. Next the House Appropriations Committee, and after it the Senate Appropriations Committee, go over the same well-beaten ground. The joint Congressional Watchdog Committee delves into the same operations. Paul Hoffman, the administrator of the Marshall plan, spent 9 days before the Senate Appropriations Committee alone, being heckled about every export detail from brooms to wigs; and during the past session Louis Johnson, the Secretary of Defense, had to testify before 10 different committees or subcommittees of Congress. In 1 month he made no less than 15 appearances.

Compounding confusion, the Appropriations Committees are beginning to take over the making of policy also. The Foreign Relations Committee of the Senate was willing to go along with the State Department on policies affecting Franco Spain; but Senator PAT MCCARRAN, as chairman of the Appropriations subcommittee, said to the Secretary of State, "I am not in favor of your policy with reference to Spain and until that policy is changed I am going to examine your appropriations with a fine-tooth comb." And the influence of Senator SHERIDAN DOWNEY, exercised through the Senate Appropriations Committee, held up the pay of Reclamation Commissioner Michael Straus for 5 months because the Senator did not like Mr. Straus' policies.

For all the virtues of the reorganization bill, it left untouched the biggest evil of the present committee system: the hoary system of seniority that sits upon the committees like an old man of the sea. The chairmen of committees are those who have grown old coming from safe districts. Ability, effectiveness, knowledge, even political shrewdness—which is sometimes needed to get things done—have nothing to do with the selection of a committee chairman. The oldest man in point of service gets the job.

A committee chairman appoints the personnel of subcommittees. He sets the dates for meetings. He directs what bills are to be considered and when. Because of the traditional deference to him he can practically smother legislation which fails to meet with his personal approval.

The result is that several of the most important committees of Congress have been kept in a state of disorganization. Chairman JOHN LESINSKI, of the House Committee on Education, and Labor began the past session by trying to install a committee counsel whom not even his Democratic colleagues on the committee would swallow. Later the administration's effort to repeal or drastically modify the Taft-Hartley Act saved face only by sending the measures back to committee. The bill for Federal aid to education, handled so smoothly by the Senate that it passed with scarcely a ripple, was allowed to fall into a needlessly bitter row in this House committee, and was stranded there, its friends unable to muster a committee majority to consider it. Finally, the chairman used his arbitrary power to abolish several subcommittees. Representative ANDREW JACOBS, Indiana, Democrat, bitterly protesting, spent the last 3 weeks of the session trying to have the full committee called together. The chairman by seniority said "No." In the nondemocratic committee system of Congress, a chairman's "No" is effective.

Then there is Chairman JOHN E. RANKIN, of the House Veterans' Affairs Committee—chairman, of course, by virtue of seniority. After giving his committee members only a few minutes to look over a new version of a bill to cost $125,000,000,000 for veterans' pensions, he railroaded it to the floor of the House over the shrieks of protesting Democrats. It took not only good sense but considerable political fortitude for the House to send the bill back to committee, because it is considered political suicide to vote against anything for veterans.

At the other end of the Capitol, Senator MCCARRAN, chairman of the Judiciary Committee, secure in his seniority, defied his own party leadership and a majority of both parties of the Senate for one entire session over the bill to revise the displaced-persons law. He did so by just prolonging indefinitely public hearings on the bill. The Senate, always deferential to committee chairmen, had authorized $135,000 for immi-

gration inquiries, which gave scope to protracted study.

III

Much of the unedifying spectacle of congressional dawdling, fumbling, and obstructionism is caused by slow motion in the Senate, and this results from the rule of unlimited debate and the rule of unanimous consent. One dissenter holds up action; and, because there is no requirement that speeches be germane to the issue before the Senate, the discussion of a housing program may be stalled for 4 hours by a speech on milk for Hottentots. There is value in deliberation and full debate, but the result of such latitude is boredom and a snail's pace. In the past session it was only when summer had crept into fall and the House had taken a conspicuous vacation that the Senate finished what could easily have been completed 3 months earlier.

During last winter and spring it became standard practice for the Senate to spend 2 or 3 weeks on every major bill. Any reasonable men, untrammeled by the habits of the Senate, could have resolved each of those issues in 4 days with full discussion.

Real filibusters are not frequent, but there are always long, long speeches carried well beyond the point of weariness. While one or two men harry a point for days, the rest of the Senators are working in their offices or off home for a visit. Sometimes the speeches are a form of political blackmail. Just to get rid of the talks, the Senate accepts what they demand.

In the midst of the debate over a change in the Senate rules last year, up rose Senator HARRY CAIN, the Washington Republican, and delivered himself for 6½ hours of his low opinion of Mon Wallgren, whom the President was trying to appoint as Chairman of the National Security Resources Board. The Senator brought along an extra pair of shoes for the talkathon, changing from one to the other to relieve weary feet. The bored listeners got no such attention.

Incidentally, in the House a roll call takes 40 minutes; in the Senate, 15. Electrical voting equipment would eliminate this droning ritual. But Congress will have none of it.

IV

Some of the causes of congressional inefficiency appear to be insoluble. For instance, the greatest source of distraction to Congressmen in the efficient conduct of their legislative work is their individual constituents. The nonlegislative workload of errands and chores takes 80 percent of the time of some Members of Congress. The gamut of these worries runs from jobs, pension troubles, railroad retirement and social security cases, veterans' affairs, and RFC loans, to defense installations and river and harbor projects for their home districts.

Mr. MONRONEY recalls that someone ironically suggested that half of Congress should be legislators and half should be representatives of the districts. The only trouble is that the representatives of the districts would be the ones reelected.

As if it were not enough that Congressmen should be laden with errands for their districts, they are also imposing upon themselves a new load of publicity activity. They are writing weekly columns for their local newspapers and weekly radio talks by transcription to their local radio stations. And new Congressman GERALD R. FORD, Michigan, Republican, is setting what may become a ghastly precedent. He has become the actor-star in a Washington travelog to be sent to clubs and schools back home, a movie full of the Washington Monument, the Lincoln Memorial, the Potomac, the chambers of Congress, and Congressman FORD. God alone knows what the demands of television will be.

Perhaps there is no way of curbing such outside activity on the part of our legislators. But some of the other scandalous conditions that I have been discussing can be remedied.

1. The chaos in finances. There is at least a faint hope that this situation will be bettered in the present session by the introduction of a single, comprehensive appropriation bill, lumping together all appropriations. This will give Congressmen a chance to look at the total of what they are voting to spend. The appropriations of the previous year will be set in juxtaposition to the omnibus measure, and the same accounting plan will be used for each year. This plan, pushed by Senator HARRY F. BYRD, Virginia, Democrat, could at least show Congress what it is doing.

To let Congress cope with the administrative departments on more even terms, the Appropriations Committees need a professional staff of perhaps a hundred members—accountants and budgetary experts delving into operations as the budget is made up.

2. The demoralizing rule of congressional committees by seniority. It would be a relatively simple change to have the committee chairman chosen either by the elected majority leaders of the Senate and the House or by the members of the committees. All that is needed is enough nerve on the part of enough legislators to push through the change; the country would applaud.

3. The rules of the Senate which provide for unlimited debate and unanimous consent. Even a mild limitation of debate, invokable only in extremities, and a standing requirement that speeches must be germane to the subject before the Senate, would bring improvement.

The old model T was a good car but the roads are slicker now and the traffic fast and heavy. The ancient congressional jalopy needs some fundamental rebuilding.

The Basing-Point Bill

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Tuesday, April 18 (legislative day of Wednesday, March 29), 1950

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have placed in the Appendix of the RECORD an editorial from the April issue of the National Independent which vigorously opposes Senate bill 1008, the so-called basing-point bill. This publication represents the independent tire dealers and tire rebuilders, and is another instance of small business opposing Senate bill 1008.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE BASING-POINT BILL MUST BE KILLED

The basing-point bill, S. 1008, which threatens to rip the very guts out of the Robinson-Patman Act, is dangerously close to becoming law.

This is a very bad bill. It must not pass.

It must not pass because it will destroy the antiprice discrimination provisions of the Robinson-Patman Act. It will weaken the very antitrust laws which both major political parties swore solemnly, during their 1948 election-year campaigns, to enforce and strengthen.

It must not pass because it will sacrifice small and independent businessmen on the altar of giant, monopoly business. It will injure mortally small and independent businessmen whose interests both major political parties swore solemnly, during their 1948 election-year campaigns, to protect and advance.

It must not pass because it will bless the operations and expansion of monopolies. It will increase monopoly domination of American business, something which both major political parties swore solemnly, during their 1948 election-year campaigns, they would oppose firmly.

It must not pass because it will, in furthering the interests of monopolies, drive our Nation down the road away from freedom toward the slave state. It will speed us on the road to socialism, fascism, or communism (three birds of a feather), which both major political parties swore solemnly, during their 1948 election-year campaigns, they would battle.

It must not pass because it is not honest. The bill will not, as its sponsors claim, benefit small and independent businessmen—rather it will injure them. The bill is not being sponsored by small and independent businessmen on their own initiative—rather it is being sponsored by small and independent businessmen completely misled by giant, monopoly industry interests.

It must not pass because it has not been given the thorough airing all legislation should receive. Senate and House sponsors of the bill have refused to hear in committees charged with considering S. 1008 the objections of small and independent businessmen to the measure. This is a practice more characteristic of the Communist slave state than of free America.

What can we do about this?

We can do three things. First, write now to President Truman, explaining our objections, and demanding that he veto S. 1008. Second, write now to our Senators, explaining our objections, and demanding that they vote against S. 1008 when it comes up for passage and in support of a Presidential veto. Third, write now to our Representative, demanding that he vote to support a Presidential veto.

Farm Rule of Reason

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 18 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Alfred D. Stedman entitled "Farm Rule of Reason," which appeared in a recent issue of the St. Paul Pioneer Press.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FARM RULE OF REASON

(By Alfred D. Stedman)

Due allowances are to be made for tendencies in the writing craft, as among other folk, to go a little loony in the spring. And since the fussing and fuming are now about the Federal farm-price program, there's a better-than-usual excuse. For the potato-and-egg mess isn't imaginary. The wheat and corn surpluses do exist. The four billions of tax money tied up in products ain't hay. And the job of press and radio is to drag such things into daylight. So the democratic process of full and free reporting must go on.

Nevertheless there still are such things as facts and the rule of reason. It is with

them that the current spring writing rage plays havoc. An aim to stir a public stampede against the farm program is avowed by two magazines and reflected by others. These two expressly adopt the Mencken view, that while the average American is too dumb to understand much of anything, he can easily be scared. So the word is out to give the farm program the works. Alarm the people into killing it. That's the idea, and, boy, are the word wizards doing it up brown.

Exhibit A on the extreme side is the article that the April Reader's Digest reprints from Fortune, these magazines being the Mencken slant twins. Fortune's original title was "The Farmers versus the People." Maybe because that seemed to label the producers of this Nation's food as inferior creatures, not people, the Digest changed it a bit. The new title is "Farm Politics versus the People." But the general theme remains.

The magazines condemn the farm program for seeking to increase agriculture's share of the national income "regardless of the group's contribution to that income"—exactly the opposite of its aim. They compare it with John L. Lewis, to his advantage. They call it inflationary, though farm prices are our most deflationary factor. They see grand scale Federal buying of pork, though pork meats have not been bought. They talk of a mounting wheat surplus in another wet cycle year, though the Plains really are swept by drought, dust storms and crop loss.

Other exhibits almost as extreme could fill out the alphabet. A Life magazine writer described the huge food reserves under the program as a curse. But a Louisville paper denounced the program for promoting artificial scarcity. A NANA columnist interpreted that wheat planting will run 40,000,000 bushels above 1949 and corn planting as much as 200,000,000 bushels higher thus maybe sinking the price supports—whatever the heck bushels of plantings might mean. People read about "Cadillac farmers" rolling in wealth, whereas income per farmer averages about half the income of nonfarmers. Repeatedly the epithet socialistic is applied to Government financing of self help for those who are really this country's most individual people. And not content with reasonable criticism of granting $8 per diem pay to farm committeemen attending the St. Paul meeting April 4, a Minneapolis newspaper editorial publishes a comparison of around 4,500 committeemen who have been elected by vote of Minnesota farmers to the long malodorous Pendergast outfit, saying that PMA stands for "Pendergast Machine in Agriculture."

On runs the gamut of denunciation, carrying small hint of Government aid to anybody except the farmer, until his head is bloody and bowed.

Certainly the farm program's costs and surpluses need scaling down, the potato-and-egg mess needs to be cleaned up, and a lot more soil conservation needs to be injected into the program. But do not other facts call for consideration before killing it off entirely?

One such fact is that the program's reserves of wheat and corn, through embarrassingly large in other respects, are also a backlog of human food that, in event of war or drought, could be vital. In opposing the program, a Minneapolis editorial belittles even this preparedness value, although on the same theory a hospital or fire-fighting or insurance plan could be derided as relying for success on the occurrence of trouble. The wheat reserve is obviously protective now in view of the Plains drought that already has slashed the official wheat estimate a drastic 120,000,000 bushels. Also the corn reserve is protective at a time when corn belt subsoil moisture is very low. These reserves are food—bread, milk and meat in storable form. Hostile words cannot take away their value of protection against possible emergencies.

Another such fact is that while the organized farm groups are denounced for upholding the program, all except one are fighting for more moderate and more flexible price supports. The dairy group is taking the lead in asking Congress for restoration of the self-financing feature that first President Coolidge and then the United States Supreme Court, with business backing, knocked out of the farm program. And while verbally opposed to the program's flexible price support feature, Secretary Brannan has officially and repeatedly used that feature to lower price supports on potatoes, eggs, flax, dairy and other products. So even the politics of the program are being misrepresented to the country.

A final fact is that not within agriculture but outside of it originate the conditions that are forcing farm price protection. Between big business and tightly organized professions on one side and big labor on the other side are the competing millions of mostly small farming units. So in postwar times, farm prices have invariably slumped much faster than other prices. Past experience tells clearly that the result of failure to guard against this is a crash and spreading disaster. Isn't there something to be said for choosing to iron out the bad spots from the farm program instead of going through another such postwar collapse? Facts and the rule of reason seem to say so. And maybe those, when the pen-and-ink brigade's present spell of spring fever passes, will for a change get a play.

The Financial Solvency of the Government

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 18 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a very interesting and timely address delivered by Hon. JOSEPH W. MARTIN, JR., leader of the minority of the House of Representatives, at the annual dinner of the Amen Corner Club, at the William Penn Hotel, in Pittsburgh, Pa., on April 15, last.

Later I hope to have the opportunity to place in the RECORD an address delivered at the same dinner by the senior Senator from Virginia [Mr. BYRD].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, fellow Americans, I am honored by your kind invitation to address the Amen Corner.

Standing before taxpayers who help pay the bills for the Washington spenders, I speak to you tonight somewhat in the manner of the referee in bankruptcy—I can't repair all the damage—but I can tell you where the money went.

We are at the crossroads in Washington today. The thinking members of both political parties realize this, and I think it is a tribute to the greatness of our Nation that these men place patriotism above partisanship and act in the best interests of our country.

When we speak of the financial solvency of Government we are speaking about a situation that affects us far more than the stability of our currency or the value of our bonds or the condition of our Treasury. When we consider that we now have a mountainous debt and that we are operating on a deficit basis, then it is clear to anyone that our very national security is at stake.

We sometimes forget that the Federal budget has only been in balance once in a generation of endless deficit spending.

We sometimes forget that taxes have only been reduced once in a generation of ever-increasing taxes.

We sometimes forget that our national debt has been reduced only once in a generation of ever mounting national debt.

Only in the years of 1947 and 1948 was the budget in balance. Only in those years was there an application made toward retirement of the debt. Only in those years—and it took 2 years and the survival of three presidential vetoes to do it—was there a reduction in taxes.

Those years—1947 and 1948—were the years of the late and much abused Eightieth Congress. Yes, the Republicans were in control in 1947 and 1948, but the task performed by that Congress would never have been achieved without the aid of patriotic and sincere Democrats who firmly believed then and believe now that the solvency of America is vital not only to the American people but to the world.

Of course, times change—in fact, they changed rather abruptly for my party in November 1948. Things are a bit different since that momentous date.

Spending has been resumed at an enormous rate. Where the Treasury showed a surplus of more than $8,000,000,000 when the books were closed on the fiscal year 1948, the books for the fiscal year 1950 will show a deficit of more than $5,000,000,000.

The budget for 1951 is based on another deficit of $5,500,000,000.

In brief, the Federal spenders will have run up a total deficit for the fiscal years 1949, 1950, and 1951—of almost $13,000,000,000.

And this at a time when Federal tax collections are running approximately $40,000,000,000 a year.

I repeat, the battle for solvency—the great battle of this year 1950—may well determine the future, not only of our own country, but of the entire free world.

Because this struggle is of such overshadowing importance, we must have the united support of all our people—Republicans, Democrats, and independents alike.

Let all patriots, regardless of party, join in this great crusade to end the era of red ink and red herring. Let us elect to office only men and women who will keep the American faith.

The world tide of public opinion is marked clearly in the recent elections in New Zealand, Australia, and England. Spendthrift socialism has been tested in the work-a-day world—and it is not the answer to the progressive needs of this twentieth century world. It has not brought to the people either peace, security, progress, or sustained prosperity.

Our crusade today is to save constitutional government. We must preserve the freedom of the American people. We must fight off a new threat of slavery—slavery to government and to crushing, crippling debt.

If I may interpose a personal note, let me remind you, fellow Americans, that it was exactly 85 years ago this day that the immortal Abraham Lincoln departed this earth.

Many times have I walked past that historic old brick house on Tenth Street, in Washington, where Lincoln had lain in agony all night long, after the fateful attack of the assassin in Ford's Theater, across the street. History tells us that a cold, driving rain fell in Washington on that Saturday morning of April 15, 1865. At 20 minutes after 7 in the morning there was a sudden stir and bustle

in the crowd which had kept its prayerful vigil through the night. At that moment, John Hay, Lincoln's secretary, emerged from the dark, brooding house to announce the death of Father Abraham.

Let this day remind us, then, that the battle against human slavery is never finished. The battle for freedom is unending.

Today we face the threat of yet another form of slavery—indenture to debt—and ours is the solemn charge to stand like bold men and proclaim to all the world: "It shall not come to pass."

Let us dare to hold high the sacred torch of freedom, lest the darkness of tyranny fall again upon all mankind.

Sickening to the patriot's heart is the orgy of waste, extravagance, and plain bad management encountered on every hand in Washington today—shocking waste—sinful waste—demoralizing waste of the people's substance.

Only a month ago we had a report from the Federal Supply Service telling of the tremendous inventories of equipment and supplies on hand in some of the executive departments. I want to read some of the figures to you—they tell the whole story of the kind of administration we are paying for today.

One agency had on hand enough fluorescent light tubes to last it for 93 years.

The same agency had on hand, as routine inventory, sufficient ruled paper to last it for 168 years.

It also carried as inventory enough tracing cloth to last for 9 years—and enough loose-leaf binders to last it for 247 years.

That's the kind of government a nation always gets when one party remains too long in power.

The bureaucrats grow fat, lazy, arrogant, indifferent, careless. They spend just for the sake of giving someone an order.

First, they become callous to the cries and pleas of the taxpayers—and then, as time goes on, these callous moods harden into attitudes of utter contempt for the people. That's when government begins to push the people around. And that's exactly where we stand today—one short step removed from the police state of compulsion.

Give this sort of government just one more vote of confidence—just one more term of security for the bureaucrats—and you will find them so deeply entrenched in their spending and give-away programs that there will be no uprooting them, ever.

The longer bureaucrats remain in power, the more money they spend. And the more they spend, the more powerful and far-reaching becomes their propaganda to crush and snuff out every voice of criticism and opposition.

High, wide, and handsome is the spending sway today. Only last month the Appropriations Committee of the House examined some detailed bills for new furniture for one office in the Federal Power Commission. The bill came to $2,189—for one office. Here are some of the items:

"Two walnut wastebaskets, at $13 each; and two ashtrays, at $5 each."

There you have the picture of today's spendthrift bureaucracy freewheeling with the people's money.

That's how they got their favorite campaign slogan, "Tax and tax, spend and spend."

Only a few sentences are needed to summarize this alarming trend in Washington today.

The Federal budget in 1928 was $4,000,000,000. By 1938 it was $8,000,000,000. By 1948 it was $40,000,000,000.

In 1928 we had 400 Federal agencies in the budget. In 1938 we had 1,000. And today we have 1,800 Federal units in Government. In 1928 the per capita debt was $146. In 1938 it was $286. And in 1948 it was $1,759.

In 1928 we had 500,000 Federal employees in all departments. By 1938 we had a million civil employees. And by 1948 we had a few more than 2,000,000, not counting any military personnel, officers, or enlisted men.

The Federal debt today is an unseen mortgage of more than $7,000 on every family in America.

The spenders have mortgaged the lives, not only of your children and your grandchildren but of their grandchildren for generations almost unnumbered.

I call as a witness against this reckless course another noted Missourian, the Honorable CLARENCE CANNON, Democratic chairman of the House Appropriations Committee. Commenting on the Federal budget for 1951, Chairman CANNON told the House on January 9 this year:

"From every technical and statistical point of view, our fiscal situation is the most unfavorable in the peacetime history of the Republic."

I could read to you tonight for hours from the splendid reports submitted last year by the Hoover Commission. Those 19 reports cataloged waste, extravagance, and overlap and duplication in every department and agency of the Government—page after page of such items as I have cited from this year's appropriations hearings.

Yet the powerful administration propaganda machine only sneers and jeers at the people's cry for real economy in Government and lower taxes. They make no real effort to cut down the spending.

But the day is fast approaching when the Government can no longer live on I O U's. The day is approaching when they must tell the people what has become of the social-security trust funds. Today the social-security till is empty. The social-security taxes for 15 years were spent for routine Government operations, as fast as they came in. The trust fund is a pile of Federal I O U's.

When the day of accounting comes—as surely it must—we will find the master spenders grouped on the White House steps responding to the assembled multitudes:

"Let 'em eat powdered eggs."

Or:

"Let 'em eat dried milk—there are whole caves full of these spoiling foods available in Kansas."

Or perhaps they might offer us a few potatoes.

No, fellow Americans, we dare not stand idly by and see such a band of reckless, irresponsible, and desperate men steer this mighty land into the shoals of economic disaster.

Ours is the solemn duty and the sacred responsibility to demand a house cleaning in Washington—now.

One of the great myths in Washington today is this thing called Federal aid.

"Taxes must remain high," the spenders tell us, "because Washington is sending so much money back to the States to help build roads, hospitals, airports, and other public works, and to sustain vital welfare programs."

But what is the truth about Federal aid:

Every dollar sent back to the States from Washington comes from the States in the first place. Every State except one is taxed more for these services than it gets back.

Look at the figures for your own great State of Pennsylvania. In the fiscal year 1948 Pennsylvania paid into the Federal Treasury in all forms of taxation the astonishing total of $3,223,000,000.

And Pennsylvania got back in all forms of Federal aids and grants only $359,000,000.

In other words, every time Pennsylvania pays in a dollar for Federal taxes, she gets back 11 cents.

Yet the thinkers and planners down there tell you it is the State-aid programs which keeps taxes so high.

Pennsylvania pays in a dollar and gets back a dime.

Given her own Federal revenues each year, Pennsylvania could do for herself everything that Washington is doing for her today in the way of Federal aids and grants—and save millions upon millions a year in the bargain. Isn't that worth doing something about?

Federal aid is a myth. The bureaucratic brokerage is terrific. Any State or any city—yes, any citizen—can spend this money at home more wisely than the Washington planners can spend it for us.

The spenders tell us that everything is going to be lovely. They tell us that in 50 years every family will have an income of $12,000 a year.

And that is another cruel and heartless myth.

The President was very careful not to predict what the American dollar would be worth in the year 2000.

He knows that today's dollar buys only 60 cents' worth of goods, as measured in 1939 purchasing power—and less than 30 cents' worth of goods, as measured in the purchasing power of the year 1900.

If the purchasing power of the American dollar falls off as much during the next 50 years as it has in the last 50, the dollar will be worth exactly 18 cents, in that great year of promise, A. D. 2000.

Then the $12,000 family income so glibly promised by today's tax-eaters would represent a yearly purchasing power of $2,160 in terms of 1939 dollars—less than today's average income per family.

So this whole theory and program is only a gigantic hoax on all the people—a political shot-in-the-arm to lull them to complacency for a few more years of irresponsible tax extraction.

And this gigantic hoax is reared upon the contemptuous official opinion in Washington that the American people do not catch the difference between the 100-cent dollar, a 60-cent dollar, and an 18-cent dollar.

Such callous trafficking in human destiny is without parallel in modern history.

I predict that the American people, once aroused, will soundly reject and repudiate the power grasping mob which seriously sponsors such economic nonsense. There is a job for all of us. We must all unite in seeing that the American people are fully informed. They must know the facts. When they do, they will make an intelligent decision.

What this country needs is a good five-point program for American revival, security, and progress.

We must get rid of the wartime excise taxes and other punitive taxation.

We must create tax incentive for small business.

We must balance the budget and reduce the debt.

We must administer the tariff program more carefully, to protect American jobs.

We must remove the threat of socialization which hangs like a pall over the spirit of American thrift and industry.

We must stop this pump-priming for disaster.

And we must drive the Reds, subversives, spies, and saboteurs from the structure of the Federal Government. Our policies must be supervised by men and women whose first loyalty is to the United States.

Let us band together like good Americans to end the era of the red herring, and secret government.

Every time a committee of the House or Senate digs up a new name of a Communist sympathizer on the Federal pay roll, that's more red herring.

The official record demonstrates that our State Department has been harboring in recent years, by their own admission, people who never had any moral right to any position of power or influence in public affairs.

But may the American people look at these records?

Oh, no. They are confidential. They are secret. They must be held under lock and key. No official of any department may release these records to Congress save upon personal order of the President.

That order is denied.

Our highest defense secrets have been stolen.

Our policies have been betrayed.

Our security has been undermined by spies and saboteurs.

But the records are sealed from the American people. Why?

Yet I feel confident that an overwhelming majority of the American people support our proposition that we must root out the Communists and fellow-travelers in every department and every branch of our Government. The people want action—not excuses. They know that the Stalinites have outwitted us, and they want the stables cleaned.

We must rid ourselves of those wobblies who now frustrate and obstruct and sabotage operations within the very structure of government itself.

There is no place in our Government for these spies, traitors, and saboteurs.

It is a profound fact of history that the secrets of the pumpkin papers were first disclosed to an Assistant Secretary of State as long ago as 1939. But the American people did not hear of these black deeds until the summer of 1948.

We face difficult times as we grope for progress and prosperity at home and peace abroad. These two problems go hand in hand. Without a strong and solvent America we cannot have good times and be sure of the preservation of our rights and progress. Without a strong America we cannot meet the great challenge to America to preserve the liberties and freedoms of the people and to exert a powerful influence for peace. We must not waste and squander our liberties. We must be strong financially and we must be strong in a military sense. Only through a strong army and navy and an all powerful air force can we make sure of peace. New ventures and new experiments in government must be delayed while we build our air forces as a mighty impetus for peace. My countrymen, only through self-denial and sacrifice and unselfishness can we meet this great challenge. We must go forward united; class, racial, and religious differences must be subordinated to the common good. We are one people, all with a common destiny. We will go forward together or we will sink together; united we can meet successfully, fairly, and justly the economic problems of our time. With tolerance and patience we can build a better America for all. We can build a stronger America that will bring peace, happiness, and progress, not only for our own people but the people of all the world.

We must not fail in this God-given opportunity to serve our day and generation. Our duty to civilization demands we shall not fail.

How To Regain Lost Water Rights

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, April 18 (legislative day of Wednesday, March 29), 1950

Mr. WATKINS. Mr. President, I ask to have printed in the Appendix of the RECORD an editorial entitled "How To Regain Lost Water Rights," published in the Los Angeles Times of April 12, 1950. The editorial comments on Senate bill 3376, which I introduced a week ago Monday.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows :

HOW TO REGAIN LOST WATER RIGHTS

Sudden realization throughout the West of the bold attempt of the Bureau of Reclamation to take over internal water and power rights in the various States, has led to a revolt at last.

This awakening has been late. But it is not too late.

Congress finally has been asked to act on a comprehensive plan to rescue many water and power projects which have been taken over by the Bureau of Reclamation on an apparently permanent basis in its policy of seize and control. The proposed legislation would restore to the people the local rights and legal privileges which have been wrested from them by the Bureau.

WATKINS, OF UTAH

Senator ARTHUR V. WATKINS, of Utah, is the spokesman for local rights who has stepped forward with specific legislation. His bill is described as an effort to provide grass-root management of multipurpose reclamation projects—that is, where irrigation and power development both are involved.

The so-called basin projects include those in which the Bureau, by long-planned and devious steps has succeeded in supplanting local control and has substituted its own costly and extravagant management from Washington. The Colorado River and the Columbia River and the Central Valley project in California are examples of the Bureau's continuous and growing encroachment.

Only by some such plan as that put forward by Senator WATKINS can this Federal domination, resulting eventually in full economic and political control by the bureau planners in Washington, be forestalled.

THE BANKER TAKES ALL

Simply framed, Senator WATKINS' bill would provide the legal machinery for enlargement of local operational groups to care for the big water and power developments. This would fit in perfectly with the aims of many aroused groups throughout California which now are seeking to take back control of the vast Central Valley project from the Bureau of Reclamation. The Central Valley story is unfolding day by day as the Bureau through many maneuvers seeks to tighten its hold, and the local groups, fighting hard at last, move to block the loss of their remaining rights and to regain their lost ones.

A point which Senator WATKINS makes is so important that it is difficult to understand how it has been overlooked so often. This is that in every instance the local citizens are paying for the water and power developments, yet full control is sought by Washington merely because it has provided the basic loan or financing. It is as if a bank, making a home loan, should demand the right to dictate what kind of a house a man is going to build and also seek title to the house even after the borrower has paid off the loan.

Entire objective of the Watkins bill is to move back toward the original purposes of the Reclamation Act of 1902. This act has been perverted flagrantly by the Department of the Interior and the Reclamation Bureau in their efforts to foist a strangling Federal domination upon the West.

ALL MUST JOIN FRAY

In the Central Valley project of California, particularly, some aid is needed immediately to restore local rights. The Bureau at the moment is seeking by every means at its command to take over the hydroelectric rights of the Pine Flat Dam on the Kings River in defiance of Congress, the Federal Power Commission, precedent, and the rights of the owners of the water. This effort merely is an extension and a support of previous attempts to force the 1,000,000-acre Kings River Water Users Association into the Central Valley project against its will.

The united and fighting efforts of organizations throughout the State are needed now to crystallize the sentiment of local farmers and other citizens to fight the Bureau at every turn. Support of Senator WATKINS' bill is one segment of this struggle; positive backing should be given the bill in Congress by every Californian interested in preserving his State from outside domination.

Southern California's $550,000,000 stake in the Hoover Dam-Colorado River development is a vital reason for this section to be active in aiding all efforts to block the Bureau from permanent control. Local taxpayers are footing the bill every day; they should know that their investment is to be secure.

Sometimes it takes a good while for a realization of the enormity of the seize-and-rule schemes such as those exemplified by the Bureau of Reclamation. Now that the realization has begun to make itself apparent, there should be no let-up in the fight.

The Bureau is in the wrong. It can be defeated. It must be.

Chinese Representation in the United Nations

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, April 18 (legislative day of Wednesday, March 29), 1950

Mr. O'CONOR. Mr. President, Professor Owen Lattimore has publicly suggested that the United States representatives to the United Nations so act as to bring about the expulsion of the Chinese Nationalist delegates which would lead inevitably to the seating of the Communists, sent here by the Peiping regime, the collaborators of Russia. I consider it would be a grave mistake for the United States to follow Dr. Lattimore's article. In my opinion the views he here expressed are not shared by the great majority of Americans. It is to be hoped that the State Department will ignore his counsel. Not only would we be repudiating the friendly representatives of China who have cooperated with the freedom-loving nations at Lake Success but we would be giving aid and comfort to communism by any manifestation of attitude which will hasten the seating of representatives of the Peiping regime.

Furthermore, if our Nation follows this advice of Professor Lattimore we will merely assure another certain "veto" in any deliberations of the United Nations where democratic interests are in-

volved. Why invite into our midst a group of Communists, all of whom are looking for the opportunity, and biding their time, to help in the overthrow of our free institutions? Certainly Moscow would rejoice over having scored another major victory if we assist in any way in the seating of the Chinese Communist delegation, which I hope we will never do. It would give Russia two of the Big Five votes to thwart any action looking toward the peaceful settlement of international disputes.

The New York Times has expressed its well-considered views in an editorial entitled "The View of Dr. Lattimore." I ask unanimous consent to have this editorial printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE VIEWS OF DR. LATTIMORE

Prof. Owen Lattimore has a right to his opinions and a right to express them. They may be wrong, sometimes, but to challenge them is not to challenge his integrity. Since he has that right, others have the right to disagree with him without being accused of having joined a smear campaign.

Since his views have been brought conspicuously into the limelight by present circumstances, it is prudent to weigh them carefully, not to see if they are subversive but to see if they fit the facts sufficiently well to inspire confidence. He is a specialist on the Far East, and our policies in respect to that area are much in debate. Whether his advice should be followed is germane to that debate.

In Philadelphia on Saturday night Dr. Lattimore advised members of the American Academy of Political and Social Science that the United States should disavow the Nationalist Government of China by "allowing those members of the United Nations who wished to do so to vote to unseat the old Chinese delegation to the United Nations and seat a new one." We submit that this is bad advice because it is based on a false presumption and is therefore thoroughly misleading in respect to the United States and its relations to the United Nations.

The assumption that the United States could and should "allow" other nations to take courses of action is false, since it implies that the United States thus far has not so "allowed." The United States, exactly contrary to this assumption, made it plain 2 months ago that it would abide by a majority decision on China in the Security Council. Dr. Lattimore is urging the United States to do something it has already done.

The disadvantageous and dangerous aspect of this advice lies in its equally false implication that it is the refusal of the United States to "allow" a vote in the United Nations that is causing the present stalemate in the international organization. That record must be kept straight. The United Nations is in difficulty at present, not because the United States does not recognize the Communist regime in Peiping or welcome it into the United Nations but because of the blackmailing boycott of the Soviet Union and its satellites.

The issue is not one of recognition or representation. The issue is merely whether the Soviet Union can force the United Nations to be obedient to its dictation by a poncy of walk-outs. When Dr. Lattimore beclouds that issue he is putting his Government in the wrong light and hindering the important business of getting the facts in the case and getting them straight.

The Atlantic Community Looks Ahead

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 18 (legislative day of Wednesday, March 29), 1950

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Atlantic Community Looks Ahead," by Walter Lippmann, published in the Washington Post of this morning.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ATLANTIC COMMUNITY LOOKS AHEAD

(By Walter Lippmann)

The principal Atlantic allies—Britain, France, and the United States—have been carrying on friendly but difficult discussions which turn finally on the question of what is to happen 2 years hence, when the Marshall plan ends. Mr. Hoffman's campaign for European integration and the European Payments Union, Sir Stafford Cripps' reluctance to commit Great Britain to these schemes, and now M. Bidault's proposal to set up an Atlantic High Council all stem from a realization that the end of the Marshall plan is in sight.

The ERP program, to be sure, has been in operation for only 2 of its 4 years. But Congress is about to vote on the third installment, and after that there will be only one more. When Congress meets next January it will have to go to work on the fourth and terminating installment. Thus, while in operation the ERP has run only half its course, from the point of view of the Governments the great decisions of policy about what is to follow are close at hand.

The attitude of the three governments is inspired and defined now by what each thinks could or should happen after ERP ends.

Mr. Hoffman, adhering loyally to the mandate of Congress, is in effect saying for the United States that if the Marshall countries are to become substantially independent of an American subsidy by 1952, they must now integrate—that is to say, they must agree on measures to develop a greater volume of trade among themselves and their own dependencies. Mr. Hoffman is trying to induce the Marshall countries to unite in order that the Marshall plan may end with its main legal objectives attained.

But the consideration which inspires him to put pressure on Great Britain inspires Sir Stafford Cripps to resist the pressure. The British view, I think it is fair to say, is that Britain has a better chance of achieving financial independence if it has a relatively free hand to make its own bargains and arrangements than if it is integrated—that is, tied very closely to the European continent. Mr. Hoffman has no way of guaranteeing the British that if integration with the continent proves to be a costly burden on the British reserves, the United States will underwrite the losses.

On the assumption that American aid is to end in 1952, Mr. Hoffman has no conclusive bargaining power today which can induce or compel the British to do what they regard as disadvantageous and dangerous. Though the British will probably make compromises to avoid a serious quarrel, we must not think that we can buy a commitment from them which extends beyond 1952 because there are still two installments of the ERP subsidy to be voted.

These installments have in fact been discounted. The British know and we know that in the critical condition of the cold war, the subsidy is not likely to be withheld. They know and we know, moreover, that if it were withheld Britain could, nevertheless, survive. There would be hardship. But the British can and will endure hardship when their national independence is at stake.

M. Bidault's proposal, judging from what is known of it, is designed to be a framework of mutual aid for the period which comes after the end of the Marshall plan. His fundamental assumption is quite evidently that large American contributions to the Atlantic community should not and cannot end in 1952. He is proposing to create an institution and, thereby, an implied commitment not to terminate the American subsidies at the end of the Marshall plan.

It is fair to say that if the British could know and could believe that 1952 would not see the end of American dollar aid to the Atlantic community, that somehow or other we would make it our national policy to finance the dollar gap at a high level of international trade and domestic employment, they would soon be leading the procession, rather than "dragging their feet" toward large schemes of cooperation and multilateralism and convertible currencies.

But it is not possible for Mr. Truman, Mr. Mr. Acheson, and Mr. Hoffman to make convincing American commitments after 1952. They cannot speak now for the Eighty-second Congress which is to be elected in the autumn, must less for the next President and the Eighty-third Congress.

But while they cannot commit the Congress to action in the future, they can still do something substantial and important. They can recognize the fact, which no one will be able to deny, that, though the Marshall plan ends, it will still be an American vital interest to see that the dollar gap is closed—not through deflation and unemployment from a contraction of exports, but by the maintenance of a high level of trade and investment. Though they cannot commit the Government to voting subsidies, and should not try, they can lead the American people to an understanding of their own interests.

They can, then, lay the foundations of American policy after 1952 not on the principle of subsidies to needy but deserving and valuable allies but on the stability and prosperity of the American economy. They can adhere to the idea that 1952 is to mark the end of direct subsidies by the United States to Great Britain certainly, and one may hope to our other principal allies as well. They can take the view that after 1952 we shall deal with Britain not as the recipient of our subsidy but as the manager of a great trading community—the sterling area—with which the dollar area must find profitable relations.

In the larger view, which transcends questions of money and trade and embraces the political future of western civilization, we should look forward hopefully to 1952 and to the end of our ERP relations with Great Britain. The subsidy has been necessary. It has served a useful purpose. But it must be ended because, were it to be anything but a temporary arrangement, it would demoralize the Anglo-American partnership on which the future of the Atlantic community depends.

That partnership cannot be satisfactory if Britain is not truly independent. Britain is not independent when every spring it has to justify itself to all the committees and to both Houses of the United States Congress. At whatever cost and inconvenience, Britain must cease to be our client and be free again to be our equal ally.

The British would not be the great ally they are if they did not hate this relationship and were not determined, however unpopular it makes them in Europe and over here, to get free of it.

Soviet Policies

EXTENSION OF REMARKS
OF
HON. MILLARD E. TYDINGS
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, April 18 (legislative day of Wednesday, March 29), 1950

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Sante Fe New Mexican. I do so at the request of a constituent.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BIGGER THAN THE H-BOMB

The nonchalant American, who can be aroused only by Bunker Hill, Fort Sumter, the battleship *Maine*, or Pearl Harbor, may soon be aroused more than ever before, without so much as the dropping of an old model-T A-bomb. In the humble opinion of this oldest newspaper in the West, the Union of Soviet Socialist Republics may shortly:

1. Denounce the United Nations as a Jim Crow cartel for world dominion by white colonial imperialism;
2. Resign from the United Nations;
3. Declare that the U. S. S. R. is not and never has been a European, white, colonial, or imperial power;
4. Withdraw Soviet troops from all occupied countries;
5. Proclaim that the U. S. S. R. is and always has been an Asiatic power, of, by, and for Asiatics;
6. Point to a democratic federation for the advancement of Asiatic and other downtrodden peoples, concurrently formed in some pliant capital of the Indochinese or Malayan Balkans;
7. Proudly accept membership in this incipiently largest of the parliaments of man;
8. Donate to the new federation twice as much money for twice as big a skyscraper as Uncle Sam built the United Nations;
9. Then sit back and laugh; and
10. While our radio and newspaper commentators grope to explain why the dirty Russians didn't attack us honestly and fairly with an H-bomb, so we could retaliate.

Veterans' Training

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, March 31, 1950

Mr. RANKIN. Mr. Speaker, under the permission granted me to extend my remarks in the RECORD, I am inserting a statement issued by the Veterans' Administration which I am sure will be of interest to every Member of Congress, as well as to the veterans throughout the country.

The matter referred to follows:

The deadline for most veterans for starting a course of education and training under the GI bill is 15 months away—on July 25, 1951.

A Veterans' Administration regulation, issued today, states that the majority of veterans will not be permitted to begin GI bill courses after that date. An exception has been made for those discharged after July 25, 1947, and those who enlisted or reenlisted under the Armed Forces Voluntary Recruitment Act.

July 25, 1951, however, is not important to veterans who have started and actually are pursuing GI bill training on that date, as they have the right to continue their courses.

The VA regulation explains that a veteran who has started a course and who has continued in it will be considered to be in training, even though he has temporarily interrupted the course for the summer vacation or for other reasons beyond his control.

Once a veteran completes or discontinues his program of GI bill training after the 1951 date, he may not start another course.

The GI bill provides that generally training must be initiated by July 25, 1951, or 4 years after a veteran's discharge, whichever is later, and it must be completed by July 25, 1956.

Most veterans are subject to the 1951 and 1956 cut-off dates. But there are the following exceptions:

1. Veterans discharged after July 25, 1947, have 4 years from date of discharge in which to begin GI bill training. However, they must finish by July 25, 1956.

2. Veterans who enlisted or reenlisted under the Armed Forces Voluntary Recruitment Act (between October 6, 1945, and October 5, 1946) are not bound by either dead line. Instead, they have 4 years from the end of that enlistment or reenlistment period in which to start, and 9 years from that time in which to complete their course of training.

A veteran in either of these two categories actually must be in training when his individual entrance dead line comes around, in order to continue afterward.

The VA regulation outlines requirements that veterans in training after the entrance cut-off date will have to meet.

They will be expected to pursue their training continuously until completion, except for conditions which normally would cause interruption by any student.

They may change their educational objectives only while in training and then for reasons satisfactory to the Administrator.

According to the regulations, satisfactory reasons for change are these:

1. When the veteran is not making satisfactory progress in his present course and the failure is not due to his own misconduct, his own neglect, or his own lack of application.

2. When the course to which he desires to change is more in keeping with his aptitude, previous education, training, or other such pertinent factors.

3. When the course to which he wants to change is a normal progression from his current course and will help him attain his educational or vocational objective.

No additional changes of course will be approved, the regulation states, except for the most cogent reasons.

The VA regulation defines a course of education or training as a "curriculum, program of study or training, or combination of subjects as are prescribed by the institution as constituting a course."

The following do not constitute a change of course: a change of one or more subjects within an elected curriculum or program; the dropping of a subject without replacing it with another; the adding of a subject; change in the sequence in which subjects are taken, or advancement from a basic or preparatory phase to an advanced phase of a course.

VA explained that it is issuing its regulations on dead-line dates at this time in order to give veterans ample opportunity to make their plans for the future.

McCarthy Gets Action

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, Senator JOE MCCARTHY has achieved a great deal in his charges against poor security risks in the State Department. Mr. George Sokolsky has recently called attention to some of his accomplishments to date. I am including his article as part of my remarks which appeared in the Washington Times-Herald:

THESE DAYS

(By George Sokolsky)

The attack on Senator MCCARTHY, of Wisconsin, so far, seems to be focused upon one point: He is being accused not of saying too much but of being ill-mannered, loud, and exaggerative. He is being accused of overstatement, of employing such a term as "top spy" when nobody can know actually who the "top spy" ever is.

Maybe so. JOE MCCARTHY, I am sure, would not advertise himself as a delicate powderpuff. He is both Irish and a marine and that involves a man in a pattern of life.

My old friend, Smedley Butler, was a Quaker; yet he became a marine general. I once heard him deliver an address to his marines which would, had they known about it, have made our State Department lulus not only blush but positively crimson.

Now, let us see what Senator JOE MCCARTHY's noise has so far accomplished:

1. It forced Deputy Undersecretary Peurifoy to admit that the State Department had become a nest of homosexuals and that he had fired 91 of them—all subject, because of their vice, to blackmail. Mr. Peurifoy can probably in truth say that he did it before he heard JOE's bellow, but he kept whatever he did strictly to himself and nobody has yet assured us that these unfortunates have not got jobs elsewhere in the Government;

2. He established, through the Washington, D. C., police force, that this is only a segment of the colony of perverts in Government.

3. He reopened interest in the Amerasia case, which is the key to espionage in the State, Treasury, Army, Navy Departments and the OSS.

4. He established the fact beyond doubt, that the administration protects Communists, pro-Communists, fellow travelers and stooges by objecting to a full, impartial, bipartisan investigation into the perils of espionage at a time when espionage has been proved in the Alger Hiss and the Fuchs cases.

5. He exposed Senator TYDINGS as capable of misquoting J. Edgar Hoover, and of giving a false impression that the FBI clears persons as though it were a court and not a police department.

6. He blew the top off the State Department far eastern policy. In this regard:

A. He forced Owen Lattimore to give publicity to his own recommendations which many Americans, including myself, will regard as harmful to the United States.

B. He frightened Dean Acheson into a publicity campaign to separate himself from Lattimore.

C. He reopened interest in the Institute of Pacific Relations.

D. He reopened interest in the Pacific story, a series of 181 NBC broadcasts to our troops during and after the war.

E. He ended the trickery of the Bangkok Conference by which the State Department sought a way to recognize Soviet China by indirection.

F. He knocked the spots out of the smart trick of bringing Soviet China into the United Nations by majority vote.

Much of this Senator JOE MCCARTHY accomplished by indirection, just as he had nothing to do personally with Dean Acheson's attempt to restore the bipartisan foreign policy by having the obscure John Sherman Cooper and the Deweyite John Foster Dulles taken into the State Department.

To the rank and file of the Republican Party, Cooper is wholly unknown and when they check his voting record during his one term in the Senate, it does not look Republican. As for John Foster Dulles, this act surely ends his political career as a Republican.

For any man is entitled once to such a mistake as recommending Alger Hiss to the Carnegie endowment, but when to that is added an effort to throw a protective wall around the current administration of the State Department, it is indicative of political cloudiness. Besides, the Dewey group seems to be abandoning participation in national Republican leadership.

The point is that the State Department would not have begged Senator VANDENBERG and Senator H. ALEXANDER SMITH of New Jersey to help them put up a false facade of bipartisanship had not Senator MCCARTHY's excitement proved that there never has been a Republican-Democratic bipartisan foreign policy on the most vital issues. Policy has been made by little people in key jobs.

It sometimes takes unusual means to bring out the truth—but the truth will come out.

Import of Czechoslovak Women's Shoes

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following release of the New England Shoe and Leather Association, regarding the import of women's Czechoslovak shoes, which matter is now being investigated by the Treasury Department in order to determine whether or not these imports are in violation of the Antidumping Act of 1921:

[From the New England Shoe and Leather Association Shoe News of April 11, 1950]

FEBRUARY IMPORTS OF CZECHOSLOVAK WOMEN'S SHOES TOTAL 153,436 PAIRS—THREE TIMES JANUARY IMPORTS

Imports of women's shoes from Czechoslovakia during February 1950 totaled 153,436 pairs, valued at $146,644, according to the New England Shoe and Leather Association, based on official data released by the United States Department of Commerce. "This amount is three times the January imports of Czech shoes of 58,018 pairs, valued at $47,064. Furthermore, the combined imports for January-February of 211,454 pairs valued at $193,708 is fully 112.5 percent greater than imports for the full year of 1949, which equaled 99,491 pairs, valued at $101,413," stated Maxwell Field, executive vice president of the association.

"Equally as interesting as the heavy increase in imports is the fact that the average price of these women's casual shoes, based on the declared values stated on the import manifests, is only 95 cents per pair," declared Mr. Field. These facts substantiate our association's previous claims that over a million pairs of Czech shoes will be imported into the United States this year, and that the declared price constituted a suspicion of dumping in violation of the antidumping Act of the 1921. The Customs Bureau of the United States Treasury Department is presently reviewing this situation to determine whether a formal investigation should be undertaken under this law," Mr. Field pointed out.

An Iowa Story

EXTENSION OF REMARKS

OF

HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. TALLE. Mr. Speaker, the March 31 issue of the Iowa Development Bulletin contains a brief but highly interesting account of the boyhood of the world-renowned Wright Brothers, the first men to fly heavier-than-air machines. The setting is Cedar Rapids, Iowa, in my district; the time, 1878. The original source of the story is the official biography of the Wright Brothers, written by Fred C. Kelly and authorized by Orville Wright. My State is proud to have sheltered these great men in their youth, and, under leave to extend my remarks in the RECORD, I include their story, which is a part of Iowa's lore:

THE WRIGHT BROTHERS IN IOWA

In June 1878, when Orville was 7 years old and Wilbur was 11, the Wright family left Dayton, Ohio, because the work of the father, who had been made a bishop of the United Brethren Church, was shifted to Cedar Rapids, Iowa. And it was in a house on Adams Street, in Cedar Rapids, not long after their arrival there, that an event occurred which was to have much influence on the lives of Wilbur and Orville—as well as to have its effect on the whole human race.

Bishop Wright had returned from a short trip on church business, bringing with him a little present for his two younger sons.

"Look here, boys!" he said to Wilbur and Orville, holding out his hands with something hidden between them. Then he tossed the gift toward them. But instead of falling at once to the floor or into their hands, as they expected, it went to the ceiling where it fluttered briefly before it fell. It was a flying machine, a helicopter, the invention of a Frenchman, Alphonse Penaud. Made of cork, bamboo, and thin paper, the device weighed so little that twisted rubber bands provided all the power needed to send it aloft for a few seconds. As the brothers were to learn later, Penaud, an invalid during most of his short life, had not only invented, as early as 1871, various kinds of toy flying-machines, both the helicopter type and others that flew horizontally, but was the originator of the use of rubber bands for motive power. Simple as was this helicopter—they called it the "bat"—Wilbur and Orville felt great admiration for its ingenuity. Though it soon went the way of all fragile toys, the impression it left on their minds never faded.

Not long afterward Wilbur tried to build an improvement on the toy helicopter. If so small a device could fly, why not make a bigger one that could fly longer and higher? Orville was still too young to contribute much to the actual building of larger models, but he was keenly interested as Wilbur made several, each larger than the one preceding. To the brothers' astonishment, they discovered that the bigger the machine, the less it would fly; and if it was much bigger than the original toy, it wouldn't fly at all. They did not yet understand that a machine of only twice the linear dimensions of another would require eight times the power.

While in Cedar Rapids, Orville showed enterprise in another direction. He had enough intellectual curiosity to study lessons that the teacher had not assigned. When a little more than 8 years old he told his father that he was tired of the Second Reader they were still studying at school and wished he had a Third Reader.

One morning, not long after that, at the middle of the school year, the principal came to the room Orville was in and announced that any pupils who showed enough proficiency in reading might be promoted at once, without waiting until the end of the year, and begin the Third Reader. The more promising members of the class, selected by the teacher, then stood toeing a chalk mark, up front, as was commonly done, and took turns at reading. In his alarm lest he might not do himself full justice, Orville, someone told him later, held his book upside down. That did not prevent him from reading accurately, as he knew the book by heart, and he was promoted.

"I'm now in the Third Reader class," he proudly announced when he reached home that noon.

"Well, that's a strange thing," said his father. "Just this morning I bought the Third Reader you asked for. But," he added, "you won't be able to use it today, because you're going to miss school this afternoon. I have arranged for you and Wilbur to go to the photographer's and have your pictures taken."

Orville's picture thus commemorated what had seemed to him an important event in his life.

American Samoa

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. CRAWFORD. Mr. Speaker, today I wish to join with my friend, Peter Tali Coleman, of American Samoa, who is now a student in one of our Washington universities, in calling the attention of the Members of the House to the fiftieth anniversary of the flag raising on American Samoa which anniversary occurred yesterday, April 17, 1950.

It has been my great privilege to visit and to personally meet the present leaders of the American Samoans in Tutuila, as well as the Samoans living under the New Zealand flag on the islands of Savaii and Upolu.

American Samoa, a group of islands same 900 miles south of the equator, were acquired by the United States during the

period 1889–99 through agreement between Britain, the United States, and Germany. At that time the great Samoan race was split by this agreement without their consent and approval. These three great powers simply made a division of the territory which suited their convenience and ideas. During all of these years American Samoa has made great progress. These people are as magnificent in character and intelligence and loyal and as ambitious as any people you could find in colonial life. In all of the colonial possessions of the earth there could be found no finer people. In stature, in general appearance, cleanliness, and sincerity they are par excellence. In American Samoa you find no poor people, rich, or so-called middle-class people of consequence. The economy of the islands is operated under the Matai or chieftain system with high talking chiefs, talking chiefs, and other chiefs. The Matai and the chiefs see that all of their clansmen or tribesmen—the very young, the teenagers, the middle-aged, and the old—are all properly fed, clothed, and housed. They are ambitious from the standpoint of education and of striving toward obtaining a full and complete life as sought by the American people. The American Samoans and other parts of their race which are now under the control primarily of New Zealand—Germany having lost this territory to New Zealand following World War I—look forward to the day when the machinery of the Trustee Council of the United Nations, together with the Congress of the United States will bring the whole Samoan race back together under the protection of the United States. Shortly our Congress will be called upon to consider the approval of an organic act setting up a civilian form of government for American Samoa—they having been under our Navy rule for the past several decades—and this act, when approved, will unquestionably offer American citizenship to the Samoans, giving them a bill of rights and set them up as a possession but not as an organized territory subject to becoming a State at some future date.

Under permission granted, I submit for the RECORD the following statement prepared by Mr. Peter Coleman:

FIFTIETH ANNIVERSARY OF THE FLAG-RAISING DAY IN AMERICAN SAMOA, APRIL 17, 1950

(By Peter Tali Coleman of American Samoa)

Fifty years ago today, the American flag was raised in Tutuila, the main island of the American Samoa group. It was for the first time the United States of America deviated from its then established foreign policy of nonintervention. It was on this day that the high chiefs of Tutuila, without any solicitation, ceded the islands of Tutuila and Aunu'u to the Government of the United States "for the promotion of the peace and welfare of the people of said islands, for the establishment of a good and sound government, and for the preservation of the rights and property of the inhabitants of said islands, the chiefs, rulers, and people thereof are desirous of granting unto the said Government of the United States full power and authority to enact proper legislation for and to control the said islands, and are further desirous of removing all disabilities that may be existing in connection therewith, and to ratify and to confirm the grant of the rule of said islands heretofore granted on the 2d (sic) day of April 1900." Commander B. F. Tilley, commandant of the naval station, Tutuila, hoisted the American flag. The deed of cessation was signed by Leoso in the presence of and at the request of the chiefs and representatives of the division of Fofo and Aitulagi and by Pele in the presence of and at the request of the chiefs and representatives of the division of Sua and Vaifanua in Tutuila in conformity with Samoan custom.

Now, the day of democracy is dawning in the vast, once turbulent Pacific. Hawaii, the adult, is ready, willing, and able to shoulder the responsibilities demanded of a member of our society of States. Guam, the child, is taking its first step toward the fulfillment of a nurtured hope for self-government. Samoa, the embryo, is awaiting further developments that will bring about its government of the people.

In World War II this American possession joined readily in the war effort. Samoans participated in this global effort together with the rest of the American boys in the Army, Navy, Marine Corps, and Air Corps. Some made the supreme sacrifice for that cause which this flag represents. Thus, today, the Samoan stands as an American, believing in the fundamental principle of "In God we trust," as a common denominator of the Christian world.

In the near future, Samoa will be afforded an opportunity to participate in a representative form of government. It should be no challenge to its traditional system, for the representative form of government is only a modification, and both are founded on the same principle that the life of the land is preserved in its righteousness. As Americans, we can all feel proud of this little island. It may be a molehill in our country of States, but it is a towering mountain proclaiming to the eyes of the freedom-seeking people in the Pacific and Asia the recognition of one of God's greatest endowments to man—his natural rights.

Memorial Address by William H. McIntyre, National Vice President, the Society of American Legion Founders

EXTENSION OF REMARKS

OF

HON. W. KINGSLAND MACY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. MACY. Mr. Speaker, under leave to extend my remarks, I wish to include a recent address by Mr. William H. McIntyre, national vice president of the Society of American Legion Founders and a past national officer of three prominent veterans' organizations in this country. He is, also, at the present time, New York department chairman of graves registration of the American Legion:

The address follows:

The debt to the living and dead can be discharged by deeds, by building a secure nation in a world which never again will turn to war.

Some of us were present on that cool gray morning 31 years ago when the bugle sounded "cease firing," others at a later date in 1945 in both the European and Pacific theaters when cessation of hostilities happened.

Once again we meet to honor our dead. Your speaker had the privilege to be present when the first of our heroic dead were exhumed at St. Laurent Cemetery, Normandy, France, in September 1947, and has met every funeral ship arriving in the port of New York and attended services at the pier. Over 107,000 have been returned to date.

Nothing I might say here can minimize the great loss nor alleviate the suffering of their families. These dead stand in an unbroken line of patriots who dared to die that freedom might live and increase its blessings. Freedom lives and through it they live in a way that humbles the undertakings of most men.

The debt to the living and dead can be discharged by deeds, yes, by building a secure nation in a world which never again will turn to war. Perhaps atomic energy will prevent further conflicts; however, we should be prepared, keep our powder dry and in sufficient quantity.

At this time it would be unfaithful not to recognize the evils which exist. However, I do wish to bring to your attention and think it proper and fitting, the fact, that there are too many doctrines being preached and tolerated in this great country of ours.

The only ism that we are interested in is that of Americanism. Only a short time ago many of us saw marching in and around different parts of our State those who would tear apart and rend asunder the structures of happiness and contentment. While it is true that our Constitution guarantees free speech and tolerance, bear in mind that law and order are fundamental and liberty must not be taken for license.

The persons that I have seen parading should be taught a love for America. Love for America should be inculcated in the families of foreigners, especially those who desire to become citizens. Never in the history of our country has there been a greater need for emphasizing the principles of American citizenship.

If, in our schools we had a respect for God and an adherence and practice of some religion, we need never fear any ism that would sow the seeds of discontent, and mob rule would have no place in America. Respect for authority is the greatest responsibility of the citizens of this country.

Children of immature age cannot understand, let alone discuss the doctrines that are being preached. We grant these children may be curious, but why in common sense should we let the little school house of our youth be torn apart by propaganda from people living beyond the iron curtain?

There are definite and decent limitations for individuals' expressions, therefore, we should interest ourselves in what is taking place in our community. Don't stand idle; with the unrest that is rampant in the world today it behooves all to be on their guard to respect and obey the law, to uphold the Constitution of the United States of America and continue to love, honor and enjoy our independence and freedom.

Mr. Facing-Both-Ways

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD the following article by William Henry Chamberlin,

which appeared in the Wall Street Journal recently:

MR. FACING-BOTH-WAYS—SPIRIT OF BUNYAN'S FABULOUS CHARACTER HAS BEEN PRESENT IN THE ADMINISTRATION'S CONDUCT OF FOREIGN POLICY

(By William Henry Chamberlin)

Recent criticisms of the State Department have elicited a storm of countercriticism. The men who have censured the present Secretary of State and some of his aides have been accused of being factious isolationists, guilty of weakening American foreign policy at a critical moment.

But there are stronger elements in the mood of popular distrust which lies behind current criticism than the thick-and-thin defenders of Mr. Acheson and the Department which he heads recognize. One of the symbolic characters in Bunyan's Pilgrim's Progress is Mr. Facing-Both-Ways. There has been too much of the spirit of Mr. Facing-Both-Ways in the records of the Roosevelt and Truman administration. Here is the explanation for the attitude of mistrust which has recently come into the open.

There are, for instance, the implications of Mr. Acheson's aggressive assertion of friendship for Alger Hiss, convicted of perjury in connection with his denial that he turned over a considerable number of State Department confidential documents to a Soviet spy ring. Mr. A. A. Berle, a State Department colleague of Acheson, has testified that in 1941 he communicated to Acheson information suggesting that Hiss' loyalty was under some question. Acheson brushed this aside and Hiss went from one high wartime assignment to another. He was one of the small number of American diplomatic representatives at Yalta and he played a prominent role in the organization of the United Nations.

MR. ACHESON'S IDEAS HAVE CHANGED

One may sympathize with the chivalry of Mr. Acheson's refusal to turn his back on a friend who had apparently gone wrong and yet feel that there is a certain inconsistency between what might fairly be called a substantial error of judgment in the Hiss case and the Secretary's recent trumpet call for total diplomacy.

Mr. Acheson's recent state papers on the state of American-Soviet relations have been excellent. They have been well reasoned and realistic. But here again the shadow of "Mr. Facing-Both-Ways" obtrudes. Mr. Acheson did not always cherish such views.

As late as November 1945 he was the State Department representative at a Council of American-Soviet Friendship meeting in honor of the notorious "red dean" of Canterbury, who rather grotesquely combines his clerical office with insistent preaching of the glories of Stalin's atheistic tyranny. This organization was subsequently placed on the Attorney General's subversive list.

At this meeting Mr. Acheson assured the enthusiastic audience that never in the past, present, or future has there been any place in the globe where the interests of the American and Russian people clashed or were antagonistic. This was at a time when sharp American-Soviet differences of opinion had developed on a number of issues, on Poland, the Balkans, Iran, the peace treaty procedures, among others. At any rate the jump from this assurance of eternal harmony to the present doctrine of eternal discord is substantial and is not calculated to clear up public opinion.

One of the Secretary's recent seven points for peace with Moscow was the freeing of the satellite countries and the withdrawal of Soviet troops and police within Soviet frontiers. But in 1946 Acheson was influential in getting an American credit of $90,000,000 for a Polish Government which was Communist-dominated and which was violating all the conditions for the "free unfettered elections" which had been promised at Yalta. The grant of this credit was against the advice of Arthur Bliss Lane, American Ambassador to Poland, who wanted to see some free elections and a few elementary civil liberties first.

POOR JUDGMENT ON CHINA POLICY

Consistently opposing proposals for large-scale aid to Nationalist China, Acheson assured the House Committee on Foreign Affairs on March 20, 1947: "The Chinese Government * * * is not threatened by defeat by the Communists. The war with the Communists is going on much as it has for the last 20 years."

This was not a very perspicacious judgment, as the rapid collapse in 1949 would soon show. Nor was the sting of the debacle of American policy in China drawn by the following sentence in the letter to the President which served as a preface to the white paper on China:

"The unfortunate but inescapable fact is that the ominous result of the civil war in China was beyond the control of the Government of the United States."

If the "ominous" outlook had been clearly recognized in 1947, it is at least conceivable that something more might have been done, both on the Chinese side and on the American. It would, of course, be unfair to saddle Mr. Acheson with responsibility for the collapse in China.

But he has been unfortunate, to say the least, in his China policy, if indeed there has been a policy, apart from waiting for the dust to settle. The world isolationist is often hurled in reproach at critics of any phase of the Roosevelt and Truman foreign policies.

But the course of events has made us isolationists in China, whether we like it or not. The Communist regime in China has proved impossible to deal with; it has forced us in self-respect to withdraw our diplomatic and consular personnel. At the same time we have done everything to cold shoulder continued Nationalist resistance on Formosa.

When there are fewer inconsistencies, when the spirit of "Mr. Facing-Both-Ways" disappears, there will be a more united and confident public opinion behind American foreign policy.

Something Is Wrong

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I have just received a very interesting letter. It is from a man who says "I am just an ordinary citizen." His theme is reckless Government spending and he finds support in statements made by important people. His point is well made. I include all of his letter at this point:

APRIL 11, 1950.

DEAR SIR: I am just an ordinary citizen, but it appears to me that something is wrong:

(a) Because Senator PAUL DOUGLAS says, "We must reverse the trend whereby everyone is taking a quick grab at the Public Treasury. Folks have got to be sold in letting up—or we will be in trouble."

(b) Because Dr. Vannevar Bush says, "A people bent on a soft security, surrendering their birthright of individual self-reliance for favors, voting themselves into Eden from a supposedly inexhaustible public purse, supporting everyone by soaking a fast-disappearing rich * * * will not measure up to competition with a tough dictatorship."

(c) Because the Honorable James F. Byrnes says, "Our real trouble is debt and taxes. We cannot cure it by more debt and more taxes."

(d) Because Dr. Edwin C. Nourse says, "I am not happy when I see Government slipping back into deficits as a way of life in a period when production and employment are high, instead of putting its fiscal house in order and husbanding reserves to support the economy if less prosperous times overtake us."

(e) Because Mr. Bernard Baruch says that among the most important developments of the first half of the twentieth century is man's loss of confidence in himself and turning too much to the state instead of himself.

(f) And, finally, because our national deficit of $6,000,000,000 this year means that we are spending $16,000,000 more each day than we are taking in.

Don't you think that we should get on, and stay on, a pay-as-you-go basis? Is there any good reason why my children and grandchildren should pay for my social and welfare benefits?

Why wouldn't one solution be to restrict the benefits of the Government's social and welfare legislation to those who need it?

I am writing you, because it seems to me that you are in a position to do something about it. My name is Charles R. Petticrew, 304 West Forty-sixth Street, Indianapolis, Ind., 34 years old, with wife and four children, veteran (5½ years in service), and modest income. (Driving 1947 Dodge and is busy paying mortgage on house.)

If the above facts are in error, I would appreciate your writing me and pointing out what is incorrect.

Sincerely,

C. R. PETTICREW.

1950 Battle Line—David Against Goliath—Edwin Arthur Hall Versus the Binghamton Press

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 6, 1950

Mr. EDWIN ARTHUR HALL. Mr. Speaker, to my friends back home who want to see American Government prevail, I am issuing the call to resist the Red Fascists in the Thirty-seventh Congressional District as you have never done before.

The anti-Hall propaganda, circulated by these venal wretches for so many years, challenges every decent man and woman in the counties of Broome, Chenango and Madison and at long last must compel all of you to stand fearlessly on the side of truth.

Foremost and practically the only real perpetrator of hate toward the six-times elected Representative of this district stands the Binghamton Press, the greatest mud slinging Gargantua in the Nation today.

In company with the Press and bringing up the unhappy rear, follows an ugly assortment of pasty-faced sycophants, entirely subservient to their master but as bloodthirsty to get at your Congressman as the Press itself.

These are the poison-peddlers, who employ their every working hour with one unholy pastime, besmirching the name of EDWIN ARTHUR HALL from every street corner and cracker barrel and to every unsuspecting citizen in our district.

For 11 years, this mighty dirt dissemination has persisted, and is now reaching its foul crescendo.

Responsibility for such un-American defiance of the people's will to elect their own Representative during all these years rests mainly upon the shoulders of the Binghamton Press.

Suffice it to say, with all its open avowed intentions to overthrow the American electoral system, with all its honesty of sinister purpose to destroy Members of Congress, the Communist Daily Worker is a piker compared to the Binghamton Press.

Because the Press assumes to play the role of something it is not, the apotheosis of American respectability. The pseudo-intellectuals, who cling to its pay rolls as editorial writers actually are nothing more than literary punks devoted to the lousy profession of character assassination.

Their hate-filled minds have one obsession, and this has long since reached a perverted stage, to plunge their quivering quills into the back of your Congressman, while he is facing our Nation's Capitol, fighting the battle of the people.

Under the protection of the oft-abused freedom of the press, these zealots of avarice have ridden long roughshod over the reason and sensibilities of the voters of this district, sniping, spearing, harpooning all the forthright attempts of your Congressman in the interests of orderly legislative action.

I repeat, the Communist Daily Worker is not more dangerous than the Binghamton Press to the preservation of a free American electoral system in the Thirty-seventh Congressional District.

Sadly enough, due to their being tolerated, these monkeys have become so commonplace in our decent society hereabouts, they appear as proper and harmless as Pope's subject in his "Essay on Man."

> Vice is a monster of so frightful mien
> As to be hated needs but to be seen;
> Yet seen too oft, familiar with her face,
> We first endure, then pity, then embrace.

Their nefarious work in the Binghamton area has produced a master plot for smearing public officials. Their supposed function, news gathering, went out the window when they got their first taste of blood some years back.

Of course, the target which they have shot at most consistently of all their sordid below-the-belt schemes is your Congressman.

Just as Stalin knows America stands in his path for world domination, so is the Binghamton Press fully aware that EDWIN ARTHUR HALL is the only obstacle in her way for complete political power in New York's southern tier.

They are sworn to remove this only barrier by any and all means at their command.

In spite of their tremendous circulation in Congressman HALL's district and their day-by-day defaming of him, they still have a long way to go before they can eliminate him, and they know it.

Their plan is this: Cut the ground from under HALL's feet, soften up his support by continuing their limitless smears; then get behind an innocent-looking candidate and use him to try to finish HALL off.

My undying objective between now and August 22 will be to throw the withering spotlight of public exposure upon these rats and foil their plot.

I do not know whether the political blueprint now being followed by the Binghamton Press is in use throughout the fast-growing Gannett newspapers, but if it is, I am certain this group is bent upon complete political domination of the Northeast.

I do know this, that I am fighting for my political life against a giddy Goliath, already drunk with power, and if I am to survive, I will have to use all the pebbles in my slingshot, which are no bigger than David's when he faced the giant.

I presume it was jumbled journalism like that practiced by the Binghamton Press which caused no less an American statesman than Thomas Jefferson to say:

> A man who never looks in a newspaper is better informed than he who reads them; inasmuch as he who knows nothing is nearer to the truth than he whose mind is filled with falsehoods and errors. (Source: UE News, November 28, 1949, p. 7.)

So the battle lines are drawn in the Thirty-seventh Congressional District: it is David against Goliath, EDWIN ARTHUR HALL versus the Binghamton Press.

The galaxy of candidates arrayed against me is of no consequence. The Press will knock out all of them before the time for filing arrives except the one made to order for the Press.

It would be foolhardy to deal with the candidates when the only opponent is the Binghamton Press.

The Press would have you think that HALL is the only one who has enemies. The thousands of letters I have received condemning the Binghamton Press for their 11 years' smear campaign against a man of the people proves the Press has a host of them.

The struggle is between the Press and me. The Press is so far out on the limb it cannot now retreat. The lines are drawn. There is no other issue from now on. Either the Press beats me, or it must retire from political dominance once and for all in our southern tier.

Let them call forth all the anti-HALL forces in this district. Let them encourage the large Communist cell which has operated without their interference for a long time in the triple cities.

Let them bring forth their greatest gobs of smear because they will need it.

I believe the decent, respectable, upstanding Americans of our section are still in the majority and that they will back me up in this, my Armageddon.

Essential Unity of America

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article by John Griffin from the Boston Sunday Post, Boston, Mass., April 16, 1950:

CROSS-COUNTRY TRIP REVEALS THAT WE CAN HAVE GREAT FAITH IN OUR LAND—REAL VOICE OF AMERICA IS ITS BUSY MACHINES AND ROLLING REAPERS—PRODUCTION POWER AMAZING

(By John Griffin)

Last week we flew from New York to Los Angeles on a quick trip which gave us a couple of days in California and a couple in Arizona and permitted us to be home before the week was out. It left us with a lot of awe for the majesty of America.

An American Airlines DC-6 coach service coast-to-coast was being inaugurated on Easter Sunday and a group of newspapermen were taken along on a preinaugural flight. We are not plugging for American Airlines, but we wish everyone could take such a trip.

It inspires a pride in America and a feeling for the country which cannot be had sitting at a desk. In the space of a few hours the might of the industrial East passes beneath, and the broad reaches of the Middle West, the great granary of America, are succeeded by the grandeur of the Rockies and then come the incredible areas of southern California.

You do a lot of thinking as you travel along at 300 miles an hour. You wonder at the ignorance and arrogance of the Communists and the pinkos who have the colossal gall to believe they can upset a nation of such magnitude and such potential.

Then you move around in California and the Southwest and talk to people in all walks of life, and you begin to wonder whether Washington has any conception of the way people are thinking.

FREEDOM A VITAL PART

You think of the things that might be wrong about America, the poverty that exists in certain areas, the political connivance that sometimes mars our national existence, and then you begin to realize that all these things are bound to fade away in the face of the great facts and the great possibilities that are in this country.

You sense most of all the freedom that is a vital part of America, where people travel about without ever a thought of State lines or any other boundaries in their realization that it is all one big country, full of power and majesty.

You talk to a movie director in Hollywood and a farmer in Arizona, a storekeeper in Chicago, and a mechanic in Detroit and you find that despite all the efforts of those who would destroy our form of government, they are making less progress than the headlines would indicate.

You wish that some of the people in the other nations of the world could come here, and that instead of groups going over to study Germany and other occupied areas, that Germans and others, particularly the influential people in the countries that border on the iron curtain, could be taken on a tour of the United States.

The Voice of America can never convey the stature of America. The best it can do is counteract some of the propaganda that is

directed against the United States. The only way the real feeling of America can be transmitted abroad in an influential way is through people who see and know America.

REAL VOICE OF AMERICA

Rex Smith, vice president of American Airlines, has suggested in Washington that such a program of seeing America be provided for business and governmental and professional leaders of European countries. It would, we are convinced, do more to show our advantages than 100 Voices of America.

Because the Voice of America is not the voice of some script writer in Washington sent out over the air to foreign lands. The voice of America can be heard in the humming machinery of the industrial areas, in the clank of the reapers that cut through the vast wheat fields of the Midwest, in the thump of the pumps that bring water up from the earth to irrigate the farms and ranches of the Southwest.

It can be heard in the traffic noises on the highways of the Nation; in the busy roar of the big airports; in the streets of a thousand small towns. It can be felt by anyone who is attuned to it, and it forms a sound that inspires and quickens the spirit.

But even before people are brought from other lands to hear it, Americans should pay it more attention. Many Americans do not know their own country. Not everyone, of course, has the time and the means to travel, but as time goes on most people are having more opportunity for leisure, and perhaps it won't be long before the average person gets to know his own country.

Then the industrial worker of the East will know something about the man in the Midwest who owns his own land and works it, and the farmer of the West will appreciate the problems of his fellow countrymen whose way of making a living is different from his own.

CONFIDENCE IN FUTURE

Then there will be less fear in this country and more confidence in its future. The fear that too many politicians are fostering nowadays develops from lack of confidence in our own country. If we listened to the cries out of the Capital, the conflicting voices of the scientists and the politicians, and had no other information and no sense of what America really is, we would easily become prey to unreasonable hysteria.

It is impossible to cross the country and talk to people in other areas without obtaining a renewal of faith and a bolstering of confidence. You can't be in California for breakfast and in New York for dinner the same day without realizing the essential unity of America.

The Communists and the pinks can spout from the forums and do their utmost, but, fortunately, they are only a trifle in the Nation that reaches from the Atlantic to the Pacific across areas that, in every respect, hold unlimited possibilities for the future.

We intend to keep on hammering at Communists and deceitful politicians, but we have a new and unshakable faith in the greatness of this country as it stands and its limitless possibilities for the future.

Veterans' Hospital Facilities in California

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1950

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks, I should like to bring to the attention of this body some recent communications that have come to my office on the deplorable veterans' hospital situation in California.

In addition to many letters from individual veterans, I have received communications from veterans' organizations, from local chambers of commerce, from other interested public and private groups urging reconsideration of the present policy of closing service facilities, in view of the probable drastic effects on veterans in need of medical care, on the personnel of the hospitals, and on the communities involved.

I should like to submit here only the communications from organizations. The first, from the American Veterans Committee, is on the general hospital situation. The other seven are similar resolutions protesting against the closing of the Van Nuys Birmingham Hospital and the removal of patients—including veterans—and staff to the naval hospital at Long Beach. These communications are from, first, the Veterans of Foreign Wars, San Fernando; second, San Fernando Chamber of Commerce; third, Sun Valley Chamber of Commerce; fourth, Woodland Hills Chamber of Commerce; fifth, Woodland Hills Men's Club; sixth, Council of the City of San Fernando; seventh, Kiwanis Club of Sepulveda.

Inasmuch as the resolutions in every case are practically identical, I give it below as it came to me from the Veterans of Foreign Wars. The signatories on the other resolutions are given in the order listed above.

AMERICAN VETERANS' COMMITTEE, INC.,
Washington, D. C., March 30, 1950.

The Honorable HELEN GAHAGAN DOUGLAS,
House Office Building,
Washington, D. C.

DEAR MRS. DOUGLAS: The wholesale closing of Veterans' Administration hospitals, and those of the Army and Navy, has taken a particularly heavy toll in southern California. Our chapters of the American Veterans' Committee (AVC) in and around Los Angeles are greatly disturbed by the serious shortage of hospital beds for veterans in southern California, by the delay in getting new hospital construction under way, and by the closing of Army and Navy hospitals which had contracted to treat VA patients.

The closing of the Army's McCormack General Hospital and the Navy's Corona hospital has deprived California veterans of 825 hospital beds. The announced closing of the Navy's Long Beach and Mare Island hospitals will slash beds available another 550. This is the falsest sort of economy.

In fact, the number of veterans in California is steadily increasing as more and more people are moving to that State. To meet the needs of this growing veteran population, more hospital beds are needed, and needed now.

There are literally hundreds of veterans waiting to be admitted to southern California hospitals, particularly veterans who are mentally sick or tuberculous.

AVC wholeheartedly supports your effort, and that of your fellow southern California Congressmen, to get authority that will permit the VA to take over Army and Navy hospitals that have been closed, or are about to be closed.

We are united in our insistence that America's disabled, sick, and mentally ill veterans must get an even break. Indiscriminately closing hospitals to achieve a dollar saving of a few millions, while the loss in suffering and human waste mounts steadily, will in the end prove very costly to our country.

Sincerely,

LOUIS C. PAKISER,
Executive Director.

Resolution concerning the contemplated closing of the Van Nuys Birmingham Hospital, and the moving of patients and staff to the naval hospital at Long Beach

Whereas the transfer of the Birmingham Hospital and its facilities would seriously impair treatment now provided veterans in this area, for the reason that most of the doctors, specialists now involved in research work at nearby medical schools, would not move with it; and

Whereas the Birmingham Hospital in its present location represents a greater convenience to the veterans of the populous Los Angeles area who require treatment and regular visitation by relatives than if such a facility were located at some point outside the area of population concentration; and

Whereas the laboratory at the Birmingham Hospital, one of the largest and best equipped in the United States, is three or four times the size of the laboratory facilities available for research and treatment purposes in Long Beach; and

Whereas the cancer research program carried out here as well as the paraplegic rehabilitation program is likewise not equaled by a governmental hospital anywhere in the United States; and

Whereas more than $850,000 has already been provided local paraplegic veteran patients under Public Law 702 for 85 new homes built and occupied in this area with special features, ramps, low cupboards, shelves, fixtures, etc., for the convenience of those confined to wheel chairs, but of little use to normal individuals, a property investment on which the veteran as well as the Government would suffer loss in the event of resale; and

Whereas the climate of the San Fernando Valley, with its comparatively light rainfall, freedom from cold, fogs, and smog, and even climate bordering on that found in desert areas, is more conducive to the well-being of the 455 patients suffering from tuberculosis and other respiratory ailments at the Birmingham Hospital, than the climate to be found at Long Beach, adjacent to the ocean; and

Whereas it would require a 20-percent increase in personnel to staff the Long Beach Hospital because of its inconvenient ward arrangements, resulting in more than $1,000,000 a year added cost for veteran patient care; and

Whereas more than 60 percent of the employees, doctors, laboratory workers, hospital attendants, nurses, and their families are veterans who have bought homes near the hospital, an investment on which they would sustain a loss if the hospital is moved elsewhere; and

Whereas the closing of the Birmingham Hospital with its $5,500,000 a year pay roll would be a serious blow to the economy of the metropolitan and San Fernando Valley areas, a source of prosperity upon which business establishments have long expected they might depend: Now, therefore, be it

Resolved, That the Captain Frank L. Muller Post, No. 2829, Veterans of Foreign Wars, United States Veterans' Administration Hospital, San Fernando, Calif., does hereby register its objection to the proposed move, and further recommends that the Birmingham Hospital be established by the Veterans' Administration on a permanent basis, both with respect to buildings and all other facilities.

Veterans of Foreign Wars of the United States, Captain Frank Muller Post, No. 2829, San Fernando, Calif., Norman R. Zeller, Commander, Edmond J. O'Brien, Adjutant; San Fernando Chamber of

Commerce, San Fernando, Calif., J. W. Flynn, President, Harold R. Allen; Sun Valley Chamber of Commerce, Sun Valley, Calif., S. F. Muhlitner, President, George D. Hildebrandt, Secretary; Woodland Hills Chamber of Comerce, Woodland Hills, Calif., C. C. Livingston, President; Woodland Hills Men's Club, Woodland Hills, Calif., Richard William Hutchings, President; Council of the City of San Fernando, San Fernando, Calif., Bryce Schnurr, mayor, Ray A. Woods, City Clerk; Kiwanis Club of Sepulveda, Sepulveda, Calif., Gordon W. McKay, President, C. Benjamin Bemis.

Greater Lawrence Industrial Corp.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include a very excellent editorial that appeared in the April 13, 1950, edition of the Evening Tribune, Lawrence, Mass.

This article contains a great deal of constructive thought and most worthwhile suggestion. No doubt, it is a step in the right direction, and I am sure a most progressive step for the community of Greater Lawrence, Mass.:

WHAT IS YOUR FUTURE?

The formation of the Greater Lawrence Industrial Corp. is, to me, an indication of reborn confidence and faith in Greater Lawrence. I believe the other nine incorporators of the corporation feel as I do.

The object of this new corporation is to stimulate the promotion of the economic and industrial welfare of the people of Greater Lawrence, to maintain and increase opportunities for employment.

Ten incorporators cannot do this alone. The program, to be effective, needs the help and cooperation of everyone.

I am not an alarmist, nor am I wearing rose-colored glasses. I am, however, a businessman, and use, I think, a business approach to most problems. We, here in Greater Lawrence, do have a problem. We have groups which have diagnosed the ills as deadly with no hope of survival; others, as minor irritations that will clear up in time. Both are right—minor now, but deadly, if we neglect them.

I refer to the migration of New England industries to other parts of the country and the curtailment of activity by the inability of our mills to meet competitive bids for orders because of higher production costs and higher taxes than in other sections and which also handicap us in attracting new industries. I have in mind the present unemployment conditions in our local industries caused by the lack of orders. I also have in mind the resultant financial stress of some of our families even now, and the lack of spending money which will eventually be reflected in retail business and, as the cycle completes itself, will be felt by the manufacturers whose production is governed by demand.

These conditions exist not only in Lawrence, they prevail in many cities and towns throughout New England and particularly in Massachusetts. Textile cities like Lawrence, in false confidence in the future, did nothing about revaluating and readjusting their positions after the boom, war days.

Since accepting the presidency of the Greater Lawrence Industrial Corp. on March 30, I have made a personal survey of diversified Nation-wide industries which, I hoped, might be interested in coming to this community. But, at the suggestion of locating here, the answer was emphatically "No," not only as far as Lawrence is concerned, but Massachusetts as well.

The reasons?

First, the penalty of State legislation on corporations. I learned that in 1941, business paid, throughout the 48 States, an average of 14½ percent of all State tax collections with the exception of property, sales, and certain license and privilege taxes. At that time, Massachusetts business paid to this State just about the average, 14.3 percent of all tax collections. In 1948, however, Massachusetts business paid the highest percentage of any State, 33.6 percent, the average for the country being 18.1 percent. In 7 years the picture has changed sharply in this State, from an average experience to one where business is taxed nearly twice as much as in the average State. I also learned that in Massachusetts, $100,000 of plant property pays $20,£00 per year in taxes, whereas in Illinois, for example, this same property would pay only $8,450. How can we compete with this?

The other reason was the lack of employee cooperation and lower production per worker in comparison to similar industries in other sections of the country. I, personally, feel that workers, seeking what is their just due, should receive every help from management, but, it is also my conviction that local conditions and the plant's ability to meet demands must receive the serious consideration of employees for the preservation of their jobs.

It is encouraging to learn that some communities are waking up to the threat to their existence and that they and State authorities throughout the region are taking more direct action to solve problems of plant, space, financing, and taxation, in order to improve prospects for industry and jobs in New England. Programs are taking a variety of forms. In Maine, a Development Credit Corporation, pooling a small part of resources of Maine banks and other financial institutions, has opened its doors to make capital available to promising enterprises. Civic programs, along the idea of our Greater Lawrence Industrial Corporation, are being organized throughout New England. The State of Rhode Island moved to relieve one major complaint of its manufacturers by ordering an average cut of 24.5 percent in compulsory workmen's compensation rates. In Massachusetts, a special commission on taxation has inaugurated a study of the tax structure of the Commonwealth, with special emphasis on the burden of taxation in industry, and will present the most urgent problems to the 1950 legislature.

All these are steps in the right direction, but we, here in Greater Lawrence, also need local and more direct action.

I believe we are letting Greater Lawrence down. All of us, by sitting around, wringing our hands and moaning, or waving our arms in alarm, but actually doing nothing. I do not believe that being labeled a distress area and waiting for orders to be channeled through is going to solve our problem. It might afford minor, temporary relief, and our legislators should see to it that activities are channeled to Lawrence to help alleviate conditions until a more permanent and secure solution can be worked out. We want Lawrence to get orders, lots of them, not because Lawrence can't keep up in the race, but because Lawrence can produce more efficiently, more harmoniously, than any other city.

Greater Lawrence is a closely knit community as we have proved in the past by the big and small projects that we have "put over." In this kind of unity there is strength and, if we approach this problem, united, there is no reason why we can't surmount it. If we are serious and sincere about improving conditions in our area, we must forget personal gains, and all work together. Your future, as well as that of each and every one of the 124,849 people in Greater Lawrence, is at stake.

The solution depends upon us; but, we do need the wholehearted cooperation of all groups from all segments of the community, city government, management, labor, big and small business owners, public organizations, and even the fellow who works for a weekly pay check.

Why can't we have a meeting of men representative of these groups and find out what, and how much, can be done before it is too late?

Mayor James P. Meehan, will you call such a meeting by inviting representatives from these various groups?

Perhaps we have made mistakes in the past, but let's forget them now and really put our shoulders to the wheel to insure a brighter and better future for all in Greater Lawrence.

We must, we can, and we will succeed.

IRVING E. ROGERS,
Publisher.

What Is the Government Deficit and Who Will Pay It?

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. POULSON. Mr. Speaker, I have written a letter to some of my constituents and have found the interest therein so great that I have decided to place it in the CONGRESSIONAL RECORD so that it may have a wider distribution:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 7, 1950.

WHO WILL PAY THE GOVERNMENT DEFICIT?

DEAR CONSTITUENTS: We will all pay for this deficit spending program, and we should not kid ourselves that it will be otherwise. Everyone pays taxes. The cost of Government is being paid by each one of us, either directly in personal income and consumer excise taxes, or property taxes, or indirectly in the inflation of prices which result from the imposition of income and excise taxes upon the corporations which produce the commodities we buy. Therefore, every one of us should be deeply concerned about the fact that we are spending more money than we are taking in.

Most people think that Government finances are so complex and intricate, and the figures involved are so astronomical, that they as laymen cannot understand them. But let me say, as a certified public accountant, that the same principles are involved whether the business be large or small, and the net results are identical. In other words, a successful executive of a large corporation wants the picture of his operation reduced to the smallest component part. Therefore, I am going to try to analyze the administration's budget by reducing it at a ratio to compare to the average man's problems.

Exact figures presented by the Bureau of the Budget in its statement to Congress:

National defense	$13,500,000,000
Veterans	6,100,000,000
Interest on public debt	5,600,000,000
International program	4,700,000,000
Social welfare, health, security	2,700,000,000
Natural resources	2,200,000,000
Agriculture	2,200,000,000
Housing, education	1,800,000,000
Transportation, communication	1,700,000,000
General Government	1,300,000,000
Labor, finance, commerce, and industry	500,000,000
To be spent	42,300,000,000
Estimated budget receipts (take-in)	37,300,000,000
Deficit (loss)	5,000,000,000

Let us translate these figures at the same ratio into a budget we will assume as our own.

PERSONAL BUDGET

What does it mean?

We know we are going to spend $4,230 (Federal budget, $42,300,000,000).

We think we will earn $3,730 (estimated Federal receipts, $37,300,000,000).

We will have a shortage of $500 (estimated Federal deficit, $5,000,000,000).

Where are we going to get that $500? Naturally we are going to have to borrow it. But we must not forget that we are already in debt in the amount of $25,593. (Federal debt as of March 22, 1950, $255,931,000,000.) It is also alarming to note that the interest we will have to pay on our debt is $560 (Federal interest, $5,600,000,000) and next year it will be even more because we are increasing our debt.

Our earnings

We are sure we are going to spend $4,230, but we are not sure that we are going to earn $3,730. In fact, business is not quite so good as it was when we made our budget, and it looks as though our earnings will be less, which means our deficit will be greater. Also, shouldn't we consider the fact that we are going into debt in boom times? What would we do in the event of some emergency?

Analysis of spending

We are going to spend $470 (Federal budget, $4,700,000,000 for international program) to help our neighbors who are just recovering from a big disaster which has also hit us and which is partly responsible for our debt, at least the biggest portion of our debt. Don't you think that our personal financial condition is just as important as theirs? In other words, must we not remain in good financial condition if we are going to continue to help them, as we know they expect us to do? Frankly, our own family does not have all it needs at present (unemployment today, imports in competition with our own products, etc.). To be specific, we know that our neighbors can't help us. Therefore, we had better not get into a financial position which will put us in trouble.

Also, bear in mind that the money which we are giving these neighbors they are using to pay off their internal debts, paying their own relatives what they owe them, while we are building up the same type of debt and have no one to help us pay ours off. Furthermore, they are not using this money as it was intended, to rehabilitate themselves, build homes, etc.

What will you do about it?

I think you will take care of your own family first, and then judiciously assist your neighbors. I firmly believe our family welfare (the United States) should come first, not from a selfish standpoint but from the standpoint of self-preservation and good economics.

RETURN TO FEDERAL BUDGET

Interest on public debt

Let us take a look at the amount of interest the Government is paying on its huge debt of $255,900,000,000. Of course, we cannot eliminate the interest item but we certainly can reduce it. This interest amounts to more than what we are spending on housing, education, social welfare, health, security, labor, finance, commerce, and industry combined.

Do you realize that this interest is costing the taxpayers $15,000,000 a day and, in addition, that the interest on the deficit which we are creating this year will cost us $375,000 a day, at the 2.7 percent average interest rate which the Government pays? Take your pencils and figure it out. Inasmuch as this is a growing item during good times, shouldn't we be concerned about reducing it now?

Agriculture

Then, too, you should know that, under our present Government program, agriculture is going to cost more than shown in the budget, because the losses are not shown which the Commodity Credit Corporation is bound to take on the $4,000,000,000 worth of commodities which they had as of January 31, 1950. We have a billion dollars worth of cotton (1 year's supply) on hand now, and yet Congress has foolishly increased the cotton acreage by 1,200,000 acres for this year. (I voted against it.)

"We owe it to ourselves"

The proponents of this deficit-spending program say: What difference does it make since we owe this money to ourselves? Surely this is a silly philosophy because we know that not everyone owns the Government bonds which comprise this debt. However, we all pay taxes, part of which is used to pay the interest on these bonds. Furthermore, the integrity of the Nation is tied up in the promise to pay off these bonds with interest.

Government's ultimate "out"

If this deficit spending continues, the Government will either have to take over and wipe out all the debts, or else change the value of the currency. The first alternative I know 90 percent of us are opposed to. As to the "funny money" idea, too few people realize that such a move would be as costly as refinancing their automobile.

Budget can be cut

The President's budget can be cut. All it takes is the will to cut it, and the cooperation of the President, the various bureaus, and Congress, and the people throughout the country who must quit demanding increased acreages, increased subsidies, and increased profits. As Henry Hazlitt said in Newsweek of January 2: "The hand-out state will last * * * until the voter sees that he is being bribed with his own money."

Where there is a will there is a way. We proved it in the last war. We proved it in the last Congress. That Eightieth Congress, which President Truman described as the worst in the Nation's history, hired their own experts and found a way not only to balance the budget but to pay off $17,000,000,000 of the public debt, which of course reduced interest proportionately. Yes, the propaganda machines of the bureaucratic departments raised a howl. But, I ask you, which is the more important: satisfying their demands or saving the Nation?

This present Eighty-first Congress is going to add about $10,000,000,000 at the minimum to the public debt. Need I say more?

Illustrations

Just to show you that there is room for economy, here are a few simple illustrations taken from testimony at the current hearings before the Appropriations Committee:

The Bureau of Entomology and Plant Quarantine asked funds for 63 new automobiles. Committee investigators reported that the Bureau's Denver office, with 35 persons, had 217 automobiles. In the first 4 months of 1949, 194 of the Denver cars were unused and the Denver office has 80 cars for which it contemplated no future use.

During the campaign to kill grasshoppers last year, the Bureau rented one airplane at $100 per hour. The $100-an-hour plane cost the owner $6,600, but the Department paid a rental of $27,000 in 2 weeks.

A DC–3 plane was rented at $450 an hour. One of the larger air lines told the committee investigators that they would rent a similar plane with pilot, copilot and stewardess at $150 an hour and make a 25-percent profit.

Investigators located an airplane owned by the Bureau in a Macon, Ga., hangar. They said that in 2 years and 3 months it made flights totaling 30 hours.

Testimony brought out that the Bureau miscalculated on the number of grasshoppers per yard and not enough spray was used, and it had to be done over again.

Investigators learned that the Bureau sent one-half of a truck unit to Florida, the other half to Texas, in order to prevent another agency of the Department from using it.

In November 1949, a division of the Bureau declared 9,064 pencils surplus. They had been on hand since 1942.

More enlightenment from Agriculture Department: A Department announcement solemnly says: "About a fourth of the families living in open-country areas own a piece of tarpaulin and about twice as many farm families own a piece as nonfarm families in the same area, according to the result of a personal interview survey made by the Bureau of Agricultural Economics in May and June 1949. Of those who own them, about one out of every three has more than one piece." (And think what that investigation cost the taxpayer.)

Just spend it, it's only taxpayer's money: Testimony of Jess Larson, Administrator of General Services, before the Appropriations subcommittee, revealed that one Government agency had a supply of the following articles:

Fluorescent light bulbs to last for 93 years.
Ruled filler paper to last for 168 years.
Looseleaf binders to last for 247 years.
Tracing cloth to last for 9 years.

Selling the ECA: The Economic Cooperation Administration shortly will request $2,950,000,000 to finance the Marshall plan for another year. In connection with this, ECA has just hired five new press agents at a cost of $39,450 a year and engaged a magazine "consultant" at the rate of $50 a day when consulted. ECA also reveals it is looking for additional magazine and newspaper writers to act as press agents. The appropriation for publicity for ECA in this country is $285,000 for the fiscal year.

Your responsibility

Again I remind you that each of you has a responsibility and you should make your demands known to your elected officials. The best way to do this is at election time.

Sincerely yours,

NORRIS POULSON,
Member of Congress.

Lattimore and Russian Communism

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, Owen Lattimore, the target for JOE

McCARTHY's pot shots has made his own record on communism. It has been in print for some time and the Senator has rendered a real public service by turning some light on Lattimore's views. I am including an editorial from the Chicago Tribune of April 6 which cites chapter and verse on this State Department's Far East expert. It is fair to imply after reading the editorial that Lattimore loves the U. S. S. R. more than the United States of America. He should be removed immediately from any connection with our foreign policy anywhere in the world.

LATTIMORE'S VISION OF DESTINY

Owen Lattimore, accused by Senator McCARTHY as a Soviet agent who is or has been a member of the Communist Party, is to appear today before a Senate investigating committee. Denials will occasion no surprise. But if Mr. Lattimore is not what Senator McCARTHY says he is, then what is he?

By his own representations and in the belief of Presidents Roosevelt and Truman, Mr. Lattimore is an authority on Asia. Senator McCARTHY asserts that the State Department considers him the outstanding authority. Mr. Lattimore is further described as the architect of America's far eastern policy—a policy which everywhere has led to American retreat while Russia has been advancing.

Mr. Lattimore has written widely on these matters. If there are any salient points in his doctrine, they may be reduced to these general propositions:

1. That Soviet Russia is a young and vital nation, producing leaders who are "men of destiny," and that the Russian rise to power is fated. On the other hand, America and the west produce mediocrities as leaders, western thought is no longer dynamic, and western nations, however good in intention, are helpless in action.

2. That Russia stands for democracy, prosperity, progress, security, and freedom in the eyes of Asiatics, but that the West has exhausted its powers of creativeness, has become old and rigid, and, in Asiatic minds, is associated with discredited imperialism.

3. That Russia, through inevitable historic force, exercises an irresistible power of attraction over the people of all adjacent territories; that this cannot be called Red imperialism; that it signifies "hope" to the peoples of Asia; and that Soviet methods of expansion deserve careful and respectful study.

4. Finally, that there is nothing that we can do about Russia's winning of Asia; that we must keep hands off; that nothing succeeds like success; and that "to be progressive in politics means to be on the side of that which is going up and against that which is going down."

Mr. Lattimore's outlook may be buttressed by citations from his own works. For example, on point 1:

"Russia appears to be the only nation of the modern world that is 'young' enough to have 'men of destiny.' It creates its Lenin and its Stalin; they follow each other with the certainty of fate. Russia, more than China and more than any nation of the West, is launched on a career of growth, and grow it will, irrespective of the leader. Russia, of all countries, is the one of which it can be said not only that something new may happen, but that something new is bound to happen." (Manchuria: Cradle of Conflict, p. 294.)

"* * * It cannot be said of American or British politics of the present day that a Harding, a Coolidge, a Hoover, or a Lloyd George, a Baldwin, or a MacDonald, are 'men of destiny.' * * * Our modern tendency to create commissions and delegate committees is a confession of subconscious loss of confidence in the inevitability of our leaders." (Manchuria: Cradle of Conflict, pp. 293–294.)

"The specific internationalism of the West, with its characteristics of good will in intention and helplessness in action, is an index of the fact that the civilizations of the West no longer guide the civilization which they created. Yet the old western passion for individualism, responsibility, and assertive control lives on; our leaders only last so long as they can keep up the illusion of controlling the uncontrollable." (Manchuria: Cradle of Conflict, p. 293.)

Point 2:

"To all of these peoples (Asiatics bordering on Russia) the Russians and the Soviet Union have a great power of attraction. In their eyes—rather doubtfully in the eyes of the older generation, more and more clearly in the eyes of the younger generation—the Soviet Union stands for strategic security, economic prosperity, technological progress, miraculous medicine, free education, equality of opportunity, and democracy; a powerful combina'ion." (Solution in Asia, p. 139.)

"The truth is that the Russian model of civilization is not built up so high above its foundations that to adapt it to local requirements need postulate extensive sacrifice of essential structural elements. Thus it can offer to any population a model which, while Russian in action, is largely local in structure—whereas both the western and the Chinese models have been so specialized in the course of their own evolution that they are old and rigid, and must handle new material more inconsiderately in order to adapt it to their own requirements. Russian action can therefore more easily accomplish its effects by the dynamic use of converted minorities." (Manchuria: Cradle of Conflict, p. 245.)

"There seems to be no conclusion but that the west has exhausted its powers of creativeness." (Manchuria: Cradle of Conflict, p. 293.)

"All of the peoples of Asia, each in its degree—the subject colonial peoples and the people of China whose liberty had been encroached on, though not destroyed, by nineteenth century imperialism—were startled into hope, expectation, or political daydreaming by the Russian revolution." (Solution in Asia, p. 68.)

"The age of imperialism, though not dead, is withering. The decades of drift are over. We must now set a course. Have we any idea what course to set?" (Solution in Asia, p. 55.)

Point 3:

"Granted the inevitable historic force of the Russian attraction toward the Pacific; granted their reluctance to cooperate with Chinese under Chinese rule, but their proved talent for combination with all kinds of alien elements under their own rule; granted their ability to settle on the land itself, and their superior talent for modernization without corollary subordination to the west—it is difficult not to foresee a steady increase of Russian influence in the region roughly bounded on the south by the Chinese Eastern Railway. It is possible even to foresee actual Russian occupation to an indefinite depth south of the Amur." (Manchuria: Cradle of Conflict, pp. 252–253.)

This "cannot fairly be called Red imperialism." (The Situation in Asia.)

"Throughout Asia today there prevails an atmosphere of hope, not of despair. * * * What they see opening up before them is a limitless horizon of hope—the hope of peaceful, constructive activities in free countries, and peaceful cooperation among free peoples." (The Situation in Asia, p. 238.)

Stalin's formula "is so electrifyingly exact that it should be studied with cautious respect." (The Situation in Asia.) "It certainly establishes a standard with which other nations must compete if they wish to practice a policy of attraction in Asia. Russo-Mongol relations in Asia, like Russo-Czechoslovak relations in Europe, deserve careful and respectful study." (Same volume.)

Point 4:

"Clearly the Communist acendancy had become so decisive that it could not be reversed." (The Situation in Asia, p. 151.)

"We must also abandon the stubbornly lingering delusion that we can somehow maintain footholds by supporting rump territories or rump government somewhere south of the Yangtze, or on the coast, or in Formosa." (The Situation in Asia, p. 179.) This was written when the Chinese Communists were north of the Yangtze and controlled only one-third of China.

"To be progressive in politics means to be on the side of that which is going up and against that which is going down." (The Situation in Asia.)

Senator McCARTHY suggested that this last statement explains Mr. Lattimore. By his every account, Soviet Russia and communism are bound to triumph. It is historically inevitable—the Marxian view. So, said the Senator, Mr. Lattimore has chosen his side.

If the investigating committee finds that Mr. Lattimore is not what Senator McCARTHY says he is, will it kindly tell the American people just what he is?

The Budget and the Spending Program of the Government

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. MILLER of Nebraska. Mr. Speaker, under permission to extend my remarks, I insert in the Appendix of the RECORD two letters, and include a newspaper article dealing with the budget and the spending program of the Government. One of the letters is from an old friend in Texas; the other from an outstanding constituent, giving the views of a chamber of commerce in my district.

Mr. Speaker, I was home during the 10-day recess. I find people more and more disturbed about the big spending by the Federal Government. It seems that your party has adopted deficit spending as a way of life. People are beginning to realize that their dollar is buying less and less. Indeed the Government may find considerable difficulty in selling their bonds, unless the people can be assured that the dollar they put in such savings will be worth a dollar when it is drawn out. It seems to me that the first obligation of government is that of guaranteeing sound money to its people. The Government, the banks, insurance and trust companies are unofficial custodians of the people's money. We just cannot have sound money when we continue to spend more than we take in.

Mr. Speaker, your party, with a majority of 91 in the House, now controls all legislation, and it seems incumbent upon you and your party to take the lead in cutting the fat out of the Federal

budget and bring it into balance with our income.

APRIL 17, 1950.

Dr. A. L. MILLER,
Congressman, Fourth District, Nebraska.

DEAR DOCTOR: I have been reading a lot in the last few months about the wild spending of Harry Truman, backed by the Democratic wing of our legislators. I feel that you are of my opinion—that we are on the road to destroying our American way of life.

With a national debt of $256,000,000,000 and interest of over $5,000,000,000 a year, our economic resources are overloaded. Today I cut the enclosed clipping from the McAllen Monitor, a valley daily paper. After you have read it I would like to know if what is stated here is the truth: If it is only half true, it is the biggest piece of racketeering one could think of in a country which is not at war. Our Government bonds cannot possibly bring par and the income tax and other internal revenues will not pay the bill.

Much has been written and said in justification of the Marshall plan, but you know, and I know that you cannot buy democracy or prosperity with any kind of money.

Is not there some way to stop this wild spending and balance our budget to include a liberal payment on our debts?

In this article it says that the Government will have to borrow $9,000,000,000 in the next year to pay the millions of Government employees and carry out Truman's planned expenditures. I have some Liberty bonds in my box at the bank, and am seriously thinking of cashing them for what I can get as, in my opinion, they will not be worth 50 cents on the dollar in a short time. What do you think? The clipping is from the April 7, 1950, paper.

I would be glad if you'd take this up with LLOYD M. BENTSEN, JR., our Representative from the valley, and with others you may wish to contact, as something has to be done, and it is only through our Congress, in my opinion, that any headway can be made.

Would be glad if you'd also interview our Representatives from Texas and see if you can't get their help. I am not in the habit of asking favors of our Congressmen or Senators, but this is too serious a matter to stand quietly by and not express an opinion. You have known me for many years, and know I am inclined to be optimistic. With kindest personal regards, I am,

Sincerely.

[From the McAllen (Tex.) Monitor of April 7, 1950]

GOVERNMENT TO START BORROWING MORE MONEY

WASHINGTON.—The Government, expected to overspend its income by more than $9,000,000,000 in the next 15 months, will start borrowing new money next week to make ends meet.

That will add considerably to the Government's debts, which already total nearly $256,000,000,000.

The first step in the new borrowing program, as announced by Secretary of the Treasury Snyder Thursday night, will take this form:

The Treasury owes about $900,000,000 in 91-day bills falling due April 13. It will sell $1,000,000,000 in new 91-day bills that day to pay off the due debt and leave it $100,000,000 extra cash.

Except in scale, the transaction will be the same as that of a man who has a $900 note falling due at the bank next Thursday and takes care of it by giving a new note for $1,000.

MORE FALLING DUE

The Treasury will have a chance to pick up an extra $100,000,000 in each of the two succeeding weeks by identical transactions, for it has $900,000,000 issues of 91-day bills also falling due April 20 and 27.

Next week will mark the first time in 7 months that the Treasury has sought to borrow extra funds in the public money market, made up mostly of banks.

Since last September it has been paying off securities falling due by selling practically identical amounts of new securities.

It has not, however, been heavily pressed for cash in that time, partly because the Government has run only about $1,370,000,000 in the red since the 1950 fiscal year started last July 1.

Also, it could stall along by using cash on hand, borrowing from Government trust funds (particularly the social security fund), and looking forward to heavy income tax collections in March.

As it turned out, income tax receipts proved disappointingly low, raising a threat that the Government income may fall short of expenses by more than the $5,533,000,000 total President Truman figured for this fiscal year.

Worse still, nearly $4,200,000,000 of that deficit will be piled up between now and the fiscal year's end June 30, and the President has estimated that income will fall $5,100,000,000 short of spending in the following 12 months fiscal 1951.

PAYING INTEREST

The Treasury already is paying out more than $5,700,000,000 a year to cover interest charges on the old and climbing debt.

Right now, the Treasury has around $5,650,000,000 in cash on hand, some of which can be used in taking care of the coming deficit costs.

Much of it, however, must be kept on hand as a sort of reserve against emergencies, in view of the billions in back debt on which payment could be demanded any time and in view of the scale of Government outlays.

The practice is to keep at least $3,000,000,000 in cash on hand at all times, and borrowing to meet cash needs in excess of that minimum balance.

In the borrowing operation, funds will be obtained not only from banks and other lending institutions but also from the trust funds and from the individual sales of savings bonds.

APRIL 10, 1950.

Representative A. L. MILLER,
House of Representatives (Nebraska), Washington, D. C.

DEAR MR. MILLER: In behalf of a chamber of commerce and community in Nebraska and to add my personal feelings, I would like to add a voice to the many letters you must receive on the state of the Union as it now exists.

There is an incessant demand on the streets of this city for more economy in our Government affairs. On April 18 the House will be voting on the $29,000,000,000 single-package bill. The over-all total of Government expenditures must be cut in all events. In order to satisfy the political demands of the Nation, the bill should be sent back to the Appropriations Committee with order to distribute cuts among the various agencies and departments. Our solicitations to you are almost in the nature of a demand that your vote be on the side of economy at every opportunity. Unless cuts are made, the public is about ready to question the financial status of the Government. On the streets I hear questions raised on the Government bonds themselves. If the Nation gets fearful of the credit of the United States and they commence cashing their bonds in wholesale fashion, this Nation will resound with cries of anguish from all quarters. Whenever the public becomes fearful of its Government, we are on the road to complete ruin. I believe that the people in this community are in a state of unrest because of the fiscal policy of the United States Government. The people still want their little dole, but they are slowly wakening to what is going on. It is for you and me to comprehend this situation and to make our complaints in the form of a demand with all the strength and power that we possess.

I find myself personally advising crowds at the sale of real estate to get the money out of the banks and cash their bonds because of the fiscal policy of the Government. This letter is a warning as best I can compose the same that great trouble lies ahead unless you boys put up a stronger fight than has been manifest heretofore. Our people are getting tired of the lip service of their Congressmen and the lack of action on the part of Congress. TAFT has hit a good line when he states that the only way to change this policy of our Government is to have a change of administration. That statement is taking hold of the public mind. The gang war in Kansas City is linked directly to the President's door. The Congress should be urged to look deeply into gang warfare. It is more deeply connected with Government than we are willing to admit. I believe nothing constructive will be done until Congress itself awakens to the peril of this country.

In fairness this community would like to know why there is such little progress in enacting many of the Hoover Commission recommendations. The recommendations are the heart and the over-all demand of this Nation for economy measures. Your office is varied in its duties, but instead of answering this letter, this community asks you to not give up the fight and do more than you have done, even though you think you have done your best. The best you have done is not good enough. It is time to do more.

With kind personal regards.

Carroll Binder Reports From Europe

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, April 17 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, Mr. Carroll Binder, editorial editor of the Minneapolis Tribune, has earned for himself the reputation in the State of Minnesota as one of the most outstanding of our citizens. His writings on international affairs demonstrate an objectivity, coupled with a firm dedication to democratic principles, which make him, in my opinion, one of the most valuable writers in American journalism. He has been observing, reporting, and analyzing major news developments throughout the world ever since he graduated from Harvard in 1916. In 1922 he joined the Chicago Daily News. As foreign correspondent, and later as foreign editor and director of that newspaper's foreign service, Carroll Binder reported the rise of fascism in Italy, nazism in Germany, and communism in Russia. He became editorial editor of the Minneapolis Tribune in 1945, and we have been grateful to welcome him as our neighbor and fellow Minnesotan. During World War II Mr. Binder covered the war in the Pacific and in Europe, and following the war was present in San Francisco for the formation of the United Nations.

Most recently Mr. Binder made a trip to western Europe. With 14 other editors he spent 3 weeks studying the operation of the Economic Recovery Program. He then spent 2 more weeks investigating other problems of western Europe, particularly as they affect American foreign policy.

I ask unanimous consent to have printed in the Appendix of the RECORD a series of articles entitled "Carroll Binder Reports From Europe."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

BINDER SEES HOPE DIM FOR WEST UNITY—RULING ELEMENTS CLING TO NATIONALIST PRIDE, TOURING WRITER FINDS

(By Carroll Binder)

PARIS, FRANCE.—If you expect the nations of western Europe to scrap their separate nationalisms shortly, and form a United States of Europe in return for the billions put up by American taxpayers, you're in for a big disappointment.

I have heard much talk about integration in each of the four countries I have visited during the past 5 weeks.

I found many individuals who share the belief of many Americans that the European democracies cannot survive politically or economically if they persist in trying to remain independent and in trying to become self-sufficient.

NOT READY TO YIELD

But I found no evidence that ruling elements in any country soon will be ready to give up their national sovereignties for the purpose of changing Europe into one big market of 270,000,000 people.

This change is what Paul Hoffman and other American spokesmen are asking for when they advocate integration.

"The only real Europeans are the Americans," hard-bitten west German Socialist leader Kurt Schumacher said in reply to my inquiry about the prospects for European integration.

Schumacher voiced disgust at the intense nationalism rampant in Europe, particularly among his fellow Socialists in other countries.

He justifies his own intense nationalism by the lack of camaraderie he finds in British and French socialism.

JUSTIFIES STAND

The only possibility of political and economic union Schumacher sees is between western Germany and Austria.

Since the Marshall plan emphasizes American interest in uniting Europe and since integration has become to many Americans a measure of the success or failure of our aid to Europe, this adherence of western Europeans to nationalism is of major significance.

To one unfamiliar with European history, economics, politics, traditions, and temperament this resistance to integration may seem stupid, perverse, and unappreciative of American aid and advice.

To one familiar with the power accumulating on the other side of the iron curtain—750,000,000 people scattered over 15,000,000 square miles and great natural resources at the command of the most ruthless and purposeful dictatorship in history—the persistence of separate western European nationalisms and the failure to integrate may seem suicidal.

THINKING NOT CLEAR

This series of articles is more of a report on things as they are and appear likely to be several years hence than a discussion of what should be done.

It may not be amiss to say that a study of talk about integration is likely to leave one less clear as to what Congress and ECA spokesmen mean when they urge integration upon western Europeans.

It also is likely to create serious doubts as to whether political integration of western Eurrope outside of both the American and Soviet systems is desirable from the standpoint of the United States.

There could not be the sort of economic integration we urge without some political integration.

This is not to imply that western Europe can survive in its present divided condition but to say that our own concepts of integration at present are too confused and unrealistic to warrant our attaching so much importance to such a formula.

Something more sound and more apt to endure seems to be necessary.

The American people probably will have to show more willingness to integrate with Europe before they can prevail upon Europeans to integrate with each other.

Europeans would be more impressed if Americans integrated their talks about integration.

There is a tremendous spread between what Americans urge Europeans to do—sometimes the same Americans.

At times our spokesmen seem to be insisting that tariff walls be abolished, fiscal policies be coordinated and currencies be made interchangeable to the extent that only a United States of Europe could achieve.

At other times our spokesmen seem to have in mind only small regional tariff groupings, abolition of quota restrictions on intra-European trade and aiming at the general reduction of tariff barriers.

Vested interests in each country naturally fight any modification of existing national barriers which seem essential to continuance of their profits, jobs, prestige, or influence.

French wine growers don't want to have to compete with Italian wines and Italian automobile manufacturers don't want to have to compete with British cars in the domestic markets.

Workers in other countries oppose the admission of Italy's surplus workers for any except poorly paid or exceptionally arduous work such as farm labor or mining. European steel production already promises to exceed present annual consumption by about 8,000,000 tons.

Nevertheless each government would like to make itself independent of others in steel and other key production.

But resistance to early and far-reaching lowering of national barriers is not confined to self-centered special interest. A sudden lowering of long-existing barriers in such an unbalanced area as western Europe would create economic and social problems graver than those it is desired to solve.

Every government must think about the welfare of its own people as well as the general welfare. It is normal that prudent governments should be cautious about exposing their people to unemployment and other economic dislocation which might result from giving free rein to less prudent governments of other countries.

A Swedish leader had this in mind when he said his people would not consent to linking their fortunes too closely with "Frenchmen and Italians who are addicted to tax evasion and blackmarketing"—practices frowned upon in his country.

A Dutchman who has seen how much more luxuriously Italians doing the kind of work he does are able to live in Italy's "free" economy balks at pooling his country's frugal economy with Italy's. The Dutch limit their families and share their limited resources to keep their national house in order. The Italians go on reproducing at their traditional rate despite a chronic overpopulation of 2,000,000 for which at present there is neither employment nor a home abroad.

It is difficult to integrate economies such as those of Britain, the Netherlands, and Scandinavia (planned along Socialist lines) with relatively unplanned economies such as those of France and Belgium. Such fundamental differences exist between neighboring Belgium and the Netherlands that Benelux, the pioneer European project for elimination of customs barriers, has yet to be implemented.

The three Scandinavian countries have as good a basis for union as can be found anywhere. But, despite common institutions and other integrating forces, differences in wealth and conflicts between industries thus far have prevented implementation of the long-discussed customs union.

Sudden abolition of barriers would throw about 50,000 Norwegian women textile workers out of employment. Their product couldn't compete with the more efficient Swedish textile industry. But the Norwegian women could not be moved elsewhere because their husbands are engaged in fishing. The families must remain near the sea, and the mills have gone to fishing towns to obtain this available female labor. If Sweden would buy Norway's chemicals, Norway could buy Sweden's textiles, but Sweden developed its own chemical industry as a defense measure.

Even in the case of Belgium and Luxemburg, there are constant rows over joint trade agreements with other countries. Luxemburg is primarily dependent on its steel industry. Belgium has a steel industry, but its textiles are more important. When Belgolux negotiates a trade agreement with Norway, the Belgians insist on disposing of a lot of textiles, while the Luxemburgers insist on Norway taking a large part of its payment in steel.

Such experiences with limited forms of integration and such moods in western Europe lead Prof. Gottfried Haberler, of Harvard, to believe that only a dictator or the imminent danger of being taken over by Soviet aggressors could induce the various countries to abandon their separate national sovereignties and become one sovereignty.

Haberler believes that collapse of the dictatorship or subsidence of the crisis would lead to the quick disintegration of such a forced western European union. He thinks the planned and the unplanned societies would each try to go their own ways rather than remain united. Less comprehensive cooperation is possible, however, in Haberler's opinion, and should be fostered.

EUROPE LAYS RECOVERY LAG TO BRITAIN—BINDER WARNS UNITED STATES MUST NOT TURN BACK ON DEPENDABLE ALLY

(By Carroll Binder)

PARIS, FRANCE.—When a man makes a quiet getaway in France—whether from jail or from a social situation—they say he scrammed in the English fashion. In England they describe such behavior as taking French leave.

These popular expressions reflect states of mind about each other which have developed in centuries of contact between peoples separated by wide cultural, political, and temperamental differences as well as by the English Channel.

It thus comes naturally for Frenchmen and other Europeans to blame the British for failure to make appreciable headway toward European cooperation. And it is not surprising that Americans, in and out of the Economic Cooperation Administration, accuse the British of dragging their feet.

ROIL AMERICANS, TOO

Europeans who do not wish to have their own countries' failure to take real steps to-

ward integration examined too closely join with anti-British groups in attributing lack of progress to the British, who are playing their usual selfish game.

The British are doing some things which certainly are not conducive to integration. They sometimes rub Americans as well as Europeans the wrong way.

But attempts to saddle all the blame on the British can only obscure more important stumbling blocks to the recovery and peace of Europe.

Also, it would be a great injustice to the British, whose stand with us in time of stress is the chief hope of preserving free institutions.

ONLY DEPENDABLE ALLY

When all things are considered Great Britain is the one ally in this part of the world upon whom we can count unreservedly for thick-and-thin cooperation for the common defense.

Such a dependable and capable ally is entitled to hold aloof from any project which it fears may weaken, rather than strengthen, its ability to survive in freedom and relative well-being.

Its stubborn standoffishness may prove less difficult to cope with than the pretended cooperation of nations not so wholeheartedly dedicated to freedom.

The British refuse to put all their eggs into the western European basket because they are not convinced such a political and economic entity can stand up to the Soviet challenge or remain a going concern.

They have two other relationships which they consider more vital than their continental relationships. One is with the British commonwealth. The other is with the United States.

BRITISH DETERMINED

The British are determined to preserve their ability to deal directly with both the United States and the other members of the British commonwealth, regardless of urging by high-placed Americans to identify themselves more unreservedly with Europe.

Although the commonwealth and other parts of the world constituting the sterling bloc no longer offer the economic and political advantages they once did, this integration of 250,000,000 people and a quarter of the world's trade is a bird in hand.

The British deem it worth more than the bird in the European bush.

If Europe continues to be a collection of would-be self-sufficient nations, Britain wants the sterling bloc and commonwealth aces in the hole. Britain believes that the United States will make arrangements with it which it is not yet prepared to make with western Europeans individually or collectively.

The monetary talks last autumn in Washington confirm that British estimate. Britain may be persuaded to conduct its sterling and United States relationships in a more constructive manner as regards European cooperation, but it cannot be bullied out of them any more than the United States can be induced to forfeit values it cherishes for dubious values about which little can be ascertained.

Britain's participation in the European integration movement is also conditioned by ideological and other factors spelled out in the second article in this series.

Britain is not willing to expose its full employment policies to the forces operative in the relatively free economies of France, Italy, and Belgium. It is not willing to again subject its critically low gold and dollar reserve to Belgian and other attempts to gather a still larger dollar and gold strength through convertible currencies.

Conservative leader Anthony Eden is no more willing to discard currency controls than the Laborites.

There are some other potent factors in British policy. Unlike the Italians and the Germans, who take it for granted that the United States should and will continue to help them indefinitely or the French who assume that the United States can always be counted upon to come to their rescue if they face disaster, the British are determined to try to get off the back of the United States at the earliest possible moment.

They resent being dependent on American aid and deliberately go without most of the good things of life in the hope of working their own passage again.

How Britain can stand on its own feet economically is hard to see. Some experts consider it impossible of attainment. But Britain's effort to become independent deserves more respect than the sycophancy of Europeans who expect to be supported in return for their lip service to European unity.

Key personalities in the Labor regime are motivated by other considerations. They want to be able to carry on (in even more austere fashion if necessary but independently) if the United States decides to shut off aid because of disappointment with results of ERP or displeasure with British Socialist policies. Some British measures arise out of that attempt to insure against an unfavorable turn of events.

This preoccupation with British survival and with cherished domestic measures has led to certain British practices such as dual pricing which ECA officials feel to be highly unfair and dangerous.

It is estimated that Britain is making a profit of about $50,000,000 a year by imposing an extra charge of £1 a ton on coal exported to other Marshall plan countries.

Sir Stafford Cripps and conservative businessmen justify this practice on the grounds that coal always has been sold abroad at the price that can be gotten and that the United States and other countries have more than one price for the same commodity when they can get away with it.

ECA accuses the Labor government of taking advantage of scarcity abroad to make the nationalized coal industry show a profit which otherwise would not be possible with high costs of production and subsidized domestic prices.

There can be no economic integration if each country being helped takes its little advantage at the expense of other countries which are being helped.

While the practice may help a given country to make a temporary gain, none will benefit in the end because Sweden, overcharged for British coal, is likely to overcharge some other country for its iron ore and soft wood. France will have an excuse to overcharge for its phosphates, Italy for its hemp, and Norway for its whale oil. Instead of being enlarged, trade thereby would be contracted.

An ECA official, whom I know well enough to feel certain that he is fundamentally friendly to Britain, likens Britain's present behavior toward European integration to the London policeman he observed during one of the worst blitzes busily trying to put out a gaslight which, according to regulations should not have been on.

Across the street the blaze of one of the largest buildings of London afforded enemy raiders an illumination 10,000 times brighter than the offending gaslight.

My friend fears that Britain's preoccupation with its own survival overlooks the burning building across the street which is Soviet designs on free Europe.

He thinks Britain could not survive in freedom if western Europe is taken over by the Soviets and that western Europe cannot save itself without the wholehearted cooperation of Britain.

How Your Tax Bill Grew

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Pathfinder for March 8, 1950:

HOW YOUR TAX BILL GREW

Sometime before midnight, Wednesday, March 15, 53,000,000 Americans will pay an average income tax of a dollar a day for the privilege of being governed.

This dollar-a-day levy will provide $19,000,000,000 of the $43,300,000,000 needed to run the Federal Government this year—or about 43 cents of every $1 the Government collects.

Moreover, these same Americans and their families will pay through taxes on their whiskies, cigarettes, Easter presents and Christmas gifts, movie tickets, and corporations another $18,000,000,000.

When it's all in, the Treasury will need $5,500,000,000 more to meet the bills.

To make up the shortage, these same Americans will lend their Government this $5,500,000,000, indirectly, through their banks; directly, by buying Government bonds.

By then the Government will owe about $260,000,000,000, nearly $1,750 for each man, woman, and child.

In the light of these six harsh facts there was little wonder that few taxpayers were happy as they turned over their Forms 1040 to internal-revenue collectors this week.

Equally cheerless are these other facts, probably less well known than the dreary six:

Income-taxpaying citizens will pay 15 times as much this year as they did in 1930.

By the end of this year the national debt will be 10 times larger than it was at the close of World War I.

The total cost of running the Federal Government this year will be nearly 13 times more than it was 2 decades ago.

This year's Federal deficit alone will be $2,100,000,000 more than the cost of all Federal activities in 1930.

The question of greatest interest to individual taxpayers was, of course, omitted from the short forms and long forms.

Why has the cost of Government skyrocketed so in the last 20 years?

Part of the answer, but not all of it, comes from these specifics:

In 1930 the Federal Government was composed of 38 major departments and agencies. Today there are 61.

In 1930 the Federal Government employed 600,000 workers. Today it employs 2,100,000.

In 1930 the United States taxpayer supported the Government of one nation, his own. Today he helps support more than 20 governments, including his own.

In 1930 the population of the United States was about 123,000,000. Today a Government which serves 150,000,000 is necessarily larger.

These partial answers point to the vast expansion of the functions of Government since 1930. Then, a citizen's chief contacts with his Government came during presidential or congressional elections; or when he ordered a pamphlet from the Agriculture Department.

But when, early in the thirties, the Government tried to end the depression by hiring everyone who was out of work, its functions mushroomed. So did its costs.

In 1938 the Government's income, which had been mounting steadily because of

greater national income and more taxpayers, had passed the $5,000,000,000 mark. But the same year Federal spending pushed $8,000,000,000. This deficit, plus earlier debts, put the Government in the red for some $37,000,000,000.

Then came World War II. When it was over the Nation staggered out of its far-flung foxholes with a gaping wound in its budgetary side—a national debt of $269,000,000,000.

COSTLY ITEMS

And, since VJ-day, taxpayers' hopes for a return "to the good old days" have been frozen stiff in the cold war. Rather than be caught flat-footed again, as they had been twice within a generation, the taxpayers' representatives face this year:

The spending of $13,500,000,000 for military defenses—nearly as much as the total cost of Government in 1941.

Care of veterans of all wars at a cost of $6,000,000,000—nearly six times what it was 20 years ago.

Help to friendly nations through independent loans, Marshall plan aid and the North Atlantic Pact at a cost of nearly $5,000,000,000.

These, plus the interest of $5,600,000,000 on old debts, add up to three-fourths of the $42,400,000,000 1951 budget President Truman submitted to Congress last January. The President deplored the deficit, but made it clear that he regarded paper solvency of less importance than his Fair Deal program—which cannot help but create more debt.

Stuyvesant Town's Threat to Our Liberties

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1950

Mr. MULTER. Mr. Speaker, the Supreme Court is preparing to consider the constitutionality of a decision handed down by the highest court of New York in which it upheld the right of the Metropolitan Life Insurance Co. to restrict its huge housing development, known as Stuyvesant Town, to "whites only." The effort to reverse that decision has significance which goes beyond the field of housing or even the problem of racial discrimination. Unless the decision is reversed, it may set a precedent which in time may prove ominous to our whole American pattern of democratic government.

A study on this subject appeared in the November 1949 issue of Commentary. It is written by Charles Abrams, a leading authority in the field of housing, who himself played an important role as counsel in the legal fight to abolish racial discrimination in Stuyvesant Town. I commend it to the attention of my colleagues.

STUYVESANT TOWN'S THREAT TO OUR LIBERTIES—GOVERNMENT WAIVES THE CONSTITUTION FOR PRIVATE ENTERPRISE

(By Charles Abrams)

(New York State's highest court has upheld the right of the Metropolitan Life Insurance Co. to restrict "to whites only" its huge housing development on New York's East Side, near the United Nations site, built with the public aid of the city of New York; now the Supreme Court of the United States is preparing to consider the constitutionality of this decision. The struggle to reverse the decision, Charles Abrams argues here, has significance beyond the housing area, or even the broader field of racial discrimination, important as both are. It is necessary to void a precedent, Mr. Abrams suggests, that may have the most ominous consequences for our whole American democratic pattern of government. Mr. Abrams, a leading authority in the field of housing, is an attorney, and was until recently housing analyst for the New York Post Home News. He himself played a prominent role, as counsel, in the legal fight to abolish racial discrimination in Stuyvesant Town. He is the author of The Future of Housing and Revolution in Land. His article The Segregation Threat in Housing appeared in the February 1949 Commentary.)

Last July, New York's highest court, by a 4 to 3 decision, upheld the right of the Metropolitan Life Insurance Co. to bar Negroes from its Stuyvesant Town housing project. (*Dorsey* v. *Stuyvesant Town Corporation* (299 N. Y. 512).) Though the decision received Nation-wide mention in the press, the general impression was that it concerned only another attempt, perhaps new in its form, to ban Negroes from white neighborhoods. But when the court's majority and dissenting opinions appeared in the law journals, the issue emerged in its full gravity: the case reached down to the very roots of American freedom.

It was not merely that minorities living in slums could now, with the help of city and State governments, be ousted from their homes to make way for restricted private developments. Far more important was the fact that an ominous device for circumventing the constitutional safeguards against arbitrary government had received judicial sanction. Public enterprises in private hands were held free to segregate, discriminate, and be above the law. Private corporations, the court held, may now be lawfully handed the powers and funds of government and use them unhindered by constitutional restraint.

It is not hard to see why dissenting Judge Stanley Fuld characterized the majority opinion as "perplexing." Where power is unlimited, tyranny begins. For centuries the safeguards against abuse of public power have been protected and reinforced. Its release into private hands opens a new chapter in political science. "It is impossible to balance the essence of democracy against fireproof buildings, and well-kept lawns," wrote Judge Fuld. "The Constitutions, Federal and State, forbid our putting the former into the judicial scales, just as they forbade the city officials from putting it upon the bargaining table * * * this undertaking was a governmentally conceived, governmentally aided, and governmentally regulated project * * * Stuyvesant Town in its role as chosen instrument for this public purpose may not escape the obligations that accompany the privileges."

But Stuyvesant Town has escaped those obligations. Judge Fuld's opinion is not the law. The law is that the precious powers of Government may now be used to create "private baronies." Indeed, with the recent passage of a Federal urban redevelopment law, dozens of them are already in the blueprint stage all over the country.

Never before in American history has such a unique liaison between Government and private enterprise been authorized. But the surrender of public powers to nonrepresentative private groups—always in the name of "social reform"—is not a phenomenon entirely strange to the modern world. It was one of the unique characteristics of the "corporate states" which have weighed like massive incubi on the prostrate body politic of Europe. The judicial approval of Stuyvesant Town represents an ominous relaxation of democratic controls when reinforcement is more essential than ever.

The Stuyvesant Town "barony" consists of 18 square city blocks and lies in the heart of New York City's East Side facing the East River between Fourteenth and Twentieth Streets. It cost $93,000,000 to build and houses some 25,000 people. It was conceived and sponsored by Park Commissioner Robert Moses as an alternative to public housing. That it is a sound investment for its owner, the Metropolitan Life Insurance Co., is due to a huge grant of tax exemption by the city totaling more than $55,000,000, or more than three times the cost of the land. The city also turned over to the company public streets amounting to a fifth of the area; these streets are now closed to the public and no one but the city's comptroller may tread on them without the company's consent. The city also condemned the land, ousting some 10,000 low-income tenants from their homes, as well as a host of storekeepers, churches, schools—and even another publicly regulated housing project. There are no public playgrounds or schools inside the Stuyvesant Town area, for it was feared by Metropolitan's chairman of the board that Negro children might attend. Negro tenants were to be barred, too, he said, because "Negroes and whites don't mix. A hundred years from now, maybe they will." The company openly admits its intention to discriminate against Negroes, claiming it as a constitutional right.

The law which authorized this singular undertaking was specially tailored to suit this $9,000,000,000 company. The ostensible public purpose behind these vast gifts of public moneys and powers is called urban redevelopment, described by the law with the novel term, "superior public use"—which means superior to schools and playgrounds, which are legally only ordinary public uses. The novel legal jargon, however, only inadquately conceals a more familiar process. Urban redevelopment is but the latest of a succession of devices conceived originally to improve housing and neighborhoods, but which have been perverted to keep minorities in their place.

Since minorities are most frequently contained in slum areas and cannot easily break out directly into better neighborhoods, they tend to infiltrate family by family where they can. A first device to prevent this infiltration was municipal zoning ordinances forbidding occupancy by certain races. These were soon held unconstitutional on the theory that an ordinance is State action, and therefore violates the fourteenth amendment, which prohibits States and public agencies from enforcing laws that deny equal protection to citizens. A second device aiming to keep minorities in their places, the racial restrictive covenant, was recently held unenforceable by the courts on the ground that courts are instruments of States and, therefore, court enforcement would violate the fourteenth amendment.[1]

But urban redevelopment is something new and different, the implications of its perversion far more sinister. The racial zoning ordinances and restrictive covenants aim only to bar minorities from coming into certain areas. Urban redevelopment, however, authorizes cities to root them out of areas in which they already live, all in the name of slum clearance. Because slum clearance is a recognized public purpose, the land on which they live and the homes they own may now be taken from them by forced sale.

Further, after acquiring the land for the private developer, the city may then turn it over to him without restrictions, according to the Stuyvesant Town decision. Cities are authorized to sell it for less than cost,

[1] See Charles Abrams, Homes for Aryans Only, Commentary, May 1947, and The Segregation Threat in Housing, Commentary, February 1949.

with taxpayers, Negro and white, Jew and Gentile, footing the bill. Yet while benefiting from these powers and subsidies emanating from all the people, the developer is free to discriminate in the renting of dwelling units. The theoretical justification for this is that once the property is in private hands the discrimination is no longer State action. The program thus grants equality of the laws during the process of eviction, i. e., no favorites are played and all are turned out into the streets with an even hand; but there is no equality in the sharing of the dividends of urban redevelopment. The minority is thus assured equality in the burdens, but never in the fruits. Slum clearance, which was intended to be the preliminary to decent housing, may now become the prelude to mass homelessness.

This is no academic matter, nor is it an isolated bogey inflated by alarmists. Twenty-five States have already passed urban redevelopment laws, and since Congress has now authorized huge Federal subsidies for urban redevelopment, mass shifts of minorities from one slum to another worse one, may soon begin. The proportion of the overcrowding in housing occupied by nonwhites is already four times as great as that of whites, the proportion of substandard housing is six times as high. These houses are the ones now most often scheduled for demolition and redevelopment. The evicted minorities find other areas barred to them while the new private redevelopment projects with few exceptions intend to follow the Stuyvesant Town exclusion policies.

The cost in human suffering may be imagined. But the evil of the program lies not only in its brutal imposition upon various minorities, but also, and perhaps primarily, in the fact that States and cities are now permitted by law to become partners to discrimination and injustice—a partnership now sanctioned by an influential court as constitutional. As racial zoning and the restrictive covenant proved, discriminatory practices are epidemic. We are thus witnessing the establishment of a legal precedent which may yet upset the safeguards of 150 years of freedom and split the structure of constitutional government.

Awakening to the dangers inherent in such urban redevelopment, minority groups have attempted to write antibias clauses into the enabling legislation. But their efforts have, to date, been thwarted. One obstacle in the fight has been the glee with which certain legislators—Senators BRICKER, of Ohio, and CAIN, of Washington, deserve special mention—have used civil-rights amendments as political footballs; the strategy is to tack anti-discrimination amendments on to social legislation in the hope of alienating enough Southern votes to kill the entire Fair Deal program. (CAIN, it might be noted, led the filibuster which defeated the administration's civil-rights program.) Unfortunately, some representatives of minority groups fell into the trap, and supported such amendments regardless of motives. A more apt phrase would have been "regardless of political realities," for the amendment as drawn almost defeated the public housing program which offered the only hope for housing some of the evicted minorities.

At the same time, Federal housing officials, who might have been expected to further the fight against discrimination in urban redevelopment, have remained indifferent. So much so, that when an amendment passed the House giving displaced tenants priority in the new urban redevelopment projects, it was smothered in conference because Housing Administrator Raymond M. Foley failed to give it administration approval.

Progress on the local front is only slightly more hopeful. Of all the State urban redevelopment laws now in effect, only Pennsylvania's bars racial discrimination. In New York City a local ordinance forbids granting tax exemption to housing projects which discriminate (but it does not apply to Stuyvesant Town, which was authorized before the ordinance passed). San Francisco is the only other city outlawing discrimination in urban redevelopment; Chicago and other cities have refused to go along, claiming that private investment would be discouraged. Experience with New York City's law, however, should dissipate Chicago's fears. More than $30,000,000 is now being invested by lending institutions in nondiscriminating urban redevelopment projects, and another $16,000,000 is being advanced for limited dividend projects.

Among the institutions making loans under the city's antibias ordinance are the Bowery Savings Bank, whose board chairman, Henry Bruere, once opposed the ordinance, but has since informed the writer that he is aware of the new social habits and that his approach in making these loans on nondiscriminating undertakings is entirely pragmatic. The Bowery has a total of $13,500,000 invested in such projects at as little as 3½ percent interest. Another New York project, Queensview Houses, a cooperative, headed by Louis Pink and financed by an 80-percent loan of $6,000,000 by the Mutual Life Insurance Co. at 4 percent, has sold almost all of its apartments to middle-income families, although 10 of the cooperators will be Negroes.

Yet, all that has been done in New York City has failed to offset the example of Stuyvesant Town and the implications of its victory in the courts. It is Stuyvesant Town the precedent, rather than Stuyvesant Town the project, that looms so large as a threat to the American way of life.

Throughout America's history rigid restrictions have been imposed upon the Government's use of the eminent domain, tax, and police powers—powers which the New York court has held may now be used for private developers who are free from such restrictions. These three powers constitute the working tools of any government, be it capitalist, Fascist, or Socialist. When abused, these are the powers that threaten life, liberty, and property.

The power to regulate, for example, is also the power to regulate out of existence; the American system has therefore always required that the courts stand guard to see that it is exercised reasonably. The power of eminent domain is the power to take another man's property; it may therefore be exercised only for a public use and upon payment of just compensation. The power to tax carries with it the obligation to use the proceeds for public purposes and not for private or class use.

One of the salient differences between democratic and totalitarian governments is that in the latter these powers are subject to the whim of a single dictator, while in a democracy their arbitrary exercise is effectively checked. The whole system of checks and balances which make up the American Republic was erected to prevent the abuse of these powers, or their subordination to private advantage.

In recent years, however, America has veered to what is euphemistically called the welfare state, and it is here that the Stuyvesant Town decision becomes the judicial authorization for a menacing liaison between private and public enterprises.

We are, to be sure, far from embarking upon any Fascist ideology or upon any conscious imitation of fascism's racist aberrations. But political systems have an inherent dynamic of their own; it is not the personal motives of politicians or businessmen which shape the ultimate pattern in the relationship between the State and the individual.

Freedom is an ethic but it is also the by-product of economic institutions. That it has flourished in America is due not only to the scheme of separation of powers but to the separation of government from business as well. In the American system up to now, enjoyment of both property and personal freedom have been inextricably linked. The linkage survived the great shift from the freehold economy to the modern corporate system, when it continued to be to the interest of the propertied and entrepreneurial classes to oppose government expansion so as to keep taxes low and regulation minimal.

With the release of the welfare and spending powers, however, the competition for government aid has taken a new turn. The insulation of business from government is ended and as the Government has now become the main functionary in the economic milieu, the driving forces of enterprise are being headed toward the Nation's Capital. The trader and tycoon are rising to the occasion to manipulate Government policies for their own ends, to influence legislation, and to harness the public official in the private interest.

In consequence, the welfare state as it is beginning to emerge in America bids fair to be a far cry from the pure and simple dispensing of benefits to America's common man, as was the intent of its initial sponsors. Under the guidance of certain business interests—as shortsighted as they are powerful—there is, at least in part, emerging a business welfare state in which the Government is being called upon to pump the funds authorized under the newly expanded welfare programs into certain private pipe lines. The common men are to become, as it were, the residual legatees, instead of being the direct beneficiaries; their benefits will be enjoyed at a second or third remove.

In the name of such public purposes as defense, housing betterment, encouragement of infant as well as senile industries, economic pump priming during slumps, protection of savings, home-ownership encouragement, and a growing list of other high-sounding goals, we are stumbling blindly in several directions, one of which is a subsidies-to-business economy. In the name of social reforms the Government is called upon also to loan to business at low rates, to socialize business losses when necessary, to remove risk from private enterprise by Federal insurance. In the process, these protected enterprises insist, of course, upon the same immunity from regulation they enjoyed before they drew upon the Government purse and the Government's powers.

The majority opinion of Judge Bruce Bromley in the Stuyvesant Town case justifies this immunity thus: "The increasing and fruitful participation of Government, both State and Federal, in the industrial and economic life of the Nation—by subsidy and control analogous to that found in this case—suggests the grave and delicate problem in defining the scope of the constitutional inhibitions which would be posed if we were to characterize the rental policy of respondents as governmental action."

Discrimination against minorities is no sudden, accidental byproduct of this emerging business-welfare state. On the contrary, discrimination in older phases of the housing program, wherever the business-Government liaison has been in effect, points to an intrinsic relationship and suggests the dangers of its extension into other fields.

It was, for example, in the Federal Housing Administration that the racial restrictive covenant received its greatest impetus. For years, and in fact during the entire period of the New Deal, this Government agency recommended the exclusion of minorities from newly developed areas, refused to insure mortgages on property if minorities were allowed to enter, and in an official manual drew up the very racial covenants that private developers were to use if they were to be eligible for FHA insurance.

The Government manual warned against such "adverse influences" as "unharmonious

racial groups." It said that "if a neighborhood is to retain stability it is necessary that properties shall continue to be occupied by the same social and racial classes." The "model" covenant it recommended provided that "no person of any race other than (race to be inserted) shall use or occupy any building or any lot, except that this covenant shall not prevent occupancy by domestic servants of a different race domiciled with an owner or tenant." In the face of vigorous protest, this manual was finally modified; but there is all too little evidence of any genuine change of heart.

Similar tendencies were noted in the liquidation operations of the Home Owners Loan Corporation. So too with urban redevelopment.

A 1944 Federal memorandum on the subject (for internal use only) states: "It is unfortunately true that, with but few exceptions, a displacement of neighborhood population by a new group results in an immediate lowering of the neighborhood level; that is, when higher groups leave, their places are taken by lower groups, four people drive out five people, rather than the other way around." The lower groups or four people are then listed as Negroes and Jews, and examples of decline in values as a result of the "travel of Jewish groups from an original semighetto" are cited.

The report goes on: "It is, of course, substantially impossible under our present social and economic system to effectively control people's movements. There is no way, nor is it necessarily socially desirable that there be a way to keep people where they are. It is, therefore, extremely difficult to prevent the encroachment upon other neighborhoods of people of unharmonious economic, social, national, and racial groups. The problem must be approached indirectly and, therefore, with poor efficiency and with only partial result."

Three indirect methods to contain neighborhoods and to keep out the undesirables were then proposed, including restrictive covenants which were recommended as "a rallying point around which neighborhood residents could gather to fight encroachment."

To stamp out discrimination in one or a few Government agencies, worth while as this is, does not affect the disease itself but only dabs at the more irritating symptoms. For the evil of discrimination in housing is not localized; nor is it due to the personal prejudice of officials; it flows from the Government-business relationship itself.

Democratic government and democratic business act under almost opposite sets of ethics and principles. Private business may, in certain respects, discriminate if it wishes to; democratic government is bound to the principle of nondiscrimination and the equal protection of the laws. According to the ideal of free enterprise, the entrepreneur may be single minded in his quest for profit, employ whomsoever he chooses, rent his product to whom he selects, do business with whom he wants. Minority and majority alike compete with their time, money, and talents. To be sure, abstractly speaking, the dominance of the profit motive in the economic system is supposed to be an assurance of egalitarianism, of the hiring of the most efficient employee and the catering to the source of profit, regardless of the race or ancestry of the worker or customer. But the real, working economic system under which we live deviates from the ideal model of the laissez-faire economists in a few important areas; economic motives do not always govern personal prejudice, and this is especially true when it touches upon the subject of housing: a man's home is his castle and an impassable moat still separates the elite from the unwanted in American neighborhoods. Exclusion practices function also in other fields in which employers as well as employees may be the participants.

In the private-enterprise economy, however, Government's role is that of keeper of the democratic morals, and it often sees that free enterprise remains truly free—a cash transaction in the open market—and is not subordinated to monopolistic restraints or racial dogmas. Any aberration in the state's activities in the direction of discrimination is subject to check by the courts, while simultaneously Government is drawn toward imposing its higher standards upon private enterprise when the latter forsakes the cash-nexus for the racial-nexus. Thus, hotels and restaurants are occasionally forbidden to discriminate though they are private businesses; courts refuse to enforce contracts that are against public policy, such as restrictive covenants. Employers may be forbidden to discriminate in carrying out public contracts, even in private employment. So, too, unions may be kept in line with the constitutional ethic, when they are beneficiaries of Government aid or power. The free-enterprise society, regulated by democratic government against abuse, has produced one of the great historical demonstrations of a tolerant society.

But in the establishment of the new government-business liaison, the ethics of the entrepreneur are not elevated to the governmental level. On the contrary, the tendency has been for Government agencies to lower their own standards to those of the illiberal self-seeking entrepreneurs who find catering to prejudice easier or lucrative. This is so—and must be so—because the establishment of the joint venture imposes a responsibility upon the administrators to make the joint venture function efficiently. Thus, for example, when the subsidized builder promises his home-buying prospect a restricted neighborhood, FHA tends to acquiesce or even encourage the policy.

This should be no surprise, for FHA depends for its success upon gretting a sufficient volume of housing-insurance business to make its actuarial formulas work. If this public agency made its aid to builders conditional upon nondiscrimination by the latter, it might not get enough mortgage insurance to justify its existence. The same is true in joint ventures such as urban redevelopment. Not the assurance of equality in the market place nor the inauguration of experiments in interracial harmony, but the financial success of the joint enterprise becomes the primary concern of the public administrators. Thus the Government attitudes becomes conditioned by the privileged private needs and interests, and soon private prejudices become part of the public policy.

A second reason for the degradation of democratic values is that the public agencies become dependent upon their private beneficiaries for lobby support in Congress. This is no secret in Washington today. The agencies best accommodated by Congress are those with an active private lobby campaigning for them. It is inevitable, therefore, that the agency officials will tend to yield to the pressures, prejudices, and customs of the beneficiary, and will close their eyes to the traditional ethical code for Government behavior.

Still another reason is that few Federal administrators who enact regulations are anxious to set them according to the relatively higher standard of racial tolerance in the North. They are apt to be practical and make their rules so they can function in the South as well. What may therefore be a localized discriminatory custom tends to become the common denominator in racial policy, and it is usually less than the standard set by the Bill of Rights.

Thus it is that inalienable rights may be diluted, governmental standards undermined, and safeguards of freedom whittled down, until racism is not only acquiesced in but becomes part of the customs and ultimately of the law of the land.

The strong dissenting opinion of Judge Fuld, the sharply divided court, and the crucial nature of the issue, however, all give hope that the Supreme Court of the United States will accept review of the case and perhaps reverse the holding.

This court has not been unaware of the implications of the growth of private governments, and since the days of the New Deal has rendered a series of decisions bringing them within the fold of the Constitution.

The Democratic Party of Texas, declared to be a private voluntary corporation by State laws, was enjoined from refusing a Negro a Democratic ballot. It was held to be "an agency of the State insofar as it determines the participants in a primary election" (*Smith* v. *Allright* (321 U. S. 629, 1944)).

When a Negro railroad employee sued to enjoin discrimination against him by a labor union which was the exclusive bargaining representative under the Railway Labor Act, the Court described the union as "clothed with power not unlike a legislature which is subject to constitutional limitations on its power to deny, restrict, destroy, or discriminate against the rights of those for whom it legislates and which is also under an affirmative constitutional duty to protect those rights" (*Steele* v. *Louisville & Nashville R. R. Co.* (323 U. S. 192, 1944)).

A company town that refused to allow a member of Jehovah's Witnesses to use its streets for the distribution of religious literature was enjoined by the court, which said that "the State urges in effect that the corporation's right to control the inhabitants of Chickasaw is coextensive with the right of a home owner to regulate the conduct of his guests. We cannot accept that contention. Ownership does not always mean absolute dominion. * * * Since these facilities are built and operated primarily to benefit the public and since their operation is essentially a public function, it is subject to State regulation." (*Marsh* v. *Alabama* (326 U. S. 501, 1946).)

A Federal district court in West Virginia found that a renting of a municipally built swimming pool to a private company did not authorize discrimination since "the voice is Jacob's voice even though 'the hands are the hands of Esau.'" (*Lawrence* v. *Hancock* (76 Fed. Sup. 1004, 1948).)

But while these cases have indicated an alertness on the part of the courts to the menace to civil rights inherent in the new "quasi-public" corporations,[1] the majority opinion in the Stuyvesant Town case has held to the view that the constitutional prohibition against racial discrimination is a prohibition against the State and that Stuyvesant Town as such is not a "state." It holds that the cases cited above are not controlling.

The dissenting judges, on the other hand, insisted: "The concept of 'state action' has been vitalized and expanded; the definition of 'private' conduct in this context has been tightened and restricted. * * * The construction and operation of Stuyvesant Town are not matters of 'merely private concern.' * * * Everywhere in evidence are the voice and authority of the State and city. * * * Stuyvesant is in no sense an ordinary private landlord. * * * The argument overlooks that the constitutional rights of American citizens are involved and that such rights may not be used as pawns in driving bargains. * * * The mandate that there be equal protection of the laws, designed as a basic safeguard for all, binds us and respondents as well to put an end to this discrimination."

In Stuyvesant Town, the issue of private government versus the Constitution is clearly

[1] After the city of New York had continuously taken the position that Stuyvesant Town was private, it issued a report on housing shortly after the Stuyvesant Town decision calling it quasi-public housing.

drawn. The crucial question is whether a 1789 Constitution, devised for a private-enterprise system and a democratic government, can safely serve as a basis for a business-welfare state. Unless the challenge is clearly seen in its full portent, and unless shaken principles and safeguards are retrieved and reaffirmed, the stage may be set in the years to come for a dangerous innovation on the American political scene.

What Should Be Expected of Advertising Today

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following most timely and intelligent address delivered by Philip Liebmann, president of Liebmann Breweries, Inc., before the meeting of the Association of National Advertisers held at Hot Springs, Va., Wednesday, March 29, 1950. Mr. Liebmann, representing as he does one of the large industries of Brooklyn, has brought to his speech the full experience of one who has studiously and constructively devoted most of his public life in the field of advertising. The Liebmann Rheingold Brewery in Brooklyn is world famous, much of it due to its arresting advertising programs which have been developed under the management and inspirational leadership of Philip Liebmann.

I have been asked to address you today on a subject which I think puts the emphasis in the wrong place. The title which has been chosen for me is "What I Expect of Advertising Today." I think what is more important is what should be expected of advertising today, not by me, but by you, by every advertising man and every company that advertises, and, most important of all, by the public as a whole.

For years the advertising men have asked to be accepted as a very important part of business. For years they fought the good fight to establish advertising on a level with the manufacturing and selling functions. This fight has been more or less won in many enlightened companies.

I say more or less because advertising men still insist that their specialty is not looked upon as an exact science; that, in too many companies, the advertising approach is still a matter of opinion, of whim; that it is not regarded in the same businesslike way as manufacturing and salesmanship.

In those companies where this is the case, the people who direct advertising, quite properly, think that they are very vulnerable. Of course, in this vulnerability they have a certain advantage, and it is this: While everyone can recognize a good advertising man, as well as a good manufacturing-production man, and a good sales manager, it is possible to get away far longer with being a bad advertising man. Because where advertising is a matter of unscientific opinion, rather than factual measurement, the abilities of the man who directs the advertising are also a matter of opinion.

And what, in my opinion, is a bad advertising director? Today, he is a man who has not grown up and matured with his profession. He is a man who has leveled criticism at those in his company who are responsible for product development and sales management for not recognizing advertising as being just as important as these other functions. And yet, because he does not recognize his responsibilities toward these other management problems, his own criticisms can today be properly leveled at him.

The fact is—and we all know—that no matter how good a sales force is, it cannot sell goods and services which are not worth what people are asked to pay for them and which don't stack up competitively. We know that a good sales force also needs very competent advertising backing.

No matter how good a product is, it must be properly sold both in personal contact by salesmen and by a proper advertising program. Even the finest product and the finest selling force needs good advertising to produce the proper results.

All this is elementary, of course. But is it? Certainly it explains why those in management responsible for manufacturing take an active interest in the sales manager and his staff, and in the advertising director and what he produces. Certainly it explains why the sales manager is always going back to the men in charge of production with suggestions, why he has such a great interest in advertising. What it doesn't explain is why some advertising men, having argued and cajoled and pleaded for so long for the recognition of their importance, should be willing to live in a world of their own and not really function as a part of the whole except for occasional giving of criticism and frequent dodging of criticism.

The first, and in many ways the most important, role of an advertising director is to ascertain the advertising needs of his company, to understand the products, the services, and public-relations activities which must be carried out in order to achieve the goals set by top management of the company.

The second function of the advertising director is to present properly to top management the role that advertising plays and must play in the company's problems. He must be able to interpret to top management the needs and responsibilities of the advertising department.

The third function of the advertising director is to sell the role which his department plays to the entire organization of the company. And this means not only convincing the sales force of the importance of advertising as a tool, but from the point of view of good public relations, the entire advertising program should be sold to all employees of the company.

In order to decide and guide advertising policy, the advertising director should make a study of all the problems involved in the manufacture, the selling and the merchandising of the products of his company.

It is necessary to study dealer attitudes, consumer attitudes and the basic merits—and sometimes the demerits—of the products and services of the company. I believe that, in the ultimate approach, not only the specific copy, not only the specific slogans and headlines, but the whole of the advertising approach should be to sell by direction and indirection, by word and picture—the very special advantages which this company may have in the merchandising of its product. Thus, if quality is the primary thing which is to be sold, all the advertising of the company must bear that over-all impression. If economy is the major factor, this must, of course, be stressed all the way through the entire campaign. If convenience, or some unique patent feature is what will probably bring the best results, then this should be the theme of all advertising efforts.

Most important of all, the advertising director must know where to go for the best possible guidance. If the company sells directly, as our company does, then the entire sales organization can serve as a veritable radar screen to bring to the advertising management all kinds of valuable information on consumer and dealer reaction which will aid in determining methods and policies.

And, of course, I think all of us feel that the selection of an advertising agency should be based entirely on merit and suitability for the job to be performed. And here again an advertising director can perform a great service for his company. He can be an effective liaison man between top management of the company and the advertising agency. Many advertising managers make the mistake of leaning too heavily on the agency, of not giving the agency the sort of direction it needs to do a good job. It certainly is an important part of the advertising director's function to make the best use of his agency's talents.

All necessary market research, copy research, and other research facilities should be used so that the net result of the thinking is based not on whim, not on prejudice, but upon sound analysis of the problems to be faced, the course which will help solve them and the results which are hoped for. It is only after this exploratory effort has been made, after basic budget recommendations, media, and copy plans have been made, that the task of accomplishing a well-rounded advertising program can be begun.

To me, advertising is the voice of our business, any business. The plant, the production, and the quality of the product are the body of a company. Sales and production management are the mind. Advertising is the voice.

The history of our company, while not exactly like the history of other companies, has followed the times in which it has been in existence. Our company has grown slowly down through more than 100 years of metamorphosis—from the earliest days of the industrial revolution to the present time. When a business such as ours started, the first problems were simply to produce a good product, and sell to a limited number of outlets which were well known to the management. Then, as the business became larger, the problems were not only those of producing a better product but of producing more. And finally, in the last phase, before advertising became of age, the problem was to organize a competent sales force to convince an ever-expanding number of retailers of the merits and qualities of our product—together with the services which our company could render to the retailer.

Now, in an era when production has grown to so much greater importance, we can no longer stop at this stage. Our salesmen and our organization can only go so far, but no further. We must reach out not only to the dealers but we must also go beyond them to the consumer, to create a desire for our product, and to sell those same consumers the very ideas which the sales organization must sell to the dealers. The complexities of our economy today require this because the dealer handles so many items that he cannot sell their individual merits to his customers and they must be, to a great extent, presold before they enter his establishment.

Since I have talked so frankly about the faults of some advertising men, I think I have a right to criticize some managements. One of the greatest fallacies of management is that it, in many cases, grew up before advertising had come of age and still looks on advertising with a jaundiced eye.

In many respects, advertising has not come of age. In a great many companies, instead of being a full partner, it is considered an expensive and perhaps unnecessary luxury. Nothing could be farther from the truth. Managements which take this point of view are very apt to end up on the losing side.

There is no need to dwell on this point, because the old story of the soap that stopped advertising and other similar stories are too well known to you.

But despite this evidence, it is unfortunately the truth that occasionally advertising is regarded as a sort of auxiliary. This is a dangerous belief for anyone to have. As I said before, I believe the three cornerstones of the structure of any modern business are management from the point of view of production, management from the point of view of sales, and advertising from the point of view of doing full justice to the manufacturing and selling aspects of the business. And I believe, actually, that I have named these three cornerstones in the order of their importance.

In view of this, I simply cannot understand why there are still a number of advertising people who consistently irritate the other members of the management team by taking the point of view that all you need is a wonderful advertising campaign and the salesmen will just become order-takers, and that it doesn't matter what kind of a product you produce. This, in reverse, is just as ridiculous a point of view as the attitude of a management that does not understand advertising. An advertising director, or an advertising department which makes this serious error will certainly not be able to educate top management in the proper use and evaluation of advertising but will instead so irritate the other executives responsible for the success of the business that they will close their eyes and ears and minds to an intelligent point of view about advertising.

When I look through the advertising trade journals, I often ask myself why so many of the men who write for them, who influence the advertising profession to a very great extent, often pay so much more attention to the advertising embroidery, rather than to the pattern of an entire business of which the advertising is only a part. I understand, of course, that people who read advertising trade journals are, naturally, interested in advertising. This does not explain why an advertising trade journal, when it tells the story of the success of a business, will give the major—if not all the credit—to the advertising history of that company, ignoring the part that the product and sales force must play in any success story.

I say this in the kindliest spirit possible. Surely no one has said nicer things about the advertising of my own company than the trade journals. And I am proud of the advertising job our company has been able to do.

But I must insist that, in the last analysis, all advertising can hope to accomplish is to create an attitude on the part of the buying public in respect to the company and its product and to get the public to try the product; that if the product is not satisfactory, the public will not continue to buy it regardless of the advertising; and if the sales organization does not achieve proper distribution, then the public will not be able to obtain the product.

The point I wish to make here is this—that, as a man who resents the fact that some companies look upon advertising as a stepchild, I think I have a right to speak frankly to those members of the advertising profession who look upon advertising as the sole power behind the throne.

I do not care how good the advertising of a company is—if the sales organization doesn't have the good will of the retail trade, its efforts can be killed off even before the advertising starts to work. You can create all the demand you want. If people have never tried the product, they may ask for it, but they will not insist on it, and unless it is available and distribution is complete, you will lose many an advertising dollar. Most important of all is the quality of the product. No matter how effective your advertising is all it can do is to get people to try your product; if they don't like the product once they have tried it, all the advertising in the world will not make them buy it again.

These facts may seem so simple you may wonder why I take your time telling you about them. But, unfortunately, neither top business management nor top advertising management seems to have thought them important enough to look at the forest instead of the trees. That is why, when advertising people outside our organization are so very flattering to our advertising, and insist upon attributing so much of the success of our company to the advertising, it bothers me. And that is because it is not a true picture of our company and its operations and of the reasons for its success.

In our company, after we have determined on the correct course of advertising budget, media, and copy recommendations, after we have sold the top management and the board of directors of our company on the wisdom of our policies, we are not through. We may still have a good product, we may have planned a fine advertising program, and yet we are still missing one of the most important keys in any advertising or business operation.

Unless we are able to sell our ideas and plans and product to our sales organization so that they not only will become more enthusiastic in their selling, more confident not only of the quality of the product, but also of the way in which all their potential customers are being made aware of the quality of the product—unless we do these things; we will not have our sales force taking full advantage of all the work that has been done. They will not be as enthusiastic as they should be and if they are not enthusiastic, our dealers will not be enthusiastic either. And if our dealers are not enthusiastic, even though a good sales organization improperly indoctrinated may still be able to get the product on the shelves, they will lack that spark, that ignition when the gas is pushed into the cylinder, which will make for a bang-up success, rather than mediocre results.

In other words, good management and a good sales force and a good advertising program can create fair success but a really sensational success can only be achieved if these things can be tied together through proper indoctrination.

Now, you may ask, What is proper indoctrination? I do not believe proper indoctrination is to hold a great big convention of your entire sales organization at which a lot of stuffed shirts from the front office get up and cram something down the throats of 200 salesmen. Nobody could possibly be enthusiastic about that kind of a program.

First of all, we should realize that our salesmen (and here, of course, I am speaking more directly of a company like our own, which maintains somewhere over 200 men on its sales force, who contact the retail trade directly)—we should realize that these men can act as radar screens, as I said before. Not only can we give them information, but they can give us information. They are out there 300 and some days a year, contacting the retail trade, getting the reaction not only to our product and our advertising, but to general trade conditions and to the products and advertising of our competitors. I would be the last one to say that we can or even should adopt most of the policies which they will recommend, because, naturally, each one of them, dealing with a particular type of retailer and with a particular section or territory, amplifies, in his own mind, the special local problems with which he comes in contact, and which, while they may be important to him, are not so important from an over-all point of view. We must collect all this material, and evaluate it from this larger point of view. But the sum total of the collective material can be very valuable to us in developing our own plans and projects.

Naturally, salesmen are prejudiced; they are very heavily prejudiced in favor of what the dealer wants and often what the dealer wants is not in the best interests of the operation, from the point of view of the manufacturer in reaching the consumer.

Having received this information from our salesmen, and evaluated it, we not only receive something which is of value to us, but we let our organization know that their desires and their thoughts are important to us and are carefully considered in the formulation of our plans. This information cannot be garnered in large meetings, and it has always been my practice and that of the other men in the advertising department of our company, to continually talk with the salesmen, with the district managers and with the supervisors daily; to meet with them at least every few weeks in small groups, that is to say, different divisions of the company both product-wise and area-wise; to sit down with 6 or 8 or even as many as 15 men, and let them talk and answer their questions constructively. I do not believe a day passes that I do not talk with a number of men in our sales organization, and I think my associates, Mr. Graham and Mr. Grau, talk with at least as many men themselves each day. As a result, our department has daily contact with a large segment of our sales organization.

This has now achieved two purposes. This continuous contact not only sells our men on the product which we manufacture, but also on the ways in which we are trying to help them to do their work, to enable them to make more money. We further contact them through a company house organ, through special bulletins from the advertising department to the sales organization, which we try to issue at least once a month, and through additional written material such as booklets, reprints of all our advertising material, broadsides—not covering a whole year, but every few months on forthcoming advertising projects, et cetera. Once a year, or so, we do have one of these great big get-togethers which I have described before, but this is done simply to try to wrap the whole thing up into a package and present it to the men in a very brief and informal form. It is a bit of showmanship to add a little glamor to the daily routine, but there is no easy road, no huge once-a-year meeting, that will give constant information to the sales force and get constant information from them for the use of the advertising organization. It is just a matter of plugging day in and day out, of working closely together, to achieve the maximum results.

These daily or weekly "bull sessions" in groups and individually will build an organization with the kind of comradeship and spirit of cooperation which will make advertising not only respected but appreciated by both management and the sales organization.

As a last obligation I believe the advertising director should have a very clear view of the social philosophy of advertising. He must be very conscious of the necessity to convince both the stockholders and the directors of his company. As I have mentioned, many people look upon advertising as a luxury. This is sheer nonsense, just as ridiculous as the attitude of the businessman who thinks he should spend a lot of money on advertising because business is wonderful and he is making a lot of money and doesn't know what else to do with it. The same man, as soon as things get a little tough, says, "Well, I guess we will have to cut the budget." I don't know which of these points of view is more ridiculous. Advertising is not something on which you spend money because you don't know what else to do with it, nor is it something you can dispense with

as things get tough. Actually when things get tough is the time when advertising is needed more than ever because the smaller the melon gets the bigger the slice that is needed for each individual company which is trying to get a piece of that melon in order to stay in the black. The stockholders don't make more money when advertising is cut; they risk their whole investment.

But our most important obligation is to the consumer. And what does the consumer say? He says, "Here you are spending a lot of money for advertising. If you didn't couldn't you sell me better products for less?"

The consumer should be told in every way possible how socially beneficial advertising can be to him. Most important of all, it preserves freedom of choice. In many other countries there is very little freedom of choice—in some cases because of unrestricted cartelization and, in others, because of government restrictions both on products and on price. In my opinion, despite all that has been said on this subject, our country has the greatest economic democracy of all. And our advertising preserves the freedom of choice encouraged by our free system. If advertising did not tell American consumers of the qualities and services of the products made available by our companies, then they would have nothing to guide them in choosing. Accordingly, they would purchase what they were allowed to purchase. The dealers would stock only a few items, and so nobody would insist on any particular product; consumers would have to be satisfied with what they could get, because they would find the same situation more or less at all dealers.

Only because we have created a demand for a larger number of different products and different brands, will dealers carry all these products, and the consumer may vote each day at the ballot box for that product which he prefers.

This makes for another special protection of the consumer. For any company that spends the large amount of money over the years that is spent in advertising of well-known brands would not take the chance of throwing away this entire expenditure by tampering with the quality of the product, and risking the refusal of the public to buy. Thus, advertising acts, in a very important way, as a strict quality control.

There is a third benefit to the consumer. The advertising cost per unit of almost any type of product is actually infinitesimal. If the advertising were eliminated, the saving would be fictitious because lower volume and higher distribution costs could immediately increase and not decrease the price the consumer is asked to pay. So, in actuality, advertising not only costs the public nothing but saves the public money.

How about the dealer? Couldn't the dealer say, "Why don't you let me make a little more money? If you cut your advertising budget, couldn't I get a higher profit?" Of course, this is sheer nonsense. Advertising makes it easier for the dealer to handle a multiplicity of items, turn them over fast, do more business, and lower the cost of distribution because he does not have to sell each of his customers on each particular brand of merchandise—the customer has already been presold for him. Thus, he is able to do a larger volume of business at less expense, benefiting both himself and his customers. And also he is able to eliminate the inventory risk of being stuck with merchandise for which there is no consumer demand.

And what about the salesman who works for your company? Couldn't he say, "If you cut your advertising, why couldn't you give me a little more salary?" This is a completely false assumption. Advertising builds up the security of the salesman's job, as well as the security of every employee of the company, because an advertised product is, naturally, a more secure product when it comes to maintaining a constant level of production and employment.

Yes, advertising offers security to stockholders, to the management of the company, to all the employees of the company, to dealers and to consumers. In addition, it makes possible the preservation of a free press, a free radio and television; it pays almost the entire cost of our wonderful organs of information. Advertising plays a real role in the creation of a true economic democracy in the fields of public communication.

I am not falling into my own trap here. I am not saying that advertising brings us all the benefits of our free economy any more than I say that advertising could possibly deserve the sole credit for the success of any business. Advertising is not all-important but it is important. The practitioners of advertising must at all times realize that, in any company, quality of production, economy of production, personnel, and dealer relations are paramount; that these are the foundations on which advertising can function efficiently and well; that the sales organization is another structure which will be built upon the same foundations. Manufacturing, selling, and advertising are a team; each must respect the prerogatives and special interests of the others. Each must be willing to work in harmony, to achieve the same goal. I believe that if advertising men play their part properly; if they not only create good advertising but sell the social and economic benefits of advertising to their fellow workers, to their top management, to their sales organization, if they realize and give credit to the equal importance of the other functions of our economic democracy, then they will receive their proper share of the credit. They will benefit the firms for which they work, and all the people connected with them and they will render greater service to a greater community, whether it be city, State, or country—or even to the world as a whole.

Advertising is not only the voice, it is the free speech of business. It doesn't stand by itself, but it is a vital and integral part of the merchandising evolution of which we are a part.

In the understanding of this I believe we can go forward, into a rising standard of living tomorrow, providing more goods and better goods at lower prices to more people than ever before.

This is what should be expected of advertising today.

Address by Hon. Herbert H. Lehman, of New York, on United Jewish Appeal

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. MULTER. Mr. Speaker, the United Jewish Appeal is currently conducting its 1950 campaign to carry out a threefold humanitarian program: First, immigration and settlement of large numbers of Jews in Israel where they will no longer be homeless; second, relief and rehabilitation to the depleted Jewish communities in Europe, and to the Jews in north Africa who are suffering untold misery; third, adjustment and integration of refugees arriving in this country under the displaced-persons law. Because of its activities on such a wide scale, the United Jewish Appeal is often described as an instrument of human reconstruction.

The United Jewish Appeal drive is now going on in some 3,500 communities throughout the United States. In many of these, our non-Jewish friends are lending a helping hand and are making possible the success of these drives.

The campaign in the Nation's Capital began on April 12. I am certain many of you will find extremely interesting the remarks on that occasion by Senator HERBERT H. LEHMAN, of New York, who has long been associated with every type of humanitarian work. His address was as follows:

History is moving at such a rapid pace that we rarely find the opportunity to study its significance or assay our own role in events that are changing the entire face of civilization.

In our concern with current problems we often lose perspective. We are either so preoccupied with our work or with the critical necessities of the moment that we do not have the time to look around to see the direction in which we are going.

In the year 1950 we are confronted with many serious problems. All of us are keenly aware of the importance of the United Jewish Appeal. Yet relatively few of us know, except in some vague, intuitive way, why this is a crucial year, why we are again called upon to act in a spirit of sacrifice.

I have been associated with the tasks of aiding Jews in distress for many years. For a third of a century I have been affiliated in an active capacity with the Joint Distribution Committee, one of the three constituent organizations of the United Jewish Appeal. I can fully appreciate the sentiments of those who say that they are tired, of those who year after year keep asking, "How long is this going to continue? How much longer must we expend all this energy and give these vast sums of money?"

But these questions are justified only where we fail to grasp the meaning of the momentous developments of recent years, and where we fail to see that the ultimate goal is almost within our reach.

In point of time, the recent past, the present, and the future can most easily be summed up in three words, achievement, crises, and fulfillment.

Let us take achievement first. I believe that American Jewry has a great deal to be proud of. I believe that in the historic accomplishments which American Jews have made possible in the rescue and rehabilitation of their coreligionists, they have not merely added stature to their spiritual and communal life as Jews. They have enriched their Americanism with a devotion to human ideals that is without parallel in modern civilization.

In a matter of days Israel will celebrate the second anniversary of its independence. The establishment of Israel as an independent nation gave the people of Israel their freedom, the Jews of the rest of the world—the homeless and distressed—the right to find a new home—and to the Jews of the United States a high sense of achievement in the program of building a better future for the Jewish people.

Let us not forget that independence did not come easily for the Jews of Israel, any more than it did for the people of these United States. They paid a heavy price in blood and tears. And they fought and many died not merely for their own survival, but to open the doors of the Jewish homeland to victims of persecution and homelessness. The victory they won was not merely recorded as a triumph on the battlefield. The victory they won is being reaffirmed every

day in the great influx of new immigrants. The fact that 400,000 Jewish refugees have been brought into Israel during the past 2 years eloquently demonstrates that its people did not merely fight a war for independence but that they actually fought and won a war for Jewish survival and Jewish rescue. To the great extent that you and other members of the Jewish community of Washington and the Jewish communities of other parts of the United States contributed to the United Jewish Appeal to keep the doors open to this unprecedented immigration you had a decisive role in the war for Jewish survival.

As long as there are large numbers of Jews who must find a new home in Israel, mass immigration cannot be separated from the existence of Israel as an independent state. In that respect, one may very well say that the crisis which Israel now faces in receiving and absorbing tens of thousands of new immigrants is directly related to the victory that made the open door possible.

The shooting war in Israel is over. But the Jewish State still has a long way to travel to achieve peace. Armistice agreements exist. But the Arab States are doing more than just talking of a second round. There is a great deal of evidence to prove that they are preparing for another war. This is a matter which should be of the gravest concern not merely to American Jews but to the American Government as well. The possibility of another conflict in the Middle East is not merely a threat to the existence of Israel. It is a danger to world peace. I firmly believe that it is the responsibility of our Government, which is keenly interested in preserving world peace, to take a firm stand in speeding a peace settlement in the Middle East. It seems to me one of the first steps in achieving permanent peace in that part of the world is to discourage all preparations for war and to prevent the large-scale rearming of Egypt and other Arab countries.

Israel wants peace. Israel needs peace to cope with the overwhelming tasks of immigration and economic development. In the 2 years of its existence, Israel has emerged as a vital and progressive democracy. In the interests of peace, in the interests of aiding this young democratic Nation, the United States Government should extend continued aid for its economic development.

We have come a long way since the days of mass murder in Europe, since the days when the doors of Israel were open only to a trickle of immigration, and when there were 250,000 survivors of Nazi oppression waiting in the DP camps of Germany.

But we have not yet reached the point where we can regard crisis and emergency as things of the past. Not while oppression and poverty endanger the status of 900,000 Jews in north Africa and other Moslem areas. Not while 35,000 Jews are still waiting in the DP centers for a new home in Israel and the United States. Not while many thousands of others must be gotten out of eastern Europe before the doors of rescue are closed.

It is this urgent situation that makes so vital the continuation of large immigration into Israel. It is this urgent need that makes it imperative for us to support the transfer and absorption of at least 150,000 this year.

As you know, Mrs. Lehman and I visited Israel a year ago. We saw at first hand the miraculous accomplishments of the Jewish pioneers and builders. We also saw the misery and heartbreak of the transit immigrant camps, the indescribable hardships which so many thousands have had to endure in the miserable tents and barracks. And there are 90,000 new immigrants in these camps today, still waiting for the fulfillment of the promise of a new home in the Promised Land.

Under these circumstances, it is no exaggeration to say that the critical problems which Israel is facing today are just as great as when its heroic people had to fight a war of survival against the invading armies of six Arab countries.

You will recall that we have never questioned the fundamental fact that the problem of the displaced and distressed Jews in Europe and elsewhere was the responsibility of the Jews of the United States and the rest of the world. The fact that these displaced Jews have been transferred to Israel does not in any way reduce our responsibility. How can we say that the DP problem is solved, if it is merely transplanted to the soil of Israel?

The burden of receiving and caring for refugees who are entering Israel at the rate of more than 12,000 a month involves many overwhelming problems. There is the need of providing homes and making these people productive citizens of the new democracy. There is the problem of integrating into its economic and social structure men and women coming from 30 countries, from highly varied environments, speaking many different languages. All these superhuman tasks cannot possibly be borne by the people of Israel alone.

And I know that it was never our intention that the Jews of Israel should have to face this situation alone. When we prayed for the days of their deliverance, for the hour when Israel would be able to receive tens of thousand and hundreds of thousands of inmmigrants, we, you and I, and the rest of American Jewry, firmly pledged our fullest material and moral aid to achieve a resettlement of such enormous proportions. Surely we have not forgotten. Surely we must recognize that we now have the opportunity as well as the obligation to fulfill these solemn pledges.

I have full confidence in your understanding and your sense of generosity. I know that there is no question about your readiness to do what is expected of you in this year's United Jewish Appeal campaign. The record of the past decade has proved that where there is need you respond and that you do so in the measure required to meet that need.

The only thing we have to fear is that we underestimate the need, that we minimize the critical aspects of the present situation.

There are many critical problems still confronting us in many corners of the world. I have referred to deadlines on emigration out of eastern Europe. It is estimated that 20,000 Jews can be brought out of Poland to Israel. But this migration project must be completed before the end of September when Poland will close her doors.

In other parts of eastern Europe, as in Hungary and Rumania, limited opportunities for imigration exist, but there is the constant danger that the policies will be changed, and many will lose the chance to start life anew in Israel.

There is also great urgency in the plight of large numbers of Jews in the Moslem countries. The speed with which we get them out may spell the difference between life and death.

I am not at liberty to go into details concerning the situation, but I can tell you that Jews are coming out in increasing numbers. We cannot, we dare not permit lack of funds to stem that flood of emigration, to halt the escape of men and women fleeing from persecution and fear. One fact I can divulge: Operation Magic Carpet, that twentieth century miracle which has brought more than 45,000 Jews out of medieval Yemen into the sunlight and hope of Israel, is nearing an end. We can take great pride in the fact that through the United Jewish Appeal we have carried out one of the greatest rescue efforts in history.

As many as can be moved must be gotten out of the Moslem lands. But we must also provide for the great numbers who will remain behind and who are in desperate need of assistance. In truth, the problem of poverty, disease, discrimination in these lands is so great that only the most superhuman efforts can adequately meet the problem.

We are making encouraging progress in caring for the children in these countries, the youngsters who have had only a 50-50 chance of living beyond their thirteenth year. A network of medical installations has been established, schools have been set up, clothing is being provided, and food is being given to tens of thousands of children and adults, for whom it represents the only barrier against literal starvation.

In some parts of Europe, the situation is a happier one. As a result of the great constructive work of the Joint Distribution Committee since the end of the war, a very substantial section of European Jewry is well on the road to self-support and independence. This is indeed an accomplishment in which we can rejoice—particularly when we recall the pitiful survivors who remained when the Nazi blight was lifted from the continent.

Yet, even in western Europe, there remain many thousands who will require our continued aid for some time to come.

And there is still another front. All of you, I am sure, are familiar with the DP legislation which has for many months been pending in Congress. The great majority of the Members of Congress are very anxious that our country should continue to play its traditional part in receiving and aiding those who need haven and refuge. Happily after a long and hard struggle a liberalized DP bill has been enacted by the Congress only a few days ago.

I hope that under this act a substantial number of refugees can enter this country in 1950 if we provide the necessary homes, jobs, and other assistance. The refugees whom we have enabled to come to the United States in the past 10 or 15 years have, by their contribution to our economy and our way of life proved themselves an outstanding asset to our country and its democratic ideals. Those who still wait anxiously for an opportunity to settle here also merit our help and our confidence.

How can we relax our efforts in the face of these global needs? How can we relax when the state of Israel faces a most serious crisis? How can we relax when hundreds of thousands of Jews are still running for their lives—still fleeing from terror and homelessness? How can we relax when there is so much that still must be done to finish the job of rehabilitation for the surviving victims of Hitlerism?

Believe me when I say that the needs of the United Jewish Appeal are greater today than ever before. Everything that we have built up through decades of devotion and sacrifice hangs in the balance of the outcome of this year's campaign.

We have to our credit great and unforgettable achievements in the reconstruction of our coreligionists, in the inspiring rebuilding of Israel and in the revival of Jewish life elsewhere. But these achievements are not yet secure. The crucial needs of 1950 still call for the most strenuous effort and the greatest service that it is in our power to give.

Let us be guided by the knowledge that we are capable of meeting the challenge of history. Our generation was blessed with the privilege and the opportunity to rescue our coreligionists from destruction and to bring new meaning and disgnity to Jews throughout the world.

I am confident that you, the leaders of the Jewish community of Washington, will understand your responsibility as you al-

ways have over the years. I am confident that through your action tonight on behalf of the United Jewish Appeal, you will set an example of leadership that will inspire Jewish communities throughout the Nation. I am sure that the greatness of this hour will find all of us big enough to live up to the highest expectations of humanity.

United Negro College Fund

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1950

Mr. JAVITS. Mr. Speaker, in all the activities which we are pursuing at home and abroad we must remember that the solid foundation is an informed and effective people. The enormous human resources available from the 32 private Negro colleges have a great contribution to make to the pool of skill and ability which we have in our country. It is a campaign which should draw its support from every truly American community. I append hereto an article from the Christian Science Monitor of April 13, 1950, signaling the opening of this drive:

UNITED NEGRO COLLEGE FUND OPENS DRIVE

NEW YORK.—The United Negro College fund has begun its seventh annual Nationwide campaign to gain support for 32 private Negro colleges and universities.

It seeks $1,400,000, the critical 10 percent that assures effective use of the other 90 percent of member institutions' combined budgets, according to fund officials.

These colleges make up the "avant garde of a democracy that we can really achieve," said Dr. Ira deA. Reid, vice chairman of the 1950 campaign, during opening ceremonies April 12 at the Rainbow Room of the RCA building.

URGENTLY NECESSARY

"Until we have completely integrated and implemented our democratic principles and practices in American public and private life, they are going to continue to be necessary to provide meaning for people our culture has disinherited," said Dr. Reid, chairman of the department of sociology, Haverford College, Pa.

More than 25,000 students from 43 States and Washington attend the 32 institutions in 13 States. The average student pays 50 percent of the cost of his education, according to the fund.

Each year, the fund has raised approximately $1,000,000. Alumni and other Negroes have contributed about 12 percent of the total in each campaign, besides giving increasingly to the colleges' endowment and building needs, officials estimate.

BENEFITS CITED

They point out that money raised by the fund enables the institutions to provide for necessary additions to faculty to meet increased enrollment and for more nearly adequate teaching salaries; provide scholarship aid for deserving students; provide for a reasonable expenditure for the operation and maintenance of the collective physical plant; and provide for additional laboratory and teaching equipment and improved library service.

At the campaign opening, Brig Gen. David Sarnoff, chairman of the board of the Radio Corporation of America, urged support of the drive and said, "We mustn't shift the burden of education to Government."

He called for "more education in politics and less politics in education."

Lt. Gen. Leslie R. Groves, chairman of the Greater New York men's division of the fund, saw the colleges as a means of expanding training for leadership which we have not developed as we should have for 10 percent of our population.

Roland Hayes, noted concert artist and alumnus of Fisk University, a fund college, sang for the 400 persons assembled. Thomas I. Parkinson, president of the Equitable Life Assurance Society of the United States and national chairman of the 1950 campaign, presided.

Cost of National Government in Sixth Iowa District

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. DOLLIVER. Mr. Speaker, herewith is a compilation of the burden of Federal expenses on the people of the 15 counties in the Sixth Congressional District of Iowa:

I. Share of national debt owed by people of 6th District of Iowa, Mar. 31, 1950

County	Population (in thousands)	Share of national debt on basis of population	1950 taxable valuation	Share of 1951 Federal budget	Millage equivalent
Boone	32.9	$57,285,000	$42,465,797	$9,595,462	$225.96
Carroll	23.7	41,430,000	41,047,563	7,336,266	178.73
Calhoun	17.2	29,921,000	40,693,921	5,665,388	139.22
Crawford	20.1	35,036,000	39,178,086	6,617,138	168.90
Emmet	13.0	22,505,000	27,127,174	4,319,279	159.22
Greene	14.8	25,830,000	36,630,610	5,348,631	146.00
Hamilton	20.1	35,036,000	43,554,870	6,418,669	147.37
Hancock	15.6	27,364,000	32,465,650	4,962,370	152.85
Humboldt	12.9	22,505,000	27,722,602	4,336,355	156.42
Kossuth	26.7	46,544,000	57,350,522	8,579,919	149.60
Palo Alto	15.9	27,620,000	29,560,720	5,209,812	176.24
Pocahontas	15.6	27,108,000	35,640,894	5,240,742	147.04
Webster	43.4	75,698,000	66,164,159	13,377,651	202.19
Winnebago	13.5	23,784,000	22,128,898	4,501,638	203.43
Wright	19.1	33,246,000	21,395,327	6,456,043	301.75
Total for district	304.5	530,912,000

II. Share of the 6th District of Iowa in current costs of the Federal debt and deficit

County	Percent of United States population	Share in daily interest in Federal debt total [1]	Share in estimated annual deficit on basis of population [2]	Share in daily interest on Federal deficit	Share in annual interest on Federal deficit
Boone	0.0224	$3,513	$1,239,477	$74.67	$27,256
Carroll	.0162	2,541	896,407	54.01	19,712
Calhoun	.0117	1,835	647,405	39.00	14,236
Crawford	.0137	2,149	758,073	45.67	16,670
Emmet	.0088	1,380	486,937	29.34	10,708
Greene	.0101	1,584	558,871	33.67	12,290
Hamilton	.0137	2,149	738,073	45.67	16,670
Hancock	.0107	1,678	592,071	35.67	13,020
Humboldt	.0088	1,380	486,937	29.34	10,708
Kossuth	.0182	2,855	1,007,075	60.67	22,146
Palo Alto	.0108	1,694	597,605	36.00	13,141
Pocahontas	.0106	1,663	586,538	35.34	12,898
Webster	.0296	4,643	1,637,880	98.68	36,017
Winnebago	.0093	1,459	514,604	31.00	11,316
Wright	.0130	2,039	719,339	43.34	15,818
Total for district	.208	32,625	11,509,425	693.40	253,092

[1] The Treasury Department estimates that interest paid on the national debt during fiscal 1950 will amount to $5,725,000,000.
[2] The Treasury Department estimates that the deficit during fiscal 1950 will amount to $5,533,377,244.

Strengthening of Free Enterprise Through Advertising

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. REED of New York. Mr. Speaker, a most informative and inspiring address has been delivered by Mr. Willard F. Rockwell, which ought to be carefully read by the businessmen of America who believe in the effectiveness of advertising as a means of molding public opinion. This is the time of all times when the fundamental principles of free enterprise should be sold to the American people. The address of Mr. Willard F. Rockwell, which I am inserting in the Appendix of the CONGRESSIONAL RECORD under unanimous consent, deals with this important subject. It follows:

STRENGTHENING OF FREE ENTERPRISE THROUGH ADVERTISING

Our Nation is the wealthiest and the most powerful in peace or war ever known on the

face of this earth, in spite of the fact that our national debt exceeds the total national debt of all the nations we are trying to support. We are told that we are engaged in a cold war with Russia because of her determination to attain world domination. Even though our working hours are nearly 50 percent lower than the Russian standard, our current productive capacity is more than four times greater, and Russia is dissipating one-fourth of her smaller capacity in an attempt to build a war machine. Russia cannot conduct a successful war against us until she accumulates vast quantities of strategic and critical materials, which are not now available and which cannot be accumulated in any short space of time. Russia would not have the atom bomb today if it had not been for the treachery in high places in our Government, which has finally been brought out into the open. The cold war is not an imminent threat. High military recognition of these facts was rendered when General Eisenhower recently said that national bankruptcy is more to be feared than the atom bomb.

Most great nations in history have met disaster through internal dissension and disorder. In Durant's history of Rome we read:

"All the white man's world looked to Rome as the center of the universe, the omnipotent and eternal city. Never had there been such wealth, such splendor or such power.

"Nevertheless, amid the prosperity that made Rome brilliant in the second century, all the seeds were germinating for the crisis that was to bring her ruin in the third century. Private and local independence, initiative, and pride withered as the power of the state increased. The wealth of the nation was drained away by ever-rising taxation to support a self-multiplying bureaucracy. Government expenditures and doles exhausted the treasury and debased the currency."

But the Romans had learned nothing from the experience of Athens, where Pericles had practiced the purchase of votes by subsidies to citizens until that great state had collapsed. And who knows how many states had risen to power through industry before Athens and Rome, only to disappear in dust when demagogues deluded and deceived the people into believing they could buy happiness by trading in their personal liberty. It has been said that Rome fell when Roman citizens lost their individual pride in their contributions to their government and became dependents on it.

The greatest threat to our high position is not the cold war with Russia, but the cold war in our own country between politicians seeking power and the business interests which have produced its wealth. Our national debt far exceeds the total assessed value of all of our taxable property. Our local, State, and Federal Governments are taking more than 30 percent of our national income, and demanding still higher taxes to meet increasing deficits. One out of every six adult Americans (or 16,000,000 people) are receiving regular pay checks from the Federal Government; and several million more are employed by State and local governments. Not content with this vast burden on business, politicians are planning even greater expenditures. All of these threats to our very existence were foreseen by the framers of the Constitution and the Bill of Rights, but we are urged to forget their warnings, to discard their theories of government, and to adopt a new way of life. Our educational system has been a dismal failure if we do not perceive that the proposed way has been tried and found wanting time after time in the course of history.

Every effort is being made to convince us that the welfare state is not a socialistic state, but it is impossible for the proponents to conceal the basic scheme, which is a redistribution of wealth and income to assure the maximum number of votes for the planners.

The founding fathers were deeply religious men who accepted the teachings of the Bible and, therefore, could not embrace either communism or socialism. They accepted the eighth commandment, "Thou shalt not steal"; and the tenth commandment, "Thou shalt not covet thy neighbor's possessions." Surely if it is sinful to covet the property or income of your neighbor, it is no less sinful to vote for a government which plainly states that it will take property and income from some for the purpose of redistributing it to others.

No Christian should have any doubts about the approval of the capitalistic system or the rights to a profit after he reads the Parable of the Talents. He will not only discover that profits are commended, but that, on the other hand, punishment is recommended for anyone who willfully fails to produce. The two servants who were given custody of their master's capital while he went into a far country were rewarded when they met him on his return and were able to return the capital with 100-percent profit. To each he said, "Well done, thou good and faithful servant; thou has been faithful over a few things, I will make thee ruler over many things." But when the unfaithful servant told the master, "I knew thee that thou art an hard man, reaping where thou hast not sown, and gathering where thou hast not strewn; and I was afraid, and went and hid thy talent in the earth; lo, there thou hast that is thine," the master told him that he was wicked and slothful and that the least he could have done was to put the money out at interest and then return him the money with interest. The talent was taken from the disloyal and disrespectful servant who had buried it, and given to the servant who had made the most profit. And the master said, "For unto every one that hath shall be given, and he shall have abundance; but from him that hath not shall be taken away even that which he hath." And finally in contrast to National Labor Relations Board edicts, the master said, "Cast ye the unprofitable servant into outer darkness," which should leave no doubt in anyone's mind that Christian principles are not compatible with the Socialist commandment that each shall produce according to his ability and each shall receive according to his need. History has demonstrated that a dictator is needed when one man's production is confiscated to provide for another who merely desires it.

When it was suggested to Washington and Jefferson that any new form of government should provide security for its people, Jefferson said:

"It is an idle dream * * * to redeem man from the original sentence of his Maker: In the sweat of his brow shall he eat his bread." And Jefferson could have added that St. Paul told the Thessalonians, "If any would not work, neither should he eat."

Political apologists for a welfare state claim they have developed a modernized Jeffersonian democracy. That the very word "democracy" was anathema to the constitutional founders is demonstrated by this quotation from James Madison in the Federalist (1787):

"Democracies have ever been spectacles of turbulence and contention; have ever been found incompatible with personal security or the rights of property; and have in general been as short in their lives as they have been violent in their deaths."

The founding fathers only sought to guarantee us life, liberty, and the pursuit of happiness, and warned us that eternal vigilance is the price of liberty. It is astounding when you stop to think of it, that politicians throughout our modern world have made some people believe that Government cannot only support us but can guarantee us security without the effort required to pursue it. All such demagogues ask is surrender of personal freedom in exchange for greater power to them to plan and order our existence.

The statement that "human rights come before property rights" has a pious sound, but simple analysis shows that it is merely a pandering appeal to unthinking people. There has never been a community in which property rights were denied where human rights were upheld. President Washington pointed out our need to depend on religion to assure security for our property rights when he said in his Farewell Address:

"Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports. In vain would that man claim the tribute of patriotism who should labor to subvert these great pillars of human happiness—these firmest props of the duties of men and citizens. The mere politician, equally with the pious man, ought to respect and cherish them. A volume could not trace all their connections with private and public felicity. Let it simply be asked, 'Where is the security for property, for reputation, for life, if the sense of religious obligation desert the oaths which are the instruments of investigation in courts of justice?' "

The Russian kulaks died by the millions rather than surrender their little farms in exchange for the benefits of the great welfare state of communism. Many of the Jews in Germany were given opportunity to escape with their lives from Hitlerism by forfeiting their property, but many chose to risk their lives, and almost inevitably lost both property and life. Washington placed security for property first; security for reputation second; and security for life third, in that farewell message.

Some may be puzzled as to just when we took the initial step away from the religious and moral paths defined in our Constitution. Future historians will point out that we took that final fatal step in 1913, the step which has removed our right to privacy and our rights to property, and may eventually deny us every form of personal liberty and security.

In 1913 the sixteenth amendment to the Constitution was ratified, which granted Congress the power to lay and collect taxes on income from whatever source derived. That gave the politicians the power to tax, which you cannot deny is the power to destroy; and, although you were assured that the Government would never take as much as 5 percent or 10 percent of any man's or any group's earned income, you have seen that Government take 70 percent from many, and more than 100 percent from a few. Their tax bills take one-third of your income—more than enough to guarantee security to the lowest paid if they could keep it—and all we have in return is a pathetically puerile political promise of security based on the insecurity of a government which cannot live within its income when business is producing a new top in taxable income. They promised to save your money, because you were imprudent; but they have spent all they collected to date and have run up a national debt exceeding 100 percent of the assessed value of your total physical assets; and, to provide more doles, they demand increased taxes on inheritances and gifts, or the confiscation of the widow's and orphan's mite. You know it is un-American and anti-American; it is immoral and unmoral; it is irreligious and sacrilegious.

The people have been deceived into believing that only the rich and prosperous pay the taxes; but, in 1949, the Federal Government alone took $55,000,000,000, which is 25 percent of the national income and exceeds the entire national income for the year of 1932, or the year of 1933, or the year of 1934. Federal, State, and local govern-

ments have pay rolls exceeding $20,000,000,000, with over 7,500,000 employees—or nearly one in every eight workers in the entire country; and, with a new high of 5,000,000 unemployed, only government pay rolls are still rising. In the last 5 years, this Government has spent more than all previous Federal Governments spent from 1780 to 1940—or 160 years.

Although 46,000 people pay out 75 percent of their income in direct taxes and many millions pay no direct taxes, every family receiving less than $5,000 a year loses a large part of that income through hidden taxes collected in Federal corporation income taxes as a part of the price of every necessity of life which they buy.

It was just a little direct tax on tea which started the flames of the American Revolution; and, sooner or later, most people will discover that they are paying the taxes to support the vast bureaucracy which, even now, plans to multiply itself, and even now demands more and more taxes. Howls of the manufacturers and labor unions protesting the tax burden on luxuries have produced strange results—the ruling politicians promise to remove these taxes, paid mostly by the well-to-do, but propose that a similar amount be recovered by higher corporation taxes, which are paid in larger proportion by the people in the lowest-income classes.

Politicians constantly attack business profits and distort both the amount and the necessity for them. Dr. Robinson's Opinion Research Poll covering industrial employees' opinions on profits shows that industrial workers believe that average corporation profits are about 25 percent, and that 10-percent profit would be fair enough. Now the Government's own reports for 1948 show that industry averaged only 5.9 percent on investment, which equaled only 2.9 percent on sales; and Professor Slichter, of Harvard, says that these profits are overstated by at least 25 percent because of higher cost of replacement inventory and insufficient allowance for depreciation of plant and facilities. The Government's attitude is never logical. A recent congressional committee report states that profits of big steel companies are entirely too high, but complains that small producers cannot show any profit. Producing steel and producing wheat are both businesses, and why there should be great difference in fair-profit standards is impossible to see, unless you follow the political viewpoint that higher profits should be allowed only when they produce more votes. The Secretary of Agriculture says that wheat producers in the Pacific Northwest have a cost of 95 cents a bushel, which includes labor, cash outlay, seed, and machinery costs, and charge for the land. He says the average Government support price in that area is $1.90, which means that the Government taxes both the employees and stockholders of the steel companies in order to insure 100-percent profit to the wheat grower. A 6-percent profit on steel sales is condemned, while 100-percent profit on wheat sales is commended; and the main difference can only be in the number of votes garnered.

Throwing aside all consideration of profits, the safety of this Nation cannot be assured unless we continue to lead the world industrially. With 7 percent of the world's population, industry has provided, and our people are in possession of, more than half the automobiles, bathtubs, telephones, radios, washing machines, and other such labor saving and luxury items existing in the whole world. General von Hindenburg was considered the greatest military expert of the First World War, and he attributed his defeat chiefly to the industrial production of the United States. In the Second World War, Russia, who must share the blame with Hitler for starting it, was finally made the victim of Germany's aggression, and its western territory was so thoroughly devastated that Russia was impotent to attack Germany until furnished with American trucks, tanks, airplanes, and the necessary petroleum products to operate them. Every military expert admits that American industrial power turned the tide of battle to victory in both world wars, in spite of which our politicians lost the First World War's objective, which was to establish world-wide peace, and are rapidly losing all of the benefits which should have been derived from our great victories of the Second World War on land, sea, and in the air. The very people who have failed so completely in dealing with our allies and enemies demand the right to control American industry, and the people of this country just cannot afford to let that happen.

The problem of retaining or returning to Washington's form of government is a personal problem for every citizen. We businessmen can no longer escape our duty to our customers, our employees, our stockholders, and our dependents. If silence means consent, we must protest vociferously. We have faith in the judgment of the American citizen when he has the facts presented to him; and we believe that management must spend part of its income—and, if necessary, all of its income—to protect the rights of these people, who, when you get through enumerating them, are all the people in the country, even the short-sighted, self-seeking, political job holders.

Along about the time of the Flanders committee hearings in January 1949, the management and directors of the Standard Steel Spring Co. decided no more time should be lost and we must employ the weapon of advertising in a militant crusade against this growing menace of political infringement upon our priceless heritage of liberty and personal dignity. We have always had a solid conviction that our citizens are not stupid. They have been exposed to one-way political propaganda, and we felt that ignorance of the facts concerning American business constitutes the greatest single menace to our system and to our way of life.

During 1949, we published 12 full-page advertisements at intervals of approximately 3 weeks, in 61 daily newspapers in 43 cities throughout the country. We selected newspapers because we thought they had the maximum mass penetration and news impact. So far as the market survey is concerned for this particular undertaking, we regard the American public as being divided into four groups: (1) the comparatively small segment of indoctrinated and very active voters on the extreme left; (2) a somewhat larger group of well-informed voters at the extreme right, who are traditionally conservative and, therefore, not too vocal; (3) the great mass of American voters between these two groups, who are misinformed or uninformed, confused, or uninterested, either on the fence or passive in their reactions to political and social trends, and (4) a vast group of 45,000,000 pathetically apathetic citizens of voting age who failed to vote in the last election.

Of course, we were told in the beginning that newspaper advertising would never reach the very class of voters who have been most misled by the political propaganda. Some predicted our plan would present another illustration of business inanely talking to itself. But we proceeded, because we felt that a simplified but aggressive explanation of the historical fundamental functions of our American business system would be welcome to open-minded Americans, and now we know it.

When our first advertisements received almost universal approval, business friends requested a résumé of the results. We, too, wanted to check results as accurately as possible, so we employed the accepted methods of testing readership commonly used in the publishing and advertising business. Nationally recognized Daniel Starch and staff are employed to tell newspapers how effective advertising is, and we found they had surveyed the New York World-Telegram of June 9, which carried our full-page story. You know the Starch organization interviews an equal number of men and women, 18 years of age and over, who have read a particular paper, within 24 hours after issue, over the entire area of distribution, in direct proportion to the circulation break-down of the newspaper. Each interview covers the entire newspaper to determine how many have seen the advertisement, how many have read it and associate it with the product or advertiser, and how many have read it thoroughly. Our position was not so good: two-thirds of the way back in the newspaper. In this particular issue, the average observation of all national ads was 10 percent among men and 16 percent among women (women, of course, looking for advertised bargains). The observation of the Standard Steel Spring Co.'s advertisement was 40 percent among men, and 33 percent among women. The average thorough readership of all national ads of this issue was 4 percent among men, and 6 percent among women. The thorough readership of the Standard Steel Spring advertisement was 23 percent among men, and 12 percent among women. On July 28, over 1 month later, the Starch organization surveyed another advertisement in the New York Sun. The average observation of all ads in the issue was 16 percent for men, 19 percent for women. The Standard Steel ad was 56 percent for men, 42 percent for women, indicating cumulative interest in the series. The average thorough readership was 31 percent for men, 15 percent for women. These readership figures by all known standards of measure appeared so optimistic that we requested the Starch organization to compare readership of our advertising with the highest rated advertisements in all issues they had studied from January to the end of July, of the New York World-Telegram and the New York Sun.

From the standpoint of thorough readership in the New York World-Telegram among men readers, we tied with one other advertiser for first place among all the advertisements in the seven months. Among women readers, we rated highest in the entire seven-month period. And in the New York Sun for the same period, in thorough readership, we received the highest total among all advertisements of both men and women readers. I would like to emphasize again that thorough readership means reading from top to bottom.

Remembering the Literary Digest and Gallup polls, these reports aroused skepticism on such surprising readership figures, so we decided to make our own readership study during the week of July 25 in 9 cities: Chicago, Cleveland, Detroit, Los Angeles, Milwaukee, Minneapolis, Philadelphia, St. Louis, and San Francisco. We instructed our interviewers to stay down among the lower income groups and to get an adequate cross section of labor union workers, housewives, proprietors, clerks, and so forth. This 9-city survey confirmed the Starch figures. We came up with an observation rating of 49 percent among men and 33 percent among women, and thorough readership of 34 percent among men and 17 percent among women. Such thorough readership figures are virtually unheard of in any type of advertising.

In answer to the question, "Who is reading these ads?" a study of circulation figures proves that there are not enough white collar workers or stuffed shirts in any of these cities, or in this whole country, to add up to such totals. It is impossible to cover here the extent and contents of the mail that we received spontaneously from all classes of citizens throughout the world. We read and

analyzed every letter received, and 98 percent of them have been favorable and enthusiastic. Two percent have been unfavorable, and, as you might suspect, most of such were not signed. We received mail from 45 States and Canada, India, Cuba, Mexico, Australia, Hawaii, Sweden, Germany, England, New Zealand, and so forth.

During the summer, British General Critchley, whom some of you met during the war, asked us to send proofs of these ads to members of Parliament and important business executives in England. Of course, we sent them. We had very favorable replies. General Critchley wrote us, and said: "Thank you very much indeed for sending these reprints. * * * These ads state the case against socialism clearer than anything we have yet seen on this side, and your firm is to be highly congratulated in making the layout so very definite and readable."

Comment on these new-type ads followed almost in an avalanche. The usual statements run to this effect: "You're doing a great job; why don't other corporations do the same thing?" and "Please don't stop." I will read you one that we received from a Diesel Workers' Union. It says:

"DEAR SIRS: We have 12 bulletin boards in this plant, and we would like the cost on 12 copies No. 1, 12 copies No. 2"—and so on.

"Also we would like to know the cost of just one of each of the 10. Please send your reply to the Diesel Workers' Union, attention of Dan Ramsdell, and I thank you and hope to hear from you."

Of course we sent them, and he replies as follows:

"Received the advertising you sent and want to thank you very much. It's companies like yours that keep labor on the up and up. Again we say thank you."

We have received so many requests from businesses of all types for numbers of reprints that we decided to query 36 of them to find out how they were being used. Wilson & Co. and J. I. Case distributed them to their branch managers and posted them in the factories. Torrington Manufacturing Co. distributed reprints to every employee in the shop. Eddie Rickenbacker's Eastern Airline Co. asked for 7,500 and distributed one to every employee in his pay envelope, which may indicate the methods which keep this air-transport company in the black. Wolverine Oil said: "We are a small oil company with 80 members and service-station dealers. Think your ad is wonderful propaganda for our form of government"—probably meaning the form of government we did have.

General Foods: "Posted ads on all company bulletin boards." Peavy Elevators—that's grain elevators—"Distributed reprints to 225 country elevators in Minnesota, North and South Dakota." The response from educational institutions has been one of the most amazing, interesting reactions to these ads. To date, 39.4 percent of all Americans of voting age have had no experience politically with anything but New Deal and Fair Deal administrations; and the teenagers of today are the voters of tomorrow. They represent a very fertile field, which has been insidiously cultivated by the proponents of socialistic and communistic thinking. So, you may understand with what gratification we have received letters from teachers, professors, and university students, presidents, and hundreds of public-school teachers and students.

It seemed important to us to get back to some of these people and get their reactions, so we interviewed 1,762 small retailers in 27 cities where these ads had been published. We simply showed them the proofs, asked them if they had seen and read the advertising, and what they thought of it. Eighty-two percent of this nearly 2,000 retailers reported that they had seen the ads, 64 percent that they read them. Eighty-seven percent of those who read our ads expressed the opinion that other companies should do a similar job. The typical comment of the small retailer could be summarized in the statement of a small jewelry store operator in Los Angeles who said: "Well done. It's about time the big companies helped the little ones." Or a musical instrument dealer in Cleveland who said: "A big boon to small business who cannot afford the same publicity."

The campaign was barely started before the editorial departments picked it up and put the story into editorials. Such newspapers as the Cincinnati Enquirer, Boston Traveler, Memphis Commercial Appeal, Chicago Daily News, Cleveland Plain Dealer, Seattle Post-Intelligencer, and so on, had editorials on the subject. Many of them quoted in part or in whole, and most gave definite credit to Standard Steel Spring Co. One of the most interesting and serious editorial efforts was that of the Pittsburgh Courier, which some of you may know has the largest circulation and is a leading Negro newspaper in this country. This publisher not only printed editorials, but, at his own expense, reprinted the eight ads that we first put out and mailed them to 2,500 leading colored citizens, teachers, preachers, etc., throughout the country.

Typical of spontaneous letters received is a statement from the publisher of the Washington (D. C.) Times-Herald:

"If not at this juncture, just when should private enterprise state its case in positive, dynamic fashion? Surely not after the whole damned horse is stolen. Accordingly, if you will pardon my vehemence, this was the right time for enterprise to speak up. Tomorrow is still the right time. Day after tomorrow may be too late." Possibly he was hoping public sentiment might shorten the bitter coal strike. The publisher of the Canton (Ill.) Daily Ledger says: "Personally, in my almost 30 years in the newspaper and advertising field, I have never seen a better prepared campaign, nor more forceful copy than this. More copy of this nature should have been around in this country several years ago." I think he meant 17 years ago.

The publisher of the San Francisco Examiner made this comment. "This is the first time in my many years in any formal publication I have seen the basic principles and factors of economic and political philosophy so simply, so effectively expressed, and so forcibly presented."

Many small businesses wrote for permission to publish our ads in their own newspapers at their own expense. In Lancaster, Pa., for example, a newspaper published the entire series over their own name. And a number of English manufacturers published them in England, with footnotes to remind the reader that these ads originated in the United States of America and represent an American view of what is going on over there. The advertisement on socialism was displayed or quoted on the front page of a number of English newspapers, and the Glasgow (Scotland) Daily News. When the Scots take notice, you know you have hit pay dirt.

It would be next to impossible to tell you how many house organs throughout the country have picked up these ads and published them. The Bell Telephone, Standard Oil of New Jersey, General Motors, a number of the biggest companies, and many of the smallest.

Now, naturally, there were people who said when we were advertising in such papers as the New York Times we were wasting our time and money. Our advertising people thought we weren't, and I feel the best answer came from some of the people who have picked up our program from the New York Times, resulting in radio comment which has been surprisingly helpful and significant. Arthur Godfrey has an audience estimated at 3,650,000, which, of course, includes the stay-at-homes, the hospitalized, the housewives, and many who cannot read and others who are temporarily unable to read. On June 7, he read one of these ads to this vast morning coast-to-coast assembly. He devoted 6 minutes out of his 30-minute Chesterfield program to this advertisement. But there was one great comment he made which shows you what ads can do to arouse our people by reminding prominent speakers of our current dangers.

Godfrey said: "I would like to quote a statement of significance by Thomas Jefferson:

" 'I place economy among the first and most important virtues, and public debt as the greatest danger to be feared. To preserve our independence we must not let our rulers load us with perpetual debt.

" 'We must make our choice between economy and liberty, or profusion and servitude. If we run into such debts we must be taxed in our meats and in our drink, in our necessities and in our conveniences, in our labors and in our amusements. If we can prevent the Government from wasting the labors of the people under the pretense of caring for them, they will be happy.

" 'We are endeavoring to reduce the Government to the practice of rigid economy to avoid burdening the people and arming the magistrate with a patronage of money which might be used to corrupt the principles of our Government.'

"And," said Mr. Godfrey, "wouldn't it have been wonderful if we had followed his advice?" How can anyone claim that Jefferson would endorse any political platform presented to the voters in our 1948 presidential election? They should give complete credit to General Coxey, who said our Government should print money and distribute it to the poor.

Baukhage, the top ABC commentator, also quoted from our current advertising. Kate Smith, of Moon Over the Mountain fame, made reference to our advertising and added force and facts to our story.

This, for the Standard Steel Spring Co., has been a major effort in terms of dollars spent. It has cost nearly a million dollars, but it has produced amazing results. Of course, as a Congressman from Texas pointed out, some of that expenditure reduced tax income for the Government, for which we're awfully sorry, but we believe the money was used for the benefit of every American, while tax money sometimes arms the magistrate with a patronage of money, just as Jefferson prophesied, "to corrupt the principle of our Government."

So far as this experiment in combining public education with institutional advertising has gone, it has registered in a manner beyond our greatest expectations. As I have said, I am deeply concerned about the future of business in this country and the future of this country's way of life, and many of you share in that concern. But now we have proof positive that the American citizen does think straight and will act decisively if he is given the straight facts about any public policy. This advertising experience proves the existence in the people of our country of keen desire to acquire facts affecting the economics of business—facts which do enable them to refute the planned-economy propaganda and to exert themselves to recover the political powers they surrendered in 1913. This experience has proved to us, if it has proved nothing else, that there is in the minds of the American people (including the minds of so-called small business throughout this country), a latent respect and admiration for the great American accomplishments which the "Farewell State" advocates have labeled, libeled, and criticized as big, bad business. There is still time, in our opinion, for business leaders, large and small, to employ their courage and vision to discharge their obligation to their fellow citizens—openly and factually to pro-

tect, defend, and advance our competitive free enterprise system.

American business had led the world in advertising and sales promotion of its products. It has altered and improved the living habits of the American people and most other civilized nations. But American business has failed miserably in selling 150,000,000 Americans on the fact that our competitive free enterprise business system is the secret and source of our success; that the return to, or resort to, repudiated and reprehensible political panaceas is a frightful threat, not only to business and employment but to the American way of living—the envy of 2,000,000,000 people on this earth who do not share it.

Closed Door for Price Support

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. BARING. Mr. Speaker, at the St. Louis meeting of the Zinc Institute, Director Boyd, of the United States Bureau of Mines, said:

It has become obvious to all but the most blind that our reserves have not been developed at the desired rate. The door is virtually closed for price support and production subsidies. The need for encouraging exploration must become more fully recognized.

If the point is made clear to the Government and the public, and not clouded by extraneous issues and the problems of individual operators, there is some hope for constructive action.

This appears to me to be a statement of utter futility.

No Government agency did more to close this door than the Interior Department itself. What mining company of ordinary size can afford to participate in exploration programs which, if successful, would most likely find ore which cannot be produced profitably now or in the reasonably foreseeable future? This leaves the exploration field pretty much to large companies and the Government itself, not at all a happy situation.

As to the "problems of the individual operators"—and does that not mean those of the numerical majority of those in the mining industry?—Mr. Boyd no doubt long since has noted they rapidly are solving themselves like the problems of those 10 little Indians who died 1 by 1.

This Is Not Fiction

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include a recent editorial from the Cleveland Plain Dealer and reproduced in the Melrose (Mass.) Free Press:

THIS IS NOT FICTION

(From Cleveland Plain Dealer)

Will the reader pretend that he has an obscure neighbor by the name of Harry Truman? And will he pretend that Neighbor Truman has decided he must borrow money, a decision which many of us ordinary folks have reached at times in the tempestuous course of life?

Neighbor Truman, we're going to pretend, steps into the bank to apply for the loan, and we're going to have the privilege of observing the transaction.

"I want to borrow $500," says our neighbor. (Now most will anticipate the next few questions.)

"Do you have any debts at the present time?" the banker inquires.

"Yes," says our neighbor. "I owe the bank at this moment about $25,800."

"What is your annual income, Mr. Truman?"

"I have take-home pay amounting to $3,750 a year."

"Hmmmmmm," the banker hmms. He at once is suspicious of the client's ability to pay the old debt without $500 more added. And aren't his eavesdropping neighbors suspicious?

But the banker gives allowance for unforeseen circumstances. So he asks Mr. Truman, "Do you think you will be able to save a large portion of your income this year and each succeeding year to reduce your indebtedness?"

"Oh, no," Neighbor Truman replies to the surprise of the banker, and the neighbors listening in. "My necessary living expenses this year will be $4,250. I'll be forced to spend more than I earn."

"Pardon me," the startled banker interjects. "Do you mean that, owing already an amount that constitutes seven times what you'll take in during a year, you're going to spend more than you earn?"

"That's right," says Neighbor Truman. "You see I must provide tuition at private schools for my children. I must help a poor relative set up a new business in which he's going to lose money for a long time to come."

"Just what kind of business is that relative going to sink your money in?" the incredulous banker asks.

"Why," says Mr. Truman, "he's got a wonderful humanitarian idea. He's going to sell milk to the Hottentots at a price they can afford to pay."

"But just those things won't eat up your whole income this year, will they?"

"No, but that isn't all," says Mr. Truman. "I am building security for my children by putting price supports under them. My boys sell newspapers to the neighbors at a nickel a piece, but I give the man an extra nickel. My daughters make lamp shades which they sell for $5, but I don't think that's a fair price, so I give an extra $2 for each one they sell. Besides, my wife wants a television set."

The banker now steps aside to get his breath. Here's a fellow who owes more than he can ever repay if he lives frugally below his income, seeking to borrow still more, and at the same time boldly proclaiming his intention of carrying out fantastic money-spending schemes.

What will the banker do?

Will he lend the new money? It's silly even to ask the question.

This scene is not fiction. It constitutes a faithful reproduction of the program set forth in regal solemnity by President of the United States Harry S. Truman. Multiply all figures by 10,000,000 and you have the Truman budget, his plan of government, the Government's income, and the Government's debt.

In this case Congress is the banker. If it makes the loan, Borrower Truman's note will have to be signed by the taxpayers, which is to say by all the people. Who, in his right mind, would voluntarily sign the note of such a profligate spender?

The Kerr Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. STEED. Mr. Speaker, I desire to call the attention of the House Members to the attached editorial from the Tulsa (Okla.) Tribune in connection with the so-called Kerr natural gas bill. This issue has held tremendous interest in Congress and the Nation recently and will, I believe, continue to be one of growing interest as time goes on despite the veto death of this bill last week.

My purpose in placing this editorial of record is because this article so completely and clearly points out the real facts at issue. Now that this effort to protect the developers of our natural-gas reserves has failed, the consumers will need have no doubt as to who is really to blame when their gas bills begin to increase in the months and years ahead. All those who have a clear knowledge of the oil and gas producing industry know that gas prices to the consumer are going to go up. Opponents of the Kerr bill put so much emphasis on their love for the gas consumer that I feel the information here will make interesting reading for these consumers when they find themselves faced with higher gas costs.

By placing this editorial on file for future reference, the day is not far off when these consumers will be enabled to discover who really had the consumers' best interests at heart in this fight.

The editorial follows:

Mr. Dowling's cartoon today illustrates the practical problem President Truman is supposed to be up against in determining whether to sign the Kerr natural-gas bill or veto it. But the picture doesn't tell the whole story. Maybe there's no use trying to tell the whole story to people who refuse to look beyond their noses. But we'll try, once more.

There is a natural-gas reserve of 130,000,000,000,000 cubic feet. This would last 30 years at the present rate of consumption. But more miles of pipe line and more consumers are being added every day to the Nation's gas system. By 1955 the present reserve will be equal to only 9 years' supply at the accelerated rate of burning.

Heretofore the gas business has largely been a byproduct of the oil exploration and production business. Hereafter it will be big business and stand on its own legs. Until now, being a byproduct, gas has sold at unsteady prices at the wellhead. Some has been blown in the air because it would cost more to connect it to a pipe line than it would bring in a reasonable length of time at prevailing prices. The price at the wellhead even in the light of today's growing demand is only at an index of 88.3 compared with coal at 108.

However, and this is what Mr. Dowling doesn't recognize, the natural-gas business can only remain big business if there is assurance that the supply will be kept in line with the demand. This will take exploration and drilling, with the usual risks that attend mining enterprises, such as unproductive wells. The so-called independent producer will have to drill these speculative wells. The interstate pipe liners are in the business of transporting and selling gas, not drilling for it, except in a few instances.

Clearly, then, the driller can't be put under the same rule book as the transporter. The Natural Gas Act regulates the latter, holding him to something like 6-percent profit after taxes on his investment. That's eminently proper, for he has a mortal cinch—if the gas supply holds out.

The Kerr amendment merely takes the driller out of the regulatory set-up, where it was never intended he should be in the first instance. Out of a strait-jacket, he is free to drill a second well if his first one is a failure, and charge enough for the gas he gets from it to cover his costs of both wells and his profit. Kept in the traces, he'll never drill the second and subsequent wells that are necessary if the whole new natural-gas structure is not to collapse.

Cartoonist Dowling's big city consumers ought to be able to see that an abnormally low gas price for a year or two isn't going to do them any good if it halts the search for new reserves. The reserves will be exhausted before they can amortize the costs of their new furnaces with their savings over coal, unless the producers are sweetened up to continue the venturesome business of exploring, drilling, and recovering. Naturally as the reserve dwindled the wellhead price would rise until it touched a figure equal to the value of coal plus the worth of the convenience of gas.

Cartoonist Dowling's complaining voters are not the real victims of the new deal in natural gas. They would be lucky to get gas at twice the price they have to pay today. The real unfortunates in this revolutionary change that John L. Lewis has brought about by shutting down the coal industry until he has sent its prices sky high are the people of Oklahoma and Texas.

We had a century's supply of natural gas at fair prices for all concerned until the interstate pipe liners came along to blow it out from under our feet. Now we have no more gas than the people at the other end of the longest line—Milwaukee or Pittsburgh.

When the supply is exhausted for one it will be gone for all. Milwaukee then will still have its lake upon which to float in coal cheaply. Pittsburgh will still have its nearby coal mines which operate at low costs, relatively speaking. Oklahoma will have only high-cost and low-grade domestic coal. Texas will have—exactly nothing to burn but what is left of its oil and mesquite.

Farm Message Lures Voters

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. DAVIS of Wisconsin. Mr. Speaker, in order to obscure and confuse the people regarding the costly result of his action in signing the cotton- and peanut-acreage allotment bill, President Truman dragged into his message another plea for his pet vote snarer, the Brannan plan. The President recognized the bad features of the bill he signed. His message shows that.

This bill and the Kerr-Thomas natural-gas bill illustrate the hybrid legislation which results from the strange alliance which composes the present-day majority party.

The Milwaukee Journal, Wisconsin's largest newspaper, commented on the President's farm message in an editorial which pierces the veil surrounding his statement. I commend it to my colleagues:

FARM MESSAGE LURES VOTERS

The reluctance with which the President says he signed the potato-cotton-peanut farm bill is perfectly understandable. The bill was a makeshift, patchwork measure.

The bad features of the measure and the extra outlays that will be required, which the President discusses in detail in his message, at least come close to offsetting the promise of stricter control of potato surpluses. The legislation falls far short, as the President says, of any sound solution for the potato problem. It isn't even the beginning of a sounder program for coping with farm prices and surpluses.

The President neglects to mention, however, that much of the responsibility for the muddling and waste and colossal expense in the present farm program rests upon him and the Democratic majority in Congress. He takes undue credit if he implies that he or his party have been wiser or more consistent than the Republicans; or any less prone to play farm politics with tax billions.

All that the President says about need for better farm legislation to protect agricultural, consumer, and taxpayer welfare is trite and scarely open to argument.

There is plenty of room for argument about the Brannan plan, which the President again urges Congress to adopt. The merits and costs of the Brannan plan are speculative. There is no evidence of marked agreement in Congress, in farm circles or the country at large as to whether the plan would work better than present legislation in the case of perishable farm products, or any particular product.

At present, there appears no strong probability that Congress will even give serious consideration to the Brannan plan before the fall congressional elections.

The President's farm bill message, therefore, sounds very much like political thunder for the coming political campaign. He can cite it as evidence that he has demanded something "far better" in the way of farm legislation. He can call for the election of Democrats to Congress to help him achieve that goal.

That may be good for some votes next fall.

Address of John B. Trevor

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. WOODRUFF. Mr. Speaker, John B. Trevor, president of the American Coalition, on April 13, delivered one of the soundest, most sensible, most far-seeingly patriotic addresses that has come to my attention in many months.

Mr. Trevor, during the First World War, was in command of military intelligence in the entire New York area. For many years he has devoted his time and efforts to the elimination of all subversive elements within our population and has stood and worked for those principles which would perpetuate the Constitution of the United States and all it stands for.

Under unanimous consent, I include the splendid speech to which I have referred:

Mr. Chairman, I deeply appreciate the honor of the invitation extended to me to address this distinguished body. The name of the society arouses memories of the greatest tradition in our history, that is, the founding of our Republic. You trace your ancestry to the patriots who made this great Nation possible, so it seems to me not out of place to suggest that membership in the Order of Founders and Patriots carries with it a grave responsibility to defend aggressively, and to the last ditch, the magnificent heritage handed down to you by your forefathers.

We are faced as everyone throughout the land knows by a deceitful and ruthless enemy abroad, and within we are confronted by not only the agents of this enemy who have penetrated every organism of our body politic, but also by a multitude of groups led by persons of prominence in the community, which, consciously or unconsciously, are undermining that patriotic fervor which impels men to die for their country on the battlefield.

I do not question for a moment the sincerity of these leaders in the cause of peace—God knows we all want peace—but with all respect to the accomplishments of these men in various fields of endeavor which they thoroughly understand, I challenge their knowledge of the world they seek to reorganize.

The sounds of battle had barely ceased in 1945, when Dr. Mortimer J. Adler, said to be well-known as an author, philosopher, and psychologist, proclaimed from a platform in the auditorium of Notre Dame College, in Cleveland, Ohio—"We must do everything we can to abolish the United States." The reason the speaker gave for this pronouncement is summed up in one short paragraph: "The only answer to the threat of atomic war is world government—complete relinquishment of United States and all other national sovereignties."

A much more distinguished citizen, former Justice Owen J. Roberts, of the Supreme Court of the United States, gave the impression to the audience at a recent hearing before the subcommittee of the Foreign Relations Committee of the United States Senate, that he was ready to join with Senator THOMAS, chairman of that subcommittee, in pulling down the Stars and Stripes from the Capitol in pursuance of a desire to create a world government. Also, and specifically, Justice Roberts said, and I quote: "What is there in nationalism that so poisons the ability to be broad and to see the other fellow's point of view?"

On an earlier occasion, that is, as far back as 1943, Justice Roberts declared, "An international government, with police power over every individual citizen in the nations belonging to it—instead of over merely the national governments as such—is the only way to keep the peace."

Now let me call your attention to the beliefs, purposes, and policies of the United World Federalists, Inc. I quote from one of their leaflets, dated October 29, 1949: "The world federal government should include the following basic organs: (a) A world legislature to enact all laws necessary to carry out the functions delegated to the world federal government; (b) a world executive agency to administer and enforce the laws; (c) world courts to interpret the constitution and laws, and to try and to sentence lawbreakers." Let me slip down to

No. 4, of their principles, which reads: "World law should be enforceable directly upon individuals"; and, the seventh principle declares: "The world federal government should have authority to raise dependable revenue under a carefully defined and limited but direct taxing power independent of national taxation."

Up to this point the proponents of world government are united. They want to abolish the United States as it now is. They want to abolish the national sovereignty of all States, and they want to focus the loyalty of all the people of all the world upon the world government of a superstate. Furthermore, they want this superstate to have the right to enforce its laws upon the individual citizen of the world state in its own courts, and, finally, they want to confer upon the superstate the right to tax directly the individual citizen of the superstate regardless of whatever national taxation he may be required to pay. But when it comes to actually drafting a constitution, the proponents of world government are one and all floundering in a morass of philosophical speculation on how to devise an acceptable system for the selection of delegates to the legislature of the all-embracing power they seek to create.

Let us analyze this situation objectively. We are up against a real and very serious problem. The United World Federalists, to mention only one society, have spent $291,672 to lobby their plan for the development of the United Nations into a world federation through Congress, and they have plenty to show for their money.

House Resolution No. 64 was sponsored by at least 119 Representatives, and its counterpart, Senate Resolution No. 56, is supported by 17 Senators. There are a whole flock of other resolutions, varying in scope and variously sponsored. In addition, the legislatures of 22 States have approved resolutions for world government. This thing is not a joke, at least not in the United States.

In a discussion of world government by the State Department, in Publication 3712, released in January of this year, appear the following comments:

"The absence of universal identity of purpose and principle among nations is as marked now as it was at San Francisco, and the conflict between national aims and ambitions is in some cases much sharper. To establish any type of world government would mean that individual States would have to be prepared to carry out the decisions of that body even when they ran counter to established national policies. It would also mean that the world government would itself have the means to force a recalcitrant State into line.

"Under present circumstances—when what appears as essential to the welfare of the people of one state is so often diametrically opposed to the apparent interests of another—there is little indication that nations are now generally disposed to surrender their sovereign rights to this extent.

"There is hardly reason to believe that a proposal to establish a world government would receive the support of a substantial number of the nations of the world, or that these nations would be willing to delegate the necessary powers to such a superstate. There is, in fact, some danger that efforts toward this end, if pressed too far, too fast, may impede rather than encourage international cooperation."

Right here in these comments of the State Department upon world government, the thought is expressed in no uncertain terms that there is at the moment no identity of purpose and principle among the nations of the world. Furthermore, the State Department specifically sets forth the fact that the conflict between national aims and ambitions is even now more pronounced than at the time the United Nations emerged in concrete form from the conference at San Francisco.

The State Department also makes clear, what really is self-evident, that a world government must have power to bring a recalcitrant state into line. Well, gentlemen, that, of course, is merely another way of saying that war would be a necessity in order to bring about the perfect union of which the proponents of world government dream. That thought is in conformity with our own experience. It was the very lack of identity of purpose and the wide divergence of economic interests that made our Civil War inevitable. There is, therefore, no guaranty of peace in the attempt to amalgamate in a superstate a mass of nations and people who differ widely in their interests, their culture, their civilization, and their race. In fact, I think the very attempt to bring together these utterly divergent interests might be the best way to precipitate a conflict.

As I have already said, a federal union is no guaranty of peace, and while the United States has been involved in only 12 wars, our Government has engaged in over 170 distinct military campaigns. As I have stated before, I do not question for one moment the idealism of the proponents of world government, but I definitely challenge their ability to appreciate the realities of the situation which confronts the world in this day and age.

Let us now take a brief look at the population of the world which is estimated to be composed of approximately 2,250,000,000 souls. This 2,250,000,000 people represent 29 distinct types, ranging from the Bushmen of South Africa, the Dravidians of India, the Patagonians of South America, and the Eskimos of the Arctic to the northern and western Europeans from whom the founders and patriots of 1789 were descended. These 29 types, described by the great anthropologist Deniker, subdivide into hundreds of linguistic groups or races of which our Bureau of Immigration has recognized 45 as coming to the United States. Thirty-six of these races or peoples are indigenous to Europe. From this heterogeneous mass of humanity there are in our population, according to the United States census of 1940, 106,795,732 native whites; 12,865,518 Negroes; and 11,419,138 foreign-born.

Gentlemen, I suggest that you consider these statistics and figure out for yourselves what our influence would be in a world legislature recruited by popular suffrage, and give a thought to what that legislature would be like. Also, let me ask, How long do you suppose any limitations on taxation would last which might be incorporated in the new constitution of the world. If we objected, our power to resist would be gone, and our right to secede is specifically denied in the program.

In a very interesting article which appeared not long ago in the magazine American Affairs, it was estimated that we had about 6 percent of the world's population, and approximately 36 percent of the world's income. You will readily see that on a share-the-wealth basis the present-day American would have to cut his living standard to one-sixth of what it is now, when the socialist government of the superstate really got going. As a matter of fact, the administration now in power in Washington has an international agreement before the Senate to merge all the trade of the world under the control of an international body in which we would have 1 vote out of 58; in other words, our influence in this international association would be on a par with Luxemburg or Siam. In plain English, our whole economic system is at the moment in imminent peril of destruction at the hands of our socialistic internationalists.

This peril is no fantasy of the imagination. Look at the platform of the present government now in control of England. It differs only in minor details from the economic philosophy of the Politburo of Soviet Russia; and, let me say, the same comment may fairly be made in varying degrees upon virtually every government of continental Europe, except possibly Switzerland, Spain, and Portugal.

So I say to you, gentlemen, even if Soviet Russia is left out of the picture, and it cannot be logically done, we Americans would face utter and complete ruin if we become involved in any form of world government which would be dominated by the Marxian Socialists of western Europe. Let us not forget, that it is governments controlled by these Socialists that the American taxpayer is now supporting by paying the deficits in the economy of their nations. That is the picture. Take a good look at it. In saying this, bear in mind, that I have not even mentioned the fact that if a representative system of government is conceivable for a world government, and I do not believe it is, the people of Asia alone could outvote all the nations of the earth, and her civilization, such as it is, would be supreme. The alternative is some sort of a Fascist regime which no American should tolerate.

Now, for a last word—the leaders of the Russian Revolution declared in their constitution for the Soviet Union in 1923 that they had taken "a new decisive step along the path of the union of the workers of all countries in a World Socialist Soviet Republic." To be sure, this union is now composed of only 182 nationalities, speaking 149 different languages or dialects. It also has ten to fifteen million of its citizens in jails or concentration camps, and its firing squads are never idle.

It will not do, gentlemen, for anyone to assert that the Russian system is beyond a reasonable conception of what may happen here. Mr. Beveridge, the English economist, whose plan had wide publicity in the United States, frankly admitted that his scheme for industrial reform would be unworkable unless force were used to make all persons subject to it comply with the orders of the directing authority. That, of course, is despotism, and there is nothing more despotic in theory now in operation under the Russian regime.

I, personally, have no use for the Soviet system, or any Fascist form of government, but, as I have seen the world and lived abroad among some of its strange peoples, I think the Russians have devised the only form of world government which will work, and so far as it goes, although it is utterly detestable, it does work.

It would, of course, be silly to suppose that the present promoters of world government have any connection with the Communist movement in the United States. I would be the last to suggest the thought, but if patriotism is destroyed by advocacy of loyalty to a superstate and we let our Government drift much further into socialism, I fear that a communistic Frankenstein, as bad as Russia, may be created which will engulf the great heritage handed down to us by the founders of the Republic.

Ex-Justice Hyman Rayfiel

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Brooklyn Eagle of

April 5, 1950, the subject of which, former Justice Hyman Rayfiel, was for many years a distinguished resident of my district and whose career will long remain an inspiration for the youth of that community and of Brooklyn. He served his borough and city most creditably and possessed all those fine and rare attributes that make for a most successful judicial career. His distinguished son and former colleague, Leo Rayfiel, now United States district judge of the eastern district of New York has been inspired by his father. We who knew him mourn his passing.

EX-JUSTICE HYMAN RAYFIEL

Hyman Rayfiel, former special sessions justice who died at the age of 89, had a long and interesting life. The father of Federal Judge Leo Rayfiel came here from Austria at the age of 16, got a job as court interpreter, studied diligently and passed his regent examinations without a day of formal high-school education. He went to law school at night, was named chief clerk of the New Jersey Avenue police court, was appointed a magistrate and later was moved up to special sessions court. After 37 years in the courts, he retired to take up once more the art career he dropped when he decided to become a lawyer. In the course of his long life Justice Rayfiel made countless friends who mourn his passing.

Lyndon Johnson and the Kerr Gas Bill

EXTENSION OF REMARKS

OF

HON. HOMER THORNBERRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. THORNBERRY. Mr. Speaker, under leave to extend my remarks, I would like to include a very fine editorial which appeared in the Fort Worth Star-Telegram on April 9, 1950.

This editorial recognized the important role the junior Senator from Texas, LYNDON JOHNSON, had in the recent debate on the Kerr gas bill.

No one worked more tirelessly than Senator JOHNSON to make certain that the bill, passed by both Houses, would not make any change in the existing Federal Power Commission practices. Senator JOHNSON with great patience and with painstaking effort made certain that the bill would not have an adverse effect on the consuming public and that it would provide justice and fair play for producers.

The Senator from Texas served as chairman of the Senate Interstate and Foreign Commerce Subcommittee which rewrote the original Kerr bill.

It was a tribute to his leadership and to his fairness that the subcommittee unanimously voted to report the bill.

He maintained his fairness and objectivity throughout the long debate on this bill.

LYNDON JOHNSON AND THE KERR GAS BILL

Leslie Carpenter of the Star-Telegram's Washington bureau has called attention to the important part played by Senator LYNDON JOHNSON, of Texas, in the passage of the Kerr natural gas bill by the Senate.

"The 44 to 38 victory of the bill in the Senate," Mr. Carpenter reports, "can be laid to a large extent to the long and hard work of Senator JOHNSON of Texas. When some of the best-informed observers around the Senate predicted certain defeat for the bill, Senator JOHNSON labored even harder. When the votes were counted, the bill won."

Mr. Carpenter was simply giving credit where credit is due. As a matter of fact, the legislative history of this measure indicates it might properly have been designated the Johnson-Kerr bill.

The need for amendments to the Natural Gas Act of 1938 to clarify certain court decisions arose in 1947. A measure known as the Moore-Rizley bill was introduced in the Eightieth Congress and was passed by the House but never cleared the Senate.

Early in the Eighty-first Congress measures similar to the Moore-Rizley bill were introduced in the Senate by Senator KERR, of Oklahoma, who had succeeded Senator Moore of that State, and by Representative HARRIS, of Arkansas. A modified version of the Harris bill passed the House last year and went on to the Senate where, like the Moore-Rizley bill, it was not acted upon.

Meanwhile the Kerr bill (S. 1498) had been referred to a subcommittee of the Senate Interstate Commerce Committee, of which Senator JOHNSON of Texas, was chairman. After extended hearings by the subcommittee in May of last year, Senator JOHNSON revised the Kerr bill to meet administration objections.

The revised bill retained its original number and the name of its original sponsor, however, and it is proper that this was the case. Senator KERR, although serving his first term in the Senate, was floor manager of the measure and handled the debate on it with the skill of a veteran legislator.

There were substantial differences between the measure passed by the Senate and the Harris bill which had been passed by the House last year. Instead of sending the two measures to a conference committee to work out the differences, the House accepted the bill without change as it had passed the Senate. It thus paid Senators JOHNSON and KERR an unusual compliment.

All who voted for the bill deserve commendation because its enactment was a distinct victory for States' rights.

Technically, the purpose of the bill is to clarify the Federal Power Commission's scope of jurisdiction over the production and gathering of natural gas, by confirming the exempt status of independent producers.

Actually, as Speaker of the House RAYBURN put it, "The purpose of the bill is to see that the little producer (of gas) is not hauled up to Washington to be regulated."

Heretofore regulation of oil and gas production has been a State function. Congress now has said in no uncertain terms that this business should continue to be subject to State regulations, and not to Federal control.

By exerting himself on behalf of this measure Senator JOHNSON also demonstrated that he is fully aware of the best interests of his home State. It is estimated that Texas has 55 percent of the natural-gas reserves of the United States. But this great natural resource has little value to Texas or to the Nation unless it can be produced and utilized. Enactment of S. 1498 should stabilize and preserve a system which is making this cheapest, cleanest, and best of all fuels available to American homes and industries, and at the same time providing producers in Texas and other Southwestern States with a market for their gas at a fair price.

Stopping Communism

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. BURDICK. Mr. Speaker, all over America our people are thinking, thinking of the unspeakable horrors of an atomic war, thinking of the crushing cost of another great conflict, thinking of the necessity of an understanding with Russia before that war comes.

Evidence of that thinking is indicated by a communication received by me from an instructor in the State university, at Grand Forks, N. Dak., Arthur W. Munk. Under leave to extend my remarks, I include that letter:

STOPPING COMMUNISM

GRAND FORKS.—We are all interested in stopping communism. Thus far, however, the methods which our Government has used have been crude, clumsy, and ineffective. You cannot stop communism with military force. Foolish blusterings like those of Secretary Johnson, when he said we could knock the hell out of Russia in 90 minutes, will not stop it.

The Truman doctrine, the North Atlantic Pact, and the Marshall plan have also proven ineffective. Why? Because all three are based on the futile faith in force, and are part of the foolish cold war. All three have stimulated Russia to intensify her efforts. In fact, now that Russia has the atom bomb (and she may beat us to the hydrogen bomb), the Truman doctrine, the North Atlantic Pact, and the Marshall plan are hopelessly obsolete. We must evolve a better strategy.

How can we stop communism? By doing four things. First, we must convince the world that we are really for peace. The time has come for us to take the lead in a great world-wide peace offensive. Witness how the British people rallied to Winston Churchill when he insisted that the time had come for another attempt at a peaceful solution of the differences which divide the east and the west. The neutral nations know that we cannot defend them, now that Russia has the atom bomb. Yet they would certainly rally to our side if we took the lead in launching a great peace offensive. Even Russia would eventually have to fall in line or lose face; and Senator MCMAHON, of Connecticut, and Senator TYDINGS, of Maryland, have actually suggested such a strategy.

Second, we must convince both the rulers and the people of Russia that our intentions are good; that we mean to be friendly. Nearly everything that we have done so far has served to arouse their suspicions. Third, we must give minority groups within our own land their rights and treat them with respect like human beings. How can we preach democracy abroad when we refuse to practice it at home?

Fourth, a serious effort must be made through the United Nations and otherwise to feed the world. Hunger makes Communists. We could stop communism at the borders of India if we would. Instead of forcing our farmers to reduce production we ought to be encouraging them to produce to capacity, even if we have to subsidize them. Then let us make our surpluses

available to the people of India and other hungry people. Even if we have to give them vast quantities of food—this would be far cheaper than an arms race and a war.

ARTHUR W. MUNK.

Mr. Truman Takes the Credit

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Altoona (Pa.) Tribune of April 14, 1950:

MR. TRUMAN TAKES THE CREDIT

The President of the United States told his news conference Thursday a rather amazing thing. He said he expects to take credit for the nation's prosperous condition "despite claims by some parts of the press that these conditions would exist even if a moron were in the White House."

Mr. Truman seems to carry a chip on his shoulders these days when he meets newspapermen. It's a far cry from April 1945, when Vice President Truman nervously told some reporters, "If any of you boys ever pray, please pray for me now."

That was when he stepped into the place made vacant by the death of President Roosevelt.

Since his election victory, Mr. Truman has become a very much changed man. He appears to forget that as President, he represents all the American people, not just those who voted for him.

Maybe it was because of his recent challenging attitude toward the public and the press that he took credit for the Nation's present good condition. Perhaps it was because as a politician, he knew that he could be blamed for it if the Nation were in bad condition.

But, as a matter of judgment, his statement appears in poor light.

For one thing, the American system was not set up, nor is it even now, to be so dependent upon one man that he can determine its whole course. Yet, the last two Presidents appear to have operated, and to be operating, upon that premise.

For another thing, if the President takes credit for prosperity, he may be asked to show what he has done to bring this about.

A frank appraisal of our country today must lead one inevitably to the conclusion that our national prosperity such as we have is in spite of the President's programs, none of which offers the least aid to progress or prosperity.

Newspapermen often are severe critics of the Government and the administration because their work requires them to watch the actions of their President and Government more carefully than the average American.

A perusal of the record fails to show specifically what Mr. Truman has done to bring about national prosperity, which has been created despite Government efforts to depress it through tax and regulation. Prosperity is created by the doers, the workers, the planners, the Americans who produce.

The greatest boon the American Government was intended to give was freedom to produce.

That freedom has been dwindling year by year, through the joint efforts of President, radical advisers, and often a Congress itself which has lost sight of American freedom.

The daily record shows that Mr. Truman's every effort appears to be aimed politically.

Senator BYRD threw him a challenge the other night that Mr. Truman can be expected to ignore. The Virginia Senator asked the President to show proof that he does not favor socialism.

It is exceedingly tiresome to have our elected officials constantly making patriotic statements about our American freedom and then in the next breath proposing programs that are the very antithesis of Americanism.

Politicians generally are looking too hopefully toward the socialistic welfare state ideas as a vote getter.

The idea will probably offer temptations both to officeholders and public—until the public becomes informed—and takes the trouble to do so.

Never in the history of government has there been one that could give out to the people more than they pay into it.

To the contrary, every welfare state shows by its record that the people—the poor people, the common people—pay in taxes far more than they derive in benefits. If the money taken from them in taxes were to be applied to private pension or insurance funds, their benefits would be far more than they receive by government.

But what Mr. Truman and other socialistic planners propose is to force the people to accept social welfare programs for which they pay in taxes and for which they also pay the extravagantly high extra cost of government's inefficient administration.

In Britain, for example, the poor people, averaging $1,200 to $1,500 a year, pay an average of $9 to $10 weekly in taxes, but their benefits—that is, those they can claim—never total more than an average $8 a week.

American progress will cease when the time comes that our prosperity must depend upon a President, rather than upon the individual initiative and ability of the American people.

Address by Secretary of Agriculture Brannan at United Jewish Appeal Conference

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. MULTER. Mr. Speaker, Secretary of Agriculture Charle F. Brannan was one of the major speakers at the conference of the national Christian committee of the United Jewish Appeal, held in Washington, D. C., last Sunday, April 16. I commend his remarks, which follow, to the attention of my colleagues:

There is an old saying that the best way to keep good acts in memory is to refresh them with new ones. Evidently this is being applied here today.

You people have come here from many parts of the country with enthusiasm and determination to carry on a magnificent program of cooperation and brotherhood in action.

I consider it not only a pleasure, not merely an honor, but a true privilege to have some part with so many other Americans in this work.

It is only about 2 years since the modern State of Israel came into existence as an independent entity. I wonder if there was ever a time when a fledgling nation found the going tougher than today.

Here are some of Israel's problems as they have been presented to me.

In 2 years' time, 400,000 immigrants have poured into that land. Penniless and without resources, from more than 20 countries, and speaking almost as many different languages, they have come to this new nation as to a long-promised home.

This is almost as many immigrants as we admitted to our own land in the entire decade of the 1930's. And the population of Israel, even after all this influx of new residents, is not much more than a million persons.

Our own land has been a melting pot in which multitudes of men and women from abroad have been fused into a democratic, freedom-loving society. We know that this peaceful and healthy assimilation was made possible by the opportunity immigrants found here—jobs in industry and land to settle and cultivate.

Our own experience demonstrates that the peaceful assimilation of so many immigrants into so small a country as Israel is a task to stagger the imagination. Last year alone this small country took within its borders as many immigrants as our own Nation took from the end of the Revolutionary War to 1820.

For me, that one fact does more than anything else to illustrate the kind of problem Israel and its immigrants are facing.

It is a tremendous accomplishment that already three-fourths of these 400,000 newcomers of the past 2 years have found homes and a beginning of economic opportunity.

This is an accomplishment in which many factors played their parts; but one of the biggest, and one of the indispensable factors has been the success of the United Jewish Appeal in raising funds to provide for these needy people.

It takes millions of dollars to pay transportation costs—and these costs are an important part of the UJA budget.

It takes more millions to provide for the maintenance of immigrants until they can earn their own way. I am told that there are still some 90,000 persons in Israel living in tents and barracks in temporary reception camps. Even at an average of 50 cents a day for food—even a minimum cost for other necessities—it still takes a lot of millions to keep 90,000 persons going.

And 150,000 additional immigrants are expected this year.

It takes even more millions to build homes and agricultural settlements for so many newcomers.

I am given to understand that most of this year's budget will go for such purposes as I have just mentioned.

The great endeavor, of course, must be to help the immigrants to become self-supporting as rapidly as possible. One of the most pressing problems is that of expanding agricultural production in Israel to provide enough food. I appreciate the fact that the agriculture of Israel is being developed by competent technicians. The work in research, pest control, irrigation projects, and other phases of agriculture is of a very high order. I hope that the time will soon come when we shall have an effective point 4 program that will enable us to cooperate with Israel along agricultural lines to the mutual benefit of both nations.

Recently a new type of agricultural settlement called the workers village has been developed. I understand that immigrants will be able to live in these new-type agricultural settlements and to find work in shops, factories, and building projects while they are getting themselves settled on farm units.

Now, I suspect that the question has arisen in your minds, as it did in mine, whether the assimilation of the new population would not be much easier if the flow of immigrants could be reduced for a few years. Undoubtedly it would, but the question unfortunately

is not very practical. Some of the countries from which these people are coming have set dead lines for getting out. In Poland, for example, the dead line for some 20,000 Jews who are planning to leave is October 1, 1950. After that, the doors may close and then in sober truth those left behind would be without a country.

Even apart from the persecution, discrimination, and threat of physical violence to which these unfortunate people are subjected, they would have to face the hard fact that adjusting to life in Russian-dominated areas is tremendously difficult. Many of these persons were formerly shopkeepers or were engaged in other forms of small business or the professions. But throughout the Russian-dominated area private enterprise of this kind is being obliterated.

There is, then, no time to lose.

That is why this appeal aims at a high goal. That is why Jewish and non-Jewish people alike are making this year a greater effort to meet the goal than ever before.

A year ago, when I spoke to you, I mentioned that a schedule had been set up "for the ingathering of some 250,000 homeless Jews" during 1949. I hope you will pardon me for saying that I had some doubts that the job could be done.

It was done. The problem of the displaced Jews of Europe is almost solved today—largely because of the work done by the agencies of the United Jewish Appeal. Two years ago there were more than a quarter of a million Jews in the DP camps. Today there are no more than 40,000, and almost all of those who have left have gone to Israel.

Those who remain represent mostly the "hard core" of the DP problem—the sick, the disabled, the aged, those whom no country has welcomed to its shores.

Yet even these unfortunates will now be enabled to go to Israel. Under a special program developed by the agencies of the UJA, in cooperation with the Government of Israel, 4,000 of these most difficult cases, together with more than 5,000 dependents, will go to Israel during the months ahead. There they will have special care and special aid in rehabilitation.

In addition to the projects I have mentioned, the United Jewish Appeal has programs of medical and welfare services for impoverished Jews who will remain in Europe, or north Africa, or in other areas. The UJA will also assist some 25,000 Jewish refugees who are expected to come to our own country this year.

I want to congratulate all of you on your part in these inspiring programs. And I should like to recall to all our minds that whatever good we do benefits you and me as well as those unfortunates who receive our aid. Anything done for another is done also for oneself, for as George Eliot expressed it: "Our deeds determine us, as much as we determine our deeds."

I say sincerely: May the Almighty bless this work and help us make it a great influence for peace and for justice.

District Sesquicentennial Celebration

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. TEAGUE. Mr. Speaker, I have a high regard for Mr. Jesse C. Suter, of the Washington Sunday Star, and those who have followed his writings about the District of Columbia will soon be in agreement with me on that point.

Under leave to extend my remarks in the RECORD, I wish to include his newspaper article which appeared in the Washington Sunday Star on April 16, 1950, regarding the opening feature of the sesquicentennial celebration:

BEGINNING OF PAGEANT OF AMERICA; PATRIOTS' DAY EVENTS RECALLED

(By Jesse C. Suter)

DISTRICT SESQUICENTENNIAL CELEBRATION BEGAN YESTERDAY

The opening feature of the sesquicentennial of the permanent seat of the Government of the United States was held on the Capitol Plaza in the forenoon of yesterday. While the celebration is in commemoration of the one hundred and fiftieth anniversary of the establishment here in what is now the District of Columbia of the seat of the Government, the first feature commemorates the one hundred and fifty-ninth anniversary of the laying on April 15, 1791, of the first cornerstone at the south corner of the original "10 miles square." The exact location of this stone is at Jones Point, on the Potomac River, below Alexandria, and since the retrocession of the Virginia portion of the District to Virginia, it is now located within that State.

It is recalled that on April 15, 1941, the one hundred and fiftieth anniversary of the event was picturesquely celebrated under the auspices of a joint committee of the Masonic Grand Lodge of the District of Columbia, the Association of the Oldest Inhabitants of the District, the Alexandria-Washington Lodge, of which George Washington was at one time the worshipful master, and officers from the Washington Board of Trade. Among the speakers at this triple-featured celebration were the mayor of Alexandria, William T. Wilkins; District Commissioners John Russell Young and David McCoach, Jr.; the president of the Washington Society of Alexandria, John B. Gordon; Ara M. Daniels, grand master of Masons in the District of Columbia; and others.

The most interesting feature of the occasion was the arrival of a procession led by the master and members of the Washington-Alexandria Lodge, the officers attired in colonial costumes and impersonating members who had participated in the ceremonies of 1791. The officers of the lodge so costumed reenacted the laying of the cornerstone.

It is related in the records of the lodge that when they returned to the place from whence they came, a number of toasts were drunk and the following was delivered by the master of the lodge, Dr. Cullen Dick, and was received with every token of approbation:

"May jealousy, that 'green-eyed monster,' be buried deep under the work which we have this day completed, never to rise again within the Federal district."

The theme of the sesquicentennial celebration is freedom and colorful pageantry throughout the sesquicentennial year will recreate America's 150 years of progress through freedom.

In thus celebrating the anniversary of the establishment here of the permanent seat of Government of the United States of America it is most interesting that here at the very heart of this, the greatest republic which the world has ever known, the most important and fundamental freedom is denied those Americans who permanently reside here, who owe no allegiance to any State, but solely to the United States of America.

That freedom which they are denied is the right and privilege to be represented in both Houses of the Congress of the United States and to vote for the President and the Vice President, and thus to participate in the government of their country by which they are taxed and for which they are required to bear all of the burdens which are common to the Americans of all of the sovereign States.

No feature of this sesquicentennial celebration could be more appropriate than for the Congress to take affirmative action on one of the proposed amendments of the Constitution under which the voteless and unrepresented American citizens of the District of Columbia would be enabled to gain this important freedom of which they are now so unjustly deprived.

PATRIOTS' DAY LESSON—REVERE, LEXINGTON, AND CONCORD

Next Wednesday will mark the one hundred and seventy-fifth anniversary of the stirring events of April 19, 1775. Paul Revere at midnight of the 18th began his famous ride to warn the people "of every Middlesex village and town" of the approach by land of the British soldiers. It was on April 19 that the Minutemen on the village green at Lexington were fired upon by the Redcoats for failing to comply with the British officer's order to disperse. The fight at Lexington has been depicted in the historic painting entitled "The First Blow for Freedom."

While Patriot's Day is observed annually in some parts of New England, its only regular observance in Washington is by the opening on that date of the annual sessions of the Continental Congress of the Daughters of the American Revolution.

It is of present interest that supporters of the Kefauver bill pending in Congress to grant so-called home rule to the District of Columbia are planning an observance on April 18, 1950, of the ride of Paul Revere. This is a publicity stunt and fund-raising enterprise. Promoters will have a character representing Paul Revere, attired in colonial costume and astride a horse, ride through downtown streets bearing a slogan, "Taxation without representation is still tyranny."

The real point in Paul Revere's ride and the memorable events of April 19 was not a protest against some form of local government but against an overriding powerful government of foreigners over all of the Colonies. The "taxation without representation" which they considered tyranny was taxation by a foreign power in whose Parliament the American colonists were not represented by those of their own choosing. Such a demonstration would be definitely appropriate in support of a constitutional amendment which would give the people of the District of Columbia voting representation in the Congress which exercises an overriding authority over the people of the District of Columbia without their consent.

In these days of hustle and bustle, heavy taxation, deficit spending, and mounting public debt, there are those who tell us that fundamental Americanism was all right in its day, but now there are trends which cannot be ignored. Now one might ask, is our great America no longer to be the land of opportunity where the poor boy may become king? And must private enterprise and individual freedom give way to a welfare state?

These are important vital questions of the day and may be amplified to an alarming degree. Are there any among the people of this broad land of ours who are more vitally interested in and affected by the solution of these problems enumerated above than are the voteless and unrepresented people of the District of Columbia?

These important questions threaten our life, liberty, and the pursuit of happiness—and, in fact, the very existence of the Republic. Are we of this great Capital of the greatest Republic on earth to be denied our rightful participation in the Government of our country?

We read frequently in the press of large classes in naturalization getting their final

citizenship papers from the courts. To the voteless and unrepresented Washingtonian this presents a disgusting situation, which has been so aptly put by the late Philander Johnson in rhyme:

"Two American voters
Met here by chance.
One came from Russia
And one came from France.
With pride in their franchise
They learned with regret
That a man from right here
Isn't naturalized yet."

RECENT ACTIONS BY THE CITIZEN GROUPS SUMMARIZED

Citizen group meetings during the past 2 weeks indicate a lively interest in both neighborhood and District-wide problems. Press reports of the meetings of 23 affiliates of the Federation of Citizens' Associations were reviewed.

The chief interest was in the petition of the Capital Transit Co. for an increased fare and abandonment of the weekly pass. The associations rather generally registered their opposition to an increase.

Continuance of segregated swimming pools and the position taken by the Recreation Board in declining to take over the pools from the Interior Department under a nonsegregated requirement are supported generally. Construction of a stadium and indoor pool at Coolidge High School has wide support and some groups would provide the stadium with floodlights for night use.

Most associations have favored summer daylight time and one raised serious objection to using the police for a poll of the people on the daylight question.

The demand for the repeal of the individual personal property tax law of the District is receiving some attention. Other actions include demand for 100 more policemen, 5-day week for policemen, establishment of a junior college and reduction in the number of places licensed to sell liquor.

The Columbia Heights Citizens' Association has announced that its May meeting will be Central High School night.

The North Washington Council passed resolutions giving specific reasons for its opposition to the transfer of Central High School and urging the Board of Education to rescind its action.

Guilt by Association—Who Started Persecuting?

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. BIEMILLER. Mr. Speaker, the Milwaukee Journal, an outstanding independent newspaper, has published a series of editorial commentaries on the charges of Senator JOSEPH MCCARTHY. With permission to extend my remarks in the RECORD, I attach two of these distinguished editorials, titled "Guilt by Association" and "Who Started Persecuting?" The first was published March 19, the second, April 14:

[From the Milwaukee Journal of March 19, 1950]

GUILT BY ASSOCIATION

The technique that Senator MCCARTHY has used to date in trying to prove his sensational charges of communism in the State Department is known as indictment by association.

This means that a person is held guilty of a crime, or error, or disloyalty, or whatever someone may charge him with—not on the basis of facts, but because of associations or contacts, close or remote, that he may have or may have had.

Marquis Childs, highly respected and cautious, moderate columnist, has pointed out that this technique is out of place in this country. We have always been devoted to the Anglo-Saxon concept of equal justice and fair trial under law.

The indictment-by-association technique, Childs explains, is that of the revolutionary tribunal. Thus the so-called courts of revolutionary France sent thousands to the guillotine because they were found to have had some contact with aristocrats. The contact might have been extremely limited and of years past. But this made no difference. The purge trials in Nazi Germany and in Soviet Russia operated along this same line.

What are the possibilities of this technique?

Persons who belonged to or had any association with groups containing Communists, before it was known the groups were Communist fronts, could be called disloyal or unsafe Americans.

Anyone who ever wrote a friendly word about Soviet Russia, or communism, or Communists anywhere, could be termed "soft" on communism.

Anyone who ever spoke, accidentally, before a meeting at which Communists were in attendance would fall in a like category.

Anyone who belonged to a group which later fell under Communist control could be considered tainted.

An individual who, even in the united-front days of the war, joined movements to send clothes to Russian children, could be splashed with MCCARTHY'S red paint.

Operating under this technique, thousands of Milwaukeeans could be labeled as "soft" on communism, because during and following the war (when we were counting on a bright new world of peace) they worked in friendship groups which later become Communist fronts. These Milwaukeeans have worked, in the past, oftentimes unknowingly, alongside Communists in war activities, politics, civic movements, welfare groups, labor unions, and other movements.

This indictment by association can became a fantastic thing. A doctrine like this is repulsive to a free people. Certainly Americans, when they think it through, will repudiate it.

[From the Milwaukee Journal of April 14, 1950]

WHO STARTED PERSECUTING?

They are trying MCCARTHY, say Senator TAFT and the chairman of the Wisconsin Republican organization. They are persecuting MCCARTHY, wails the McCormick-Hearst press. They are smearing MCCARTHY with epithets and vituperation, moans a Milwaukee veterans' group.

Whoa, now, wait a minute, wait a minute. Who started this business, anyhow?

Who said, back in February, that the State Department was ridden with Communists—205, 57, 85, or 4 of them? Senator JOSEPH R. MCCARTHY.

Who said, but recently, that he would rest his entire case against the State Department on one name, and then named an individual who has no direct connection whatever with the State Department? JOSEPH R. MCCARTHY.

Who has charged a whole string of American citizens with being disloyal and traitorous, blackening their names and imperiling their careers? JOSEPH R. MCCARTHY.

Who has had 2 months, almost to the day, to prove these grave charges, and has not so far proved a single, solitary one? JOSEPH R. MCCARTHY.

Who has accused the President of the United States of endangering the Nation's security? Who has accused a fellow Senator of lying? Who has accused another fellow Senator of being a "tool" of the State Department? JOSEPH R. MCCARTHY.

Who proclaimed on the Senate floor that he would never hide behind congressional immunity but would say off the Senate floor anything he said on it, and face the possibility of libel suits?

And who has bobbed like the dodger in a carnival booth to avoid saying off the Senate floor what he said on it?

Of course, Senator JOSEPH R. MCCARTHY.

It is MCCARTHY who is trying people—on the most serious charges, probably, that an American citizen can be faced with—and he is apparently doing it, at least so far, without evidence to prove his charges. It is Senator MCCARTHY who is "persecuting" people. It is MCCARTHY who has led the way in the unrestrained use of "epithets and vituperation."

MCCARTHY being tried? MCCARTHY being smeared and persecuted? MCCARTHY the victim of "epithets and vituperation"? That must bring a bitter laugh, indeed, from the many individuals whom Senator MCCARTHY has spattered with his whirling red brush—no matter what, if any, charges he may ever substantiate.

Potato Mess

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include an article from the Pathfinder News magazine by Wheeler McMillen, editor in chief, recently reproduced in the Wakefield (Mass.) Item:

POTATO MESS

(By Wheeler McMillen, editor in chief, Pathfinder News magazine)

How did our Government manage to get itself into this mess with potatoes? Here boils a pot of absurdities such as one could not believe if the clownish, costly facts did not stand out so plain.

First of all, the Government started out to do some good. The original idea was to protect the country against farm price disasters. The one 20 years ago not only busted farmers but closed factories and hurt everyone. So the idea was, roughly, to pass a law to keep farm prices from falling too low.

Then, politically, it seemed like a good idea to pass laws to make farm prices high. Since—if that were done for cotton or wheat—corn, peanuts, potatoes and spinach would yell that they were victims of outrageous discrimination, the law had to guarantee a percentage of parity for about every crop.

Assured high prices naturally encourage more production, so acreage allotments had to be tried. That inspired farmers to farm their restricted acres better. (If they do not know how, the Government shows them how.)

A good farmer, with the kinds of seed, fertilizer and cultural practices recommended by the Government can push his potato yields pretty high. There are many good potato farmers.

So now the Government, in the course of trying to do some good, finds itself paying to a farmer $1.46 a hundredweight for his potatoes, then selling them back to him for 1 cent.

It finds itself dyeing good potatoes blue so no one will eat them. It finds itself giving potatoes away and talking of burning them up. It finds itself taxing everybody to keep everybody's potatoes expensive. It finds that somebody can and does buy Canadian potatoes, even along the Gulf of Mexico, for less than it permits United States potatoes to be sold.

The critics of the potato situation are many and loud. But are they fair?

After all, the Government has only been trying to do some good. Is that wrong?

History has made it quite plain for a few thousand years that government efforts to do good beyond its basic services have generally robbed the people and wrecked the country. But is that any sign? Are we not smarter than anybody ever has been before?

It's wonderful to do good. Especially with other people's money.

Dr. Lowdermilk To Advise Israel on Soil Conservation

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. MULTER. Mr. Speaker, one of the leading soil-conservation experts in the United States, Dr. Walter Clay Lowdermilk, has become a special adviser to the Israel Government to aid that country solve its soil-conservation problems. Dr. Lowdermilk has long been known as an ardent champion of a plan to establish a Jordan Valley Authority to develop the water and power resources of that region.

I believe many Members of this House will be interested in the two brief articles dealing with Dr. Lowdermilk and with his JVA plan, which were published in Israel Speaks, March 24, 1950. They are as follows:

DR. LOWDERMILK, WHO DRAFTED TVA FOR ISRAEL, TO BECOME GOVERNMENT ADVISER

TEL AVIV.—Eleven years ago, when Jewish hopes for Palestine had just received the staggering blow of the British white paper, closing most of the country to further Jewish colonization, the achievements and plans of the pioneers suddenly found an unexpected and powerful non-Jewish champion.

In that year, Dr. Walter Clay Lowdermilk, top American soil conservation expert, was making a survey of Palestine by air. As he flew over lands made barren by centuries of neglect, he was struck by the special opportunity presented by the extraordinary difference in altitude between the Jordan valley and the Dead Sea (1,300 feet below sea level) and the Mediterranean, only a few tens of miles away.

What followed was Dr. Lowdermilk's concept of a Jordan Valley Authority, patterned after the Tennessee Valley Authority of the United States in scope and function, which would provide both water and power for reclamation and enable Palestine to support a population of at least 5,000,000.

Dr. Lowdermilk's bold ideas—coupled with a warm-hearted description of the reclamation efforts already under way—were later described in his classic book, Palestine—Land of Promise. In turn it became an important weapon in the battle to persuade the world that the Jews should be given a fair opportunity in Palestine.

Toward the end of World War II, Dr. Lowdermilk was associated with a group of leading American authorities in the further development of the Jordan Valley Authority plan. Under the auspices of this group, another American engineer, James B. Hays (formerly project manager of the Tennessee Valley Authority) spent nearly a year carrying out detailed field surveys.

The result was the Hays scheme, blueprinting the full utilization of the country's water resources. This remains the basis of Israel's thinking on the over-all planning of its land and water resources.

After 11 years, Dr. Lowdermilk, accompanied by his wife, has come to this country again—this time as the guest of the government of a Jewish state which it would have seemed crazy to prophesy in 1939.

With a scientist's impatience at the way politics can snarl up progress, Dr. Lowdermilk told newsmen he deplored the lack of cooperation from the neighboring Arab States to make the full Jordan Valley Authority possible, and stressed the great benefits it would bring to them, as well as to Israel.

Certain phases of the Hays scheme can, however, be brought into operation even before peace is reached with our neighbors. Now that Dr. Lowdermilk has accepted the post of special adviser on soil conservation to the Israel Government, it may be expected that he will turn his attention to these when he comes to Israel again in October, to remain for a year.

But, apart from the tremendous value of his technical advice, Dr. Lowdermilk is doubly welcome in Israel—he makes us feel good because he believes in what we are trying to do.

DETAILS OF THE HAYS-LOWDERMILK PLAN

The Jordan Valley Authority, as envisioned by Dr. Lowdermilk and developed by Mr. Hays, would supply Palestine's two chief economic needs, water for irrigated agriculture and power for industrial development. It would divert the sweet waters of the upper Jordan and its tributaries into a network of irrigation canals and, in order to keep the Dead Sea at its present level, would introduce sea water from the Mediterranean by means of a canal originating near Haifa. As this sea water dropped into the Jordan depression, there would be almost 1,300 feet of effective fall for the development of hydroelectric power. The plan is based on a unified Palestine, and its complete execution is at present dependent on the settlement of several outstanding political questions.

A brief summary of the eight stages of the original Hays scheme is given below:

Stage 1 provides for developing underground water sources, resulting in the recovery of 618,000,000 cubic meters per year, of which 518,000,000 would be utilized to irrigate some 176,000 acres (1 cubic meter = 264.17 gallons). Its second aspect is construction of a power project, including a dam, on the Hasbani River in Lebanon. The latter aspect would require agreement with Lebanon.

Stage 2 proposes to channel the summer flow of the upper Jordan and its tributaries, together with spring waters in northern Galilee, into a gravity canal. These waters would be available for irrigation in the northeast and be released also in the Emek Jezreel.

Stage 3 would utilize the waters of the Yarmuk to prevent a lowering of the level of Lake Tiberias as a result of the diversion of upper Jordan waters projected in stage 2. A dam would be built to provide a new mouth at Lake Tiberias for the Yarmuk, which now enters the Jordan from the east about 12 miles below the lake. Half the river's annual flow would be allocated to Transjordan and would enable the irrigation of about 37,500 acres of good land on its side of the border.

Stage 4 calls for the dramatic step of replenishing the Dead Sea with salt water from the Mediterranean to make up for the diversion of the Jordan waters. A good deal of the territory the sea water canal would have to cross, including the sites of the two principal power plants, is now held by the Arabs. No other route is possible because of the mountains, which bisect Palestine except in the Emek region.

Stage 5 is a continuation of stage 2 and provides for the construction of a large storage reservoir at Sahl el Battauf, a wide flat valley north of Nazareth. It is proposed to recover and store here the winter flow of all streams, wadis, and springs of the upper Jordan.

Stage 6 calls for the long-proposed reclamation of Lake Huleh and its surrounding marshes.

Stage 7 concerns irrigation in the lower Jordan Valley, as far down as the Plain of Jericho. This territory is now in Arab hands.

Stage 8 contemplates the storage and recovery of winter waters from all the principal wadis draining into the Mediterranean. This supply would then be conveyed to the Negev and released for irrigation by means of the main canal running south through territory almost entirely within Israel's borders. In the neighborhood of Dorot a pumping plant would pick up the winter surplus flow of the canal and pump it into a large regulating reservoir. In summer, during peak demand, the pumping plant would pump water from the reservoir back into the canal.

Cost of the Jordan Valley Authority, as estimated by Dr. Lowdermilk and Mr. Hays, is approximately $250,000,000. It is believed it would take 10 years to build, and would be self-liquidating in a 50-year period—a standard considered quite satisfactory for American reclamation projects.

Essex County Training School

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include an excellent article by Steve Walsh, who is very familiar with the workings of the Essex County Training School situation at Lawrence, Mass.

Mr. Walsh, due to his position with the attendance departments, Lynn public schools, in the city of Lynn, Mass., has over the years had much experience with the conduct of these institutions and the amount of constructive work accomplished by the superintendents, past and present.

Mr. Walsh knows whereof he speaks, and I offer this interesting article for the Members for their thought and consideration:

Most of you know the city of Lawrence as a woolen and worsted center. And we have

often taken a ride up to that locality to also know that tourists have commented on the nearby Bodwell's Falls and the flowing Merrimack. But for a long, long time the writer has linked this bustling community as being the place where the Essex County Training School stands. There are many reasons for my having such a keen interest in its welfare, and whenever I hear of the unusual happening up that way, it is quite natural that I lift what is known as an eyebrow. For anything good that comes to this school brings satisfaction because I know its worth.

EVEN SUCH IS TIME

One of the first things which the presiding judge of southern Essex did after his appointment to the bench was to take a trip to the afore-mentioned school. And the Honorable William J. Landergan had a purpose in his quest. And not having the temerity of thinking that I can speak for him, I do feel that I can openly praise him without restraint. That is because I liked what he did.

The records will show that Judge Landergan was the only man who has worn the black robe of justice in this district who found the time to pay a visit to the school that harbors certain boys and girls, teaches them the need of becoming proper members of society, and sends them back into the world with a far different understanding than what they had when they came to this 60-year-old institution.

It has been my privilege to be affiliated with the last three superintendents of the school and all of them made the position a public trust—the late Grant Fancher; former State Senator Robert J. Tetler, who was buried a month ago; and the present director, George A. Baker, who has been on the job for the last 2 years. And Mr. Baker was the man whom Judge Landergan had his talk with.

A careful analysis of the school will also interest any citizen because of the vast amount of good it performs. Here, then, could have been the scope of thought that passed between the two men; information which I have known for a long time, and feel is of vital importance for others to possess. For this is one answer to juvenile delinquency and a formidable one, if you will.

Such an Essex County program was created by an act of the State legislature and approved by the county commissioners in 1891, under the name of the Essex County Truant School. This name was changed in 1906 to that of the Essex County Training School, a better word being supplemented to avoid any form of stigma that might be in the way of a boy or girl as they advanced through life.

THAT TAKES IN TRUST

Teaching means the imparting of knowledge whereas training implies not merely the imparting of knowledge but also inspires to repeated action which results in the formation of habits, or making use of the knowledge acquired. Essex County Training School is thus in a community by itself, undistricted by city or town life, situated on a slope overlooking the Merrimack River.

The physical make-up of the school consists of some 50 acres of land upon which stand many fine buildings of modern construction; the most important of them being academic hall, containing classrooms, auditorium, gymnasium, and a swimming pool. Nearby is an administration hall, housing the office and the superintendent's quarters. Adjacent to this are the Bates and Wings halls.

In the last two are kitchens, dining rooms, laundry, tailor shop, recreation room, dentist office, library, instructor's quarters, locker and shower rooms, and three large dormitories where the students are segregated chronologically. Three classes of maladjusted children are assigned to the school—the habitual truant, the habitual absentee, and the habitual school offender.

Just why they come there can be traced to various reasons but their delinquencies are not an aggressive reaction but are really the opposite; consisting of flight from unpleasant situations rather than attacks upon them. Schools, to the delinquent, are a place where they come in contact with unsatisfactory, unsuccessful, unhappy and extremely frustrating situations.

School is the first organized society with which the pupil comes in contact and in which he does not have any part in formulating the rules governing the conduct of the group. Prescribed regulations are met which often are in conflict with his developed ways of behaving. If the student is not socialized properly by his teachers, he is on the road to becoming a delinquent.

There are four basic factors for living together—security, love, recognition, and a new activity which allows a proper outlet of the adventurous urge. Training school officials remember these four factors and see that they are placed at the disposal of each and every individual regardless of age. When one or a combination of these four factors are denied, delinquency has its birth.

OUR YOUTH, OUR JOYS

This school of training affords the cities and towns of Essex County a community of learning and cooperative living. Its program is designed to help students develop those appreciations, habits, and skills which are so necessary for satisfying and creative experience. Regular academic training, as prescribed by the State board of education is carried out to the letter.

This school of training emphasizes the adjustment of the course of study to the individual student. Recognizing that each student has his own individual needs, encouragement is made possible for him to go ahead in each subject as fast as he is able. A daily trade-training is another feature that is distinctive, and a valuable element is the experiment of preparing the child.

Each student receives 2 hours of trade training daily. This means that periodically they will be found gaining additional training in the woodworking shop, laundry, kitchen, dairy, poultry houses, piggery, greenhouse on the truck farm. Physical development, vocational significance habit-forming, and proper attitude are the benefits accrued from this program.

Instructors at this school are selected for their capabilities to fit into the atmosphere confronting them. They are expected to guide youngsters by responsive, flexible, adaptable means which entails a quiet, humorous, understandable manner than that of the threatening and domineering demand. Social and personal needs must always be considered and the ECTS staff carry these out to perfection.

Religious influence is constantly encouraged, and alertness is maintained to see that the trainee takes regular advantage of this perquisite. Thus Catholic students attend mass each Sunday and Holy Day of Obligation, go to confession and Holy Communion monthly as well as attending religious classes as prescribed by law. Protestant children attend their church on Sunday as well as the religious classes.

An important contribution to the social treatment of delinquent juveniles is the athletic program. This school conducts a modified interscholastic scheme that emphasizes the value of team play and also that of the individual. Ample facilities are provided for intramural sports—football, soccer, swimming, basketball, hockey, baseball, and track. Such activities provide pleasure in leisurable hours.

OUR ALL WE HAVE

When the youngsters are first brought to this training school they are given a thorough physical examination to determine their physical condition. From this finding can be determined what kind of treatment is needed to bring about a well-developed body, because no child can do good work of any kind unless he feels well. A study is made of his needs and these are provided as quickly as possible.

Physical ailments being corrected, a child with a good healthy body is ready for training and guidance. The future health of the student body is cared for by a staff of competent doctors who advise the means needed to control the undernourished body and physical ailments such as faulty teeth, eyes, ears, nose, tonsils, and adenoids. Then, too, the facilities of the Lawrence General Hospital are always available.

Despite the spiral prices for foodstuffs and commodities in these days, the feeding of the youngsters doesn't create an excessive cost. This is brought about because of the good husbandry that prevails at the ECTC—the raising and producing milk, eggs, butter, vegetables, pork, ham, bacon, and chickens; all of which with other edibles keep the cost of operation at a minimum.

Each city and town of Essex County pays their proportional share of maintaining this training school. This is based on the valuation of each city and town. Lynn with its valuation of $151,194,710 pays 21.05 percent of the costs. In addition to this, each city and town pays to Essex County the sum of $2 weekly toward the support of each youngster enrolled from their district.

This, therefore, is a thumbnail sketch of the Essex County Training School in Lawrence. It has been within my province to pay frequent visits to its environs on many occasions. No place of its kind that I know of has greater efficiency in its plant, or more humane understanding for the wants of the children therein. It is a model to look up to; it is a credit to Essex County in its entirety.

Youngsters who never got a chance in the beginning of life emerge from its portals ready and willing to meet life anew. Impressive records have been compiled of what they have performed since leaving the school on the banks of the Merrimack. Supt. George A. Baker is doing a well-planned and efficient job as its leader. Anyone who knows of what I say will gladly substantiate that statement. That is why I was very pleased to hear that Judge William J. Landergan took time out from his work to see for himself. For he is a valuable ally for the youngster of today and tomorrow, who only asks for a chance.

RINGING THE BELL

The Essex County Training School will conduct its annual graduation exercises in June just as it has for the last 60 years. It is always a memorable occasion because it shows just how effective the training school has been in producing adjusted future citizens. Statistics compiled over the years bear this statement out. Hundreds of youngsters have left Lawrence and have made their mark in the world. Over 70 percent who have returned to the society of which they were a part have made creditable names for themselves. Isolated cases verify this such as the Andover boy who went out to become a respected member of a large law firm in the State of Florida; a Lynn boy, who furthered his education in a large eastern college and now is a member of the faculty of a prominent preparatory school; a Haverhill boy who has been assigned to the United States Air Corps to deal with the secrets of atomic energy; another Lynn boy who braved the perils and the hardships of the South Pacific with the last expedition of Admiral Byrd. Such is the proud boast of the ECTS.

"Another War Means Wholesale Destruction," Says Senator Westberg

EXTENSION OF REMARKS
OF

HON. HUGH B. MITCHELL

OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. MITCHELL. Mr. Speaker, during the hearings on House Joint Resolution 64 someone said "No peace without law, no law without government."

Without stating the problem so cogently I believe I am correct in saying that this was the thought which led the State of Washington Legislature to adopt a memorial asking the Congress "to take all possible steps to strengthen the present form of the United Nations so that it shall possess the means and legal authority to preserve world peace."

Certainly it was with this general thought in mind that I appeared before the Committee on Foreign Affairs to urge action on House Joint Resolution 64 as a first step of many which this Nation should take to maintain its leadership in the striving for peace.

To the committee, I stated in part, as follows:

The world is groping for methods and institutions capable of preventing another war, a war that could easily leave this globe in shambles. Nations seek a moral leadership that offers the promise of a peaceful, plentiful future. The United States stands in a position to accept that challenge with a policy that far outshines the hollow promises of world communism.

In the past we have put our faith in military strength and defensive alliances. This alone can never be a panacea. For a new age we must develop new systems of social and political implementation. This is tragically evident in international affairs today.

It is in this spirit that we must take this big step forward and supply law and order where none have ever existed.

That the desire to do something constructive to aid future peace prospects is widespread is nowhere better illustrated than by the activity on the part of the young men and women of the United World Federalist organization in Seattle.

No one better exemplifies this spirit than the president of the Seattle UWF chapter, the Honorable Alfred J. Westberg. Mr. Westberg, a Republican, represents the thirty-seventh legislative district in the State senate.

Mr. Speaker, under leave to extend my remarks, I include President Westberg's speech made at the First Baptist Church in Seattle March 12, in the RECORD:

UNITED WORLD FEDERALISTS

Ladies and gentlemen, as a representative of the Seattle chapter of the United World Federalists, I want to preface my remarks on the subject of world government by a brief statement to you about the United World Federalists.

It is an organization, Nation-wide in scope, of about 40,000 members. In the State of Washington there are about 400 active members divided into chapters in the larger cities and members at large in smaller communities where chapters have not yet been organized. Nationally, the membership of the organization is widely representative of all groups of citizens of all political points of view and various ages, representing a fair cross-section of American citizenship. It is significant that a large proportion of the membership is made up of veterans of World War II. Cord Meyer, Jr., who was the first president of the national organization, and served as president until this year, is a veteran who suffered serious injuries during the war and was veteran adviser to Harold Stassen at the San Francisco conference where the Charter of the United Nations was drafted. Numbered among the national leaders of the organization are the chairman of the board of the Standard Oil Co., of Ohio, leading bankers and educators, as well as numerous citizens who have been leaders in their communities and in national affairs. Leaders in church organizations are active in the United World Federalists, both nationally and locally. One of our most active members in Seattle is Mr. Stephen F. Chadwick, former national commander of the American Legion. The people who are active in the world federalist movement in the United States are patriotic Americans who are convinced that our country has a responsibility to the whole world to lead the way toward ultimate and permanent solution of the problems of international relations and that without the leadership and cooperation of the United States no movement toward that end can be successful.

Based upon the horrible experience of the last war, in which it was clearly demonstrated that armies and navies cannot defend their countries from attack but can only attack the enemy countries and that wars cannot result in anything greater than victory and destruction, we are convinced that there is not much time in which to act if we are to avoid future catastrophes. The rapid development of the atom bomb and the threat of the use of the new H-bomb have convinced us that, if another war comes about, it will result only in wholesale destruction of cities and civilian populations beyond the power of any army, navy, or air force to prevent, and can end only in a victory for that side which becomes paralyzed and exhausted last.

Likewise we are concerned with the state of our country's finances. The cost of paying for past and future wars is becoming an intolerable burden upon the economic structure not only of our country but of the world as a whole. Our country cannot long continue to assume the obligations to defend with military power and to support the agricultural and industrial requirements of the entire world. Every day that goes by our country goes further in debt and the dollars we have in the bank and in our pockets are worth less and less in food and clothing and the other things we want to buy. To continue on such a course leads us only and inevitably into the necessities of a rigidly planned and Government-controlled economy. This will mean that our wages, our prices, and every activity of our lives will be controlled to support the vast military establishment which must grow if we are to contain our enemies. In this way we will lose our freedom while doing our utmost to defend it.

To this grim prospect we see only one alternative, that is, the establishment of a world government with power to pass laws prohibiting the development and possession of the materials for war and with power to enforce its laws against individuals wherever they may be located. Such a world government would naturally possess some military force, otherwise its laws would be as unenforcible as our laws would here without a police force to arrest and without courts to punish individuals who violate them. However, if such a world government were established, its powers must be limited to the field of international relations. It should not have any right to decide the economic structure of our country, the rights and privileges and freedoms of our citizens, or those of any other country. The United States must recognize likewise that it will not have control of such a world government. If we seek a world government over which we have control we are seeking only an American empire. We have no greater right to impose our will upon the entire world than Russia has to impose her will upon the entire world. However, if all nations of the world, or even only those substantial military powers that now exist, agree to surrender their military power and to submit to the rules adopted by a world government, we could not fear any aggressor.

I am satisfied that the people of the world like the people of the United States want peace. However, I am also satisfied that the actions of our Government and the comments made in our Congress and before our congressional committees with reference to the manufacturing of atom bombs, the increases in the size of our Air Force, the bases being built all over the world, must look to any other country as the actions of an aggressive or warlike people. We also interpret the acts of the Russian Government, in constantly seeking to expand its sphere of influence and to bring within its control greater and greater areas, as imperialistic and aggressive. Until we offer to the Russians and to the rest of the world a proposal to abandon the frantic arms race in which we are now engaged and to submit with them to a world government in which we all participate, we cannot expect that they will be more anxious than we are to surrender their sovereignty or abandon their efforts as they see them to defend themselves from the threat of American imperialism. The Russian Government has not looked with favor upon the World Federalist movement within the United States and Pravda has publicly described the leadership of the United World Federalists as the fig leaf of American imperialism. So it seems that the two great contenders for world power, our country and Russia, are at this time caught in a dilemma which can lead only to one of two results. Either we and they will continue on the path toward total mobilization, grinding burdens for the support of military establishment, and loss of all individual freedom of action, or we will join in a movement toward government of the world by law and not by force with a machinery within the framework of the United Nations strong enough to prevent war and insure peace.

Naturally, we recognize that until a world government is set up which will protect us as well as all others from the aggressive acts of other nations or individuals we cannot surrender our program of self-defense. No World Federalist advocates the scrapping of our Army, Navy, or Air Force in advance of the creation of an effective structure of world government. No one nation can offer to enter into a world government except upon the condition that other nations will simultaneously do so. It is obvious that no world government will meet the purposes we have outlined unless it includes both the United States and Russia but we can set up the framework of a world government and announce our readiness to enter into it, reserving our right to defend ourselves from attack until all of our potential enemies, whoever they may be, likewise join the world government.

Proposals for world government have some substantial support in official circles in the United States. Over 100 Members of the House of Representatives and 20 Members of the Senate have endorsed resolutions which, if adopted, would direct that the purpose of American foreign policy will be toward the strengthening of the United Nations so that it may become a world government of limited powers with sufficient authority to prevent war and insure peace.

In six States the people themselves or their legislatures have called upon Congress

to call a constitutional convention for the purpose of amending our American Constitution so that this country may enter into a world government when such a world government is set up and when such a government meets with the approval of the Congress. In this State the local chapter of the United World Federalists is sponsoring an initiative for the purpose of having the people vote at next November's election on whether or not they would approve of the State of Washington likewise asking Congress to call such a convention. The approval of such a measure, of course, is only a very first preliminary step and does not commit the United States toward any particular form of world government or surrender one whit of our right to defend ourselves or to examine carefully the structure of any world government that is proposed and determine for ourselves whether we wish to join it. But such a movement, supported by the people of this country, could not help but have a healthy effect on the attitude of people all over the world. Likewise, it should strengthen the United Nations because we have in the recent past gone outside the structure of the United Nations in dealing with other powers.

It is our view that the United Nations deserves the active support of the United States and the use of the facilities that it now provides for the settlement of international problems. Only through use of the facilities that are given us will the possibilities of strengthening them and making them more secure be realized. I hope all of you will become fully familiar with the facts and the arguments with reference to proposals for world government. They offer to mankind the achievement of greater freedoms and unlimited benefits by permitting us to use our economic and industrial development for the benefit of our people rather than for the support of military organizations and to pay for the cost of destruction, loss of life and limb in warfare. Without that burden, there is no limit to the benefits which American enterprise, ingenuity, and resources can achieve, and they will be achieved on that basis for all of the people of our country.

The Real Tragedy

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. LANHAM. Mr. Speaker, under leave to extend my own remarks in the RECORD, I am glad to include an editorial which appeared in the Chattanooga Times for Wednesday, April 12, 1950, entitled "The Real Tragedy."

I agree with this editorial that it is truly tragic that men in positions of high responsibility should accept the shrieking tantrums of a John T. Flynn—and may I add of the "copycat" sermon of the minister in Tennessee—as a substitute for thinking our way out of our problems.

The editorial follows:

THE REAL TRAGEDY

We were glad to reprint yesterday the article by Hodding Carter protesting against the widely distributed sermon by a Nashville minister. We shall not go into the points of the dispute again. Mr. Carter, we think, gave the sermon a more decent burial than it deserved.

But the tragedy of the present hysteria in which so much of the country has joined is that men and women from whom we have a right to expect sane and fair thinking have abdicated that role. It is tragic that men in positions of high responsibility should accept the shrieking tantrums of a John T. Flynn as a substitute for thinking our way out of the problems before us, and should believe they find salvation in the gospel according to "St." Flynn.

We have had propagandists of this kind before in this country. Some of the early political pamphleteers were their intellectual forebears. But in these days of mass communication and reprints by the millions, the machinery of propaganda is more ponderous in size, and more frightening. And we have reason to fear for reason itself when we look in the mail in the morning and discover that men who should know better are distributing the shoddy wares broadcast.

How can it be that straight-thinking Americans do not recognize the hysterical writing of such people for what it is? There is plenty to criticize in our Government and in our ways of life, and some solid arguments can be made against men and policies now to the fore. But one discards good American common sense in putting the case for pleading in the hands of men whose logic, whose respect for the truth and the simple rules of evidence qualify them for jobs only on such newspapers as Izvestia and Pravda, the organs of the Communist tribe.

It is tragic, again, that the wild stuff of Stalin and his kind should have led us to think that the way to combat the Communist menace is to produce stuff just as nauseating on the other side. Our democracy, our justified faith in freedom and free enterprise, in the sacredness and dignity of the humblest individual, call for the simple truth simply told.

It is not a bad idea, when someone asks you to defray the expense of sending out a reprint of the Nashville sermon, of a Flynn article, of a Senator MCCARTHY outburst, or something of the kind, to reread the Gettysburg Address. It is good mental medicine, one likely to cure mild cases of hysteria. Some cases, we know, are hopeless.

Four Billions Not Saved

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald of April 14, 1950:

FOUR BILLIONS NOT SAVED

If the present national administration desired to manage Government affairs economically and efficiently, the tools to do so are at its disposal. A nonpartisan commission, created by Congress in 1947 and headed by Herbert Hoover, studied Government organization, functions, and methods for 2 years and had come up with plans for reorganization which would have saved at least a billion dollars a year, while improving the quality of work that was done.

The Hoover Commission was no muckraking group seeking to make capital for a political party and gain publicity for ambitious politicians. Neither was it an undertaking of academicians without practical experience in the affairs of Government and business.

COMMISSION WELL QUALIFIED

Four members of the Hoover Commission were appointed by the President, two of whom were high-ranking officers in his administration and two from private life. Four members of the Commission were appointed by the Speaker of the House, two being able Congressmen, one from each party, and two from private life.

One of the latter was Mr. Hoover. The four members to round out the 12 were appointed by the President pro tempore of the Senate, who named two able Senators, one from each party, and two non-Government men.

The Commission was the best qualified group ever created to seek improvement in Government and reduce costs of administration. It went about the job with great intelligence and drive. Three hundred experts were employed and assigned to 24 committees, each dealing with a specific function, area, or group of problems.

The research reports were reviewed by the Commission and made the basis of comprehensive plans for eliminating duplication of work, cutting red tape, and revising administrative methods.

The Commission did not concern itself with the billions spent by the Government on activities which could well be eliminated. It found ways of saving $4,000,000,000 without eliminating any Government functions.

For the citizen who wants to inform himself about the economies the Hoover Commission pointed out, there is a little book entitled "A Hook in Leviathan," by Bradley D. Nash and Cornelius Lynde.

A wise and able President would have utilized the enthusiastic popular reception of the Hoover report to put it into effect in its entirety. But that is not what Mr. Truman did. What he saw in the Hoover plan was backing for petty moves of advantage to himself.

The Commission proposed that the salary of the President be increased from $75,000 to $100,000, and that, in addition, he be paid $50,000 a year of tax-exempt money. Mr. Hoover himself appeared before a congressional committee to approve this.

That had Mr. Truman's complete endorsement and a bill was rushed through Congress so that the President could get the extra money from the beginning of his second administration.

Mr. Truman also was happy to have the authority of the Hoover Commission back of a transfer of the public employment offices and the unemployment compensation machinery from the Social Security Board to the Department of Labor.

Congress had on three occasions vetoed his request for the transfer. This was a move dear to the heart of the President because he owed something to Secretary of Labor Tobin, who took the Secretaryship in 1948 when no one else would.

RECOMMENDATIONS ARE DELAYED

After dawdling a year and a half, while the Government went into the red five or six billion dollars, Mr. Truman on March 13 sent to Congress a batch of 21 plans for administrative changes. One of the plans called for abolishing the Office of General Counsel of the National Labor Relations Board, as proposed by the unions. This was not a part of the Hoover plan at all. It had never even been discussed by the Hoover Commission.

Other plans have been so long belated that opposition has been allowed to develop which may prevent their acceptance by Congress. Mr. Truman has used the Hoover report when possible to serve his personal and political ends and otherwise has reduced its effectiveness. Even at this late date he admits he has done nothing about half of the things suggested.

If anyone ever supposed that the Truman administration was interested in economy, a

look at a recent report of the Armed Services Committee of the House would correct the impression. It mentions:

"A budget request is pending for a new $18,000,000 veterans' hospital in the Los Angeles area, while the Navy is closing the 1,500-bed Long Beach Naval Hospital in the same area.

"A 500-bed veterans' hospital is being built in Philadelphia, while the Army is closing the 2,000-bed Valley Forge Hospital 20 miles away.

"The veterans' agency plans to build 1,000-bed hospitals in Boston and at Brockton, Mass., while the Army is closing Murphy General Hospital at Waltham, Mass.

"The Veterans' Administration wants to build a 500-bed hospital in Atlanta, while the Army is closing Oliver General Hospital at Augusta, Ga.

"A 500-bed veterans' hospital is planned at Ann Arbor, Mich., while the Army is closing the 1,600-bed Jones Hospital at Battle Creek."

There won't be any Government economy until there is a different kind of a man in the White House.

Address by Secretary Chapman at United Jewish Appeal Conference

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. MULTER. Mr. Speaker, at the conference of the national Christian committee of the United Jewish Appeal, held in Washington, D. C., last Sunday, April 16, Secretary of the Interior Oscar Chapman delivered an important address which deserves wide attention. The full text of his address is as follows:

I consider it a privilege to come here this morning to lend all the support I can to the United Jewish Appeal, and to the work to be done under its auspices. The needs it must serve are urgent, and during 1950 they will be greater than ever before.

In this critical year of the world's mid-century, it is imperative for Jews and Christians alike that the democratic nations be strengthened in every way we can devise. We can assume that our citizens will give strong support to the appeal because of their admiration for the courageous efforts of the people of Israel and because of their almost traditional warm response to the needs of those who undergo hardship and suffering. There is something else at stake this time. We as American citizens are beginning to recognize that if our own country is to remain strong and secure in the ways of democracy, we must make sure that the light of democracy is not extinguished anywhere on the globe.

The new nation of Israel is a democracy that has sprung up in an area of the world where its fruits are badly needed. It was established by a relatively small group of determined and idealistic people, many of whom had endured untold suffering and misery in the mass persecution under Hitler, but who still possessed the courage to build a land of hope for themselves and their brothers in other parts of the world.

Their remarkable achievement has been an inspiration to all of those who are concerned with the progress of democracy. The establishment of Israel on the foundations of human liberty in the face of overwhelming odds is a welcome reassurance to mankind in its search for better understanding and lasting peace. Like our own forefathers the founders of Israel are striving to secure the fundamental principles of democracy that we and other nations enjoy.

Next Saturday we celebrate the second anniversary of Israel's declaration of independence. Within these 2 years, the accomplishments of this new nation have been much more fruitful than the world had anticipated.

Since the establishment of Israel, its 660,000 Jews have welcomed nearly 400,000 more, increasing the nation's population nearly 60 percent. I am told that, through the United Jewish Appeal and other sources, 250,000 immigrants were brought to Israel in 1949, that 80,000 were helped to emmigrate from Moslem lands, and that only 40,000 Jews remain in displaced-persons camps. I am advised also that over 31,000 housing units were completed in 1949, and that 174 new settlements have been established.

Many of you know more forcefully than I do that these things have meant a refuge for life itself to thousands of men, women, and children. They have meant for thousands more a breathing once again of the air of freedom. For untold numbers of children and youths the opportunities and aspirations possible in a free land are present for the first time in their lives. And for the people of this and other countries throughout the world, Israel is a symbol of a strengthening spirit and determination in man that refuse to bow to the forces of degradation and repression that press inward from so many sides today.

For this new nation's own security, for the very continuance of the lives of its people, for the growing strength of decency on earth, for the peace of the world—Israel must not be weakened in its determination to provide this kind of salvation for men. All of the people of our country must be told the story of Israel's work, and they must come to understand its meaning for America and for the world.

It is imperative that Israel succeed in this great crusade upon which it is embarked in the name of humanity. Its paramount concern for unlimited immigration, resulting in its record influx of refugees, has created situations in living and rehabilitation that must be met, and met soon.

The thousands of people still living in tents and shacks must be housed in decency and security. Sanitation must be provided. New settlements must be established, and newcomers must find work they are fitted to do. Israel has to build schools and hospitals. It has to reclaim much more of its land to produce food in sufficient quantity to nourish the people who keep on coming. I am told that, while Israel's citizens are engaged in this herculean task during 1950, a minimum of 150,000 additional immigrants must be accepted as permanent residents.

Israel will win this heroic struggle to establish a sound economy, just as it won the war for its freedom. Right now, in 1950, its people must have help as they wrestle with problems of rehabilitation and reconstruction on a scale never undertaken by a small nation. The progress Israel makes this year will be in a real sense the measure of Israel's own future. The effort must not be allowed to fail.

In addition to this vital work of human reconstruction in Israel, the United Jewish Appeal has before it other activites in rebuilding and readjusting the lives of victims of homelessness and persecution overseas. Aid must be provided for hundreds of thousands of Jews in European lands and for the adjustment of refugees who find a haven in the United States. The United Jewish Appeal offers to the people of America, Jew and Christian alike, opportunity to associate themselves with this humanitarian effort to bring the blessings of brotherhood and warm affection to those upon whom the tortures of war inflicted their greatest and most dreadful toll.

This is the great year of Israel's need, and it is also the year during which millions of the world's people will choose some way of life which they believe can promise them security for the future. The democratic system of government is undergoing the severest test in its history, and men and women in far-flung areas of the earth's surface are looking for leadership that will guide them from the darkness of fear into the light of peace.

We have long ago determined that the democracies of Europe shall not be undermined. America cannot afford to let the democracy of Israel disappear from the world. Regardless of religious affiliation, we remember vividly, as one people, the death and suffering visited upon Jews under the brutal lashings of the dictators. We remember that we promised ourselves to erase such things from the world forever.

The people of Israel ask help, not for themselves, but for others. This means that contributions to the United Jewish appeal declares to the world that the people of the United States have not forgotten, and that they do not intend to forget.

Our contribution will also mean that the United States stands behind the efforts of people everywhere to establish and strengthen the democratic way of life, and that the aid given to the democracies by our Government is strongly supported by the people themselves.

I am glad to represent the Department of the Interior at a meeting like this, for the work of reclaiming natural resources with which we are charged stirs our close sympathy with the Israelis as they move forward to reclaim their land. We know the importance of watering the desert that it may bloom like the rose, and we have learned how living can achieve serenity and peace when life-giving waters bring arid land into fruitfulness.

As a citizen of the most-favored nation on earth, I know, too, what the air of freedom and the climate of peace and abundance can give to men who share them. Israel's people have a homeland which holds a deep promise for the future. And as they grow in security and abundance, that homeland will become a lasting beacon of democracy that shines throughout the world.

Whatever the citizens of America contribute today to build the strength and hope of Israel will be yielded back to them many times over, for Israel will remain on the side of humanity in its battle for a lasting peace.

Address of Dr. George W. Cox Before United States-Mexico Border Public Health Association

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. THORNBERRY. Mr. Speaker, under leave to extend my remarks, I wish to include a speech delivered by Dr. George W. Cox, State health officer of Texas, before a meeting of the United States-Mexico Border Public Health Association in Chihuahua, Mexico. Dr. Cox is president of this very worth-while association which was organized for the purpose of promoting health and sani-

tation along both sides of the border from Brownsville, Tex., to San Diego, Calif.

Members of the United States-Mexico Border Public Health Association, my good friends of both Mexico and the United States, ladies and gentlemen, the time has arrived when we find ourselves again assembled in this, the eighth annual convention of the United States-Mexico Border Public Health Association. For me, this is indeed a happy and honorable occasion, and I acknowledge with humility the privilege of serving as your president for the past year. While I would like to personally thank each of you individually for your splendid cooperation, I hope you will accept instead my simple expression of gratitude at this time.

Meeting in this beautiful city of Chihuahua and observing its physical charm, its culture, tradition, and national life, brings back to me treasured memories of years gone by—and my active medical practice along the border when my friends and patrons were equally divided by the Rio Grande. I recall those years with pride and satisfaction—and without a single regret. Those were years of personal service to mankind, and to humanity, on the basis of mutual understanding. In the field of service in which I am now engaged, I regret to say I have discovered that the greatest single obstacle we face is the difficulty in establishing mutual understanding. In order to surmount this obstacle, we must realize first, that man fears those things he does not understand.

A meager knowledge of the people in other lands has frequently been to our disadvantage; however, I am fully conviced that when adequate ways and means are provided for people to assemble and discuss with one another their different problems, they will achieve understanding in the end—and finally realize that our objectives are all the same. That is the purpose of this association; and these meetings should teach us to understand other people better, so that we may view their shortcomings with charity, their virtues with appreciation, and their kindness to us with gratitude. Peace and understanding in our time, and for all time, must be brought through a greater measure of international understanding.

My friends of the business world tell me that every well-managed business compiles an inventory at regular intervals. Over a period of many years, this custom has proved to be helpful in determining the existence of obsolete stock and the need for its replacement. An orderly establishment of these facts allows us to develop plans for the future upon a sound basis, and while I know that in both our professional lives and in business not all our goals are achieved, we at least are able to direct our efforts in an orderly manner toward the objectives we set for ourselves. Public health, while primarily a profession, is nonetheless a business too, and it would perhaps be well for us, as members of this profession, to pause, and, like good businessmen, also take inventory to determine if we are keeping pace with modern trends.

At this time I am conscious, as you are, that we are at the beginning of a new half century—a new year—a year of great promise, but also of grave significance. Great events seldom develop in a single year; they cast their shadows before, and the world lives in the aftermath. Events that will change and direct our future are constantly developing, and are about us today. No doubt the quiet day-by-day living of the early part of this century is gone forever.

The first change we notice is in the map of the world. It is different to the extent that geographical boundary lines have passed on into history, and we cannot help but realize at the same time that great empires which have existed for centuries have substantially relinquished colonial possession and authority. Millions of people have moved from one place to another, all of which is vastly significant.

The next noticeable sphere of change is in the field of science—with its new discoveries and inventions. They have arrived rapidly, and the interval of time between discovery and production, to actual use, is incredibly short. Science, in just the last few years, has produced radar, electronics, atomic energy, new metals, chemicals, wonder drugs—and we are advised that more discoveries will be presented in the immediate future. In medicine, our doctors feel they are very near the answer to disease that has ravaged mankind since history began.

The next change that appears imminent, and may actually be in evidence, is the philosophy that would change and control our ideas and beliefs about people, about governments, about life. In a world that feels the tragic potentials of atomic implications, mankind undoubtedly faces a critical and urgent choice, whether or not we on this planet should learn to live together or cease to exist. There is one way to live together, and that is according to the Golden Rule, which means doing unto others as we would have them do unto us. Unfortunately, there are some nations not willing to abide by this rule in their international obligations. The fundamental question of our time is whether or not our system of living will be forcefully superseded by some order that we do not want. There is only one practical answer to this problem, and that is found in the very preamble or formula of self-preservation. Our formula for self-preservation can best be established by maintaining and improving good health; by being strong in our industry; strong in our finances; strong in our purpose. Now you ask, What is purpose? Whereupon we must define and accept the definition for the word. The word "purpose" is all-inclusive of the policies we adopt and the procedures we follow; our public relations, our international relations, which are essentially and in substance the expression of faith and confidence and the will to do by agreement.

This organization has gone far beyond treaty and agreement. This organization has set an international precedent for professional-scientific cooperation, understanding, friendship, good will, faith, and confidence—all of which can be nothing less than the common denominator in the affairs of public health. I am glad to express my highest regard for my friends in Mexico who are members of this organization for their sincerity of purpose; for their accomplishments; for their high quality of attainment in the medical and scientific world.

This is the kind of goal that can be achieved, only if we place our emphasis on the human element instead of concentrating on the economic and political factors of life. While this organization developed its original plan and objective on a rather local, restricted basis, intending to give attention and concern especially to those public health problems that arose on either side of the Rio Grande, I am confident that a great deal more progress has been made than we are able to enumerate or point out as visible physical accomplishments.

My own efforts in this joint program have not gone as far as I would have liked, I must admit; however, I can assure my friends in this organization that as time and circumstances permit, we will do our part. Latent and active factors have developed as a result of this public health organization that we must not forget, and in the course of time I am sure we will appreciate them more. To know one another, and to know the problems and difficulties of each other on a personal basis, can only accurately determine the human equation that establishes mutual friendship.

In this connection I cannot fail to mention a generous offer of assistance from Dr. Rafael P. Gamboa, secretary of the Mexican Department of Health and Sanitation, when he proposed to me the services of his personnel to help complete a vaccination program during a smallpox epidemic in three southern counties of Texas. I wish to acknowledge in grateful appreciation this fine expression of cooperation on the part of Dr. Gamboa and his epidemiologist, Dr. Calderon. Their efforts as well as those of the health officers of Tamulipas and Reynosa and other cities are largely responsible for the control of this disease on the Mexican side of the border.

Compliments are due officials at Nuevo Laredo for their public health program. I am aware that this good-neighbor city has a first-class water-treatment plant, modern swimming pool, a new market, and modern schools. It is reassuring to know of the continued typhus-control program and the fine mutual interest manifested by joint attendance at the Laredo Insect Control School. The joint monthly waterworks meetings, carried on bilingually, should be a source of pride to both Mexico and the United States. The interchange of morbidity reports continues to prove helpful.

The fine building at Juarez stands as a monument to an expanded health program, and it has given impetus to general public health service in that area. It is gratifying to observe the close cooperation at El Paso between the two health departments, evidenced by the interchange of laboratory service, in-service training, and inspection facilities.

It should be pleasing to note that public opinion in the Matamoros area is beginning to swing strongly toward the desire for mosquito-control activity. Here, as in Laredo, morbidity reports are exchanged on a weekly basis.

The Pan-American Sanitary Bureau, now directed by Dr. Soper, is rendering a vital service, with the limited resources that it has available, in putting public health on a firm basis. The Pan-American Sanitary Bureau has been recognized as an integral part of the World Health Organization, which, as you know, is laying the foundation now for solid philosophy with principles designed by and for all mankind.

I especially wish to take this opportunity to pay tribute to the work that was initiated by the Institute of Inter-American Affairs—work of a most practical nature. The record reveals the fact that the Institute of Inter-American Affairs has about 600 projects, on a cooperative basis in 10 American Republics under its general jurisdiction, in which general sanitation and other programs are given consideration. Our National Congress unanimously approved the work of the institute and made a moderate appropriation to assist in the continuation of this program for the next 5 years. Doubtless this program is contributing much in public-health improvement.

Likewise it is interesting to review overall progress that has been made these last 7 years along the border. In the field of sanitation we find a number of improvements have been made to the border water supplies. Operators of water plants have been trained and surveys of railroad-coach waters and tourist-court waters have been completed. Several sewage-treatment plants have been constructed, and in other instances waste has been removed from the common boundary stream and used advantageously for crop production. Ratproofing, as well as typhus-control programs have been initiated in several boundary communities, while malaria control has been stimulated in several other communities. Food sanitation has received more attention in a number of localities. Model market houses and slaughtering establishments have been constructed.

Venereal-disease control has received major emphasis in almost every community on both sides of the border. It is my understanding that other speakers at our meeting here will review the progress made in the control of these diseases and make some pertinent observations. Considerable educational material was distributed relative to tuberculosis control. We were successful in making X-ray chest examinations of all the counties along the Texas border; and our State has seen fit to locate a tuberculosis sanatorium in Hidalgo County. The health officers from the other States will, undoubtedly, report on the activities in their States on tuberculosis control.

Incidentally, in my opinion, probably the finest thing that has come out of this organization is the fine fellowship that is created. Public health speaks but one language—public health is the foundation on which to erect the pillars of good government. It appeals to all creeds, and it is free of all "isms." It appeals to all strata of society, and offers great reward by paying dividends in the way of prosperity, well-being, and contentment.

Although we have made a creditable showing by first approaching our major public-health problems along the border, there is still much left undone, especially in the environmental sanitation field. We should here rededicate our efforts to enlarge our activities in the fields mentioned and eventually increase the scope of our horizon. I feel very much encouraged when statesmen of the caliber of Gov. Fernado Noglio Miramontes, and other administrative officials of Mexico, come to a meeting of this nature, give their time, and indicate such sincere interest in this growing humanitarian service.

The attendance at this conference which includes a great number of the outstanding leaders in the fields of government and public health is an inspiration to me, and the quality of the program as well as the multitude of details related to the success of our annual meeting is a tribute to the organizational ability and patience of our secretary, Dr. M. F. Haralson. We all realize that Dr. Haralson has expended great effort in helping to make this our eighth annual meeting such a wonderful success, and I wish at this time to extend my personal thanks and the gratitude of the entire membership for his competent and faithful service.

I wish also to take this opportunity to express our appreciation to the city officials of Chihuahua, to the various committees and individuals, who have contributed so generously of their time and interest toward making this annual conference such an outstanding success.

The Rio Grande—the border—with its rich historical background, its beautiful natural environment, its romantic heritage, will undoubtedly attract many more visitors in the future. We can see that this border lends itself to the development of a health resort, a playground and recreational center; and furthermore, we, through our association, can set the pattern for other nations to live in peace, and enjoy the fullness of life together. We have touched off the spark, which I hope will kindle the imagination of other nations to eventually build a world nation without discord in the harmonious program in which we have thus far been successful.

This, then, is my inventory of conditions as they exist today. There is room for vast improvement in partically every phase of an international public health program, which is too great for any single nation, state, agency, or individual; it demands the concerted effort of everyone.

United in our thinking, united in purpose, and united in our efforts, may we all as members of the United States-Mexico Border Public Health Association face this midpoint of the twentieth century with a spirit of mutual understanding, and rededicate ourselves to a concept of service through public health to a world where all mankind can live, work, and walk with the dignity of a civilized being in full, physical, mental, and moral health.

Thank you.

The Lattimore Case

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. MADDEN. Mr. Speaker, the following editorial by H. B. Snyder, editor of Gary (Ind.) Post Tribune, reveals the general opinion of everybody who I talked to when I was home during the Easter recess. Republicans also feel that National Republican Chairman Gabrielson and other leaders made a mistake in approving the McCarthy fiasco:

SENATOR MCCARTHY FALLS FLAT ON HIS FACE OVER CHARGES

Senator MCCARTHY's probe of the State Department and particularly his charge that Owen Lattimore is a Communist and a spy fell on its face because MCCARTHY was relying on rumor rather than fact. It is true that Lattimore has been regarded as a radical by some but there is nothing in his record or his writings to prove he is or was a Communist.

The Post-Tribune has published many of Lattimore's writings and not a Communist tinge has appeared in any of them. With some of his viewpoints we have not agreed but that he is an authority on the Orient we have no doubt. MCCARTHY took a chance of making political hay out of the Communist issue. And despite his failure he may have succeeded.

The reason for this curious possibility lies in the mistakes of the State Department and the growing antagonism in America to communism. MCCARTHY voiced some of the rumors that have been rampant and so may be regarded as a fighter against this foreign "ism" despite his failure to make good his charges.

The popularity of his attack is based in the knowledge that at one time the State Department was infested with Communist ideas and with sex perverts and Americans look upon the record with wonder and disgust. How, they ask, could men of the caliber of Acheson and the other higher-ups in the Department countenance such goings-on?

And if he did countenance such a situation has he changed enough so that Americans may have full confidence in his present position? If it is true he led the Russian contingent in the Department how is it possible to have confidence in his judgment now? Had MCCARTHY put his emphasis on the known record he might have made more of an impression on thinking Americans.

However, MCCARTHY preferred to rest his case on the sensational charge that a Russian Communist spy was determining State Department policy. This was absurd. Whatever the State Department has done in the past there can be no doubt about the forthwith policy Acheson recently announced. Precisely what he means by total diplomacy is not clear but that it indicates a change from a defensive to an offsenve policy is certain.

Unquestionably Acheson has made serious mistakes in relation to Russia but he has unquestionably turned completely around and is now intent on stopping further aggression. He is an able man and capable of developing and carrying on an effective attack against our enemies. Therefore, despite his somewhat soiled record we prefer to let him alone rather than risk another Truman appointment.

Don't Disturb Us

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. GOODWIN. Mr. Speaker, evidence is accumulating that obstacles are going to be put in the way of adoption of some of the recommendations of the Hoover Commission by reason of an outpouring of letters from constituents who assure us that while they believe in economy they are constrained to oppose certain of the plans. In most of these cases it is not difficult to deduce that those who are doing the objecting have a personal interest either direct or indirect. Pertinent to this subject is the following editorial from a recent issue of the Medford (Mass.) Mercury:

"DON'T DISTURB US"

When the Hoover Report was submitted to Congress Herbert Hoover warned the American people that unless the people themselves demanded action on Federal reorganization the report would just gather dust on some forgotten shelf.

He also warned of the danger of the report being killed by the "grasshopper bites" of those who say "reorganization is fine for everybody else but don't disturb my agency."

Almost every proposal made by the Commission steps on the toes of some special-interest group.

If the Commission's proposals were to be adjusted to take care of all special cases, nothing would be left of the Hoover reorganization program.

Perhaps no group or individual can find himself completely in agreement with every recommendation made by the Hoover Commission. Within the Commission itself, there was disagreement in many areas.

Most individuals, however, find themselves substantially in agreement with all save a very few proposals.

Lately, however, serious misconceptions about some of the Hoover Commission's recommendations have arisen in the field of veterans' affairs.

To leave these uncorrected would be unfair to the Hoover Commission. Incidentally it would be unfair to the taxpayers, including millions of ex-service men and women. It would be equally unfair to veterans' organizations which have often called for better and more economical management of government.

Before we go so far as to say that the Hoover report would dismember or do away with the Veterans' Administration let's read the actual recommendations.

At no place in the Commission's report can be found any recommendations for either the increase or curtailment of medical benefits or other services, to veterans. The Commission stated that such policy decisions were outside its terms of reference

and should be the subject of congressional determination.

The Commission's recommendations covered only the better management of existing programs.

It would seem logical and sensible to wait until specific legislation affecting veterans is introduced before allowing emotional thinking to warp our view of the Hoover blueprint for a more economical management of our Government's business affairs.

It is terribly important that we achieve as much as possible of the program for which most Americans have waited so long.

Lobbying Investigation

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. DAVIS of Wisconsin. Mr. Speaker, we have heard a great deal lately about the investigation of lobbying. Every legislative body ought to check this matter carefully at regular intervals. One of the greatest and most dangerous lobbying groups exists within the Government agencies—the "Federal lobby." The trend toward too much government and too much centralization of that government has grown alarmingly. The great urge of bureaucracy is to expand, and the agencies have thousands of tax-supported public-relations agents to drum up the false need for more and bigger agencies.

I sincerely hope, Mr. Speaker, that the Buchanan committee will not consider its work completed until it has thoroughly investigated the tactics used by Government agencies to propagandize their own programs. The Harness subcommittee of the Eightieth Congress made a notable contribution on that score. Much remains to be done.

Apropos of this need, I submit a forceful editorial which appeared recently in the Wisconsin State Journal, a fine objective newspaper published in Wisconsin's capital city:

THOSE WHO WILL NOT BE TOUCHED

There is one area of lobbying that really would bear some investigation, and subsequent regulation.

But there will be little investigation in this direction, and no strict regulation.

We refer here to the pressure tactics and propagandizing by Government agencies in behalf of their own programs.

According to Congressman JOHN VORYS, of Ohio, our Federal publicity and public relations activities now cost taxpayers more than $100,000,000 a year.

This tax-supported lobby works unceasingly for Federal housing, Federal power, socialized medicine, more valley authorities, and more Federal control of everything.

There are more than 3,500 Federal employees—who cost taxpayers more than a million dollars a month—engaged in selling and lobbying for and stirring up support for the programs wanted—not by the people—but by department heads and Mr. Truman. The Department of Agriculture now has 525 information specialists boosting the Brannan plan, Congressman VORYS points out. Five different agencies are lobbying and publicizing Federal housing, while over the past 10 years the Federal Security Agencies' bureaus have spent more than $20,000,000 in a campaign for socialized medicine.

Congressman VORYS points out one great danger in this tax-supported Federal lobby:

"Whether the immediate purpose of Government propaganda is good or bad, the fact remains that individual liberty and free institutions cannot long survive when the vast power of government may be marshaled against the people to perpetuate a given policy or a particular group of officeholders."

Some of these tax-paid lobbyists work directly—even arrogantly—upon our Congressmen and Senators. Others work indirectly, stirring up the demand for more and more Government services out in the provinces.

Now here, in our opinion, is a lobby that should be investigated—thoroughly and completely.

Here are lobbyists who constitute an immediate threat to the taxpayer—to his freedom, his way of life, and his pocketbook.

And the not-so-funny part of it is that the taxpayer, unwillingly and unknowingly, is financing the very menace from which he now has no protection.

Will Congress do anything about this tax-supported Federal lobby?

We'll bet against it, for a very good reason:

The tax-supported lobbyists now are beating their brains out, working in behalf of and stirring up a demand for Dr. Truman's political patent medicines.

Indian Legislation

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. STEED. Mr. Speaker, due to the fact that several bills designed to bring equality and justice to America's Indian citizens are soon to come before the Congress, I am placing this editorial from the Tulsa (Okla.) Tribune in the RECORD in the hope it will aid House Members in becoming better informed on some of these issues and problems.

The editorial follows:

STATUS OF THE INDIANS

Last week's prediction from Representative TOBY MORRIS, of the Sixth Oklahoma District, that the House of Representatives, at least, will approve claims of members of the Five Civilized Tribes of Indians against the Government for more than $10,000,000 sent reporters digging into Indian statistics. One of them Sunday came up with an estimate that the claims our red brothers have on file in Washington total more than half a billion dollars. All are based on treaties, guardianships, and the other trappings of dealings between separate peoples.

This must puzzle many people who remember that in 1924 Congress conferred citizenship on all United States Indians. The act was half in earnest and half out of the emotion that arose from the action of so many tribesmen in volunteering for service in World War I. They were not liable under the draft, but they went to training camp by the battalions and fought with conspicuous bravery in Europe.

The courts attached strings to the congressional enactment almost immediately, holding that citizenship is not incompatible with either tribal existence or continued guardianship. Pulling these strings, the Indian Bureau seems to have been able to tighten its grip on Indian affairs. It is a notable, and most Indians say, a tragic fact that in the last 17 years, or since it was proposed by the Bureau in 1937 that 29 tribes would be released from Federal supervision over a 10-year period, fewer Indians have escaped from the Bureau into full citizenship than had done so during any period of like length in the past 100 years.

How is the Bureau able to survive all these promises and years and get huge biennial appropriations to keep large staffs in the field and an army of white chiefs and helpers in Washington? Probably by never actually settling its disputes with the tribes, or pushing the Indian Claims Commission to do so. The same desire to hold onto jobs with the Commission undoubtedly impels workers there to take their time about winding up any case.

Should the $10,000,000 appropriation for the Five Civilized Tribes clear both Houses of Congress and be approved by the President, a new push to clear the docket of claims might follow. Senator HUGH BUTLER, of Nebraska, found considerable favor Nation-wide when he said a few years ago:

"The Government of the United States should determine definitely what its debt to the Indians amounts to—individually and collectively—pay such debts and allow them to take their places in the communities of this Nation on an even basis with other citizens—they have been on probation long enough."

Don Eddy, for the American Magazine, made a 9,000-mile tour to ask the Indians what they thought about the situation. He came up with the conclusion that restitution for past wrongs is not so important to present-day Indians as the right to be treated as equal citizens.

Thoughtful Oklahomans will agree with Senator BUTLER. Since it is proposed to cut all special ties between the Indian and the Federal Government finally, and transfer the Indian to the jurisdiction of State and local governments. Oklahoma will want them to come in as well prepared financially to hold up their ends as is possible and just.

More than a third of all American Indians live in this State, by order of Uncle Sam. As with any other large segment of our population some are well-to-do and some are necessarily objects of charity. If any of the latter are due sums from the Government, Oklahomans will want them to colect and be self-supporting at the time of terminating Federal wardships.

Address by Mrs. Eleanor Roosevelt to Americans for Democratic Action

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, April 19 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, on the occasion of the annual convention of Americans for Democratic Action, held here in Washington on April 1, Mrs. Eleanor Roosevelt delivered a fine and thoughtful address, stressing the truth

that we must have the courage of our convictions and the freedom to express them, if our democracy is to survive. As always, Mrs. Roosevelt spoke from the depths of her great wisdom and her profound belief in our way of life. I ask unanimous consent to have Mrs. Roosevelt's speech printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies and gentlemen, it's a very inspiring thing these days to come to a meeting such as this and find so many people coming together to discuss and make plans for an organization devoted to obtaining in our country as good a government as we can have. This organization is made up of both Democrats and Republicans.

I was amused the other night to have a young boy at a meeting where we were discussing good government say, "Mrs. Roosevelt, you've talked about the liberals, but if you really have conservative convictions, what should you do?" I think the thing that makes one happy about ADA is that it really has convictions. And the people who belong, belong because they want to find a way to put those convictions to work. They recognize—everyone in this room at this meeting knows—that our democracy is not perfect. But they also know that it's working to improve democracy. That is the important thing. Those who are satisfied—those who feel that there is nothing they can do—they are the people who will do harm to the Government and the citizenship in the United States.

We live in a time when every single one of us must realize that what actually is important in a democracy is that sense of individual responsibility. And there are certain things here in our country that I think we must watch very carefully. It is true, as has been said, that there is a sense of insecurity—I might almost say a sense of fear—among many people in this country of ours. With some people it's a fear of the possibility of war; with others it's a fear of what the new weapons of war may mean if we should come to war; with others it's a fear of what may happen to them personally if by chance they offend in any way. That is the fear that bothers me most—the fear of people who are afraid to be themselves, to hold convictions, to stand up for them—because that fear, I think, is the fear which can really hurt our democracy more than any other.

This is a time when it takes courage to live. It takes the kind of courage that it took in the earliest days of our history. I'm quite sure that George Washington and his men must have had moments when they wondered how on earth the United States was ever going to exist. And I'm sure that there have been other times in our history which have looked black indeed to the citizens of the country and its leaders. But at present we need all the courage that our forefathers had and perhaps a little more, because we have a job to do at home and a job to do in the world.

The job at home has to be done, and has to be done first. We have to be unafraid. And we have to realize that here is where we as individuals have to fulfill our belief in democracy. If we cannot prove here that we believe in freedom, in the ability of people to govern themselves, if we cannot have confidence in each other, if we cannot feel that fundamentally we are all trying to retain the best in our democracy and improve it, if we cannot find some basic unity even in peace, then we are never going to be able to lead the world. This is the problem that is before us today. If we do not lead the world, who is going to lead it? We have to accept the fact that it's what we do here that makes us fit to lead the world. So every day in our daily lives as citizens we are building our world leadership.

Our great struggle today is to prove to the world that democracy has more to offer than communism. You can't just say that anyone who understands communism must be against it. You have to face the fact that this is a struggle, and a very great struggle. If we want to win the cold war, if we want to reach a greater security—I think it's going to take us a long time, and I think we have to develop a courage and a stanchness that perhaps we have never had. If we want to achieve it, then we must prove to the world what we can offer. That means we have to take certain definite steps. We have, for instance, to make sure that we have civil rights in this country. There was time when we could look on that question as a purely domestic one—that we could take all the time we wanted to educate ourselves to solve the problem. It isn't any longer a domestic question—it's an international question. It is perhaps the question which may decide whether democracy or communism wins out in the world.

I sit in the United Nations; have sat in the General Assembly since 1946, and I sit in the Human Rights Commission. Over and over again the failures of democracy are pointed out to me in terms of specific instances of things that have happened in our country. I don't try to say they didn't happen, because usually I know that they did. All I can say is that we know about them, and those of us who really care, work to improve our democracy. Therefore, we must actually look at ourselves with more critical eyes than we have in the past.

Where do we fail, and how hard do we try to live up to the things we've given lip service to? It's not a domestic question; it's a question that perhaps is one of the most important factors in the winning of the struggle. Of course, economic questions enter into this struggle, too. We cannot be complacent about unemployment in our country—about injustices. Not long ago I remember hearing in a certain city that the papers actually printed what certain rather well-paid officials would have as pensions in an industry, and yet when it came to the point of pensions to the workers, that was too heavy a burden for the industry. Well now, I'm not a Socialist. I'm a very practical capitalist, I'm sure. But if we want to keep capitalism, we in this country have got to learn that there must be a real sharing, a real understanding, between management and labor. They must plan together because their interests are really identical. But both sides must realize it.

Now, the answer to unemployment, I didn't get an answer when I asked some of our Democratic Senators the other day, "What is the answer to unemployment?" I doubt if many people know. I think it's one of the things that perhaps we need to experiment, and perhaps it may be tied up, too, with some of our decisions in the realm of foreign affairs. Perhaps backing the United Nations with our own four-point program, seeing what can be done through them, to work with other nations in the world, that may have some tie with unemployment. There may be other things that I know nothing about, but I never like to feel that we don't face problems and that we don't set people to work on finding the answers. There's no reason why we shouldn't say we don't know the answer now; there's every reason why we shouldn't say we're not trying to find out. It is essential, I think, to our winning this struggle that we actually find answers, because in this economic area communism has a program. And democracy has to have a better one. If it doesn't, we're being judged before the bar of the world, and we have to win. We have to win because we have a conviction that democracy does offer people something that no other form of government and no other way of life can offer.

There's one thing that always strikes me, and that is that the Communist representatives in the United Nations never talk about liberty; they never mention it. On one occasion when Mr. Vishinsky was forced to do so, he said that was a foolish thing to talk about because no one could have liberty. Well, you and I know quite well that everyone's liberty is conditioned by the rights of other people. But we must think about liberty, because that is really one of the basic reasons why we prefer democracy to communism. And somehow we must keep ourselves free from fear and suspicion of each other. I sit with people who are representatives of Communist countries, and to sit with them is a lesson in what fear can do. Fear can take away from you all the courage to be an individual. You become a mouthpiece for the ideas which you have been told you must give forth. I have no feeling of real antagonism toward these representatives because, poor things, they can do no other. They must do that; their lives depend on it.

Now, it seems to me that the ADA is an organization that has thinking people in it, and we must preserve the right to think and to differ in the United States. We must be able to disagree with people, and to consider new ideas, and not to be afraid. The day that I am afraid to sit down in a room with people that I do not know because perhaps 5 years from now, someone will say, "You sat in the room and five people were Communists, and so you are a Communist," that day will be a bad day for democracy. We must be sure enough of ourselves, of our own convictions, to sit down with anyone and not be afraid of listening to what they have to say, and not be afraid to contamination by association. It's true that the company you keep may say something about what you are. But to be able to meet with people and argue your own point of view, and to meet with people whom you do not have screened beforehand to be sure they are safe to meet with—that must be a part of the freedom of every citizen in the United States.

So I'm grateful that ADA prods us to think, that it has an opportunity to bring before us the ideas that seem important, that it also has the opportunity of backing people in elections who promise to be good public servants. I'm grateful that it is representative of people in both political parties, and I'm grateful for the numbers that have come today. I think it shows that we as a Nation are waking up to the need to preserve our basic ideals in our Republic, that we are taking up to the fact that we have to live those ideals, and that we have to improve our democracy by the way we live. To do that we must come together, and consult together, and get other people to help us where we need help. There must be no one who fights the battle of good government, of freedom of thought, of real democracy, with a sense of doing it alone. That is the value of ADA—you do not have to be alone.

I was speaking to a little group of college students the other day who had started an organization where they tried to live the ideals of democracy, and one of them said to me, "I graduate this year. What do I do when I go home?" And I said, "You find people who feel as you do." He said, "I don't know any, where I live." Now, that shouldn't happen to any young person, because they should be sure that if they were really trying to live their convictions they would find support in their community. That's why I stress that it is in our own communities that we must fight this struggle, not only the struggle against communism but the struggle for peace.

We will have on a world-wide scale, a human rights convention, probably before the General Assembly next autumn at the United Nations, and then before our Senate, a ratification. That's part of our struggle. If we don't ratify, who else will ratify in the world? And yet human rights are basic to establishing peace. A common understanding throughout the world of human rights—of the value of human personality and freedom—that understanding, spread throughout the world, is one of the cornerstones on which we must build for peace.

Curtailment of Postal Services

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, April 19 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD a statement prepared by me protesting the order of the Postmaster General curtailing mail deliveries and making other changes in the postal rules.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WILEY URGES POST OFFICE DEPARTMENT TO WITHDRAW OUTRAGEOUS POSTAL-SERVICE CUTS

I urge my colleagues in the Senate and House of Representatives to take immediate action and request a withdrawal of the outrageous order just issued by the Postmaster General curtailing mail deliveries to residential sections and making other changes in postal rules.

I believe that there is a deep suspicion among the American people that this drastic Postmaster General edict has been timed with Congress' review of the 1951 fiscal year budget—as a means of putting pressure on the Congress. Fifty million tired taxpayers have been hit in the mail box by this ruling, and I, for one, think it is disgusting because, from reports which I have received from my people, there is need for more mail service rather than less mail service.

I think it is outrageous to make wholesale changes in postal rules and regulations before the Congress has acted on the Hoover Commission reports dealing with the reorganization of the Post Office Department. While there are some controversial elements in those reports, I believe that we can effect considerable savings through them, and that in particular, the budget and accounting system of the Post Office Department which is so hopelessly obsolete that it must be revised. In addition, there are many items in the Post Office budget (which contribute to the present size of the deficit) which should be removed from that budget, and thus the deficit will shrink. Over 2 years ago, I suggested that Congress take out the air-mail subsidy and the Government and congressional free-mail subsidy from the Post Office Department budget, because those should be allocated to the budgets of the respective agencies and to the Congress rather than to the Post Office Department.

It is absurd that the same administration which has just soaked and socked the American taxpayer with:

1. A $1,250,000,000 rat-hole appropriation for a few land owners in Arizona (a bill which has passed the Senate).

2. A wasteful $200,000,000 subsidy to peanut and cotton growers in the South to increase their already surplus acreage.

3. A $1,500,000,000 pork-barrel rivers and harbors bill.

That this same administration should suddenly become so interested in "economy" that it tries to save some money by firing a few $40-a-week substitute postal workers—most of whom are veterans. This order hits the little fellows in the Post Office Department, but what is far worse, it hits every user of the mail.

The Senate and House Appropriations Committees and the Senate and House Post Office Committees should indicate their extreme displeasure with Postmaster General Donaldson's ruling and they should take action immediately to have this unjustified ruling rescinded.

The International Trade Organization

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 19 (legislative day of Wednesday, March 29), 1950

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The ITO Charter Should Be Ratified," from Business Week for February 25, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ITO CHARTER SHOULD BE RATIFIED

The International Trade Organization is coming before Congress for the third time. Backers and critics agree that this time it will either be floated or left on the shoals as a monument to a vast amount of frustrated international negotiating.

American business itself is sharply divided. The National Association of Manufacturers, the National Foreign Trade Council, the United States Chamber of Commerce, and others have lined up against it. The Committee for Economic Development, the National Planning Association and the National Council of Importers are among those backing it.

The impressive array of organizations on both sides of the question is ample testimony to the complexity of the problem. After careful study, we line up with those who are supporting the charter.

In spite of its weaknesses, the charter is demonstrably useful in economic terms. And we think that ratification is important to preserve America's leadership in world trade and to strengthen the forces promoting free trade.

DISAPPOINTING

Admittedly the charter has major weaknesses. American business will get little benefit from ITO in the immediate future.

The charter provision outlawing import quotas has been made meaningless by a score of amendments and exceptions. For example, a special provision permits use of quotas to limit imports from countries whose currency is scarce. Since the United States makes less use of import quotas than any other major country, and since dollars are short, this provision has the effect of permitting discrimination against our goods.

The charter will also disappoint Americans looking for guaranties on foreign investments. It offers no more than a general declaration favoring fair treatment of foreign capital. Investors may well feel that the United States will have to obtain strong additional guaranties by diplomatic negotiation.

Even so far as the charter goes, ITO will have only powers of persuasion. The charter contains no enforcement provisions. It is difficult to see how the clause outlawing cartels, for example, can be enforced effectively through persuasion alone.

Beyond these specific points, many critics point out that the charter does little to restore unrestricted free trade. It does not sweep away resrictions; it accepts them and tries to limit their use.

Finally, the charter is riddled with loopholes and is so complicated that it is difficult to say what many points mean.

BEST WE CAN GET

The question is: Could we get a better agreement by starting fresh, from scratch?

The thing to remember is that the United States is virtually the only country pushing for unrestricted multilateral trade. And even the United States has written into the charter several restrictions designed to protect particular American interests. Considering that most major countries do want restrictions, the charter on the whole goes a long way in the direction of American thinking.

Actually, the charter probably could not be stronger; it is unlikely that the major nations would give an international body any greater control than this over their domestic policies. At this stage, it seems, few international organizations can be more than sounding boards or, at best, arbitrators.

POSITIVE ACCOMPLISHMENTS

In spite of all its weaknesses, we think that the charter can help knock down the trade barriers between nations—and so, in the end, benefit American business. Several provisions have positive, immediate value:

1. The charter outlaws discriminatory two-nation trading deals. Countries with government trading organizations would have to compete in world markets just as the free enterprise countries do. This is very important to American business and agriculture.

2. Dumping goods in foreign markets at prices below domestic levels is prohibited, except for farm commodities (an exception put in by the United States).

3. Tariff negotiations would be conducted selectively on the "most favored nation" principle—a basic point in United States tariff policy since 1934.

4. Existing tariff preferences (such as our agreement with the Philippines) are to be honored—but preferences are not to be increased. The charter permits customs unions and mutual tariff reductions by neighboring countries.

5. The charter outlaws a multitude of practices now widely used to limit imports.

All these are highly desirable objectives.

Now, what about the political questions involved?

First, and most important, is that the United States may lose its leadership in international trade affairs if it rejects the charter. We proposed the idea. We have supplied much of the effort behind it. Our approval of the charter would give confidence to the countries that now fear the United States may return to economic isolationism. Our approval in itself would strengthen the drive for freer world trade. And it would give us a foundation on which we could continue to promote free trade.

If the United States stays out, however, there is little reason to believe that the world can make any great progress toward freer trade. The time is not ripe for a stronger agreement. Past experience makes it doubtful whether much could be done through bilateral treaties.

Recognizing all the weaknesses, we believe ITO must be given its chance.

Tariff Rates on Imports of Canvas and Waterproof Rubber Footwear

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1950

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

MASSACHUSETTS FEDERATION OF LABOR,
Boston, Mass., April 18, 1950.
Representative RICHARD B. WIGGLESWORTH,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE WIGGLESWORTH:

RESOLUTION UNANIMOUSLY ADOPTED BY EXECUTIVE COUNCIL, MASSACHUSETTS FEDERATION OF LABOR, APRIL 5, 1950

Whereas a bill is pending in Congress entitled "Bill to revise administrative procedures of the Bureau of Customs," which would eliminate what is known as the American selling-price principle, specifically as it applies to canvas and waterproof rubber footwear; and

Whereas the State Department has under consideration negotiations which would result in reciprocal trade agreements lowering present tariffs on canvas and waterproof rubber footwear imported from foreign countries; and

Whereas and further reduction in the tariff rates applying to imports of canvas and waterproof rubber footwear would constitute a serious threat to the major industry of our community and to other local business firms and would result in the loss of jobs, widespread distress, increase of relief rolls, and increase of the tax burden of our citizens: Therefore be it

Resolved, That the executive council of the Massachusetts Federation of Labor at its monthly meeting, held Wednesday, April 5, 1950, does hereby memorialize and petition the President of the United States, Harry S. Truman; and all Senators and Congressmen from the New England States, to take necessary action to prevent any reduction in the tariff on imports of canvas and waterproof footwear whether it be by legislative enactment abrogating the American selling-price principle, by negotiation under the general agreement on tariffs and trade, or otherwise; and be it further

Resolved, That copies of these resolutions be sent to the President of the United States, Harry S. Truman; and Senators and Congressmen from the New England States.

Respectfully yours,
HENRY J. BRIDES,
President.
KENNETH J. KELLEY,
Secretary-Treasurer, Legislative Agent.

Address by Henry Morgenthau, Jr., at United Jewish Appeal Conference

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1950

Mr. MULTER. Mr. Speaker, Mr. Henry Morgenthau, Jr., who is the general chairman of the United Jewish Appeal drive for the fourth consecutive year, delivered an important address at the national conference of the United Jewish Appeal, held in Washington, D. C., on April 15. I am glad to bring his remarks to the attention of my colleagues. The text of his address is as follows:

This conference is a unique symbol of American unity. As the campaigns throughout the country approach the decisive phase, it should be a source of greatest encouragement to all of us that many distinguished American leaders have joined together under the leadership of Franklin D. Roosevelt, Jr., as chairman and Mrs. Franklin D. Roosevelt and Senator Robert A. Taft as honorary chairmen in forming the National Christian Committee and in convening this national conference.

The National Christian Committee has already made very substantial progress. The fact that Americans of all faiths have not merely demonstrated their sympathy but are actively participating in this 1950 campaign must serve notice to the entire world that the American people are solidly behind the people of Israel in the building of a new democracy and in rescuing their fellow Jews from homelessness and oppression.

We have two very good reasons for taking stock. In the first place, as I have indicated, we are now entering the crucial stage of the 1950 United Jewish Appeal. What happens in the next 30 days will tell the story of American Jewry's response to the needs in Israel and the needs of Jews in other parts of the world.

Secondly, we are assembled here a week prior to the official celebration of the second anniversary of the state of Israel. Two years have passed since the proclamation of independence was signed in the midst of war and trial—2 years in which many miraculous achievements were recorded—2 years in which we, the Jews of the United States, played a truly decisive role through the United Jewish Appeal—2 years of glorious fulfillment and 2 years of bitter struggle against superhuman difficulties.

There will be many celebrations in various parts of the country. And there is a great deal to celebrate. We can rejoice in the fact that Jews everywhere have achieved a new dignity as a result of the establishment of the state of Israel. The young men and women of Israel performed incredible feats of heroism in time of war. But we must not forget that the people of Israel as a whole have given no less a glorious account of themselves in coming to grips with the problems and the responsibilities that followed that victory.

Let this be our celebration here but let it be the kind of celebration that will not merely herald an historic event with resolutions and hallelujahs. Let us mark this occasion with a solemn pledge of continued devotion and with the kind of concrete action that will demonstrate to Israel that we are as firmly behind them today as we were in the darkest period of their fight for life 2 years ago.

It is easy to give expression to sentiment. But our deepest sentiments will have very little meaning unless they are reflected in concrete action to meet the critical problems facing Israel today.

I am sure that all of you are interested in the status of the campaign thus far. The progress chart, as I see it, looks good. In fact, the reports from key cities in various parts of the country are highly encouraging. I am happy to be able to report that the campaign is doing better than last year. And that is a tribute not to the leadership of the United Jewish Appeal, but to everyone of the leaders and volunteers in the local communities who are working very hard to achieve the best results.

Since January 1, 1950, we have received a considerable amount of cash. This is good. But not good enough to meet the urgent needs that confront us every day.

Believe me, the financial position of the United Jewish Appeal is very serious. We cannot meet the emergency requests that come to us from the United Palestine Appeal and the Jewish Agency. There are still 90,000 immigrants in the camps in Israel. Right now, one of the most difficult problems is to maintain them and try to give them a decent home.

In the past several weeks two things have happened to underscore the emergency character of the 1950 campaign.

The Government of Iraq has voted to permit the Jews who have been living in that country under the shadow of persecution, to leave and emigrate to Israel. There are about 130,000 Jews in Iraq. Most of them want to go to Israel. But this emigration, like the emigration from eastern Europe, has a deadline attached to it. The Jews have only 1 year in which to move out. This means that we must provide for the transfer and absorption of a minimum of 90,000 Iraqi Jews before the end of 1950. Shall we say that we didn't include these Jews in our campaign figures—that we can't provide for more than the immigration of 150,000 Jews in 1950 that we pledged ourselves to help at the beginning of the year?

The second event of major importance in the work of the United Jewish appeal was the beginning of the transfer of the hard-core cases—the old and the sick among the Jewish DP's still left in Germany—and the arrival of the first group in Israel earlier this month. These are the people who suffered most and waited longest to leave the soil that was the scene of the destruction of millions of their fellow Jews. Israel has decided to take them and try to rebuild their lives or give them the chance to spend the years that are left to them in freedom among their own people. But this program cannot be carried on unless the Joint Distribution Committee and the United Palestine Appeal receive the funds they need to fulfill their share of the project that is being carried on together with the Government of Israel.

Make no mistake about it. Israel is still fighting to save the lives of many sections of the Jewish people. And it is still fighting for its own existence.

I am not going to discuss the military and political situation. But we must not underestimate the developments in Cairo and the machinations of the Arab League. There are various ways of making war. The Arab States are intensifying their economic war against Israel. They are counting on us to get tired. They are hoping that the United Jewish Appeal will fail. And they are waiting and hoping that the world and the Jews of the United States will turn to other things and cut down their support to the Jewish State.

When he independence of Israel was proclaimed we pledged ourselves to help realize the dream of the return of the homeless and oppressed Jews of the world. Israel is doing more than her share. Her people are achieving the impossible in developing a new democracy in the face of the most difficult problems.

I have said it before, and I must repeat it now. The crisis Israel is facing in immigration, in doing the job that is as much our responsibility as hers, is as grave as was the crisis of her war for survival.

For this reason we must be prepared to make sacrifices. For this reason we should feel greatly heartened by the conference that is taking place here this weekend—a conference that demonstrates that all Americans are vitally interested in the preservation of Israel as a new hope for democracy and as a major achievement in the redemption of large sections of the Jewish people.

As Israel stands on the threshold of its third year, let us give its people the firm assurance that we understand her needs and that we are ready to meet our obligations through the 1950 United Jewish Appeal.

Truman "Prosperity"

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1950

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Herald of April 15, 1950:

TRUMAN "PROSPERITY"

We wonder if people are really as happy about Mr. Truman's prosperity as he seems to think they are. Not long ago he was calling a very similar situation Republican inflation. It may be prosperity, but it is inflation too, and we are rather inclined to the view that if there is partisanship in the inflation it is more Democratic than Republican.

Is it really prosperity when the Federal Government is running at a five to six billion dollar annual deficit; when excise taxes are at wartime levels; when more taxes are being taken from the workers than at any time except at the height of the recent war? We trust that when the President goes across the country on his forthcoming trip he will listen as well as talk. And we mean listen to persons other than those who are looking for Federal jobs or already have them.

In Kansas, for example, he might run into some of the 600 Kansas stockmen who recently adopted a resolution which said:

"There impends today a stupendous threat which so menacingly overshadows the future of our country that we Kansas stockmen, of all shades of political belief, feel it our duty to speak out in unmistakable terms. This threat lies in the fact that our country—without opportunity for conscious choice on the part of its people—is rapidly drifting toward the consummation of a false concept, contemptible to free men—the socialized state.

"Tokens of this danger are everywhere and undeniable. The growing power and expansion of a wasteful government; the colossal public debt; the heavy burden of taxation, designed in large part to redistribute the wealth of the people; the ridiculous attempt—by dictating wages, hours of labor, prices, etc., and by innumerable other false expedients—to substitute an artificial economy for the natural economy which alone can function in freedom; the gradual assumption by the State of financial responsibility for every hazard incident to the life, labor, infirmity, and old age of all—hazards which must be personally met and borne by every human being who has the instinctive will to survive and the inherent impulse to be free; the arraignment of economic and social groups, one against the other, in denial of the obvious fact that their interests are identical and can be logically promoted only by application of the Golden Rule; and numerous other kindred concepts, similarly inspired and equally false.

"Government produces nothing and has no means by which to support these false and destructive policies except by exacting from its citizens the fruits of their labor. The present semblance of prosperity is only the byproduct of the most terrible and destructive war that ever afflicted the world and is now maintained only by artifice implemented by folly, fear and dire forebodings.

"The course our government is now taking, unless it is promptly reversed, will inevitably lead to national bankruptcy. In a vain effort to prolong a specious sense of security, more similar expedients will be applied until we all become mere numbers in a completely socialized state."

We think those Kansans were very discerning men. We hope Mr. Truman takes the time to fathom their thinking before he makes more sport of the slogan, "liberty versus socialism." Or brags about prosperity.

Our Citizens Are Becoming More Aware of the Problems of Wildlife Management

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1950

Mr. VAN ZANDT. Mr. Speaker, it was my privilege to address the Spring Mills Game and Fish Association, Spring Mills, Pa., on April 14, 1950.

Some 150 central Pennsylvania sportsmen were on hand for the monthly meeting of this wide-awake organization.

My remarks to this group of outstanding sportsmen were as follows:

The great problem of wildlife management is one of maintaining a balance between the needs of man on one hand and the needs of wild creatures on the other. The balance is constantly being lost as man uses up the forests, pollutes the rivers, or makes inroads on animal populations through excessive hunting. Then again, the balance is upset when animal populations increase out of proportion to the amount of food available.

As our citizens are becoming more aware of the problems of wildlife management, professional conservationists are in turn able to work more effectively to solve those problems. Americans, fortunately, are placing more emphasis on conservation. The recognition of the importance of soil conservation in agriculture, for instance, has enabled wildlife experts to point out that the populations of wild animals on a farm are also directly related to the land's fertility and inherent carrying capacity.

We are slowly making people aware of the fact that "habitat" means "living quarters." Americans are learning that wide open spaces and plenty of green brush do not necessarily make good living quarters for animals. Consequently, more farmers are planting hedgerows and border strips of food-producing plants. A wide sympathy toward the conservation philosophy by our citizens, who investigate for themselves the relationship between the wise use of soil, water, and plant life and the national welfare, is making the task easier.

Other aspects of unfavorable environment are being recognized by our citizens. Such activities as marsh drainage, admission of salt water into fresh-water marshes, diversion of rivers, industrial pollution of streams, and the general advance of industrial and urban settlements into wilderness areas constantly reduce the amount of land suitable for wildlife occupancy. Our efforts to oppose these unfavorable influences must continue without abatement.

In many phases of wildlife management we have gone far beyond the stage of indiscriminate efforts to build up the populations of animals. Some of our big game animals—most notably the white-tailed deer—have increased to such numbers that they threaten their own existence by overbrowsing their ranges. While some of this increase in populations of white-tail is the result of the animals' natural ability to adapt themselves to living in densely populated farm areas, the main factor is the failure to take doe deer as well as bucks during the hunting season. Many of the States are moving toward open season on does.

In the realm of wildlife management, research has also received a great deal of attention. Definite progress in obtaining answers and solutions to serious wildlife problems are being made in the fields of land management, waterfowl management, protection of wildlife in relation to insect control, rodent control, and predator control, and in the ecology of wild fur animals and bird migrations. The continued interest and support of the public in these research activities assure us of eventually obtaining the answers to our wildlife problems.

Not only is wildlife worth billions of dollars to us in cash, it is worth immeasurably more as a source of recreation, good living, and as a morale builder for the continual fight which we must wage in a world of insecurity and competition. In line with this thought is another: By the wise exploitation of the people's natural interest in wildlife we can foster interest in the need for soil conservation, rehabilitation of our watersheds, and the cleansing of our polluted streams. Not only would we then be building habitat for wildlife, we would be serving ourselves and our neighbors in maintaining a high standard of living and security, which must come inevitably from the land.

Many writers and scientists are reporting the sad state of resource exploitation in the world today, but the United States is one country that is pushing efforts at conservation—especially in the categories of fisheries and wildlife.

In maintaining populations of salmon, for instance, there is progress in rehabilitation of the runs of Atlantic salmon in the Northeastern States, a number of streams have been surveyed by the Fish and Wildlife Service and areas capable of supporting new runs have been found.

On the west coast, experiments are continuing in methods of guiding salmon fingerlings around dams and away from water-use diversions. Such experiments are employing chemical, temperature, and sonic stimuli to urge fish to go where they are supposed to go.

The increased construction of dams and irrigation projects make it essential for the continuation of salmon runs, that ways and means be found to preserve the spawning salmon and the fingerling returning to the sea.

Off the Florida west coast a Fish and Wildlife Service vessel, the 60-foot *Pompano* has been engaged in research to determine the causes of the "red tide," which killed millions of valuable food fish in 1947. In its study of oceanography, planktology, and the chemical constituents of the coastal waters, the Fish and Wildlife Service is working in cooperation with the University of Miami's marine laboratory and the Florida Department of Conservation.

The organism responsible for the plague is known, but the causes for its sudden increased abundance—as many as 60,000,000 in a quart of water at the height of the scourge—and possibilities for predicting and controlling future outbreaks are being studied.

Other research vessels engaged in study of the commercial fisheries are the *Black Douglas* off the west coast, and *Albatross III*, which has been making a census of total fish populations off the great North Atlantic fishing banks.

In addition, fishery research projects having to do with blue crabs, clams, and oysters are under way. In the Gulf, research is directed toward control of the most serious

oyster pest, a drilling snail, the possibilities in the culture of oyster beds off Puerto Rico and the Virgin Islands is also being surveyed.

The sea lamprey, which threatens both sport and commercial fishing in the Great Lakes, has received a good deal of attention. The eel-like parasite, which sucks the blood of fish, leaving them either dead or so badly scarred as to be unmarketable, has practically destroyed lake trout fishing in Lake Huron and has cut the take of lake trout in Lake Michigan to one-sixth of the normal 6,000,000 pounds.

The increased fishing pressure on other lakes and species due to this decline of lake trout is also very serious. Studies concerning the control of sea lamprey are underway at Ann Arbor, Mich., but a more comprehensive research program is planned to develop methods of control of the lamprey.

Fisheries research has many phases, extending into better methods of fish culture, the effects of insecticides on fish, and the control of water pollution by industry.

Since my election to Congress in 1938, I have transmitted several thousand fish applications from this congressional district to the Fish and Wildlife Service for the purpose of restocking local streams.

The demands for stocking Pennsylvania waters with legal-sized trout and warm-water fishes have increased greatly during the postwar period. In close cooperation with the Pennsylvania Board of Fish Commissioners, the Fish and Wildlife Service has endeavored to meet the increased demands for fishes for stocking Pennsylvania waters from the production of the nearby Lamar Hatchery.

Unfortunately, construction of the Lamar Hatchery was not completed at the time of establishment and the production of both trout and warm-water fishes has been limited by the lack of adequate rearing facilities, refrigeration, and equipment for the proper handling of fish food, housing, etc.

The distribution area of the Lamar Hatchery comprises most of Pennsylvania and in addition, warm-water species are distributed to southwestern New York and northern New Jersey. The demands for fishes for stocking waters in this large heavily populated area cannot be met with the rearing facilities presently available at the Lamar Hatchery. In the calendar year 1949, 230,550 warm-water fishes and 383,160 trout were produced and distributed by the Lamar Hatchery.

A development program was started in 1949 to complete the Lamar Hatchery and funds in the amount of $40,000 were provided for the construction of a holding house and trout raceways in that year. During the present fiscal year (1950), $30,000 has been provided for the construction of a cold-storage and food preparation building. It will require an additional $170,000 to complete the Lamar Hatchery into a well-balanced unit capable of producing a large number of legal-sized trout and fingerling warm-water fishes.

In the budget for the fiscal year 1951, as presented to Congress by the President, there is an item of $95,000 for continuing the development program for the Lamar Hatchery.

What Is the Bill of Rights Saying to "We, the People"?

EXTENSION OF REMARKS

OF

HON. FRANK A. BARRETT

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1950

Mr. BARRETT of Wyoming. Mr. Speaker, on March 16 last I inserted in the RECORD an editorial by E. F. Hutton. In my judgment, a second editorial by Mr. Hutton appearing in the Palm Beach Daily News of Florida entitled "What Is the Bill of Rights Saying to 'We, the People' "? is even a more important commentary on the situation confronting the people of our country today that it also should be inserted in the CONGRESSIONAL RECORD. I call attention, Mr. Speaker, to the fact that Miss Elizabeth Bentley, in her testimony before the Un-American Activities Committee of the House testified that while she was a graduate of one of the best universities of the country, never in all of her school career was she taught a proper course in the history of the United States. Miss Bentley admitted that she had joined the Communist Party and, worse yet, she admitted that she had entered into a conspiracy to filch secret documents out of various departments of our Government for transmittal to Russian emissaries. Her conduct shows conclusively that there is something very definitely lacking in our educational system. It seems to me that our public schools and our State universities should embark on a realistic program that would sell not only the students but all the people the great blessings of liberty which the common people enjoy under our system of Government. For that reason, Mr. Speaker, it seems to me that Mr. Hutton's editorial is most timely.

I therefore, under unanimous consent, insert in the Appendix of the RECORD the editorial by Mr. Hutton which appeared in the Palm Beach Daily News on March 18 last:

WHAT IS THE BILL OF RIGHTS SAYING TO "WE, THE PEOPLE"?

(By E. F. Hutton)

It is a potent symbol of something that should be as dear to all Americans as life, itself. It carries restatement of our heritage to the peoples of the 48 States.

Everything that men and women have hoped, prayed, and fought for since the dawn of history.

Why?

Because it all boils down to you—and is all about you.

Actually, that document is saying: "What is life without liberty?"

And the answer is echoed in your own soul. It is slavery.

Our Bill of Rights was conceived and started with the Magna Carta granted by King John 732 years ago. Then, in 1620, a band of Pilgrims, en route to America, made a compact, on board their frail ship the *Mayflower*.

Then, in 1776, the great-grandchildren of early settlers signed, sealed, and fought to make good a Declaration of Independence.

Then came that miracle called the United States Constitution and the Bill of Rights. We are now living in a tough world.

Freedom is on the auction block in many lands. So, why all the "to-do" about Freedom? Because we are in great danger of forgetting what we have and why we have it. That would be the first step toward the loss of freedom.

Our way of life is not perfect. No one is perfect.

Our Government is not perfect.

No labor union is perfect.

Our profit and loss and competitive system is not perfect. Nothing will ever reach perfection in any land in the entire world.

But America has spent 171 years developing the truest Republic on all of God's green earth in all known history.

We have established rules and regulations in which American institutions find perpetuity in constant modification and changes.

We have accorded to all such freedoms as man never before knew.

We have accomplished the highest standards of living, the greatest tolerance, materially and spiritually.

They are the steps in the ladder of the rise of man.

Isn't that what you want?

Freedom of worship; freedom of speech; freedom of action; opportunity to make progress; chance to expand; right to earn and save; right to vote; sanctity of home and family; right to work where and when you please; right to change jobs, without asking permission; right to live without control over your thoughts, your beliefs, your actions? Don't you want the right to exercise human ambitions?

You have them. But only "we, the people" of America have all of them, because of the Constitution and the Bill of Rights.

That's what we started with. Let us be sure we do not end by trading them, the most precious possessions ever had by any people anywhere.

Let not "we, the people" permit the change of our Declaration of Independence into the Declaration of Dependence.

All of our documents of freedoms are written and printed papers.

You can see these pieces of paper in the Library of Congress in Washington. They dignify your progress, and the progress of the whole world from darkness to light, from slavery to freedom. You can see the Mayflower Compact. You can see the Declaration of Independence—you can see the Constitution, a charter of, and for, the government of a welded 13 States.

You can see and read your Bill of Rights, the breath of life, the very soul of the Constitution.

In 1791, our Constitution, and the Bill Rights was the charter of freedom for 3,000,000 people living in 13 weak States.

We had no world industry, no world commerce, and no world power.

We were a company of dangerous dreamers, so the foreign lands thought; we believed in the rights of man.

Kings and princes—emperors and despots either ridiculed or hated us.

From 3,000,000 of nobodies, with liberty, freedom and rights of human ambitions and 13 weak States, in no time flat we became top world power in less than 171 years.

Now we have only 7 percent of the world's people, only 6 percent of the world's land area, and yet we have 35 percent of the world's railroads, 70 percent of the world's telephones, 80 percent of the world's automobiles, 66 percent of the world's wealth, and more.

By mass production—the industrial know-how—we have converted luxuries into staples within reach of the vast majority of our people. Such luxuries cannot even be found in foreign lands.

Now, how did we get all this? Are we superior beings? Not at all.

We, the people of America, have no more brains, but liberty gave us the right to exercise our brains—no better souls nor bodies than other people.

Neither race, creed, or color has had anything to do with our getting what we have and being what we are.

We had the rights of human ambitions. That made us what we are.

We have simply lived under a system that gives us the rights, the privileges, the liberty, and the freedom that every man, woman, and child should have.

We have these, because of the thoughts, the deeds, the plans, and the progress of man.

There is no such thing in this country as the common man. He is the most uncommon of all. He is what he is and has

what he has because he is an American citizen.

He has liberty.

When we, the people, lose that, we become not common men but common slaves. This so-called common man may be washing windows, cleaning streets, driving a truck, or working in a coal mine. That does not make him common.

Why?

Because no one has told him he must accept such occupation—not yet. Our uncommon man represents 75 percent of our jury system. Our uncommon man is our peer when judging whether we are guilty or not, before the law.

The jury system has never been smeared or belittled. It has done a good job. Yes; there have been some errors in decisions but then nothing will ever reach perfection.

The uncommon man holds the fate of our Nation in the palm of his hands. As he thinks he votes, strikes, and works.

There are facts he should have before him—facts of our social, economic, political, and public questions. Only industrial leadership can give him such facts. Some are doing it. More should be doing it.

Please, God, forbid the authority of any man to state: "My tongue is the law." When and if that becomes a fact America falls to the laws of the jungle. Let us keep the rights of freedom in America which, step by step, have been taken away in other countries.

There are many people in our country who have reached success. Many of them came here as immigrants because only under our Bill of Rights could they use their brains freely and their talents without fear.

But everyone here owns a share in the Constitution and Bill of Rights—everybody.

If we fail to grasp the significance of what these pieces of paper, which you can see in the Library of Congress, really mean to all of us, then we are scheduled for the dust heap of fallen nations. We have failed miserably to live up to the liberty and the freedom that has been handed to us on a platter by our two-fisted, God-fearing ancestors.

If there is a Godly way of life on earth, you have it.

Your right to escape controls and dictations. My right to make this statement. Your right to read it. Your right to throw it in the wastebasket.

Every single right you exercise from morning to night. Every safety you have all the night through, can be found in the Library of Congress.

The only enemies you have in the whole world are two in number.

One is the enemy who wants you to exchange your Americanism for some foreign ism and to take your liberty away from you by making this a planned-economy, police-governed autocracy.

The other enemy is you—too complacent, too careless, too indifferent, to protect what you have.

Patrick Henry said, "Give me liberty or give me death!"

Or, is it easier to say: "Master, here I am. Put on the ball and chain. Enslave me. I am thy good and chattel. I am nothing. You, the state, is all there is." Liberty isn't merely a heritage but a fresh conquest for every generation. We were once a weak nation having nothing but freedom and liberty. We were "short" on everything but the right to exercise human ambitions, our own initiative and enterprise.

But under our documents of freedom, we have become a beacon to the world. The right to enter America is now considered something like a passport to heaven by all who are not here.

Show us.

Where on the face of this earth has there been a country or a form of government by which communism, collectivism, socialism, has given the people more happiness, bigger pay checks, less hours of work, more comforts, more luxuries, better foods, better entertainment and greater opportunity than given by America under the American system.

Show us.

Not by arguments, dreams, blueprints, or imaginary figures, but the facts.

Show us.

Give us concrete evidence. Prove it by example, prove that any other system is better than ours.

Prove that the system, founded on our Constitution, gives less life, less liberty, less opportunity, and less freedom, than any other system.

Without a single political purpose, without a single hasty charge, without pointing a single finger of scorn, at any other system, let us review what we have; appraise, judge, evaluate, and know what we have before we trade it for any other form of government or bow to any other as being superior to ours.

Benjamin Hill stated: "The Constitution is my only client, its preservation is the only fee I ask." That is my credo. I ask no fee for my effort to preserve freedoms for "we, the people."

Budget Bureau Report on Panama Canal Tolls

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1950

Mr. ANGELL. Mr. Speaker, pursuant to permission heretofore granted, I include as part of these remarks an editorial from the San Francisco Call-Bulletin under date of March 15, 1950, entitled "Budget Bureau Report on Panama Tolls Errs in Not Recognizing Defense Value of Canal."

The editorial follows:

SERIOUS FAILURE—BUDGET BUREAU REPORT ON PANAMA TOLLS ERRS IN NOT RECOGNIZING DEFENSE VALUE OF CANAL

Pursuant to studies looking toward a revision of Panama Canal toll charges, the United States Budget Bureau issued a report and recommendations concerning Canal tolls.

In most of its aspects, the report has been greeted favorably by shipping interests.

However, the report is seriously defective in one respect, from the standpoint of west coast shipping, and is open to criticism on this point.

As the National Federation of American Shipping has pointed out, in analyzing the report, the Budget Bureau has failed to take into consideration the national-defense value and function of the Canal.

Under its recommendations, the entire capital investment of the Canal would be included in the base for computation of toll charges.

What this means, of course, is that shipping operators in the intercoastal or international trade would still be required to pay, in tolls, for a national-defense project.

This is manifestly unfair to private shipping operators, for it requires them to pay for something which is essentially a Government function and which should be paid for by the Government.

Such an arrangement, naturally, makes for higher tolls—which have an adverse effect on the shipping of San Francisco and other west-coast ports.

Shipping interests and labor, civic and business groups on this coast have been exerting themselves to combat this viewpoint, and in any final action on Canal tolls Congress should give heed to their side of the question.

The cost of national defense—and the cost of the Canal very largely represents a national-defense item—should not be thrown on the shipping operators.

Even the Budget Bureau's report concedes that the Canal was built for purposes of defense as well as commerce, and that it would be difficult to determine now which purpose was primary.

The report has recommended a division between the Government and the commercial functions of the Canal.

The former would be placed in the newly created Canal Zone Government; the latter would be assigned to the Panama Railroad Company, to be known as the Panama Canal Company.

"A logical, businesslike way" to give adequate recognition to the national-defense value of the Canal in toll computations, the Pacific American Steamship Association observed, would be "to reduce the capital cost of the newly proposed Canal company so that interest will be charged to commercial Canal users only on the basis of the Canal's commercial value."

In any final formulation of policy regarding Canal toll charges, Congress should insist that this be done.

Otherwise, shipping operators will have to bear an unfair share of Canal costs, imposed through unjustly high toll charges, and the maritime commerce of our port and others on this coast will suffer in consequence.

Inspections by Representatives of the Department of Labor

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1950

Mrs. BOLTON of Ohio. Mr. Speaker, I have recently received copy of a letter written by the president of Row, Peterson & Co. which gives so vivid a picture of methods that have been permitted to creep into our industrial methods that can never be often enough brought to the fore of the consciousness of the membership of this House and the people of the United States. We are constantly insisting ours is still a free economy. This letter presents certain doubts which I submit should give us pause:

ROW, PETERSON & CO.,
Evanston, Ill., March 20, 1950.

MR. MAURICE J. TOBIN,
Secretary of Labor, Washington, D. C.

DEAR MR. SECRETARY: Last Thursday I returned from an out-of-town trip to find one of your official representatives in the office inspecting almost everything. From Thursday morning to Monday night he bothered our office manager, annoyed our treasurer and bookkeeper, irritated me a little bit, and contrived to take up the useful time of 15 or 20 other people out of a small office of 70 or so persons.

He was pleasant enough and shall be nameless because after all he was but a minor vassal of the slave state, and I expect his counterpart is in every nook and cranny of the land. I gather, however, that all of the people he interviewed were divided between amusement and irritation and had somewhat

of an urge to throw him out the door "—— over teakettle" to use the language of one of my favorite boatswain mate friends.

He uncovered some crimes, too:

1. By diligent questioning he discovered that one of our editors had taken a manuscript home over the weekend and had done some work on it. She wasn't paid overtime either. In fact, until adroitly sweated out of her, no one had previously been aware of this alarming condition.

2. Another editor had been guilty of repeatedly working overtime for some period because she wanted to get two extra weeks' vacation to extend her trip to Europe. This she was alarmed to discover, is contrary to section something or other which says that all overtime must be paid for in the week committed.

3. The third and most serious crime is in process of commission. Your minion left a directive to the effect that some kind of a time clock, or book, or other watch dog must be kept on all of our editorial personnel. This involves some difficulty. I do not intend to personally check them in and out and besides, I am out of town a good bit. I certainly would not want to impose on one of the editors the task of checking on the balance, and to ask each editor to keep track of his or her own time, while it might be a logical procedure, would certainly break down at the end of the first week. As a matter of fact, consider the utter futility of any such registration scheme unless it were accompanied by guards at the front and back doors to search everyone leaving and entering the premises (refer to crime 1). What, also, is to be done about the most valuable part of an editor's work; namely, the idea which comes to one who wakes up between 2 and 3 o'clock in the morning? Is this to be overlooked?

We will freely admit that our combination scheme of a small drawing account with a split-up of the profits at the year's end does not fit the Federal statutes. We will be glad to pay any one of our people in accordance with the Federal statutes quite rigorously (if he or she will keep his own time), and we will be glad to include in the overtime the Sunday morning hour soaking the feet after the Saturday night dance should any one of our people express a desire to be paid in this fashion instead of in accordance with our present scheme. I doubt if this will eventuate because no signs of feeble mindedness have yet been apparent in our staff.

I am impelled to write you this letter and send copies to the Members of Congress because I have heard rumors from almost everyone to whom I talk that the thing most urgently needed in the Federal Government is a radical cut in expenditures. Since anyone can get the kind of government that your department is promoting very simply by going straight to Russia, it seems unnecessary to develop it here, and the implications are that Congressmen could find room for a large initial saving in expenses by sharply chopping the funds of the Department of Labor.

Very truly,

GORDON M. JONES, *President.*

Depletion or Destruction

EXTENSION OF REMARKS

OF

HON. ROBERT T. SECREST

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1950

Mr. SECREST. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Charles D. Fogle, of Marietta, Ohio:

DEPLETION OR DESTRUCTION

(By Charles D. Fogle, of Fogle & Fogle, lawyers, Marietta, Ohio, general counsel for Ohio Oil and Gas Association)

At first impression, it might seem that a discussion of the 27½-percent-depletion allowance in favor of the oil and gas industry and reasons for its continuation would be a highly technical one. A casual hearer might assume that it is a matter of concern to a relatively small group.

Actually, it involves two things of direct concern to every American—oil and gas and income taxes. In our highly industrialized society, we cannot live without these natural resources. In our Nation of highly developed government, we cannot survive without income taxes. Oil and gas producers are completely willing to pay their share of income taxes. But the tax must be fair if they are to continue to be income-producing.

An argument for retention of the depletion allowance is an argument for a fair income tax. It is not an attempt by a special group to avoid or duck fair taxes. It is not a new idea. What is new, or fairly new, is the theory that the industry should suddenly be deprived of a consideration under the income-tax law it has enjoyed for a quarter century.

The industry is not asking that it be permitted to pay less than its fair share of the tax burden. It is only asking that it not be taxed out of business.

The theory of an income tax in the United States dates back to Civil War days.

We are constantly being told that the major part of the Federal Government's income goes to pay for past wars and to prevent new ones. That was as true in the time of the Civil War as it is today in the cold war. The first Federal income-tax law was passed by Congress to pay for the Civil War. That was in 1861.

Although this was the first income-tax law, no taxes were actually collected under it. It was superseded by a law which became effective December 1, 1862. This law was further changed and amended and an income tax was in effect until 1872, when the act of 1870 expired by its own terms.

Then 24 years later came a Federal income-tax law on net income. The rate was a flat 2 percent upon all income above $4,000.

Reviewing the controversy that preceded the enactment of this 2-percent tax law we can smile—and we might well smile. Certain political factions in those days were all out in favor of the new Federal income tax. Others opposed it on the grounds that it was socialistic to levy such a tax in times of peace. Advocates of it were found mainly among the Populists and Democrats of the West. But the East fought it and fought it bitterly, even though the rate was, as stated, 2 percent.

Then in 1895, the United States Supreme Court when asked to review the income-tax question ruled by a split decision that the income-tax law was unconstitutional. Four judges dissented. The Court's reason for ruling it unconstitutional was that it was a direct tax and not apportioned.

The die was cast. It was evident by this time that the Nation favored the income tax. The sixteenth amendment to the Constitution empowered Congress to levy and collect taxes on incomes, from whatever source derived, and no consideration was given to apportionment or to any census or enumeration. It was passed by Congress in 1909 and ratified by three-fourths of the States in February 1913.

After ratification of the amendment the Congress enacted a net income tax law in 1913. The rates were graduated from 1 to 7 percent.

In this very first income-tax law a careful distinction is made between taxation of income and taxation of capital. Congress worked on the proper theory that it is unconstitutional to tax capital by way of income tax.

A special provision was written into this first income-tax law which would protect producers of oil and gas from being taxed on their capital. That provision came to be known as the depletion allowance. Actually, it is a type of deduction. The first depletion allowance was a deduction of 5 percent of the value of the production at the mouth of the well.

So we see that the depletion allowance is not only not a new idea, but that it dates back to the time of the original income-tax law.

The depletion allowance for producers is an essential part of the income-tax law. It is as basic and fundamental part of the theory of income tax as is the principle of depreciation in real estate.

The new income tax was only 5 years old when it was found that the depletion allowance as written in the first law was inadequate. It had not accomplished what it was designed to do; namely, prevent producers from being taxed on their capital. What had happened was that taxing a producer on 95 percent of the production from a lease, was, in effect, a tax on his capital.

To correct this the revenue laws were revised in 1918 and the principle of depletion allowance was broadened.

This revision marked the introduction of a new idea—the principle of fair market value. The new enactment said:

"Where the taxpayer on or after March 1, 1913, has discovered an oil and gas property and where the fair market value of the property is materially in excess of cost, the allowance for depletion shall be based upon the fair market value of the property at the date of discovery or within 30 days thereafter."

A further revision came in 1921 when Congress limited the allowance to the net income from the property computed before deducting the depletion. This was to prevent the allowance for discovery depletion from exceeding the income from the property. In 1924 it was limited to 50 percent of the net income of the property and in 1926 the law which is still in effect today was written, namely, 27½ percent of the gross or 50 percent of the net.

What the 1926 revision did was to substitute percentage allowance for discovery allowance. The discovery allowance was good in theory, but it presented so many administrative difficulties as to make it practically unworkable. In practice it also proved to be unfair and discriminatory.

So the 27½-percent depletion allowance was decided upon in 1926 and has remained in effect until the present time. How so arbitrary a figure as 27½ came to be agreed upon deserves a word of explanation.

Both theory of percentage depletion and the size of the percentage were arrived at by Congress after careful study. The Government made a survey of oil-production operations from the years 1918 to 1925. That survey showed that the annual average depletion of capital invested by producers in finding oil and producing it was between 32 and 33 percent. The House of Representatives passed a bill providing for a percentage-depletion allowance on gross income from a producing property of 30 percent in figuring taxes. The Senate passed a similar measure but setting the percentage at 25. The figure 27½ percent represents a compromise between these two.

I have outlined the history of the depletion allowance merely to show that the principle of percent ge depletion has been long recognized in this country as a fair one. The history also shows that the amount

decided upon is not a figure snatched from the thin air, but an amount agreed upon on the basis of long study.

Depletion has been defined many ways, but most simply put, it is an allowance for the year-to-year decrease in value of property by withdrawal of minerals.

As Senator CLINTON P. ANDERSON, of New Mexico, has said:

"The theory of depletion is that a reductio. from current income should be allowed in order to compensate for capital invested in a natural resource which is exhausted by production; or putting it another way, an allowance for exhausting capital or something that cannot be replaced, as oil or gas."

The percentage allowance is the only fair and reasonable method for figuring tax on the most unpredictable and capricious industry in the country.

Depletion allowance is not a tax loophole. If it be a tax loophole, the hole should be closed, not simply made smaller as is being recommended by some so-called tax experts.

Contrary to being a tax loophole, the depletion allowance spells the difference to many small operators between survival and failure. To others it means the difference between making a fair profit and getting by by the skin of their teeth.

The threat of removing or reducing the depletion allowance for oil and gas producers is the unfair result of a frenzied search for more tax dollars. Under pressure the administration is frantically reviewing the traditional tax sources to see where it can gouge a little deeper. To disturb the depletion allowance to oil and gas producers would be really a masterpiece of illogical thinking. It would be literally killing the goose that lays the golden egg. It makes no more sense than breaking up an old rosewood table for kindling because the shed is temporarily out of firewood.

It would plug the gap to be sure. Today's crisis would be solved, but what of tomorrow? What of the industry? It would mean taxing the capital of the members of a basic industry. That is always a deadly and dangerous policy for any nation to pursue.

In time it would have the effect of eliminating the independent producer. That in itself would be criminal. Of course, taxing any man out of business could never be considered a democratic practice. But aside from the personal tragedies of these thousands what would it mean to the Nation?

In the first place, it would encourage monopolies. Monopolies would be the inevitable result because only the very large could survive under such a crushing burden.

Second, it would mean a serious curtailment of the Nation's oil and gas production.

Third, it would have the unmistakable effect of discouraging exploration. The search for oil and gas is an immensely risky business. There is no way of eliminating that risk. The opening of a dry well is an all too frequent experience of many operators. The romantic tale of getting rich overnight on oil cuts a fine swath on the movie screen but the real-life facts tell a much grimmer story.

As was once said by Chief Justice Matthew J. Kane, of the Supreme Court of Oklahoma:

"To undertake to tax an oil or gas lease is to undertake to impose a tax upon the illimitable vista of hope."

Depletion is a recognition of the risky nature of the oil and gas industry. Costs of exploration and development are fantastic. The original purpose of percentage depletion was to permit the tax-free return of capital. It is this margin which permits the operator to discover and develop new wells. New discoveries are essential to the industry and they are essential to the Nation. In a time when we hear so much about the development of our natural resources it seems very strange, indeed, to be also contemplating a tax increase which will have the effect of discouraging discovery.

Only one wildcat in five finds production. Of all wells drilled in 1949—wildcats and development wells—more than one in three was dry. And this is not the whole story. Added to this woe is the fact that the costs of drilling increase geometrically as depths increase. In other words, a 10,000-foot hole costs 10 times as much as one of 2,500 feet.

It should be noted in connection with consideration of the high cost of exploration that it has been estimated by the Government that from 75 to 90 percent of the wildcat wells and new discoveries in the Nation have been drilled by independent operators.

Yet this is the group that would suffer the most by any tampering with the depletion allowance.

And new discoveries are not the only manner in which the small fellow would be hurt. Reduction or removal of the depletion allowance would cause many stripper wells to be abandoned and it would discourage secondary recovery operations. Although the output for stripper wells is small that output is needed to help swell the Nation's total oil output.

In days when we are struggling to build a strong defense and live in the constant threat of war it is no time to be talking about producing less oil.

Depletion is not a tax loophole, it is not a special privilege allowed the oil industry alone. Depletion allowances are allowed in the following industries: coal, 5 percent; iron ore, lead, zinc and more than 20 other minerals, 15 percent; sulfur, 23 percent; and other mines including precious stones and salt, discovery limited to 50 percent of net.

Finally, the threat of removal or reduction of the depletion allowance is a financial threat not only to the oil and gas industry but to the Nation as a whole. The industry controls 5 percent of our national wealth, enjoys 2½ percent of our national income—but—the petroleum industry and its products pays 12 percent of all our taxes, national and State and local.

In one year alone—1948—the industry paid out $1,200,000,000 in oil and gas royalties, and lease bonuses and rentals.

Thirty-seven States, 28 of them oil and gas producing, benefited from this expenditure. This means jobs and it means purchasing power. It helped not only men in the industry but the butcher, the baker, and the candlestick maker in all 37 States.

It is impossible to estimate the disastrous effect upon American business if oil and gas production is seriously curtailed. And curtailed it will be if depletion is not allowed thousands of small producers.

The industry is ready and willing to bear its fair share of the tax burden. It always has. It is not asking special favors. It is merely asking to be permitted to stay in business. To stay in business, incidentally, so it will be on hand 10, 20 and 30 years from now when the income tax man comes around. The same Federal treasury which would be bulging this year if it ravaged the oil and gas industry might well be rattling in years to come.

The 27½ percent of receipts limited to 50 percent of net income from oil and gas properties is a tax exemption and not a depletion income. It is a deserved tax exemption. To take the exemption away would be asset confiscation, to reduce the exemption would be partial asset confiscation. Neither is justified. Removal or reduction will cripple. A tax crippled industry can't produce. It is depletion exemption at 27½ percent or industry destruction.

Woman of the Week

EXTENSION OF REMARKS
OF
HON. JOHN H. MARSALIS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1950

Mr. MARSALIS. Mr. Speaker, I am inserting herewith an article entitled "Woman of the Week" by Glad Morath, which appeared in the Colorado Springs Gazette-Telegraph on Saturday, April 1, 1950. It pertains to the life and activities of Mrs. Lillian H. Kerr, a resident of Colorado Springs, Colo., for many years, who has been nationally prominent in connection with the equal rights for women movement. She was one of the three women who composed the present proposed equal-rights amendment in 1923 at Colorado Springs.

Since this amendment has already passed the Senate and a discharge petition for its consideration by the House is now pending, I believe it most pertinent that the article be brought to the attention of the Members of this body. The National Woman's Party has also requested that it be inserted in the RECORD.

Mrs. Kerr has been most outstanding in civic and political affairs, and I feel certain that the Members will enjoy reading this brief résumé of her history and activities.

The article follows:

WOMAN OF THE WEEK

(By Glad Morath)

When the suffrage amendment was added to the Constitution of the United States in 1920, most of us believed that women had been given complete equality with men, and that nothing mor was to be desired in the way of women's rights. On the contrary, most State laws still deny to women many rights enjoyed by men. In 1923, right here in the city of sunshine, three women composed the text of a proposed equal-rights amendment, which would supersede State laws and give all women of the country equal rights and privileges with men under the law. One of these women was Mrs. Lillian H. Kerr, whose name for 50 years has been synonymous with any cause she believes to be beneficial to women. For 27 years Mrs. Kerr has worked personally, through the National Women's Party, and by writing letters to Congressmen, Senators, and members of the Judiciary Committee to get this amendment before Congress. In the welter of H-bomb and crime news, few of us noticed that on January 25, the amendment passed the Senate by a vote of 63 to 16.

The text of the amendment reads:

"Equal rights under the law shall not be denied or abridged by the United States or by any State on account of sex.

"Congress and the several States shall have the power, within their respective jurisdictions to enforce this article by appropriate legislation.

"This amendment shall take effect 1 year after the date of ratification."

A few minutes before the vote was taken, a crippling and limiting rider, known as the Hayden rider, was attached, which Mrs. Kerr and members of the Women's Party feel almost nullifies the power of the amendment. It reads:

"The provisions of this article shall not be construed to impair any rights, benefits, or

exemptions now or hereafter conferred on persons of the female sex."

Naturally Mrs. Kerr will go on with her personal protests and will seek support for the passage of the original amendment, sans the rider, through clubs and individuals, and by supporting further action by the National Women's Party, which she helped to organize and of which she is an officer. She is also a member of the World Woman's Party.

"We are the political descendants of Susan B. Anthony," declares Mrs. Kerr. "It took 75 years to get suffrage, and it has taken 27 years to get the equal-rights amendment before Congress.

"There are only two rights for women that are nationally assured. One is the right to vote and the other is the right to choose citizenship when marrying an alien. All other rights are matters of State law. Colorado has the best State laws for women in the whole country."

The fact that Mrs. Kerr has devoted a large part of the 50 years of her residence in Colorado to politics no doubt has much to do with the good fortune of Colorado women.

"Peace is the most important problem of all," observes Mrs. Kerr. "Without peace nothing else matters. My second concern is always for the advancement of women. I glory in the things women are doing and the wonderful careers they are building for themselves. For the second time in 30 years the National Women's Party is conducting research in each State to uncover laws that are discriminatory to women.

"In some States," declares Mrs. Kerr, "a man can take a woman's salary. In others she can have no legal say about her children—her husband has their sole legal custody."

Mrs. Kerr, who lived in Texas before coming to Colorado, was the first feminine notary public in the Panhandle.

"I think I may have been the first in the whole State of Texas," she says. "Some people would not accept my seal because of my sex. I once sold property there, and could not close the deal without my husband's signature."

In 1918 Mrs. Kerr started the movement in Colorado Springs for municipal ownership of utilities, presenting to the city council on November 1, 1918, a petition signed by 600 citizens. Her efforts were not fully rewarded until 1925, when municipal ownership took effect. During the intervening years she and her helpers wrote to other cities, getting all the available information possible as to the differences in consumer costs.

Mrs. Kerr is the widow of the late Robert Kerr, former county judge, who passed away in 1928. She was born in Independence, Iowa, in 1867, and was 83 years old on her last birthday. While her activities are curtailed because of her advancing age her mind and her thoughts are young and sharp from constructive usage. She is still the "power behind the throne" in many activities of women's organizations in Colorado Springs. A brief review of her activities gives a clear picture of her determination to work for the benefit of humanity in general and women in particular.

Mrs. Kerr organized, and was the first president of the Colorado Springs Woman's Club. For many years she conducted classes in parliamentary law and current events, enabling club women to learn smooth and businesslike rules for presiding at meetings and to keep informed on national and international events. Her pupils were outstanding women in all professions and lines of business, as well as those who conducted more or less social groups.

A member of the Zebulon Pike Chapter, Daughters of the American Revolution, she served as State parliamentarian for the organization for 3 years. She is a member of the north end WCTU, and has always been an active exponent of the temperance cause, and is a member of the First Congregational Church.

She was originally a Republican but supported Theodore Roosevelt when he broke from the party. She served as a delegate to the Bull Moose Convention which nominated him in Chicago. Later, she became a Democrat, and in 1924 ran for Congress.

At one time she served as chairman of the civil service committee of the State Federation of Women's Clubs, because of her strong belief in the merit system. During World War I she served as a Red Cross worker at headquarters, and was a member of the speakers' bureau of El Paso County for the Liberty Loan drives. Later, she went to Washington, D. C., serving in the department of compensations and claims, in the War Risk Bureau. After the war, she took the field for ratification of the suffrage amendment, working in Colorado, Oklahoma, Wyoming, New Mexico, and Washington. These five States were among the first 36 to ratify the amendment.

She was long active in YWCA work, and was organizer of the women's auxiliary of the YMCA. For 10 years she was a member of the faculty of the Labor College of Colorado Springs. She was active in the Business and Professional Women's Club, and was named an honorary member of Alpha Iota, a young business women's sorority, which she helped organize years ago. In the days when disarmament seemed to spell world peace, Mrs. Kerr was appointed from Washington as chairman of the women's committee for world disarmament, an emergency committee to push the Borah resolution for a world conference on disarmament. She is a member of the Peoples' Mandate for Peace, an organization primarily interested in Pan American affairs where women are concerned.

She was a charter member of the Drama League, from which grew the Civic Players, and was president of the organization at the time the Fine Arts Center was opened to the organization. She was occasionally seen in dramatic parts, displaying histrionic ability as well as political finesse.

Mrs. Kerr had an exceptionally happy and successful married life, and is far from being a manhater, or a masculine-type suffragette, but she strongly believes that men have forfeited the right to govern, and that women will have to take over if there is to be any lasting peace in the world.

"Men have ruled the world for thousands of years," she observes. "And what have they accomplished? Wars and more wars. Now we don't dare to have another war, or the human race will be destroyed. So it's high time women took the reins. Things can't go on this way. The women can stop it, and they will. I'm very optimistic on this point."

When the women of the United States go to the polls to vote, they forget that that privilege is a comparatively new one. Few, if any know or remember the struggle women like Mrs. Kerr endured to bring about this privilege. Some of the severest critics of the suffrage movement were women, and it was quite the thing to ridicule and caricature those who pioneered in the campaign. But, as always in a successful crusade, the pioneers seldom receive the credit they deserve, and the fruits of their labors are enjoyed even by her critics.

No doubt, an equal-rights amendment in some form will eventually be passed, again through the efforts of a far-sighted few. And, if and when the history of the progress of women is written, Mrs. Kerr will deserve a place in the local, State, national, and international picture. She has unwaveringly followed what she believes to be the rigid path of duty, and few statesmen or public officials, have done as much for the general good of either sex. Regardless of her age or present limited activity, Mrs. Kerr will continue to be a firebrand for the rights of her sex, and she is respectfully designated "woman of the week."

Tribute to Hon. Alexander Wiley, of Wisconsin, in the Wisconsin Jewish Chronicle

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 19 (legislative day of Wednesday, March 29), 1950

Mr. SCHOEPPEL. Mr. President, I have in my hand a very splendid tribute which has been paid to our senior Senator from Wisconsin [Mr. WILEY] in the editorial pages of the Wisconsin Jewish Chronicle in the March 25, 1950, issue of this important publication.

The editor pointed out the Senator's splendid services in many humanitarian causes. I believe that this editorial will be of interest to my colleagues and to Americans of all faiths, and I ask unanimous consent that it be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR ENLIGHTENED STATESMANSHIP

The Chronicle has always hewed to a nonpartisan line in politics. We have steered clear of any alliances or entanglements with any party, and we have never endorsed any candidate or politician, however worthy may have been his record. We have believed that party and personality was a choice which our readers were sufficiently intelligent to determine for themselves.

It is, therefore, somewhat of a rarity that these editorial columns should single out Senator ALEXANDER WILEY for particular praise, but we find that the senior Wisconsin Senator has been most conspicuous of recent months in his earnest advocacy of affairs which deal with matters most humanitarian in their context. He has been sympathetic and understanding in legislation dealing with human rights, and he has exhibited a keen interest and assumed a forward position in the espousal of causes relating to international justice for Israel.

We commend Senator WILEY for his attitude and fight in behalf of the liberalized DP legislation before the Senate; for his strength and fortitude in advancing the adoption by the United States of the Genocide Convention, and for his deep concern with the disturbing signs of renewed hostility in the Far East, and his urgings upon the State Department that the latter express to Great Britain its anxiety concerning the tremendous shipments of arms being sent to the Arabs.

We are mindful that Senator WILEY will be a candidate to succeed himself this fall, and we therefore hasten to add that this is not intended to serve as an endorsement of Senator WILEY. We merely believe that credit should be given where it is due, and Senator WILEY has manifested qualities of enlightened statesmanship in several worthwhile directions.

Expenditure of Government Funds for Purpose of Hearing Discussion of Brannan Plan

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 19 (legislative day of Wednesday, March 29), 1950

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial from the Richmond News-Leader.

It appears to me that the propaganda machine of the Federal Government has reached a new low when it uses Government funds for the purpose of hearing the Secretary of Agriculture explain the Brannan plan.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EIGHT DOLLARS A DAY TO LISTEN TO MR. BRANNAN

Farmers who have been paid by the Government for fertilizing their land, raising legumes to improve their land, planting trees to keep their land from eroding, turning under green crops to increase the value of their land, and growing anything they like on it later whether there is any market for it or not, are now being paid by the Government to attend political meetings, at which the Government pays the speakers to speak to them.

This latest example of prodigal squandering of public money was disclosed at St. Paul, Minn., on April 4, when Senator HUBERT H. HUMPHREY, who is being paid $15,000 a year to attend to legislative duties in the United States Senate, and Secretary Charles W. Brannan, who receives $22,500 a year to administer the Department of Agriculture, traveled at Government expense to St. Paul. They went there to urge support of the Brannan plan to a group of farmers, all of whom had been paid $8 a day and traveling expenses to come from all over Minnesota to hear them. So far as can be learned, the meeting of 5,000 community committeemen, summoned by the Production and Marketing Administration of the Department of Agriculture, had no other purpose than to afford the committeemen an opportunity to see and to hear our Secretary of Agriculture, Charles F. Brannan. "We feel," the official PMA letter announcing the meeting stated, "it is extremely important for you to have this chance to hear your Secretary, who is making a terrific fight to maintain some measure of economic stability for farmers."

To make it worth the committeemen's time to come, they were told their expenses to and from St. Paul would be paid and per diem of $8 would be allowed for 1 or 2 days. In per diem alone, this meeting cost the taxpayers more than $40,000—there is no way of estimating how much more it cost them in traveling expenses—Mr. Brannan's expenses for the trip, including an entourage of seven which he took with him, have been estimated at $15,000; anything between $75,000 and $100,000 is a reasonable estimate of the total cost of this one meeting to the taxpayers. And at the meeting, Mr. Brannan was quoted as saying that it was one of several that are being held throughout the country.

According to all press and other accounts, Mr. Brannan divided his speech between an impassioned appeal for support of the Brannan plan and an attack on the present Agricultural Act, during which he frequently assailed Allen B. Klein, the head of the American Farm Bureau, who supports it. Now Mr. Brannan may not like the Agricultural Act of 1949, but it is the law of the land; Mr. Brannan is charged with administering it and has sworn to do so. Under any circumstances, the propriety of his denouncing it throughout the country and lobbying for passage of his own bill, would be questionable. There is no question at all whether public money should be used to pay audiences to hear him do so. Clearly it should not. If no worse can be said for it, this constitutes a shocking extravagance in the use of public funds, the more outrageous and indefensible in that it occurs at a time when the Nation is running a deficit of $5,000,000,000 a year.

Government Financing

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 19 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Deficit Grows—and Still Congress Votes Spending," from the Philadelphia Inquirer of this morning.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEFICIT GROWS—AND STILL CONGRESS VOTES SPENDING

It is not necessary to accept as final the estimate of the Joint Congressional Committee on Internal Revenue that the deficit this fiscal year will reach $6,700,000,000 to recognize that red-ink spending is still a top national problem.

Yet by its vote authorizing the spending of $1,500,000,000 for navigation aids and flood-control projects in various sections of the country, the Senate has afforded alarming signs that it is still following a head-in-the-sand policy when it comes to dealing with the deficit situation.

And unfortunately, the Senate is not alone in this. The House passed a similar waterways bill, allowing for spending $1,117,000,000. The Senate simply raised the amount—and for projects which Senator PAUL DOUGLAS rightly termed "flagrant examples of pork."

This is the kind of legislation that breeds deficits. Worse than that, it reflects the custom of Congressmen, especially in election years, of putting politics before any obligation to face the responsibility for the financial stability of the Federal Government. Sectional interests and vote swapping combine to build up a costly list of a flood-control project here, a dredging project there, until the Government is committeed to spend billions it doesn't have.

Such reckless voting has brought us to a situation where the deficit, according to the joint committee staff, will be $1,200,000,000 more than forecast by President Truman. The staff may be wrong, but its record is at least as good as the President's in these matters.

Mr. Truman cannot escape his own responsibility for this situation. He has presented huge budgets without apparent concern for the fact that they can't be financed out of current revenue. But even his inflated budgets didn't include an appropriation for the waterways projects this year.

Congress should face the financial facts and refuse to vote the waterways appropriations—still necessary before this additional drain on the Treasury can become a reality. If the deficit menace is to be ended Congress will have to do more. It will have to stop committing the Government to present or future spending unless it has made sure that the revenue will be enough to pay the bills.

My Dear Mr. Truman

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES

Wednesday, April 19 (legislative day of Wednesday, March 29), 1950

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "My Dear Mr. Truman," published in the Sussex Countian, of Georgetown, Del., on April 13, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MY DEAR MR. TRUMAN

With your vast national and international interests, you are not cognizant of the fact, probably, that there is a little county in Delaware by the name of Sussex. There was, however, an important news story coming out of our northernmost border town of Milford last week that you should have read. It had to do with jobless benefits. This story appeared in the Wilmington papers the same day that you asked Congress to hike unemployment compensation to $30 a week, plus additional pay for dependents. Here's the Milford story:

This small town in Delaware decided to offer jobs to 10 men who were receiving unemployment compensation. What happened? Of the 10 notified to report for work, 5 failed to show up and were automatically dropped from relief rolls. The sixth man immediately obtained a job in private industry. He was dropped from relief, as well as another man who worked only 1 day and quit. Seventy-five percent of the loafers were weeded out.

Mr. Truman, don't you know—all the rest of us do—that what is the case in Milford is true in your home town in Missouri as well as in the great cities of this vast country. Seventy-five percent of those receiving Uncle Sam's dole are not deserving of it. You are going on the false assumption that all men are industrious and want to work. You know human nature better than that. If you keep on increasing the amount paid to the unemployed, you are making this Nation a land of loafers. You'll get more votes next election, but you are "selling the United States down the river," and making a lot of hardworking citizens support a lot of lazy people.

Try the Milford "work-relief" plan throughout this country. You will find out, as quickly as Milford did, that you and Uncle Sam are being taken for a ride; that billions of dollars are being wasted that could go for defense. If you keep on, you are going to take the incentive to work away from all of us. If compensations go up to $30 a week, plus additional pay for dependents, why most of the citizens will do better by themselves if they quit work. Why should we lift when we get better pay if we lean. Please, Mr. Truman, check the Milford plan.

A Review and a Warning

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 19 (legislative day of Wednesday, March 29), 1950

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Review and a Warning," published in the bulletin of the metal trades department of the American Federation of Labor, of March 19, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A REVIEW AND A WARNING

The metal trades department is again compelled to call to the attention of all, the shameful imposition being practiced upon the navy yard employee by the United States Department of Defense.

We cannot accept lightly the discarding of the rights of the civilian navy yard worker. Not only his right to work; not only the forced abandonment of his home; not only the necessity of his seeking employment in sections of the country far distant from the community in which he has established roots, but the crowning assault has been made upon him and upon all American labor, to have forced, captive, and lesser-paid labor perform the work for which the navy yard civilian worker is traditionally called upon to perform. This is work for which his training eminently fits him, work which a statute of the United States says he shall perform.

We refer to the ever-expanding use by the Department of the Navy of enlisted personnel in the naval shipyards and their replacement of the civilian worker.

This charge is frequently denied by the officials of the Department of Defense, but denials do not change the facts. The files and records of the metal-trades department are replete with cases, including the nature of the work performed, the location, the dates, and all other information pertinent.

Members of Congress have protested to no avail. Regrettable as it may seem, unbelievable as it may sound, Congressmen protesting have been given the same run-around as has the navy-yard worker. Quite true, letters answering Congressmen's protests, bearing the signature of the top official down through to lesser officials, have been sent denying that enlisted personnel are replacing civilians. These replies all attempt at justification of the Navy Department's practices, rather than an acceptance of the issue, or a denial, or admittance that they are in violation of the intent or spirit of the statute of 1912, which statute prescribes limitations on work which the enlisted personnel shall perform.

It is also interesting to note that, although these letters to the Congressmen bear different signatures, the replies are so alike in each instance that, to say the least, they challenge the theory of coincidence.

To emphasize the position of the Department of Defense, it is best to reprint two orders issued by the Secretary which speak for themselves. The first was issued October 14, 1949.

"The Department of Defense is responsible for the security of our country. Civilian employees share fully in that responsibility. Use of civilian employees affords abilities not otherwise available, assures continuity of administration and operation, and provides a nucleus of trained personnel necessary for expansion in any emergency. Because civilian employees free military personnel for primarily military duties, they will be utilized in all positions which do not require military skills or military incumbents for reasons of training, security, or discipline.

"The establishment of a work environment in which civilian employees will be able to contribute most effectively shall be the responsibility of every person who plans or directs the work of others. Supervisors will provide progressive and constructive leadership to individual employees and shall endeavor to create sound management-employee relationships. They will insure that every employee understands what is expected of him, to whom he is responsible, and his work relationships with his fellow workers. Productive efficiency can be built only upon a recognition of the individual as the basis of the organization and through application of sound principles of human relations.

"The following principles will guide the conduct of human relations in the Department of Defense:

"1. There shall be no discrimination because of race, sex, color, religion, national origin, lawful political affiliation, or physical handicap.

"2. Employees shall be placed in jobs for which they are best fitted and shall be given opportunities for advancement.

"3. Training necessary to insure improved performance and individual development shall be provided.

"4. Appraisal of work performance shall be made fairly and objectively on a continuing basis and such appraisal shall be discussed with employees.

"5. Within whatever compensation schedule is applicable, employees shall receive equal pay for work of equal difficulty and responsibility.

"6. Working conditions shall be made safe and healthful as possible.

"7. Recognizing that a well-informed work force is a productive work force, employees shall be informed, insofar as possible, of plans and policies affecting them and their work.

"8. Employees shall be encouraged to express themselves concerning improvement of work method and working conditions.

"9. Employees shall have the right, without interference, coercion, restraint, or reprisal, to join or refrain from joining any lawful employee organization or association.

"10. Any employees having a grievance shall be accorded a fair and prompt discussion with the supervisor immediately concerned and, failing prompt and statisfactory adjustment, he shall have a right to appeal, under established grievance procedure. In presenting a grievance, an employee shall be free from interference, restraint, or reprisal, and he may designate a representative of his own choice to assist him.

"Maintenance of sound management-employee relations is not the responsibility of management alone. The Department of Defense recognizes its obligations to its employees. In return, it makes reasonable demands of employees to discharge conscientiously their assigned duties in the most effective manner possible, to respect administrative authority of those directing their work, and to observe the spirit as well as the letter of the laws and regulations governing their official conduct.

"This policy is applicable throughout the Department of Defense. The Secretaries of the Army, the Navy, and the Air Force will assure that it is made effective within their respective departments.

"LOUIS JOHNSON."

The metal trades department and its constituent organizations can, and do subscribe to this statement.

But, what happened? Either the statement was contrary to the practices being carried on, or someone was responsible for the Secretary making another one on the same subject.

The first release could not have been much more than circulated when the second appeared within a period of 60 days—December 14, 1949. The high-sounding pronunciations of October 14, of human relations were forgotten.

In their place were apologies for, and denials of intent of the October 14 statement, evasion of the issue and the magnifying of training, inconsistency, and finally, the mailed military fist. We quote this statement:

"Memorandum for the Secretary of the Army, the Secretary of the Navy, the Secretary of the Air Force

"The over-all statement of personnel policy for civilian employees in the Department of Defense, released on October 14, 1949, contained the following sentence:

" 'Because civilian employees free military personnel for primarily military duties, they will be utilized in all positions which do not require military skills or military incumbents for reasons of training, security, or discipline.'

"The question has been raised as to whether this statement of policy would require that civilian employees be hired to perform necessary repair and maintenance work on military equipment or facilities, even though military personnel are available to perform the work because, temporarily, they are not required for primarily military duties.

"The quoted statement of policy recognizes that certain positions will require the use of military personnel for reasons of training. This is particularly true of operations involving the necessary repair and maintenance of military equipment or facilities, in view of the requirement that military personnel be able to carry on these operations under conditions which preclude the use of civilian personnel. However, aside from the question of training, it is not my intention that this policy statement be construed so as to require the employment of civilians when military personnel are temporarily available for these operations, since any such construction would cause unnecessary expenditures of public funds and would prevent the realization of the economics in operations for which we must constantly strive. Therefore this statement must be construed to mean that whenever military personnel are available because, temporarily, they are not required for primarily military duties they shall be utilized, in the interest of economy, to perform necessary repair and maintenance operations on militay equipment or facilities.

"This will not, of course, change the original intent of the policy statement and authorize the use on a continuing basis of military personnel on jobs which are primarily civilian in character and where the factors of training, security, or discipline are not present.

"LOUIS JOHNSON."

We cannot accept the thesis of this December 14 declaration and remain or hope to remain very long free American workmen.

It becomes more and more apparent that the last one to profit by experience is the United States Government, and in this instance, the United States Navy Department.

So the record may be complete, let us review briefly the navy-yard worker and his accomplishments.

First, there was a tremendous expansion in shore facilities prior to the emergency preceding World War II. It reached its peak somewhere in 1945. Thousands of skilled men, responding to the call of their Government, moved into naval shipyard areas and went to work, in many instances, at much lower rates of pay than they could have received in most other industries. Many

of these skilled mechanics subjected themselves to additional training to fit them for navy-yard work. This training came from association with and benefiting by the experience of the skilled navy-yard men who had made naval shipyard work their career. Many of these navy-yard workers had never worked anywhere else. They had learned their trade there and were accepted as being the highest type of mechanic. They were part of the community in which the shore facilities were located. They purchased homes. Their children attended school in the same area, and in many instances, aspired to succeed their fathers in navy-yard work. At least all of these people were dependent upon navy-yard employment in one form or another. They were an essential part of the economy of the section in which they lived.

Among the many thousands of new employes in the yards were some not so highly skilled as the regular navy-yard worker or the journeyman mechanic. Thousands of navy-yard employees, following the same course of employees in private industry, became either inducted or enlisted in some branch of the armed forces. These navy-yard employees were very carefully screened by those responsible for the production of naval vessels however, with the result that deferment was forced upon those considered more essential. Therefore, even though the employee may have wished to enter one of the military services, he could not.

As a result of this, and with the passage of the Veterans' Preference Act, we have a great many veteran navy-yard workers, some with at least 20 years of seniority, being replaced by navy yard employees of a year. In some instances, sons have replaced fathers. But, even with the inequities of the Veterans' Preference Act, which has caused great hardship among some navy yard workers, it is still something tangible. It is also the law and can be corrected through legislative channels if found necessary or advisable.

However, the latest challenge to the navy-yard worker is something else. It is something which is being fostered and carried out by some who are either not aware of the traditional practices of the Navy Department in its relation with civilian employees, or who do not care. The new practices are alleged to result in economies of operation and to effect economy of Government spending.

We assert that present practices, in substituting enlisted personnel, are neither economical, sound strategically, nor fair to the trained navy-shipyard personnel. Any economies which may result from pay-roll reduction of civilian personnel are more than balanced by the numbers required to perform like work from other sources.

So there may be no misunderstanding about labor's attitude toward the enlisted sailor, let us say we offer no criticism of him whatever. We have the highest admiration for him. He represents the finest type of young American manhood. The vast majority are the sons of workers. Large numbers are the sons of men who are dependent upon work in the naval shipyards for their livelihood. True to their oath to their Nation, if ordered they are compelled to carry out the orders given them, dissatisfied as they may be. We would not have them do otherwise.

Further, make no mistake about it, we all favor economy in the administration of our Government, regardless of its branch, and who it may affect. But we submit that it is not economy, nor is it just, that military personnel, enlisted for military duty, with the attendant benefits and obligations, be used to replace Government employees at lower rates of pay, and yet at higher aggregate costs—that compulsory guaranteed labor be used to replace free labor. This is totalitarianism in its initial stages.

There is still another aspect to this invasion of civilian rights which must be apparent to those charged with the administration of national defense.

Present practices create the possibility that workers in the future, if they are recruited for naval-shipyard work, will request rates of wages comparable to those they could obtain in private, commercial employment. The attraction of working in the navy yard will be dissipated by the knowledge that as soon as enlisted sailors are available and not needed for the purpose for which they enlisted, they will take the mechanics' job. Surely this is not a very inviting prospect for the mechanic or the recruiting of one.

In addition to the previous comments, it is evident that attention should be focused upon another phase of current developments which may well transcend in importance any other question which has been raised.

We refer to the gradual usurping by the military of functions which are essentially civilian. We agree that full and complete defense measures are necessary to protect our Nation, its people and our way of life. In accepting this premise, American people must never forget that our Government is one of laws, one of representatives chosen by the people of the Nation in free elections; a Government responsive to the wish of the majority of the people, or as it has been so aptly expressed, "of, for and by the people."

Under such a form of government it is difficult to foresee any possibility of that government being challenged from within.

However, we assert that today there exists a challenge to the rights of civilians. This is evident in the gradual assumption by the Department of Defense in the replacement of free labor by enlisted, military personnel.

It is not difficult to envisage military dictatorship, without military personnel under military control and conditions carrying out every phase of defense operations, including those civilian in character.

In the formation of our Government it was never proposed that the military branches should be a law or body unto themselves. The Constitution provides for a civilian commander in chief in the person of the President of the United States. This principle has been further carried out by the selection of civilians to be the chiefs of the various departments of defense. This system has proved eminently satisfactory in the past. Perhaps not to those whose horizon is clouded with visions of an entire nation's economy and people being subjected to the efficiency, precision, and obeisance of a marching army, but we must accept the fact that under civilian control, we as a nation, have managed to get the job done for a century and three quarters. Comparison with the history of other nations of the world, who have moved from monarchies to pseudo-democracies, to dictatorships, proves the wisdom of continuing civilian control of all branches and agencies of our Government.

But we must submit that with the complex, scientific, highly technical development of defense mechanisms, a temptation is offered to military administrators to bypass the civilian and to become an agency apart and free from the everyday, not too efficient seeming, administration of a real functioning democracy such as our own.

The Nation expects its civilian administrators to protect it against any movement which might destroy or tend to destroy its essential civilian character. We want to believe that this basic cornerstone of our freedom will be as zealously guarded in the future as it has been in the past.

We believe the principle must be practiced, not on the basis of economy of operation in terms of dollars and cents, as is professed at the present time in the use of enlisted personnel and the discharge of civilians, but on the basis of the preservation of an ideal.

Billions of dollars have been spent in the past to preserve our democracy. Billions are being spent now. Billions will be spent in the future. Great sacrifices have been made in devastating wars. We do not propose to permit this most cherished possession of the people of our Nation to be undermined and menaced under the guise of economy or ambition.

And, we further submit, that we have every right to expect that work traditionally performed by civilians continue to be performed by them, and that any move away from traditional civilian administration in any branch of our Government be halted.

Bonnie Mae Mathews

EXTENSION OF REMARKS

OF

HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 19 (legislative day of Wednesday, March 29), 1950

Mr. ELLENDER. Mr. President, radio station WWL, New Orleans, is Louisiana's only clear channel radio station. WWL has been a willing public servant ever since its beginning in 1922. With its clear channel on 870 kilocycles it is able to extend its service from the immediate environs of New Orleans to remote sections of Louisiana and nearby States to give some folks the only radio service they are able to enjoy and to others a choice of programs which would otherwise not be possible.

I think it is interesting to note a recent public service of WWL which is typical of that station's dedication to the good will and well-being of the folks in the deep South. Without further comment I hereby ask unanimous consent to have inserted in the Appendix of the RECORD this brief article in response to an American Red Cross appeal for aid to a child suffering from the dreaded disease, nephritis.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

New Orleans WWL 50,000-watt clear-channel station teamed up with the American Red Cross, Pan American World Airways, and Mid-Continent Airlines recently to save the life of 8-year-old Bonnie Mae Mathews, of Coushatta, La.

Watermelons, which are out of season, were desperately needed for use in the treatment of nephritis, which Bonnie Mae had contracted.

The American Red Cross' appeal for the hard-to-get melons was aired over WWL, and within 24 hours melons flown up by PAA from Balboa, C. Z., were being fed to the child victim.

Pan American officials have assured the Red Cross and WWL that they will continue to supply the watermelons as needed for an indefinite period.

The melons were received in New Orleans by George Shannon, WWL's farm-service director and flown to Coushatta by Mid-Continent Airlines.

Meantime Bonnie Mae is beginning to show improvement on her diet of melons, which is a must if she is to overcome the dread nephritis.

Texas City Booms Again

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 19 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Texas. Mr. President, one of the most inspiring stories of community initiative in our national history is the heroic story of Texas City.

Three years ago this month this city on the Gulf coast of Texas was virtually destroyed by a gigantic explosion which killed 500 of the city's citizens and injured 2,000 more.

Today the scars of that terrible moment remain only in the hearts of Texas City residents. On the surface the city shows no marks of the violence which tore out its heart in 1947.

All Texans are very proud of the city which bears the name of the State. I ask unanimous consent to include in the Appendix of the RECORD today an article from Business Week magazine of April 15, 1950, reporting on the amazing progress made in rebuilding Texas City.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Three years ago, on a warm April morning, the freighter *Grandcamp* was burning alongside a pier at Texas City. It blew up. In the train of explosions that followed, over 500 people were killed, 2,000 injured. Much of the town was left in wreckage.

This week, on the third anniversary of the holocaust, Texas City claims it's the shiniest city in America—and very likely is. Its industries have not only been rebuilt; they are setting new production records. By 1948, chemical and petroleum refineries in the Texas City area were valued at $129,000,000, and some $15,000,000 of new construction have been added since then. All together, these plants turn out some $500,000,000 worth of products a year. Pay rolls of the 500 firms in the area come to $23,000,000.

Signs of Texas City's rebirth can be seen everywhere. Along the city's streets rise rows of new houses and buildings. Texas City has a new high school and elementary school, two new department stores, and a host of smaller ones. Not including industrial plants, over $1,700,000 worth of building permits were issued in Texas City in 1949.

Texas City has more people, too. Population was 18,000 in 1946, is 27,000 now. In recent months, homes for about 1,000 families have been put up. On the outskirts of town new subdivisions have sprouted, complete with streets and utility lines. Even so, 42 percent of the people who work in Texas City must still live in other towns. "If we could just build fast enough," said one enthusiastic citizen, "we'd have a population of 50,000 today."

It took more than an explosion to overcome Texas City's favorable location. It has always been a transportation center. Five railroad trunk lines serve the city; it has water shipping; it's near Texas' oil fields. Before the disaster, Texas City ranked as eleventh largest port in the United States. It hasn't regained this spot yet, for debris is still being removed from the burned docks. But even now, new docks are being planned for handling grain, sugar, potash, and other cargoes.

Seatrains are making two calls a week at the city, handling about 15,000 loaded railroad cars in and out of the port annually. Another 31,000 cars a year are handled by direct-rail connections.

Of the industrial plants flattened by the blast, Monsanto Chemical Co.'s suffered most. Its polystyrene unit, finished just 3 months before, was ripped to shreds. Some 145 Monsanto employees were killed. But less than a week afterward Monsanto's president, William M. Rand, stoutly affirmed his company's intentions of rebuilding. Within a year's time a new styrene plant was already in operation (BW, April 17, 1948, p. 48).

Today the Monsanto plant is back on its feet, bigger and better than ever. From its original 45 acres the plant area has grown to 60. Total cost of the new plant is about $16,000,000.

The other chemical and petroleum companies, which were not as hard hit as Monsanto, have also gone doggedly ahead with reconstruction and expansion plans.

Pan American Refining Co. was far enough from the explosion to escape serious damage. But 12 employees were killed and the company's dock area suffered $750,000 in damages. Today the refinery, which turns out aviation gasoline, motor and industrial fuels, has a capacity of 100,000 barrels of crude a day. The company recently finished a desalting unit and has several more under construction. The company's pay roll in 1949 came to $8,500,000.

Carbon & Carbide's plant, which was 2 miles from the blast, suffered little damage except some broken window panes. The company's recent building program is estimated at upward of $15,000,000. This week several large units for producing vinyl resins and methanol were just about ready to go into operation. The plant, which was originally built in 1938, turns out some 35 organic chemicals.

Republic Oil Refining Co. suffered heavy losses in both personnel and plant from the blast. Its $2,500,000 refinery was destroyed; its docks were a total loss; some 80 storage tanks were ruined. Today the refinery has been almost completely rebuilt. A polymerization unit was added in 1949. The present capacity of the plant is 36,000 barrels of crude oil a day.

Tin Processing Corp.'s Longhorn Tin Smelter has just finished a $2,700,000 hydrochloric acid recovery plant. The smelter employs around 800 and turned out 37,000 tons of tin in 1949.

Electoral Reform

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1950

Mr. GOSSETT. Mr. Speaker, one of the finest newspapermen and one of the best editorial writers in the northeastern section of our country is Mr. James Morgan. In the Boston Sunday Globe of March 26, 1950, Mr. Morgan has written an excellent article on Senate Joint Resolution 2 and House Joint Resolution 2, now currently referred to as the Lodge-Gossett amendment. I commend Mr. Morgan's discussion to the serious attention of the Members of the House. Such article follows:

A HOAX IN THE CONSTITUTION?
(By James Morgan)

Once I had a question that I thought would stump the now late and widely lamented Information Please, but I neglected to send it in. Here is the riddle: What American college has awarded diplomas to many distinguished men, perhaps to more of them than any other college in the land has graduated, and yet it has neither a campus nor a classroom, nor a faculty, nor any habitation whatsoever? Answer: The electoral college.

Franklin P. Adams, John Kieran, and their companion experts now are off the air, more's the pity. Even the electoral college itself may vanish if and whenever the House of Representatives is permitted to consider and decide whether to concur with the Senate in submitting to the States a proposal to remove that vermiform appendix of Uncle Sam.

Thanks to Senator LODGE, who since World War II has been less inclined than formerly to narrow his mind and give up to party what was meant for mankind, this question has not become ensnarled in partisan politics. The Massachusetts Senator associated himself with Congressman GOSSETT, a Texas Democrat, in a joint sponsorship of the amendment. He hitched up also a strong bipartisan team of cosponsors in the Senate, with Republicans and Democrats, southerners, easterners, and westerners all pulling together.

A CONSTITUTIONAL HOAX?

An experience of a century and two-thirds justifies Gladstone's tribute to the American Constitution as the most remarkable work * * * in modern times to have been produced by the human intellect at a single stroke. Nevertheless, the wise fathers of the Republic fumbled badly the problem of electing a chief of state in a then world of hereditary rulers. Two changes already have been made in order to correct their mistakes.

The twelfth amendment was necessary to prevent a repetition of the deadlock in 1801, when the country came perilously near having Aaron Burr in the Presidency instead of Thomas Jefferson. The twentieth or lame-duck amendment shortened the interregnum between the election and installation of a new President after we had come dangerously close to being left without an effective Government in critical periods of the Civil War and the two world wars.

The nicely laid plan for an electoral college never did work except in the two elections when George Washington was acclaimed the unanimous choice of public opinion. Since his retirement, it has remained for 150 years a rubber stamp of the parties, a puppet show.

The idea that the electors, sitting apart in their respective States on the same day without an opportunity for a meeting of minds, could ever give a majority to anyone, is so fantastic that the men who wrote the provision in the Constitution cannot have believed that it would function. Many members of the Philadelphia convention were in favor of having Congress choose the Chief Executives. It is only fair to their common sense to assume that they contrived this plan as a disguise for their real design, which was to throw the election into the House of Representatives in the inevitable failure of the electors to produce a majority. The scheme looks very like a hoax, perpetrated on the Constitution.

THIS NEW PLAN

Men more wise did those planners surprise. They did not foresee the rise of political parties which now have had a firm grip

on the electors for 125 years. No one of them has presumed to exercise his constitutional right to vote his own individual choice, except a lone Tennesseean in 1948, who was elected on the Truman ticket but cast his ballot for Thurmond, the Dixiecrat candidate. The pending twenty-second amendment would remove the ever present danger of a sufficient number of electors taking it into their heads to reverse a Presidential election.

The amendment would abolish the electors while retaining the electoral vote. Each State would continue to have the same number of votes that it has Senators and Representatives in Congress. That is the basic compromise of the Constitution between the larger and the smaller States. These latter would not have sacrificed their independence and entered the Union in the first place had they not been guaranteed an equality in the Senate.

PRO AND CON

That equality is reflected in the electoral votes, where Nevada and New York alike each have two to correspond with their two Senators. If the proposed amendment had not retained that compromise, it could not have commanded the necessary support of two-thirds of the Senators. Nor would it have a chance to be ratified by the required three-fourths of the legislatures. Twelve of the lesser States hold an effective vote on any change in the Constitution.

Another provision of the Lodge-Gossett amendment drops the majority rule in the election of a President. Like all other elective officials in the country, he would need only a plurality. Now, if no one has received more electoral votes than all his opponents, the election is thrown into the House, which chooses from the three highest names on the poll. The amendment provides that if there be a tie only the names of the two candidates who have the same number of votes would be submitted to Congress, where not the House alone but a joint session of Senate and House would elect. Nor would the vote be by States, as now, with each State casting one vote. Senators and Representatives would vote individually, and a majority of the whole assembly would choose between the two candidates.

The most controversial feature of the amendment provides that a winning candidate for President in any State should no longer be credited with the entire vote of that State. The winner would not take all, but would have to share electoral votes with the other candidates in the proportion of the popular vote received by each. For example, the total electoral vote of New York would not have been awarded to Dewey in 1948, who carried the State by a plurality of 61,000, and Truman's plurality of only 7,000 in Ohio would not have given him the whole electoral vote of that State.

EVIL OF DOUBTFUL STATES

This provision has raised the cry that it would encourage the growth of splinter parties, which are the plague of France, Italy, and other European countries. Senator LODGE and his cosponsors accepted a qualifying provision that a candidate must have 40 percent of the total popular vote in order to be elected.

The electoral vote undoubtedly has done the country the service of maintaining the two-party system. There have been as many as 70 parties which succeeded in breaking into Congress, but only 11 have won any electoral votes. After that experience most of the losers went out of business.

The potential danger of splinter parties is to be weighed in the scale with the certain advantage of making every vote in every State count in a presidential election. This would cure the evil of one-party States and of safe States, where the ballots of a minority are lost. The Democrats would campaign in Maine and Vermont and the Republicans in Georgia and Alabama. That would widen the participation in voting, and our total vote would not be put to shame in comparison with that of every other free country.

A counterproposal by Congressman COUDERT, of New York, would retain the electors and avoid proportional voting by breaking up the electoral vote of a State into congressional districts. Under the Coudert plan, only the two electors that correspond to the two Senators would be chosen on a Statewide ballot and the rest would be elected by districts. That would not crack the solid South. Neither would it open up some safe States and many safe districts in the North to hopeful contests by the minority.

Moreover, it is notorious that congressional districts are fearfully and wonderfully made for the unfair advantage of the party in control of the redistricting. This is such an old, recognized American custom that we have a word for it. If a President should be chosen by districts there would be an added incentive to gerrymander them even worse than they are, if that be possible.

The Lodge-Gossett amendment would cure the most serious evil of all in presidential elections, the centering of campaigns and campaign funds on pivotal States. These coquettish sisters in the family would be cut down to size, not only in elections but also in the bargaining of nominating conventions and in the distribution of patronage. There would be less truth than there is in the saying that some men are born great, some achieve greatness, and some come from doubtful States.

A Vote for Integrity

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Wednesday, April 19 (legislative day of Wednesday, March 29), 1950

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Vote for Integrity," published in the Wilmington (Del.) Journal of April 18, 1950. The editorial deals with the President's plan for reorganization of the National Labor Relations Board. It rebukes the President for seeking to "gain by guile what he knew he never could obtain by honest and forthright action."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A VOTE FOR INTEGRITY

By a majority of 9 to 4, the seven Democrats and six Republicans comprising the Senate Committee on Expenditures in the Executive Department have called on the Senate to veto the President's plan for a reorganization of the National Labor Relations Board. This is at once a vote for integrity in government and a stinging rebuke to a President who sought to gain by guile what he knew he never could obtain by honest and forthright action.

The Truman proposal, now stymied, and it is hoped, forever dead, would abolish the office of Robert N. Denham, the general counsel of the National Labor Relations Board, and thus leave the administration of the Taft-Hartley Act at the complete mercy of its enemies. Its acceptance would have virtually given Mr. Truman what he has been seeking all along, the repeal or at least nullification of the act. The vigorous support which organized labor mustered in behalf of the President's plan is the best proof that this would have been the result.

The part which Mr. Truman played in this shady performance is thoroughly discreditable. He had pretended, and even stated publicly with a great show of virtue designed to deceive the unthinking, that he was merely carrying out the recommendations of the Hoover Commission on governmental reorganization. That was not so. The Commission never advocated any course of this sort.

Fortunately the Senate committee has seen through this effort to mislead the Nation. The whole Senate, we trust, will be no less determined to strike a blow for straightforward dealing.

John M. Clayton, Famous Delawarean and Outstanding American Statesman

EXTENSION OF REMARKS

OF

HON. J. CALEB BOGGS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1950

Mr. BOGGS of Delaware. Mr. Speaker, as president of the Delaware State Society of the District of Columbia, it has just been my privilege to place a wreath upon the statue here in the Capitol of John M. Clayton.

In the commemorative ceremony which marks the one hundredth anniversary of the signing of the Clayton-Bulwer Treaty, I said:

Born in Sussex County, Delaware, John M. Clayton achieved outstanding success and international prominence, and rose to one of the highest public offices in this country, that of Secretary of State.

The career of John M. Clayton is an inspirational story of a great American. He was renowned and respected as a lawyer, legislator, jurist, United States Senator, statesman, diplomat, and outstanding citizen of his State and Nation.

It is appropriate that this commemorative ceremony be held at this time for it marks the one hundredth anniversary of John M. Clayton's greatest achievement, the signing of the historical Clayton-Bulwer Treaty between the United States and Great Britain.

As Delawareans we have every reason to express our pride in John M. Clayton, whose ability and achievements brought great honor to Delaware, the first State.

Mr. Speaker, a very fine piece of reporting concerning the facts and the historical significance of the Clayton-Bulwer Treaty has been done by my good friend, William P. Frank, of the News-Journal Co., in Wilmington, Del. Therefore, as a part of my remarks it is a pleasure to include Mr. Frank's article on this

subject, which was published in the Wilmington Morning News on April 10, 1950. That article follows:

CENTURY-OLD CLAYTON-BULWER TREATY WILL BE CELEBRATED

(By William P. Frank)

Exactly a hundred years ago next week—April 19—a Delaware-born statesman and a skilled British diplomat signed their names to a treaty that was to become one of the most controversial documents in American history.

Even to this day, historians are debating whether John M. Clayton, of Delaware, outmaneuvered Sir Henry Bulwer-Lytton or whether the Englishman outwitted the Delawarean—in in the drafting of what has come to be known as the Clayton-Bulwer treaty.

While the treaty ended a cold war of nerves between the United States and Great Britain over Central American territory, it also made Clayton the target of personal attacks that branded him everything from a coward to un-American.

Because the treaty involved British-American control of any canal built in Central America, American land speculators, and expansionists sneeringly declared that Clayton deserved British knighthood.

PREVENTED WAR

But the more intelligent verdict of historians is that Clayton in 1850, as Secretary of State under President Zachary Taylor, prevented the possibilities of a war with Great Britain at a time when the United States couldn't afford to go to war.

Also, the general opinion of modern critics of the treaty is that it was executed at a time when the United States was a far weaker maritime power than England, and that it was a triumph for American diplomacy because it ended all risk of British expansion in Central America.

The treaty was signed on April 19, 1850, and ratified by the Senate on July 4 of that year. Five days later, President Taylor died and Secretary of State Clayton returned to private life at his home, Buena Vista, near Wilmington—now the home of a descendant, the former United States Senator Clayton Douglass Buck.

TREATY ATTACKED

Almost immediately, Clayton's political opponents began a campaign of attack upon him and the treaty. Joining the hue and cry were schemers and speculators who didn't like the treaty because it restricted them from land-grabbing in Central America.

The attack became so vicious and so personal that the Delaware General Assembly, split between the Democrats and Whigs, disregarded politics and elected Clayton to the United States Senate so that he could more advantageously refute his critics and enemies in Washington.

The Clayton-Bulwer treaty, which continued under fire for more than 50 years, was finally superceded by the Hay-Paunceforte treaty which paved the way for the American construction of the Panama Canal.

A heroic statue of Clayton is in the Capitol in Washington and plans are being made for a brief ceremony there through the Delaware State Society in Washington on the anniversary of the treaty.

In his day, Clayton was one of the best-known Delawareans, having entered the legal profession and politics at an early age. He was born in Dagsboro and educated in Sussex County, was graduated from Yale, and began his law practice in Georgetown. He was first elected to the United States Senate in 1839, at the age of 33, then the youngest Senator.

OUTSTANDING JURIST

He took part in the revision of the State constitution, became chief justice of Delaware at the age of 41, and when he left the bench was hailed as one of the outstanding jurists of the State.

He became an ardent admirer of Gen. Zachary Taylor and, in fact, he named his home south of Wilmington Buena Vista after the great battle won by General Taylor in the Mexican War.

Politics was the great field in which Clayton played an important role and when Taylor became President, Clayton was selected as his Secretary of State.

Almost as soon as Clayton took over the post, he was confronted not only with the problems of North versus South in the United States, but also the very acute question of what to do about Great Britain in Central America.

Gold had been discovered in California, and it was important to find the shortest route to the west coast. The Isthmus of Panama afforded the possibilities for such a route. Sensing that the United States would soon be interested in a ship canal across the Isthmus, Great Britain began taking over territory in that area on various pretexts, particularly in the vicinity of British Honduras.

JOCKEY FOR POSITION

But as Great Britain moved to protect her interests in Central America, the United States also moved in the same direction—both countries jockeying for advantageous position in reference to a possible canal through the isthmus.

It became a war of nerves. Strained relations developed between the two governments. Each nation assured the other that its interests were not selfish.

There was talk of the possibilities of war, or an armed collision. And at that point, Sir Henry came to Washington to negotiate a treaty with Clayton.

The treaty—which eventually stirred up such a conflict within the Nation and the Senate—provided that the two countries would jointly control and protect any canal built across the isthmus. The treaty also stated that neither country would occupy or fortify any part of Central America.

ANOTHER DISPUTE

But even as the treaty was ratified in the summer of 1850, another dispute developed over the interpretation of the treaty. The United States said the treaty was retroactive, that Great Britain would have to give up Central American territory. England said the opposite. Again war threatened but finally Great Britain withdrew from the disputed Central American areas in 1858.

Many attempts were subsequently made in the Senate to abrogate the treaty because of the way it restricted the United States, but these efforts failed until 1902 when a new treaty was effected—and then came the Panama Canal.

Allan Nevins in his Ordeal of the Union writes, "The accusation that Clayton permitted himself to be outwitted by slippery diplomatists had no truth. He made a fair, and for the period, a profitable agreement."

Another authority states that while the Clayton-Bulwer treaty, by taking Great Britain into American partnership in controlling the proposed canal, violated the spirit of the Monroe Doctrine, it should be noted that the United States forced the British to give up long-existing territorial claims—a unique triumph for the Monroe Doctrine.

Carroll Binder Reports From Europe

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 19 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, in the Appendix of yesterday's RECORD there appeared two reports written by Mr. Carroll Binder, editorial writer of the Minneapolis Tribune. The reports relate to conditions in Europe as found by Mr. Binder. I now present two more articles in the series of articles by Mr. Binder, and ask unanimous consent that they may be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

WEST EUROPE BACKS PHONY INTEGRATION—CYNICAL REFUSE TO ABANDON SOVEREIGNTY FOR ECONOMIC UNITY

(By Carroll Binder)

PARIS, FRANCE.—Since Congress and a section of the American public think integration will cure Europe's ills, certain cynical western Europeans are prepared to go through the motions of pretending to take the cure.

More concerned with keeping up the flow of American aid than with laying a base for enduring security, Europeans of this ilk give lip service to integration without any intention of trying to make it a reality. They show no inclination to give up their national sovereignties for the purpose of changing Europe into one big market of 270,000,000 people.

SINGLE LEADER SOUGHT

This state of mind was behind much of the European support for roving Ambassador Averell Harriman's attempt to make Paul-Henri Spaak, of Belgium, the political leader of the European Marshall plan council.

Harriman wanted to deal with one European leader who, in turn, would deal with the various governments receiving aid.

He thought Spaak, out of office in Belgium and active in movements for European unity, would fill the bill.

A number of governments, which do not care much for Spaak and would prefer to deal directly with the chief ECA representative in Europe, supported Harriman's efforts to have Spaak accepted as his deputy and as a super-European spokesman.

They thought they could create the impression in the United States that western Europeans are integrating without surrendering any real sovereignty or foregoing the right to make direct approaches to American aid distributors.

BRITISH VETO MOVE

The British scotched this move. They would have none of Spaak. They are being severely criticized for torpedoing an attempt at integration.

The British attitude toward integration, which will be discussed later, played a part in their veto of Spaak.

Belgium, a hard-currency country, has made the going especially tough for the soft-currency countries. Hence Britain and other soft-currency countries objected to the former Premier of Belgium being placed in a position where he might create greater difficulties for them.

PEEVED AT SPAAK

The Labor Government of Britain was also peeved at Spaak, a fellow Socialist, for a speech and an article in which he criticized British behavior toward Europe.

Still other Europeans didn't like the idea of trying to fool the American public with such a phony sort of integration.

They knew that, in the present mood of Europe, Spaak really would not have functioned as Americans were given to understand he would function. They rightly believed that European-American relations will not thrive permanently in such an atmosphere of petty deception.

They believed a sounder basis for collaboration is for Americans to become acquainted with European realities and vice versa.

Designation of Foreign Minister Stikker, of the Netherlands, as a political conciliator of the European Marshall plan council is a more honest move.

His duties have yet to be defined and probably will not amount to much. But at least his provisional appointment and the other provisional moves toward integration do not give Americans or Europeans the impression that barriers are being lowered when they remain as high as ever.

Foreign Minister Sforza, of Italy, who launched the idea of an economic union between Italy and France in 1947 and is as ardent a worker for real unity in Europe as I have found, urges Americans not to be discouraged by the slowness of the movement for integration.

"I want free Europe to be united," Sforza said, "but I do not believe in miracles. Where there is power such as America possesses there is responsibility. The United States has a responsibility to work for integration despite the opposition of commercial, emotional, or other elements in individual countries."

Sforza, who has been in diplomacy and politics for a half century, is better acquainted with both the United States and Europe than most Europeans. He takes a dim view of the ability of Italy, France, or Britain separately to resist the rise of another leader in Germany who might again attempt to impose Germany's will on Europe.

He believes only a united free Europe can successfully resist Soviet imperialism. He gave the impression that he does not despair of such eventual cooperation.

Meantime the preoccupation of each Marshall plan country with its own narrow economic interests and preservation of its full freedom of action makes a greater impact on the American than the prospects for lowered barriers.

It is not merely difficult to get individual countries to abandon uneconomic industries being nursed along for reasons of prestige, security, or make-work. Attempts to prevent building up steel, oil, and other key production facilities beyond reasonable needs are being frustrated by hog deals between interested countries. Western Europe already has facilities for making 8,000,000 more tons of steel a year than it is expected to consume. Yet the Dutch are being allowed to build an uneconomical steel mill although neighboring Belgium and Luxemburg cannot find markets for all their present steel output and neighboring Germany has excess steel mills. The Dutch got this sanction because they supported a French project for expanding the steel plants of Lorraine.

The urge to be self-sufficient and give fullest possible employment is always present in intra-European attempts to jointly regulate investment programs.

Since our money is being used and our security and prosperity also are at stake, we have a right to criticize these European shortcomings. We have a right to press for better and more prompt performance as Paul Hoffman and other ECA spokesmen do incessantly.

But it might not be amiss for us to admit to ourselves that we sometimes have been a long time fulfilling our own precepts. There is considerable discrepancy between what we tell Europeans to do and what we ourselves do.

That does not excuse Europeans but it should make us more tolerant and patient.

The American Union did not start with 48 States. It took years for the 13 colonies to agree on a basis of union and it took a great civil war to preserve the union.

If the United States were willing to identify its fortunes as closely with western Europe as it urges western Europeans to identify their fortunes with each other, integration would proceed far more rapidly.

If we were willing to modify our sovereignty in an American-European union as we propose that Europeans modify theirs in a European union, a union of the free might take form more rapidly.

Western Europeans proceed cautiously for substantially the same reasons that we proceed cautiously in such unfamiliar paths. There is danger that we all may do too little too late. This is a report on the way things are rather than on the way they ought to be.

EUROPE AID STALLS RUSS, BINDER FINDS—WAR NOT INEVITABLE, BUT TENSION WILL CONTINUE, HE SAYS

(By Carroll Binder)

PARIS, FRANCE.—What is there to show for the $8,000,000,000 the American people have invested in the Marshall plan and the additional $12,000,000,000 worth of assistance they have given Europe since the end of the war?

What can the American people hope to gain by investing an additional $3,000,000,000 in the European recovery program for the year beginning next June 30 and another $2,000,000,000 for the year ending June 30, 1952?

I have sought the answer to these and related questions in a 5-week study of conditions in four of the principal beneficiaries of this American aid—Britain, Germany, Italy, and France.

I have talked with leading personalities in the Governments of those four countries. I have talked with leaders of the opposition. I have talked with farmers, workingmen, labor leaders, and journalists as well as with businessmen and statesmen. I have visited farms, factories, slums, the homes of the rich, eating places of the very poor, and the ritzy restaurants where the best food and service is enjoyed by those well-enough heeled to pay the high prices charged.

I have talked off the record with American diplomats, Marshall-plan executives, and military men closely identified with administration of American aid to Europe and the safeguarding of American interests.

I have checked my impressions and what I have been told with the estimates of old friends who have been covering Europe for the American press for many years and know how to distinguish the real from the phony.

I have known one of these countries—France—for 32 years, having spent 2 years in the French war zone in World War I. My first-hand acquaintance with the other three countries is of more than 23 years standing. I have lived in each of them for prolonged periods.

This is my second visit to western Europe since the end of the war.

My impressions will be set forth in greater detail and with more specific reservations in subsequent articles. In this first article on the state of western Europe, 57 months after the cessation of hostilities and at the halfway point of the Marshall plan, they may be summarized thus:

A shooting war with Russia does not appear to be either imminent or inevitable.

A lasting settlement between the Soviet power and the western democracies does not appear to be achievable in the near future.

Therefore the cold war seems more likely to last for decades than to degenerate into a shooting war or to be ended on a mutually satisfactory basis.

The Marshall plan has frustrated, at least temporarily, Communist chances of taking over France, Italy, and possibly some other western European countries.

American aid to western Europe has given a priceless breathing spell in which to create such social stability here that the Communists cannot come to power through disaffection of large sections of the public.

American aid has permitted western Europeans to acquire goods and services essential to quick economic recovery which could not otherwise have been acquired because of low dollar purchasing power.

Thanks to this dollar aid and their own efforts, western Europeans have made far more rapid strides toward recovery than they made in a comparable period after the First World War. Industrial production in many lines is well ahead of what it was in 1938. Agricultural production is almost up to prewar level.

The recovery program has halted inflationary forces which otherwise might have caused profound social dislocations and paved the way for dictatorships of the extreme right or left, such as happened after World War I.

By providing jobs, food, clothing, and other means of survival at a critical juncture, the recovery program has given hope and vigor to peoples who otherwise might have been lost to our side of the struggle between Russia and the free world.

The skills, industrial establishments, resources, military potential, and strategic positions of western Europe are one of the greatest prizes in that struggle. If they remain securely on our side, we shall have to spend only a fraction of what we should have to spend for national defense if they fall into Soviet hands.

American aid to Europe has provided markets for American agricultural and industrial production. Thus, it has provided profits and wages which otherwise would not have been available because of severely limited European dollar purchasing power.

While particular regions and industries have gotten the direct benefits of this spending, the American economy as a whole has enjoyed a higher level of prosperity than otherwise would have been likely.

These are oversimplifications, for the sake of brevity. This summary would not be complete without mention of things not accomplished by the Marshall plan and important to be borne in mind as Congress debates recovery programs and appropriations:

While the recovery program has provided jobs and certain goods, it has not yet resulted in far-reaching social betterment in such critically situated countries as France and Italy. The working classes in both of these countries still have such poor standards of living and such a disaffected mood that they may yet fall a prey to communism if their lot is not greatly improved. The same is true of the land-hungry peasants in Italy.

I saw relatively little evidence that either the governments or the privileged classes of Italy and France are sufficiently aware of the urgent need for social reform or the hazards of prevailing social inequalities.

Communism, in other words, remains a profound threat and there is no reason to believe it will have disappeared when Marshall aid ends in 1952. In some respects

Marshall plan aid appears to have intensified the feeling between the classes.

The special interest—industrialists, businessmen, and agriculturalists whose products go into the general market—still influence production, distribution, and prices for their own special benefit and without thought of the general welfare. That means continuation of restrictions and other barriers to the free flow of goods and persons—barriers the Marshall plan was designed to reduce or eliminate.

Little appreciable progress toward real economic or political integration of western Europe is likely to be made by 1952.

Extremely self-centered nationalism remains the dominant mood of western Europeans. There are wide differences between the countries believing in planned economies and those with relatively free economies. The recovery program tends to bring to light rather than sublimate these differences.

Despite the impressive increase in production, inter-European trade and increases in exports to the dollar area, western Europe as a whole will have a dollar deficit of at least $2,250,000,000 annually after 1952. The United States will have to deal with this deficit either in continued subsidies, long-term investment, or other devices, if it wishes to keep western Europe in business and dispose of certain surpluses in the European market.

Some sounder approach to the problem than keeping western Europe a permanent pensioner of the United States will have to be found if western civilization is to survive and continue to flower.

Covering Up for the Communists

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, when President Truman said that the charge that there were Communists in the State Department was just a red herring drawn across the trail by Republicans for political purposes, he did not inaugurate any new policy of the New or Fair Dealers.

The activities of the Dies committee, engaged as it was in ferreting out and exposing Communists in executive departments, were opposed most vigorously by a small group in the House and by the administration then in power.

Part of their activities are disclosed in a news story written by Willard Edwards, of the Chicago Tribune, and published in the Washington Times-Herald on February 10. Edwards is a factual writer and the story for the 10th reads as follows:

REDS HAD WHITE HOUSE ENTRY FROM 1935, OFFICIAL PAPERS SHOW—REPRESENTATIVE O'CONNOR PURGED AFTER WARNING F. D. R. ABOUT COMMUNIST INFILTRATION

(By Willard Edwards)

Representative John J. O'Connor, New York Democrat, chairman of the House Rules Committee, hustled to the White House one day in 1936 to impart information of a startling nature to President Roosevelt.

"Mr. President," he said breathlessly, "do you know that one of your own stenographers is a card-carrying member of the Communist Party?"

"The only response I got," said O'Connor, telling the story years later, "was that well-known raising of the chin and blinking of the eyelids. So far as I know the woman is still there."

WEDGE TO O'CONNOR PURGE

The incident started a coolness between the Democratic leader and his chief which resulted 2 years later in a successful purge of O'Connor from the political scene. Mr. Roosevelt personally engaged in the campaign to defeat O'Connor for reelection.

From 1935 on, official records make it clear, Communists and Red sympathizers held White House jobs. In 1941, according to an official report just 2 months before Pearl Harbor, there were nine employees in the executive office of the President who were members of subversive organizations under Communist control. There were no dismissals.

In 1947, the case of Helene Yuhas was made public. She had been employed as a White House clerk from 1939 to 1944, handling the correspondence of Mrs. Eleanor Roosevelt. In May 1944, she went to work for the Soviet Embassy, writing editorials for the Russian propaganda magazine, the Soviet information bulletin.

CLAYTON'S SECRETARY

After 7 months in the Soviet embassy, Miss Yuhas decided to return to Government work. The shift was accomplished with ease. The State Department hired her and she became secretary to Under Secretary of State Clayton. Finally, late in 1947, the State Department requested her resignation and, after some protests, she left.

Lauchlin Currie, a White House administrative assistant, was named in 1948 by Elizabeth Bentley, admitted Soviet spy, as an informant for a spy ring. He vehemently denied the charge. Shortly thereafter, this story was unfolded before the House Committee on Un-American Activities.

Nathan G. Silvermaster, $10,000 a year Government official, had been under FBI investigation, by his own admission, soon after he entered Government employment in 1935.

Born in Russia, Silvermaster entered the United States at San Francisco in 1915 and became a naturalized citizen in 1927. He had been an associate of Harry Bridges and well-known Communists on the west coast. But he had no difficulty in securing a job in the Resettlement Administration under Rexford Guy Tugwell, later shifting to the Farm Security Administration under Agriculture Secretary Henry A. Wallace.

DENOUNCED BY FBI

In 1942, Silvermaster applied for a transfer to the Board of Economic Warfare. The FBI reported that he was a known Communist, a probable agent of the Russian police, and should not be given a post in a war agency where he would have access to confidential information.

Silvermaster immediately sought out Currie, the White House aide. He complained angrily that the Communist charge against him was "an insult and a smear." He also appealed to another friend, C. B. Baldwin, of the Farm Security Administration, who last year refused to tell a Senate committee whether he was a Communist.

As a result of these appeals, War Secretary Patterson was induced to write a letter to the Civil Service Commission which completely exonerated Silvermaster of all charges against him. He was given a key war post in which he served until he resigned in March 1946.

Silvermaster was named as a leader of the Communist cell in Washington which furnished secret documents to Miss Bentley which were photographed in the basement of his home.

BROWDER MET WITH F. D.

The history of Communist influence in the White House is lengthy and detailed. When Earl Browder was head of the Communist Party in the United States in 1944, he held secret meetings there with Mr. Roosevelt, according to the testimony of a former Communist Party official.

Louis Adamic, Yugoslav-born Communist propagandist who has 30 Communist-front connections listed in official records, was a frequent visitor at the White House during the war years. Adamic is given credit for the major shift in American policy in the Balkans which resulted in the desertion of Gen. Mihailovich's Chetnika in Yugoslavia and indorsement of Marshal Tito's Soviet-dominated partisans.

Joseph Lash, protege of Mrs. Roosevelt, former leader of the Communist-controlled American student union, was another who spent many nights under the White House roof. Lash was drafted in 1942 after he had been turned down as unqualified for a Navy commission despite the intercession of Mrs. Roosevelt. In 1944, he was rejected as a candidate for officer candidate school.

STIMSON AIDED LASH

On the day he was turned down, December 29, 1944, President Roosevelt sent a telegram ordering Lash to the candidate school. The wire specifically stated that "objections arising from his (Lash's) civil activities" should not be considered.

Mr. Roosevelt died before Lash was commissioned in May 1945. War Secretary Stimson wrote Mrs. Roosevelt that to deny officer rank to Lash would be an insult to the memory of her sainted husband.

The White House record of opposition to investigation of communism in the Government is unbroken from 1935 to the present date. Senator FERGUSON, Republican, of Michigan, in August 1948, reviewed the record, suggesting it called for curbing Presidential arrogance by the impeachment process.

Both Presidents Roosevelt and Truman, he noted, had refused to permit Congress to see files bearing on the loyaly of Government employees.

"There has long been an increasing tendency on the part of the executive branch to conduct their affairs in secret," he told the Senate. "It began with the voting of grants of power and great sums of money to the President simply because somebody had to act and act quickly.

"A political-military hierarchy was built up, an entirely new bureaucracy centering in the White House, the State Department, and the military. The Bureau of the Budget, shifted to the White House, became a master planner.

"An ever-increasing number of confidential agents, of whom Harry Hopkins was the chief, made their headquarters in the White House. All their activities were secret. When Mr. Roosevelt died Mr. Truman became the willing prisoner and mouthpiece of this power clique.

"In sum, the President claims the right to don the cloak of absolute executive immunity whenever he desires to do so. If he carries this claim to unconscionable extremes, the Constitution says that Congress can dispose of him by impeachment proceedings."

WHITEWASH OF 1943

Both Presidents initiated "loyalty probes" which accomplished little or nothing. Mr. Roosevelt's five-man interdepartmental committee to pass on complaints of subversive activities by Federal employees was established in 1943. It reported proudly that

there were practically no Communists in the Government. Four years later a Civil Service Commission official admitted there were more than 4,000 Communists on the pay roll in the war years.

In his 1942 veto of the Communist-registration bill Mr. Roosevelt issued what was termed in Congress a virtual invitation to the Soviet Government to spy. Registration of Communists, he wrote, might be "onerous in respect to the representatives of friendly nations who are constantly coming to and from the United States to cooperate with us."

It was in 1942, subsequent events disclosed, that the Soviet Government ordered its spies into the United States to steal the secrets of the atomic-bomb experiments.

Any thought that McCARTHY might get away unsmeared, unvilified, when he made his more recent charges against the Communists, was an idle one. The President was quick to charge that McCARTHY was Stalin's best asset; to charge that two other Republican Senators—WHERRY and BRIDGES—with McCARTHY, were aiding Stalin's cause.

President Truman has evidently learned that the public recognizes his statement as being silly and ridiculous and hence has just called this week for the aid of Senator BRIDGES.

Brought up as a member of a corrupt political machine, the President often gets on slippery ground. His administration needs not only a thoroughgoing house cleaning, but a complete disinfecting job in a tank of sheep dip.

While cleaning out the Communists he would do well to get rid of the homosexuals. Several hundred of them, it is not denied, are in executive departments.

M. D. Anderson Hospital for Cancer Research

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 19 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Texas. Mr. President, the month of April is being observed as Cancer Control Month. In Texas we are proud that one of the outstanding cancer-research centers in the Nation is the University of Texas M. D. Anderson Hospital for Cancer Research at Houston, Texas.

This center has grown rapidly in recent years, with both private and public support. The contributions this hospital is making and will continue to make to the fight against cancer will be a tribute to the capacity and determination of the Texas medical educators who have given so much of their time and talent to the advancement of this important institution.

Recently Dr. R. Lee Clark, Jr., director and surgeon in chief of the M. D. Anderson Hospital for Cancer Research, authored a most interesting article on the status of today's cancer treatment. I ask unanimous consent to include in the Appendix of the RECORD a University of Texas news service release on Dr. Clark's article.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

Today's tools, if properly applied, can bring about a momentous improvement in the diagnosis and treatment of cancer.

That is the opinion of Dr. R. Lee Clark, Jr., director and surgeon in chief of the University of Texas M. D. Anderson Hospital for Cancer Research.

Writing in Postgraduate Medicine, a professional publication, Dr. Clark declares the promise for the future development of adequate tools for early diagnosis and treatment is excellent, but even more important is the constant evaluation of methods in common use which have promise of great improvement.

"As intriguing as it is to speculate upon the possibilities to be offered by research and clinical investigation, we have a responsibility to examine the results of present-day therapy and to use available means to greater immediate advantage," Dr. Clark writes.

Summarizing a review of today's status of cancer treatment, he concludes it is apparent that if available means for the diagnosis and treatment of cancer were adequately used a great saving of lives could be effected.

The successful use of these means are, however, dependent upon several interwoven factors, which Dr. Clark outlines as follows:

First, exact knowledge should be disseminated to the public at the community and individual level.

Second, the individual, once awakened by education, should realize the need for immediate action, and go to a physician if he has a persistent aberration from normal in his body economy.

Third, every physician's office is an actual and potential cancer detection center, where a high degree of suspicion must be maintained, and where all lumps, bleeding orifices, or other persistent abnormalities must be examined, and explained.

Fourth, the primary treatment given must be adequate and radical, if necessary, but never a compromise

Fifth, the availability of the cancer team to the patient must become general. In no field is group opinion any more necessary. This is so well recognized now, that individual physicians should be able to obtain it through general tumor-clinic sessions. The combined opinions of the pathologist, internist, roentgenologist, and surgeon will assure the patient of a far better over-all primary therapy.

Sixth, all tissue removed should be examined by the pathologist.

And seventh, and most important, we should hold the progress that has been made and the progress that is to be made by assuming personal responsibility, together with every physician, for being alert to, and conscious of, what to seek as signs of early cancer among our patients.

Electoral Reform

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1950

Mr. GOSSETT. Mr. Speaker, a vast majority of the serious students of government and of the political scientists of this country are strongly in favor of the Lodge-Gossett amendment.

Dr. Hugh A. Bone, professor of political science at the University of Washington, wrote an excellent letter to the New York Herald Tribune on March 14 in which he discusses the relative merits of the so-called Coudert amendment with the so-called Lodge-Gossett amendment. Professor Bone's letter is offered herewith for the consideration of those interested in this subject:

MARCH 14, 1950.

EDITOR, NEW YORK HERALD TRIBUNE,
New York, N. Y.

DEAR SIR: Readers are indebted to the Herald Tribune for carrying the articles by Walter Lippmann on the proposed Lodge-Gossett amendment to the Constitution to provide a fairer method of electing a president. Lippmann sees the district plan as proposed by Representative COUDERT as superior to the Lodge proposal. A strong case can be made for the Coudert substitute but there is one problem which needs serious consideration in connection with it—how and by whom will the districts be drawn?

The simplest solution is to use existing congressional districts as drawn by the State legislatures. Partisan and other reasons led the legislatures during the nineteenth century to employ the technique of gerrymandering, that is, the practice of the party in control of the legislature to concentrate opposing party strength into a few districts (sometimes all in one) and to spread their own strength over many districts. The ruling party, therefore, was assured a lion's share of the seats in Congress and also in the State legislature. Legislatures dominated by rural interests found this helpful in keeping the urban areas from getting a fair share of the seats in legislative bodies. Congress became concerned enough with this practice that it passed numerous laws requiring the State legislatures to draw congressional-district boundary lines so that representatives would be elected from contiguous and compact territory. None of these equalization statutes made any provision for enforcement by Congress. A 1929 Federal law, moreover, left the matter open and the practical effect is to leave the legislatures free to district according to custom and usage. Many of the old-time shoestring- and horseshoe-shaped districts have disappeared but gerrymandering in one degree or another has persisted.

Many districts today are compact and contiguous but show adroit gerrymandering by the concentration or dispersion of bloc voters (ethnic and class) or by extreme inequities in size. The First Congressional District of the State of Washington, according to the last census, has a population of 413,000 while the Fourth District has 245,000, a discrepancy of 168,000. This is mild compared to Ohio where the difference between the largest and smallest district is 535,000. Although the differences are not so sharp, New York and New Jersey districts show substantial variation. A study made about a decade ago (Schmeckebier, Congressional Apportionment) found substantially defective districting in 26 States.

Though the total vote for Democratic Representatives slightly exceeded that for the Republican nominees in Washington in 1948, the Republicans captured four out of six seats. In Illinois the total Democratic congressional vote exceeded that of the Republicans by over 175,000 yet the Democrats captured 12 out of 26 seats. This suggests that if congressional districts are to be used as a basis for presidential electoral contests, a perverted electoral result is possible. In smaller States the two electors chosen from the State at

large would help to balance up such inequities but in the larger States this is more doubtful. Until we can evolve a plan for preventing unfair districting in the States, the Lodge proposal promises to reflect the wishes of the voters of a given State more accurately. Proponents of the Coudert substitute can strengthen their case by offering suggestions for the troublesome problem of districting.

Some of the proposals for correcting the inequities are (1) districting by the State executive with the assistance of an expert nonpartisan commission; (2) denial of seats in Congress to those States failing to conform to a minimum standard laid down by Congress; (3) districting by Congress where a satisfactory State law is not provided. Each of these has defects and would have serious opposition. In the final analysis any plan to minimize gerrymandering will be effective only if it will be backed up by an aggressive and alert public opinion that will force the State legislatures and Congress to take proper action.

Finally, Republicans may wish to ponder whether the Coudert system will be of any help in adding to their electoral-vote strength in the South. In 1948 for example, the Lodge plan would have given Governor Dewey four and a fraction votes while under the district system the Governor would have had virtually no chance of even picking up one electoral vote. In this instance at least, it is debatable whether Mr. Lippmann is correct in saying the Coudert plan "would cure all the evils of the present system quite as well as the Lodge-Gossett amendment."

Sincerely,

HUGH A. BONE,
Professor of Political Science,
University of Washington.

(Writer was formerly professor at Queens College, Flushing.)

China as Viewed Through the Eyes of Republican National Committeeman Guy G. Gabrielson

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1950

Mr. O'SULLIVAN. Mr. Speaker, in the Christian Science Monitor of April 17 last, I read an article written by Mr. Joseph C. Harsch, chief of the Washington news bureau of the Christian Science Monitor dealing with the state of the Nation through political eyes and one part of same dealing with the question as to whether China was lost or not, as so many people now claim, impressed me very much.

The part of the article in question is as follows:

A simple truth to be borne in mind today, and in months to come, is that it is seldom in the interest of any politician to present the state of our affairs in their true shape.

An example of this distortion on one side of the political fence is Mr. Gabrielson's declaration that the Truman administration has, among other things, lost the cold war in China.

The word "lost" is a very final one. Mr. Gabrielson takes the gloomiest possible view of the situation in China when he says that it has been lost. Perhaps China has been lost to the West irretrievably, and for all time. But to say that China has been lost at this stage is to assume the worst and ignore history. Some Americans thought China was lost to Communists back in 1926 when Chiang Kai-shek accepted Russian advisers and entrusted to Communists the planning of his victorious march northward. We were nearly as afraid of the same Chiang Kai-shek then, and for the same reason, as we are of his opponents of today.

But in 1927 Chiang suddenly turned our way, and it was the Russians and the Communists who lost that battle for China. Now they have won the latest round in China. And we will strive to reverse this decision, just as the Russians strove to reverse the decision of 23 years ago. We have no more certainly lost the cold war in China, yet, than we lost the real war in the Pacific with the fall of Corregidor, Singapore, and the Dutch East Indies. We have lost a battle, but we hardly assume yet that we have lost the campaign.

The Smear Artists Confounded

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, Senator MCCARTHY's charges that the administration was harboring Communists were scarcely given publicity before the small group of smear artists, administration bootlickers and self-styled intellectuals brought out their stinkpots and proceeded to attempt to do a job on the Senator.

When Senator MCCARTHY named Judge Dorothy Kenyon as one who has associated with Communist organizations, that group not only belittled but intimated that his statements were downright falsehoods, and that the Senator knew them to be false when he made them.

Judge Dorothy Kenyon rushed to Washington, appeared before a Senate committee and branded the charges as completely without foundation and said that Senator MCCARTHY was a liar.

Not long after, in her conceit, Dorothy appeared before three reporters on a radio broadcast.

George Sokolsky gives a brief account of what happened there. It reads as follows:

THESE DAYS
(By George Sokolsky)

A meeting of the Ancient Order of Red-Baiters gathered in the home of Dr. J. B. Matthews for three purposes: 1. To eat his wonderful curry which he learned to cook in Java, while he was translating hymns into Malaya. 2. To celebrate the publication of Seeds of Treason by De Toledano and Lasky. 3. To listen, on the radio, to Meet the Press.

When it came time to listen to Meet the Press, we foregathered about the radio, with daggers up our sleeves, to await Miss Dorothy Kenyon, who reminds one of Eleanor Roosevelt before her voice was cured of its falsetto.

The first voice, after the interlocutor, to come over was that of an honored member of the Ancient Order of Red-Baiters, Frank Waldrop of the Washington Times-Herald. And his first question was sharply pointed. He asked:

"Judge Kenyon, do you know one Alger Hiss?"

That did it. They all got into the situation and literally tore her apart, for the lady admitted that she only knew what appeared in the New York Times. Her exact words were, "I'm as well informed as any other reader of the New York Times * * *." So Waldrop said, "Can you tell us about Hiss?"

Mae Craig, of the Portland Press-Herald tried to get a word in to ask how many front organizations Miss Kenyon belonged to. Senator MCCARTHY had said 28; Miss Kenyon said 4 or 5. So at the soiree of the Red-Baiters we tried to figure it out. We got to a figure of 31. Maybe that was high, but we had been eating Dr. Matthew's curry.

While all this was going on, Mae Craig started this colloquy:

Craig, "Well, when you found that your name was being used without your permission, or after you had withdrawn, did you take any legal means to stop it? You're a lawyer, so I presume——"

Kenyon, "Oh, yes, yes."

Craig, "What did you do legally to stop it?"

Kenyon, "Well, when I decided that I no longer wanted to be associated with those organizations, no longer wanted to be a sponsor, I told them so. I told them that I was withdrawing."

Craig, "But that didn't quite answer the question. Did you do or take legal means to prevent it?"

One of the newspapermen on this quiz show is Larry Spivak, who can be a bad egg when he wants to. At any rate, on this particular occasion he asked some of the very worst questions which could be asked of a lady lawyer. I thought Larry was very unkind, because he stripped the lady of the last vestige of an excuse. Look at this question by Larry Spivak:

"Miss Kenyon, in your testimony before the Senate you said, and I quote, 'I challenge and defy anyone to prove that I ever joined or sponsored or continued to identify myself with any organization or individuals I knew or had reason to believe were subversive.'

"Now, the out word there was 'I knew.' That's out, but shouldn't you have known? Is it enough for someone like you simply to say 'I didn't know the gun was loaded?'"

The lady could not answer. She swirled and fished and wove, but she could not answer. She got all excited and wanted to slap Frank Waldrop. But Mae Craig brought her up to October 1949; that is, long after the cold war started.

Then Miss Kenyon faced Spivak again, which should not happen to an "artful dodger." Read this:

Spivak: "Well, now, you said that you knew about them, that you didn't join them carelessly, that you knew all about them when you joined."

Kenyon: "That's right. That's right. The ones that I did join, and I'm telling you that there were only four or five of those, and that those were all in the early 1930's."

Spivak: "Well, now, you said that you knew about them, that you didn't join them carelessly, that you knew all about them when you joined."

Kenyon: "Well, I wish, I wish you could tell me, I'd like to know, Mr. Spivak, I'd be very happy to know."

Spivak: "Well, mine didn't get on any list; why did yours?"

It is just possible that Judge Dorothy Kenyon has overlooked the Hiss, the Christoffel, and the Harry Bridges cases.

The latter two were convicted of perjury when they denied association with Communists. Hiss was convicted of perjury because of false testimony given a congressional committee.

It is just possible that Judge Kenyon does not appreciate the significance of her membership in or the use of her name by organizations classed as Communist-dominated; that she does not understand the significance of McCARTHY's charges.

The columnists and radio commentators who have been branding McCARTHY as a falsifier have often been careless with the facts and their interpretation of the facts.

Just why, when a Red is caught, or an administration employee is charged with being a Communist or sympathetic toward Communists, this little group of commentators and columnists should feel called upon to rush to their defense, has never been explained.

Certain it is, however, that their influence is rapidly growing less. They are becoming known as professional mudslingers.

A Salute to the Glory That Is Greece

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, April 19 (legislative day of Wednesday, March 29), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an article entitled "A Salute to the Glory That Is Greece," written by Harry H. Schlacht, and published in the March 24, 1950 issue of the New York Journal American.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A SALUTE TO THE GLORY THAT IS GREECE

(By Harry H. Schlacht)

Hail, O, hail, O glorious Greece, on the one-hundredth and twenty-ninth anniversary of your Independence Day.

We cheer your unconquerable soul. We salute the glory that is Greece.

Your past is unrivaled in intellectual richness. Your past is filled with the meaning of justice and beauty. Your past is studded with every form of human achievement. Your past is kindled with the eternal love of human liberty.

No tyrant has ever been able to crush you. No tyrant ever will.

You have ever held aloft the torch of liberty and freedom to light the pathway of civilization.

Your love of freedom, and your love of music and the arts; your love of the finest impulses of the human heart and mind, flourished and blossomed with such rich fertility during the age of Pericles that they have never been exceeded in history.

Like that of your Olympian god, your polished brow was ranked above the contending forces that surged below. Like Aristotle, Socrates, and Plato of old, you have kept your eyes focused on the stars.

You have demonstrated in the most terrible of wars that you possess the flame which made your ancestors transcendent examples of what the human spirit can achieve.

You have never surrendered your convictions or ideals. You have emerged triumphant through every test of fire and sword. You have manifested in blood and suffering the invincible spirit of your martyred heroes who fought and died for liberty.

You have preferred to die on your feet rather than live on your knees. You were our ally in war, you are our ally in peace.

Spring has come again to the golden land of Hellas. We can feel the warm breezes playing gently over her pastoral Arcadia. We can see the red poppies of Attica bloom beneath the gray green olive trees. We can see the branches, heavy with buds, in the Thessalonian orchards. We can see the Greek dances and hear the Greek music.

Today mother Greece is mourning for her 28,000 children held behind the iron curtain by their Communist abductors.

In the name of Him who is full of compassion for little children, let us lift our voices against this blackest crime against humanity.

Let us denounce this mass outrage at the bar of civilization. Let us demand the return of these helpless children to their grieving parents.

This is a challenge to American leadership. This is a challenge to American fortitude.

This is a spiritual challenge.

America will, America must respond to the cry of mother Greece.

From the lamps of Acropolis, from the tragedies of Euripides, from the songs of Menander, from the poems of Palamis, from the thought of Aristotle, from the science of Archimedes, the light of liberty will never be extinguished.

Hail to the land of Hellas—one nation, one language, one history, one greatness.

Long live liberty. Long live Greece.

Life Insurance Is Interstate Commerce

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 3, 1950

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address I delivered before the Union Labor Life Insurance group:

LIFE INSURANCE IS INTERSTATE COMMERCE

I am indeed pleased to have this opportunity to give some of my views on the vital subject of insurance to a group like the union-labor life insurance group. A group such as yours understands more clearly than the lay public the dramatic impact that the business of life insurance has upon the economy of the Nation.

For many, many years a legal myth existed that insurance was intrastate business, and hence not subject to Federal regulation. It was not until 1944 in the United States against Southeastern Underwriters case that the Supreme Court held decisively that insurance is interstate commerce. Thus was exploded a myth that had no, and never did have any, basis in fact. In all the business operations of life-insurance companies, there is such a crossing and recrossing of State lines that to think of insurance as merely operating in a localized area of activity is absurd on the face of it.

Life-insurance investment carries it into almost every phase of our economy, and it is this significant investment problem that must be the concern of an aware and informed public. It is a group such as yours that constitute the nub of such a public.

The admitted assets, according to Dunne's International Insurance Reports, as of December 31, 1947, of the Big Five insurance companies, were: Metropolitan, $8,548,422,601; Prudential, $7,321,428,722; Equitable Life Insurance, $4,504,971,753; New York Life, $4,234,184,598; and Mutual Life of New York, $1,942,722,247. Since 1947, the figures have gone considerably higher.

Total assets of all insurance companies are somewhere in the neighborhood of $59,000,000,000, and these assets are increasing daily. When we view the staggering fact that between the end of 1939 and the end of 1949, assets of life-insurance firms jumped from $29,243,000,000 to $59,280,000,000, we have before us a rate of increase that must ultimately bring to the life-insurance companies a control over the economy of the Nation greater than any other segment in private enterprise.

The life-insurance companies have more than twice the volume of the mortgages they held 10 years ago; they hold three times the amount of Government security they did 10 years ago. They have nearly trebled their holdings in bonds and stocks.

As a consequence the insurance companies are involved in numerous types of business. They construct housing projects; they build commercial and industrial structures and rent them for short or long periods. They are in the banking business and make loans to all manner and kinds of business. There is neither floor nor ceiling to their financial activities, save that they may only invest in capital stock to a limited degree.

Now we learn that the insurance companies will purchase freight cars and lease them to the railroads. The Atlantic Coast Line Railroad has rented 1,300 freight cars to cost about $7,500,000 especially built for the Equitable Life Insurance Co. by the Pullman Standard Car Manufacturing Co. We learn also that the New York Central Railroad will similarly rent 1,500 boxcars from the Equitable Life Insurance Co.

Most significantly, the Subcommittee on the Study of Monopoly Power, which is a subcommittee of the Judiciary Committee of which I am chairman, has made some preliminary investigations on the disposition of the vast assets in the hands of the life insurance companies. We found that the larger of these life insurance companies are practically laws unto themselves. Their combined power is incalculable. It is not too difficult to foresee, for example, another of the insurance companies buying and renting locomotives or Diesel engines, and another passenger cars, and still another parlor cars, and a fifth one proposing to electrify railroads. These railroads need help, and the insurance companies are a source of much needed money's supply. However, where can this sort of practice end—in the complete control of railroads by insurance companies? This is by no means an improbable conclusion, I predict that this kind of practice will spread like wildfire. I see a long queue of railroads at the offices of the big five life insurance companies—insurance companies which are faced with a necessity of investing their billions of dollars of assets which keep increasing. Why not? Officials of railroads would be foolish, indeed, not to take advantage of these offers by insurance companies. They

can deduct the rents of the cars from their income taxes and get much needed good equipment for bad.

Now the point I wish to make is that I am not condemning this practice as such. That it holds implications of danger is apparent. The railroad financial situation is not of the soundest, and we must, therefore, question how secure are these investments for the company, the policyholder, and the public, but I do believe there is a more fundamental issue involved and that is the lack of proper supervision over life insurance companies' business operations.

In the last 2 years, according to some evidence submitted to me, private loans placed by life insurance companies have practically doubled. It has been estimated that between the years 1945 to 1947, these private loans have risen from five and one-half billion dollars to ten and one-half billions. I understand that these figures have been challenged, others placing it at six billion and some placing it at ten billion. Whatever the figure, the bold fact is that these loans are being made without supervision by entities like the SEC, the Federal Reserve Board or the Federal Deposit Insurance Corporation, entities which supervise loans made by banks, underwriters and investment outfits. Certainly, there should be some protective guidance to safeguard the interests of the stockholders, the policyholders and the public with reference to life insurance. These loans are usually negotiated between the insurance companies and the borrower without benefit of any intermediary, with no registration with State or Federal entities. These loans are of an investment character requiring far closer supervision and inspection than can possibly be given by any local State superintendent of insurance.

I am personally convinced that Federal regulation is necessary. There is presently no State supervision of life insurance companies (although there is a pretense of one), and even when there is, as for example in New York, the supervisor is made a year later when the insurance companies make their reports. Then that which is already done becomes an almost impossible and involved job to undo. Frankly, in most of the States, the regulated have already become the regulators, with few exceptions, so that there is no public reckoning.

I re-emphasize that Federal regulation is imperative. It is not, of course, my thought to superimpose Federal regulations upon State regulations which would result in 49 regulatory bodies. But it is my belief that the solution lies in Federal regulation which would govern in any conflict between State and Federal law.

In the preliminary discussions before the Monopoly Subcommittee, two very vital facts were presented: (1) that insurance with smaller companies is just as safe as with larger companies, and (2) that the premiums paid for insurance are no higher with a smaller company.

These two facts contain within themselves most interesting implications, particularly with reference to the size of insurance companies—size that carries with it a power almost as great as Government itself. I think that there is a need to explore these facts further and to relate them to both the question of size and Federal regulation of life insurance companies.

I know that you are alive to these problems, and I present them because I believe that a healthy, vigorous, and critical examination by groups such as yours will in the end produce the best answers in the interest of the people and the country.

A Century of Progress

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks I wish to include an excerpt from the Clinton (Mass.) Daily Item. This excellent article is the work of Mr. Orra L. Stone, editor of the Item, an authority on the history of Clinton:

A CENTURY OF PROGRESS

When Erastus Brigham Bigelow touched off the spark that fixed Clinton in the industrial firmament as the mid-nineteenth-century center of the manufacture of carpets, ginghams, and wire cloth and probably influenced, more than any other American, the development of the textile art, neither he nor his associates envisaged that within a century the plants that rose Phoenixlike to provide thousands with their living would, with one exception, wither or be removed from Factory Village in a little over three-quarters of a century.

But such is history and in place of three local enterprises that grew out of his inventions only one remains today. The original companies have been succeeded by approximately 35 smaller industrial establishments employing more than 3,200 workers to whom are being paid, in wages, approximately $6,000,000 annually, in the year that Clinton observes its centennial year.

One hundred years old today the great and General Court of Masachusetts passed the act that gave birth to the town and during that period its sons and daughters have passed through many trying years, none more seemingly disastrous than the early thirties of the present century when the Lancaster Mills liquidated and the Bigelow-Sanford Carpet Co. closed its local plant and removed its machinery to Thompsonville, Conn., and Amsterdam, N. Y.

These events from the economic point of view seemed to herald the end of Clinton as a manufacturing town and to spell bankruptcy to its merchants as the former weekly pay rolls of $130,000 melted into approximately $15,000 every six working days.

Every resident faced a crisis such as has befallen few Bay State towns and cities, but the courage, initiative, and business acumen of a group of 33 leading citizens were drawn upon in forming the Clinton Industries Corp. and a campaign was immediately launched which resulted in the acquisition of the idle plants and, aided by the chamber of commerce, concerns were lured from their former locations, vacant plants were filled with ma-machinery, and the town again resumed its industrial march with diversified products shipped to all world areas.

It was the second time that Clinton's growth and prosperity had been adversely affected as, in 1895, the expansion of homes and manufacturing plants to the south part of the town was halted when the Metropolitan Water and Sewerage Board seized 17 percent of the territory of this municipality, at that time the smallest town in Worcester County, in area, save Hopedale.

But, on the 5.2 square miles that constitute the geographical limits of Clinton, approximately 13,000 souls today confidently look forward to the continued influence of the town in the halls of statesmanship, education, industry, and all walks of life.

From time immemorial the go-getters have been the people who have run the world. Their souls have been awake and after all it is the soul that counts, not the body, not brawn and bone and blood and muscle, avoirdupois, and athletics.

A sleeve may carry a stump and a leg may go with a limp, but the soul that is regnant and determined will arise and overcome all difficulties as has been amply demonstrated by Clintonians since the natal day of its existence.

Nothing can block the way for the dauntless spirit that says: "It shall be done."

Like all towns Clinton has had those who never found themselves, those who have never gotten into action, others who were creatures of circumstance and easily diverted to the line of least resistance.

Some have been spineless and visionless, quickly subsiding without an ounce of steam in the throttle, a pound of coal in the bunker or a spark of fire in the furnace and have wondered why they failed.

But the human personalities that have made Clinton what it is today were dynamos of power, Niagaras running to waste and reservoirs of energy merely waiting to be tapped. Men have failed not because they lacked education, or equipment, or opportunity, but because they lacked pep and failed to demonstrate driving power.

The switch was never thrown, the will never asserted itself. That type failed to become a go-getter but fortunately the army of men and women who devoted themselves to the upbuilding of Clinton has been and today is awake and numerous and cannot be halted.

It is a far cry from the few dusty and ofttimes muddy highways that served Clinton in 1850, to the 35 miles of paved streets that Clintonians traverse daily while the primitive cesspools of that year have given way to 34 miles of sewers.

No longer must residents go to the expense of locating and digging wells as was the case in 1850, for today they are served by 45 miles of water mains on every street in town, providing them, by the simple turn of a tap, with a daily capacity of 925,000 gallons of the purest water enjoyed by any Bay State municipality with the right to pump 500,000,000 gallons a year from Wachusett Reservoir in times of emergency and with the Wekepeke reservoirs holding 235,000,000 gallons of water which flow, by gravity, to Clinton, without the aid of pumps and with the value of the waterworks system set at $1,000,000.

In 1850, residents enjoyed illumination from kerosene lights or candles while today electricity flows through 4,200 meters installed in all dwellings and public and private buildings.

One hundred years ago the busy Clinton housewife prepared the meals for her family on a range fed with wood while today at least 2,200 dwellings are equipped with gas meters supplying fuel, through modern ranges, that require only a thumb to turn the flow off and on and many more homes are equipped with electric ranges.

In 1850, if a Clinton resident wanted to talk with a relative or neighbor it was necessary to journey to where they lived but, today, by simply uncradling a receiver from a mechanical instrument in 4,039 homes or places of business he can almost instantaneously make his voice heard in any town or city between the Atlantic and the Pacific or in the far corners of the globe.

No longer is it necessary to hide one's money in a stocking at home or journey to the mother town to place it on interest as was the case when Clinton was incorporated, but he finds safe depositories in either the Clinton Trust Co., the Clinton Savings

Bank, or the John Prescott Cooperative Bank, the three financial institutions possessing total assets exceeding $16,330,000.

Four years before Clinton was incorporated the first newspaper, the Lancaster Courant, was established, later to become the Clinton Courant and 7 years before the town celebrated its semicentennial the late William J. Coulter launched the Clinton Daily Item.

When Clinton came into being residents were dependent for home reading on such volumes as they purchased or obtained at the limited library established by the Bigelow Mechanics Institute, in Clintonville, just prior to the incorporation of the town, but today they are served by the Bigelow Free Public Library, housed in a building erected largely by the philanthropy of the late Andrew Carnegie and now containing on its shelves more than 53,000 volumes in its circulating department and approximately 44,000 in the children's department.

The religious life of Clintonians is cared for by 15 churches, including three Roman Catholic parishes, and edifices housing the Baptist, Congregational, Episcopal, Methodist, Free Methodist, Greek Orthodox, Jewish, Lutheran, United Presbyterian, Unitarian, and Christian Science denominations.

Through the generosity of the late Frank T. Holder and his wife, Clinton, although the youngest of Lancaster's daughters, boasts a historical building that is second to none in the Commonwealth and serves as a center for many civic activities.

The boys of 1850 showed their athletic prowess on vacant sandlots, but the youth of 1950 is served by three playgrounds; Fuller Field, with a seating capacity of 3,000, and four public parks with the old common providing a beautiful centerpiece for the many public and private buildings surrounding its four sides.

In 1850 the residents of the little town enjoyed only a few stores with meager stocks, but 100 years later more than 125 wholesale and retail establishments, including some of the leading national chains, are visited daily by thousands of customers in their ultramodern interiors where are dispensed every article catering to human needs at prices on a par with the big department marts in the larger cities.

Notable indeed are the recently enlarged enterprises of the F. W. Woolworth Co., and the J. J. Newberry Co.

The retail enterprises cater to a consuming population of more than 25,000 persons within a shopping radius of 8 or 10 miles.

While the horse and buggy served the denizens of Clinton, in 1850, today more than 3,000 locally owned automobiles and trucks traverse Clinton streets daily speeding their owners and passengers to the shopping center and to towns and cities where many Clintonians are employed.

Of the 2,088 dwellings in Clinton, more than 505 are one-apartment houses and are owned and occupied by the owners. During the period of the last depression from 1929 to 1940, the longest in the history of the Nation, few new houses were erected but in 1949, approximately 50 were constructed at an estimated cost of $256,000, to partially relieve the acute housing conditions, and in this centennial year the town's first State-sponsored housing development will be completed and dedicated at a cost of $300,000.

In 1850, all new arrivals were ushered into the world at the homes of their parents but today, 99 percent of all infants born to local and vicinity families see the first light of day at the Clinton Hospital now a little more than a half a century old and the centennial year will witness the dedication of a $1,000,000 fireproof brick structure bearing the name of its founder, the late Dr. Walter P. Bowers, which with its maternity ward, will accommodate 117 beds.

Out of Clinton have gone, especially in the last half century, sons who were products of Clinton High School to take their places in the halls of statecraft. A decade ago Clinton boasted, in a single year, a State representative, a State senator, a United States Congressman, and a United States Senator, and previously a Lieutenant Governor and a Governor as well as candidates for Attorney General and Lieutenant Governor. The town has furnished two United States Congressmen within the past 10 years.

Clinton High School probably has graduated more young men who went on to win national and world fame in many fields than any other institution of its type in a town the size of Clinton in this or any other State.

Included in the long list are such notables as former lieutenant governor, governor, and United States Senator, Hon. David I. Walsh, the late Congressman Edward Kenny, of New Jersey, Congressman Philip J. Philbin, former Congressman Joseph E. Casey, Matthew J. Connelly, Secretary to President Harry S. Truman for the past 5 years, associate justice of the Superior Court John W. Corcoran, who also was honored by Democratic Party nominations, successively, as attorney general and lieutenant governor and only a few years ago it looked to many people as if Clinton might be the home of both Massachusetts United States Senators when the late Senator Walsh was serving, as the senior representative of the Commonwealth in the upper branch of Congress and Congressman Casey was nominated, by his party, for the junior senatorship.

Hon. John A. Roche served as the reform mayor of the great city of Chicago from 1887 to 1889, while the late Rev. Dr. Charles H. Parkhurst, born in the house now owned by Dr. Edward H. Mackay, led the greatest moral, social, and political upheaval that has occurred in the United States in the past century when he attacked Tammany Hall, in the Nation's metropolis and was given the support of the newspapers and of all civic groups of the largest city of the country.

Adwin Lassiter Bynner, author of the novel Agnes Surriage, won laurels in the field of literature and Arthur F. Bowers, brother of the late Dr. Walter P. Bowers exerted great influences in the fourth estate, in New York City where he served as editor of the New York Tribune.

David M. Cheney, of 130 Prescott Street, has authored several historical novels in recent years that have enjoyed large sales and is at work on an epic contribution to American literature at the present time, while pertinent contributions to the life of the era frequently appear in the Saturday Evening Post, from the pen of Richard F. Attridge, of 37 Hammond Street. The writer of this editorial is the author of a 4-volume history of Massachusetts industries which appeared in 1930.

Cause and Cure

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1950

Mr. O'SULLIVAN. Mr. Speaker, I wish to direct the attention of the membership of the Congress and the readers of the CONGRESSIONAL RECORD to a very timely editorial written by the Honorable James E. Lawrence, editor of the Lincoln Star, published at Lincoln, Nebr., which editorial appeared in the issue of Tuesday, April 11, 1950.

All Democrats and Republicans whose political faiths have not been fashioned in the loom of un-Americanism by the interweaving of the warp of extreme left wingism and the woof of the extreme right wingism will, I am sure, appreciate reading this editorial.

Mr. Lawrence has for many years been one of the outstanding, faithful Democrats of Nebraska, and has always pursued his journalistic labors in an effort to be helpful to people of Nebraska and the Nation. He has been a firm believer in, and advocate of, the great Jeffersonian principle reiterated by Abraham Lincoln that the citizens of our Republic are entitled to have "a Government of the people, by the people and for the people" instead of a Government, State and national, of selfish big business, by selfish big business and for selfish big business.

In passing, I might also observe that the Lincoln Daily Star is the leading Democratic newspaper in Nebraska, and but for the efforts of this newspaper and its sister Republican newspaper, the Lincoln Daily Journal, all political faith in Nebraska would have been less potent today than it is now. True, there are a number of other great Democratic and Republican newspapers in Nebraska which have less circulation than these two fine newspapers and they, too, are entitled to their full measure of praise for the great good they have accomplished. Concerning all of these fine publications it might well be stated "Glorious it is to wear the crown of a pure and well-deserved success."

Of course, it should be the desire of everyone to reduce taxes if possible, but when doing so we should remember that we are not living in an era of peacetime economy where we can freely cut expenditures to the bone and pay off the national debt. On the contrary, we are living perhaps in the most disturbed era which our country has ever known.

We are endeavoring to successfully fight the cold war through ECA appropriations and in other ways, and many people think the time is not far distant when we shall be engaged in world war III, and if that be a fact, then our watchword should not be "economy," but on the contrary should be "preparedness." We should not be induced to follow the reactionary pattern which was in vogue before Pearl Harbor and which almost brought about our defeat—but we should profit by the experiences of the past and do everything possible to protect our Nation and save its people and its Government which is not only our hope but the last ray of hope to the peoples of the world who desire freedom and lasting peace.

I now will set forth the editorial which I have mentioned herein with a few slight changes by way of deleting from the text the name of the person mentioned therein:

CAUSE AND CURE

One of the Nebraska Representatives "in Congress is quite certain that he has located

the cause of a Nebraska ailment. Unfortunately in setting forth his views, nothing that he says even slightly resembles a cure for the disease he has discovered."

He "told a staff member of the Washington bureau of the Omaha World-Herald that a small-town banker in southeastern Nebraska had written him that his institution had made out 304 income-tax returns for taxpayers who also filed returns in 1948 and the tax paid for 1949 was approximately 50 percent of what they paid in 1948. Then he added:

"The root of the trouble is an economically unsound tax system that destroys savings and discourages new business. Continuation of the present heavy wartime tax load certainly is one of the basic problems in the national as well as the farm-income drop for excessive taxation is not conducive to expanded enterprise either in the city or on the farm."

There is a germ of truth in what he says. Certainly excessive taxation destroys savings. Whether it robs individuals of incentive is open to argument. There is no evidence to support it in Nebraska. The farmers of this State continue to plow and plant, to cultivate and to harvest. In the towns and the cities, business and industry look forward to new physical plants, to increased production, to greater efficiency, and to more successful operation.

We have yet to talk to a single individual, who actually has decided to seek an easy chair, or to sit with folded hands, lazily gazing at the skies. The tax burden is heavy. The amount of each dollar of earnings that goes to the support of Government at all levels, takes a surprisingly large chunk of every dollar of the individual's earnings. But in spite of it we see no loss of creative thinking by Americans. They work, plan, and actually, they complain surprisingly little. They dream of homes, of comforts and necessities, and they do continue to practice thrift.

We're inclined to think most of them are realists enough to recognize that if there is to be national security, it will prove costly; that if America is to fulfill foreign commitments, that will take huge chunks of money; that if the single item of interest on the national debt is to be met, it alone will call for an annual tax burden equal to an approximate 40 percent of the total Federal budget in the early thirties.

It does not take a smart man to recognize that the present tax load is punishing. It does call for a miracle man to figure out how America can cut its present expenditures substantially—cut them enough to make the economies reflect themselves in the individual's tax burden.

He has been a member of the House Ways and Means Committee, where tax legislation originates in Congress. There's where he should try his cure if he can convince his associates that he has one.

Address by President Truman Before the American Society of Newspaper Editors

---

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, April 20 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the address delivered by President Truman today before the American Society of Newspaper Editors. It is an honor and privilege to insert an address which refers to my resolution, Senate Resolution 243, now before the Senate Committee on Foreign Relations, and which brings to its objectives such eloquent and powerful support.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished guests, members of the American Society of Newspaper Editors, I am happy to be here today with this group of editors. You and I have a great many important problems in common, and one of the most important of these is the responsibility we share in helping to make the foreign policy of the United States of America. That is why I am going to take this opportunity to discuss with you some aspects of that policy.

No group of men in this country is of greater importance to our foreign policy than the group your society represents.

In a democracy, foreign policy is based on the decisions of the people.

One vital function of a free press is to present the facts on which the citizens of a democracy can base their decisions. You are a link between the American people and world affairs. If you inform the people well and completely, their decisions will be good. If you misinform them, their decisions will be bad; our country will suffer and the world will suffer.

You cannot make up people's minds for them. What you can do is to give them the facts they need to make up their own minds. This is a tremendous responsibility.

Most of you are meeting that responsibility well—but I am sorry to say a few are meeting it badly. Foreign policy is not a matter for partisan presentation. The facts about Europe or Asia should not be twisted to conform to one side or the other of a political dispute. Twisting the facts might change the course of an election at home, but it would certainly damage our country's program abroad.

In many other countries today, the papers print about foreign affairs only what their governments tell them to print. They can't add anything, or cut anything. In the democracies, the papers have a free hand. Only in a democracy is there such mutual trust and confidence among citizens that a private group is given such an all-important role in determining what the Nation as a whole shall do. There is too much nonsense about striped trousers in foreign affairs. Far more influence is exerted by the baggy pants of the managing editor.

There has never been a time in our history when there was so great a need for our citizens to be informed and to understand what is happening in the world.

The cause of freedom is being challenged throughout the world today by the forces of imperialistic communism. This is a struggle, above all else, for the minds of men. Propaganda is one of the most powerful weapons the Communists have in this struggle. Deceit, distortion, and lies are systematically used by them as a matter of deliberate policy.

This propaganda can be overcome by truth—plain, simple, unvarnished truth—presented by newspapers, radio, and other sources that the people trust. If the people are not told the truth, or if they do not have confidence in the accuracy and fairness of the press, they have no defense against falsehoods. But if they are given the true facts, these falsehoods become laughable instead of dangerous.

We can have confidence that the free press of the United States and most of the other free nations will keep us from being deceived by Communist propaganda. But in other parts of the world the struggle between falsehood and truth is far more intense and dangerous.

Communist propaganda is so false, so crude, so blatant, that we wonder how men can be swayed by it. We forget that most of the people to whom it is directed do not have free access to accurate information. We forget that they do not hear our broadcasts or read impartial newspapers. We forget that they do not have a chance to learn the truth by traveling abroad or by talking freely to travelers in their own countries.

All too often the people who are subject to Communist propaganda do not know Americans, or citizens of the other free nations, as we really are. They do not know us as farmers or as workers. They do not know us as people having hopes and problems like their own. Our way of life is something strange to them. They do not even know what we mean when we say "democracy."

This presents one of the greatest tasks facing the free nations today. That task is nothing less than to meet false propaganda with truth all around the globe. Everywhere that the propaganda of Communist totalitarianism is spread, we must meet it and overcome it with honest information about freedom and democracy.

In recent years, there has been tremendous progress all over the world in education and the exchange of ideas. This progress has stirred men everywhere to new desires and new ambitions. They want greater knowledge, they want better lives, they want to be masters of their own affairs. We have helped and encouraged these people, but the Communists have seized upon their desires and ambitions and are seeking to exploit them for their own selfish purposes.

In the Far East, for example, millions are restlessly seeking to break away from the conditions of poverty and misery that have surrounded them in the past. The Communists understand this situation very well. They are trying to move in and take advantage of these aspirations. They are making glittering promises about the benefits of communism. They reach directly to the peasant or the villager in these vast areas, and talk to him directly in his own tongue about the things he has learned to desire. They say that they can get these things for him. And too often he hears no voice from our side to dispute them.

We know how false these Communist promises are. But it is not enough for us to know this. Unless we get the real story across to people in other countries, we will lose the battle for men's minds by default.

The Communist propaganda portrays the Soviet Union as the world's foremost advocate of peace and the protector of defenseless peoples. The contradiction between what the Communist leaders have promised and what they have actually done is so startling that we are amazed that anyone can be deceived. In Berlin, in Czechoslovakia, in the Balkans, in the Far East, they have proved, time after time, that their talk about peace is only a cloak for imperialism.

But their intended victims will not learn these facts from Soviet propaganda. We are the ones who must make sure that the truth about communism is known everywhere.

At the same time, we must overcome the constant stream of slander and vilification that the Communists pour out in an effort to discredit the United States and other free nations.

Soviet propaganda constantly reviles the United States as a nation of war mongers and imperialists. You and I know how absurd that is. We know that the United States is wholly dedicated to the cause of peace. We have no purpose of going to war except in defense of freedom. Our actions demonstrate that we mean exactly what we say. But when men throughout the world are making their choice between communism and democracy, the important thing is not what we know about our purposes and our actions—the important thing is what they know.

Communist propaganda also seeks to destroy our influence in the world by saying the American economy is weak and about to collapse. We know this is preposterous. The industrial production of the United States is equal to that of the rest of the world combined. Our agricultural production is more than adequate for our needs. Our people enjoy the highest standard of living in the world's history. Our economic strength is the bulwark of the free world.

From every standpoint, our free way of life is vastly superior to the system of oppression which the Communists seek to impose upon mankind. In many parts of the world, however, where men must choose between freedom and communism, the true story is being untold.

We cannot run the risk that nations may be lost to the cause of freedom because their people do not know the facts.

I am convinced that we should greatly extend and strengthen our efforts for making the truth known to people in all the world.

Most of us have recognized for years, of course, how important it is to spread the truth about freedom and democracy. We are already doing some very good work, through the Voice of America and the United States information offices and libraries in many parts of the world, through the exchange of students, through the United Nations and its affiliated organizations, and in other ways. But events have shown, I believe, that we need to do much more, both ourselves and in collaboration with the other free nations. We must use every means at our command, private as well as governmental, to get the truth to other peoples.

Private groups and organizations have an important part to play. Our labor unions have already done fine work in communicating with labor in Europe, in Latin America, and elsewhere. The story of free American labor, told by American trade unionists, is a better weapon against Communist propaganda among workers in other countries than any number of speeches by Government officials.

The same principle applies to other groups. The best way for farmers in other countries to find out about us is to talk directly with our own farmers. Our businessmen can speak directly to businessmen abroad. We need to promote much more direct contact between our people and those of other countries.

We should encourage many more people from other countries to visit us here, to see for themselves what is true and what is not true about our country. We should find more opportunities for foreign students to study in our schools and universities. They will learn here the skills and techniques needed in their own countries. They will also see at first hand the rights and duties of citizens in our land of democratic institutions.

Our colleges should train more Americans to go abroad as teachers, especially to teach modern methods of farming, industry, and public health—and, by example, to teach our concepts of democracy. The notable record of our many charitable and religious organizations who send teachers abroad is proof of what can be done.

Another major part of our effort must be carried out through our great public information channels—newspapers and magazines, radio, and motion pictures. We must strive constantly to break down or leap over barriers to free communication wherever they exist. We must make full use of every effective means of communicating information, in simple, understandable form, to people whose backgrounds and cultures are different from ours.

This poses an enormous challenge to groups such as yours, a challenge which can be met only by extraordinary inventiveness and enterprise. I am confident that the American press can and will make a tremendously useful contribution toward finding new solutions.

The Government's programs for telling the truth about the United States to the peoples of the world also need constant improvement. Our present overseas information and educational exchange program is getting results. For example, the Voice of America has been carrying to people behind the iron curtain the true story of world events. It has been so successful that the Soviet Government is using a vast amount of costly equipment in an attempt to drown out our broadcasts by jamming. We must devise ways to break through that jamming and get our message across. And we must improve and strengthen our whole range of information and educational services.

This is not a conclusion reached by Government officials alone. We have had the valuable aid of the United States Advisory Commission on Information created by the Congress. Your own society is ably represented on that Commission by Mr. Mark Ethridge and Mr. Erwin D. Canham. The members of the Commission have given intensive study to the overseas information program and have made repeated recommendations that it be substantially expanded. Similar recommendations for the exchange program have been made by the Advisory Commission on Education, headed by Dr. Harvie Branscomb. I have been glad to see that many Members of the Congress have urged an improved and expanded program in these fields, as shown, for example, by the resolution introduced recently by Senator BENTON for himself and a number of his colleagues.

Because of the pressing need to increase our efforts along this line, I have directed the Secretary of State to plan a strengthened and more effective national effort to use the great power of truth in working for peace. This effort will require the imagination and energies of private individuals and groups throughout the country. We shall need to use fully all the private and governmental means that have proved successful so far—and to discover and employ new ones.

Our task is to present the truth to the millions of people who are uninformed or misinformed or unconvinced. Our task is to reach them in their daily lives, as they work and learn. We must be alert, ingenious, and diligent in reaching peoples of other countries, whatever their educational and cultural backgrounds may be. Our task is to show them that freedom is the way to economic and social advancement, the way to political independence, the way to strength, happiness, and peace.

This task is not separate and distinct from other elements of our foreign policy. It is a necessary part of all we are doing to build a peaceful world. It is as important as armed strength or economic aid. The Marshall Plan, military aid, point 4—these and other programs depend for their success on the understanding and support of our own citizens and those of other countries.

We must make ourselves known as we really are, not as Communist propaganda pictures us. We must pool our efforts with those of the other free peoples in a sustained, intensified program to promote the cause of freedom against the propaganda of slavery. We must make ourselves heard round the world in a great campaign of truth.

We have tremendous advantages in the struggle for men's minds and loyalties. We have truth and freedom on our side. The appeal of free institutions and self-government springs from the deepest and noblest aspirations of mankind. It is based on every man's desire for liberty and opportunity. It is based on every man's wish to be self-reliant and to shape his own destiny.

As we go forward with our campaign of truth, we will make lasting progress toward the kind of world we seek—a world in which men and nations live not as enemies but as brothers.

Address by Hon. Edward Martin, of Pennsylvania, at Annual Dinner of the Amen Corner

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, April 20 (legislative day of Wednesday, March 29), 1950

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered last Saturday by the Senator from Pennsylvania [Mr. MARTIN] at Pittsburgh, Pa.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is appropriate on occasions such as this, when sincere, loyal Americans meet to consider the welfare of our country, to recall the warning contained in the familiar quotation:

"Eternal vigilance is the price of liberty."

It is likewise appropriate to recall the words of Daniel Webster, who said:

"God grants liberty only to those who love it and are always ready to guard and defend it."

When we reflect upon those profound truths it is incumbent upon each of us to search his soul and to ask:

"Have we been eternally vigilant in the protection of our liberties?"

"Have we been always ready to guard and defend the freedom that God has granted us?"

My friends, because we cannot, in good conscience, reply in the affirmative, we live in a world of unrest and confusion, a time when our precious liberties are in grave peril.

There are many dangers in the world today. The air is filled with strange philosophies and fantastic slogans.

On all sides we are bombarded by propaganda that the plan of free government by free men, established by the founders of our Republic, is outmoded and should be thrown on the junk pile.

Loud voices have been raised telling us that it should be replaced by a socialistic

ideology with an all-powerful central government promising comfort, ease, and security from the cradle to the grave.

But they do not tell us that the price of the system they advocate is surrender of all individual freedom.

They do not tell us that its inevitable result would be enslavement of the people to the government under rigid controls, regulation, and regimentation.

They do not tell us that the socialistic plan has brought disaster to every nation where it gained control and that it dragged the people down to poverty and misery.

Under its plan of individual freedom, the United States, throughout its history, has been a bright beacon of peace, good will, and liberty in the world.

In less than 200 years we have made greater progress than any other people on earth. We have produced the highest living standards and most advanced cultural and spiritual attainments of all time.

Yet we are not free from danger. There are those, jealous of our unparalleled success as a nation and a people, who would destroy us.

There are those who would discard our system of free enterprise and would substitute a planned economy to direct our lives and our activities.

We have those who are striving to array one class against another and one section against the other to create dissension and distrust among our people.

These are some of the elements of the national peril which threaten freedom of the individual and freedom of opportunity—the firm foundation of American greatness.

But we are exposed today to a greater and more menacing source of danger.

The greatest threat to American freedom is the atomic bomb of national bankruptcy caused by excessive taxation and reckless, extravagant Government spending.

One of the most shocking developments in American history is the rapid increase in the cost of Government and the heavily increased burden of taxation and debt.

In recent years we have witnessed radical changes in the philosophy of government and dangerous departures from the traditional American course.

We have seen a vast increase in the size and complexity of the Federal Government. We have seen its power encroaching more and more upon the functions and authority of State and local government.

We have seen the cost of Government multiplied eightfold in 20 years. We have seen excessive direct and hidden taxes drain away the earnings of the worker, the farmer, and the resources of industry.

We have witnessed the tragic spectacle of an administration unaware of the danger of national bankruptcy and the threat to American freedom that is inherent in a national debt exceeding a quarter of a trillion dollars.

We have witnessed the wildest spending spree in our Nation's history. This year alone it may add $6,000,000,000 to our present crushing burden of debt.

The cost of government at all three levels, local, State, and Federal, has increased until it has reached $65,000,000,000 a year.

Government costs 13 times as much as education. We pay for government 40 times as much as we contribute to our churches of every denomination. We spend more for government than for food.

Thirty cents out of every dollar earned by every one of us—worker, farmer, preacher, lawyer, doctor, and businessman—goes for government.

Government is taking so much from the earnings of the people that the men and women who have supported the churches, hospitals, charitable institutions, research foundations, and colleges will no longer have the means to continue their support.

These institutions will be forced to make increased demands for governmental aid and finally will become totally dependent upon government for their existence.

They will no longer be free institutions. They will be controlled and directed by political overlords with the power of life or death, according to the whims of political fortune.

With these critical conditions confronting us there are important questions which must be answered.

How much of the national income can be taken in taxes and still leave enough to continue high employment and operate industry at full capacity?

How far can we go without everyone getting hurt in the tax squeeze?

How far can we allow taxes to consume the substance of the people and still maintain our high living standards?

If we reduce taxes more people will have more money to spend for automobiles, homes, household appliances, and the necessities of life. That is the way real income should be increased, not by inflation through government spending of borrowed money.

Under the socialistic government of Great Britain the people pay even a higher tax than we pay here in the United States. As a result living conditions for the worker have been reduced to a poverty level and opportunities to improve health and education have been ignored.

High taxes ruined Germany. They were "goose stepped" into regimentation and all freedoms were lost. The same happened to Italy and Russia and to every other nation which followed this plan.

History teaches us that one of the causes of the fall of the great Roman Empire was the steady trend toward turning citizens into pensioners. When the Roman masses got their minds firmly fixed on free bread and circuses, they soon became indifferent to liberty and freedom.

In modern times we see the same abuses in the constantly increasing pressure and demand upon the government for support of destructive programs that reach into every activity of our daily lives.

When Government control goes far enough into medicine, education, agriculture, labor and business, the freedoms which made us a great Nation will be lost.

Security is the desire of every right-thinking man; but never in the history of the world has it been attained by a governmental formula.

Real security must be bought and paid for by work and sweat, individual thrift and sacrifice. It is the reward of enterprise, initiative and prudence.

Security cannot be achieved by the simple method of having the earnings of the people spent, not by themselves, but by a spendthrift Government bureaucracy.

Is there one individual in all our broad land who will say:

"I no longer want freedom."

Is there one with soul so small or vision so limited that he will say:

"Give me security and I will surrender into other hands God's gift of liberty."

If there is he has ceased to be an American. He has forfeited the rights and privileges of American citizenship.

Real Americans can serve their country by working and fighting for sound fiscal policies and economical, business-like administration of the public funds.

A bankrupt America cannot stop communism at home or abroad.

A system of taxation that destroys initiative and incentive and prevents the production of new wealth can destroy the United States.

Our first line of defense must be a strong, dynamic, solvent America.

I repeat:

"Eternal vigilance is the price of liberty."

Renewal of Radio Station Licenses

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Thursday, April 20 (legislative day of Wednesday, March 29), 1950

Mr. BRIDGES. Mr. President, I ask to have printed in the Appendix of the RECORD a statement prepared by me regarding the FCC hearings on renewal of radio-station licenses.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, on March 30 I introduced into the RECORD a statement with reference to the present Federal Communications Commission hearings in connection with the Commission's attempt to not renew the licenses of radio stations KMPC in Los Angeles, WGAR in Cleveland, and WJR in Detroit.

I am this morning in receipt of a copy of a statement relative to this matter, issued by Mr. Hugh Fulton who is the chief trial counsel for these radio stations. His statement is as follows:

"I am amazed that the Federal Communications Commission would attempt to destroy an excellent station like KMPC and its right to its license on the basis of testimony of witnesses such as those relied upon by the Commission.

"With the exception of a very few whose testimony if accepted 100 percent would not justify any attack upon the license of KMPC, they were all disgruntled former employees who had been fired for laziness or incompetence. Very obviously they nursed grudges against KMPC and against Mr. Richards (principal owner of the stations) and have endeavored for years to damage and injure the station.

"Testimony was replete with obvious exaggeration and emphasis on everything which they conceived might be stretched into something unfavorable. Wherever they thought they could do harm they purported to have marvelous recollections but on cross-examination constantly sought refuge in 'I don't remember.'

"On their own testimony it was clear that most of them were committing perjury and some of them also admitted facts establishing theft of files from the station and participation in ventures under investigation by the district attorney for fraud. One openly asserted on the stand that he had deliberately lied in a prior statement.

"The amazing thing is that the Federal Communications Commission should have vouched for the credibility of witnesses such as these and should rely on that kind of evidence in an attempt to destroy great radio stations which have for so many years furnished such excellent service to tens of millions of listeners.

"In all that time the Federal Communications Commission put in evidence only one solitary complaint from a listener and referred to two or three other complaints which its witnesses said they had received in the course of 11 years, but which they had not kept, despite the fact that one of its leading witnesses testified that he had carefully preserved for 7 years all the material which he thought might be injurious to the station.

"The Federal Communications Commission counsel fought desperately to prevent the authentication of the actual scripts that had been used in broadcasts by KMPC, and even went so far as to try to prevent the authen-

tication of the scripts for use on cross-examination. This attempt of the Commission to get away from the criterion of what was actually broadcast, taken together with the absence of complaint and complete satisfaction of the listening public with KMPC and its programs, is most significant.

"The Commission's only claim of right to examine into the matter at all is on the theory that the public needs to be protected. The public itself is the best judge and the verdict of the public with respect to all three stations based on years of listening by tens of millions of persons was rendered in favor of the stations many years ago.

"These proceedings have already cost the taxpayers and the radio stations, and through the radio stations the public, a vast sum of money, and have diverted time and attention that otherwise would have been devoted to still further improving the excellent service rendered to the public by these fine stations.

"Despite the fact that none of the Commission's witnesses could show anything broadcast that was false or that deceived the public, the Commission apparently thinks it proper to engage in this kind of proceeding on the testimony of these disgruntled former employees, most of which was to the effect that Mr. Richards dared to have political views different from those of the administration in Washington, and particularly that he dared to state over the radio true facts which such witnesses characterized as unfavorable to the administration and to various persons connected with it, particularly the Roosevelt family.

"Clearly, this is an attempt to censor what goes over the radio in violation of the Constitution and of the ban by Congress against censorship, and all this is in the face of the admission in Washington by the chief counsel of the Commission that the Commission has no investigation pending against any radio stations owned by Democrats or labor unions that have expressly stated their intention to purge and drive from office Republican Senators and Congressmen who support the Taft-Hartley Act."

Mr. President, I am sure that no Member of this Congress—either Republican or Democrat—can question the integrity of Mr. Fulton. Many Members of the Congress will recall that Mr. Fulton was chief counsel for the War Investigating Committee during the period when President Truman was chairman of that committee. They will recall the fine reputation which Mr. Fulton made for himself at that time and the many tributes paid to him, both by the President and other members of the committee. The fact that Mr. Fulton is a Democrat and is in this case defending the right of Mr. Richards, an avowed Republican who has been a foe of the administration privately, to voice his private opinion lends even greater support to my belief in Mr. Fulton's intellectual honesty. It is because of this very fact that I believe that the members of this Senate should carefully examine the statements by Mr. Fulton which I have placed in the RECORD today.

Hidden Billions—United States Ignores Assets of ERP Nations

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Thursday, April 20 (legislative day of Wednesday, March 29), 1950

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mr. Herman A. Lowe, appearing in the Philadelphia Inquirer on Thursday, March 30, 1950. I recommend this article to the careful consideration of all Senators, since it is based upon careful research by Delaware's most efficient and capable Representative BOGGS, who calls our attention to the unknown billions of dollars' worth of assets in the 16 European nations now receiving aid from this country.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HIDDEN BILLIONS—UNITED STATES IGNORES ASSETS OF ERP NATIONS

(By Herman A. Lowe)

WASHINGTON, March 29.—Delaware's able Congressman, J. CALEB BOGGS, has turned a spotlight on this Nation's most prominent anatomical peculiarity—its heart is bigger than its head.

At a time when Congress is beginning to think about what kind of policy should succeed the European recovery program which expires in 1952, BOGGS has asked leaders of the House Foreign Affairs Committee to:

1. Try to find out the value of the foreign assets of the 16 ERP nations.

2. Determine whether some of these assets should not be liquidated to pay for a portion of the goods being supplied to them by the heavily burdened American taxpayers.

In the course of digging for information, BOGGS has verified that the 16 ERP countries and their citizens own billions of dollars worth of assets in the United States and other countries—but that our Government has only a notion of how many billions.

Yet, without bothering to learn the answers, our Government lays billions of dollars in taxes upon the American public and adds other billions to the national debt, to aid the ERP countries.

So far as BOGGS is concerned, that is a very unrealistic way of operating. He thinks maybe we ought to be governed by some of these facts as well as by our generous emotions.

In his letter to the Republican and Democratic leaders of the House Foreign Affairs Committee, BOGGS said:

"It seems very proper at this time to ask for an over-all statement of such overseas assets as may now be owned by the 16 ERP countries. It is known that large investments by European governments and private citizens have taken place in the United States during the five postwar years.

"It is most surprising and remarkable that we have never been given a comprehensive report of the assets owned by the 16 ERP countries in areas where we have spent money for off-shore procurement on behalf of Europe under the Marshall plan."

That second paragraph holds the crux of BOGGS' idea for having the ECA countries pay for part of the aid. A substantial part of the food and other materials which ECA has bought with American money has been in other countries. BOGGS says it amounts to $2,700,000,000 worth. He thinks that some of the assets of the 16 beneficiaries in those other countries should be liquidated to pay for future commodities there—instead of the burden all falling on the American taxpayer. He does not urge at this time that any of the beneficiary country assets in the United States be liquidated. He does, however, suggest that we find out what these assets amount to.

The latest figure on ECA country assets in the United States was released by the United States Department of Commerce in 1947. It set the total at about $11,000,000,000. BOGGS took this up the other day with the State Department which pointed out that many of the figures in the big total were compiled in 1941 and that no recapitulation had been made since.

State Department threw up its hands vaguely, explaining that: "Any estimates derived from the original census become more and more unreliable as the years go by, and consequently it is not believed that a reliable estimate can be made today." State admitted that, so far as it was concerned, it just did not know how much was around.

On the question of what assets the ECA countries had in other foreign nations, the State Department had even less to offer.

"To our knowledge," it informed BOGGS, "such information is available only in isolated cases and not on any comprehensive basis."

State went on to explain that it was "the understanding" of the Department that the balances had been reduced. However, no real efforts have been made to find out.

And there you have the situation. Billions have been spent for ECA aid by the United States. Yet our Government has never obtained any figures to determine whether the spending was all necessary, or whether our people could have been spared some.

BOGGS thinks we ought to insist upon getting all the facts before we shape up a new program which will doubtless cost us additional billions.

Patriots' Day Address

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at Lexington, Mass., on April 19, 1950, to commemorate the one hundred and seventy-sixth anniversary of the Battle of Lexington and Concord:

Mr. Chairman, the immortal heroes of the battle of Lexington, distinguished guests, ladies and gentlemen, and all my friends, the most outstanding and significant factor in all history is that from Wednesday dawn, April 19, 1775, this Nation, conceived in freedom and born on this immortal spot of earth, still exists and has steadily progressed, enduring many national catastrophes, two world wars, and threatening enslaving philosophies of government, until now, this Wednesday dawn, 175 years later, it is the most modern, God-fearing, the most powerful Nation on earth—depended upon by free nations everywhere this United States of America holds within its power and strength the freedom of mankind throughout the world.

Here on this precious soil little did the heroic men of that momentous dawn know the meaning of their stand against the overwhelming force of British Regulars. Little did they know the destiny of the colonies their valor cemented together into a new Nation dedicated to freedom and equal justice under law. Little did they know this new Nation under a new concept of government would some day extend for 3,000 miles across the Great Plains, the fertile valleys, and majestic mountains to the Pacific Ocean. Little did they know their heroism that Wednesday morning was the beginning of the United States of America

which has twice saved the great British nation and twice saved the free nations of the world from enslavement and the loss of their lands, their people, their culture, and their civilization. Little did they know their fearless gallantry set the example, molded the pattern, and breathed the indomitable spirit of life into the Nation which has become the most powerful on earth and which can, if necessary, assemble twenty-five — yes, thirty — millions fully equipped for the defense of its freedom. Every patriotic American knows that freedom is the most valuable asset of mankind and that once gained and experienced, death is preferable to its loss. Let no nation—no dictator—no group of greedy world-power schemers—ever again make the mistake of attacking the free people of this powerful America, for if they do they will experience the mighty fury and full devastation of this power.

It is not easy for any trained soldier of a great modern army of this time and day to go forth to meet the full storm of the enemy. When he does, however, he is assured by the fact he possesses the finest equipment industrial science has developed. In the breast of every soldier is the courage to meet the test. More than courage, however, flourished in the hearts of the 60 patriots who assembled here on this honored green under the leadership of Capt. John Parker. These men possessed the spirit of self-sacrifice. They were ready and willing to sacrifice their lives to save freedom for those who survived and those who would follow.

No modern equipment had they. Theirs was powder, ball, and musket. In the last great war America possessed many generals completely able to lead our armies to victory just as efficiently as the leadership which did, but here on the green of Lexington there was only one Capt. John Parker. His order to his men that momentous Wednesday morning still stands today as one of the most inspiring and decisive military commands ever given by any field commander. "Don't fire unless you are fired on but if they want war, let them begin it here." This command now is an American principle. America does not desire to make war on any country. America does not desire to engage in war but if any country fires on America they will receive the full weight of our might in return.

On this Wednesday, 175 years after Lexington and Concord, America is in trouble. Since the conclusion of the war there has been a gradual disintegration of national and moral unity largely accomplished by the spread of communism. Russian communism is organized. It's objective is world domination. On a number of occasions the Soviet leaders have expressed their conclusion that our system of free government and free enterprise cannot exist in the same world with communism. In five short years we have seen communism take over eastern Europe and constantly threaten the western European nations. It is spreading over Asia, having gained control of China, and moving south to Siam, Burma, and India. But for the European-aid program, organized and operated by our own Government, Soviet communism at this very hour would be in control of all Europe and moving across the Mediterranean into Africa. The only power which stands across the path of world domination by Russia blocking the spread of communism is the United States of America. This country stands for a free world and a world of free people. Because we believe this to be right we must be adequately prepared to meet successfully the Russian challenge of communism. We must go on keeping the flag of freedom flying amid all the winds that blow.

Under our Government we possess many freedoms we now accept as routine in our day-to-day living. Freedom of speech permits us to express our views regarding political issues, the Government, and activities of our fellowmen. This cannot be done in Russia under communism. Freedom of the press permits all sides of an issue to be presented to the people for their determination of that which is false and that which is right. This is not permitted in Russia under communism. Freedom of religion gives us the right to worship God in our own way. This is not permitted in Russia under communism. The heart of our strength as a Nation is our faith in God. This faith represents one of our cardinal differences with communism, for communism neither believes nor accepts a higher authority. The government is all-powerful in itself and is in no sense subject to the higher authority of God. If you believe in communism then communism must be your God for you cannot look to any other. This is the creed of the Communists and this is the reason it is impossible to bridge the gulf between these two ways of life.

Our national unity is only so strong as the spirit of patriotism is alive and burning in the hearts of the people. For 283 years prior to April 19, 1775, the American Colonies welcomed to their free soil the oppressed peoples of Europe. As these people came to this new land they quickly adapted themselves to their new life and were proud to be Americans. During the 175 years that have followed Lexington and Concord people from every country in the world have streamed into America seeking the freedom and opportunities making for a happier life. After becoming an American citizen it is the duty of every new American to give to his new country his complete loyalty and cooperation. If he is not willing to do this the right to remain should abruptly cease. Just recently I have been informed that in the event of an open conflict with Russian communism many of our workers, on which the Nation would greatly depend, plan to resort to sabotage and do everything they can to assist and promote the communistic cause, hoping for a communistic victory. Not for one moment do I believe this to be true. I have complete confidence in the workers of America. I believe them to be loyal, patriotic Americans. They have proved their loyalty many times. In case of an attack on their country they would be among the very first to see that every man and woman did their duty. Once having experienced freedom, it is most illogical and most difficult to believe that anyone would seek a life of limitation and enslavement by decrees of dictators and the atheism of communism.

Without a doubt, there are many agents of communism and Soviet Russia here in America. Without a doubt, some are citizens—yes, native-born citizens. Without a doubt, some have worked themselves into high and important positions in our Government. Regardless of the political consequences, the American people should arise to this underhanded challenge to our country and demand that they should be expunged from the Government and denied the right of citizenship, just as the patriots of Lexington made their stand against the challenge to their freedom. I cannot find within my heart and conscience any desire to close the door on this great issue until America—your country and mine—is free of the cancerous scourage of communism. It is our duty—our precious duty—to do everything we can to strengthen our national unity and to protect the spirit of America, for if we do not we are no longer worthy of the bravery of Capt. John Parker and his men and no longer worthy of freedom. It is well to remember:

"Freedom's battle once begun
Bequeathed by bleeding sire to son
Though baffled aft is ever won."

The dramatic event which fate determined to happen on this immortal spot is the most significant since Calvary. And like Calvary it will command the heart and spirit throughout the history of mankind. Lexington was the beginning of a new world. Lexington brought to an end serfdom and slavery and replaced it with freedom for millions. Because of Capt. John Parker and his 60 minutemen patriots a new concept of government was born—government of the people, by the people, and for the people. Lexington was the beginning of this great free Nation—the United States of America. I am so proud, so deeply proud to represent it in the Congress of the United States.

In this troubled time of our Nation's life, our solemn duty orders us to hold fast and to protect all they gained for us the living and to measure every act and deed, for we cannot fail to meet successfully the test of our generation. It is your duty to constantly try and my duty to constantly try—and try we will.

In every part of America and throughout the world free men are turning their eyes and attention to Lexington during these hours of celebration. They, like those of us here, again give thanks to Capt. John Parker and thanks to his noble men.

Promoting Democracy Abroad

EXTENSION OF REMARKS
OF
HON. RALPH E. FLANDERS
OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, April 20 (legislative day of Wednesday, March 29), 1950

Mr. FLANDERS. Mr. President, a few days ago bipartisan sponsorship was given to the resolution introduced by the Senator from Connecticut [Mr. BENTON], calling for an enlarged program for promoting democracy abroad. The proposal has brought forth much favorable editorial comment, and I should like to have printed in the Appendix of the RECORD an editorial entitled "Promoting Democracy Abroad," published in the St. Louis Post-Dispatch of March 24, 1950; an editorial entitled "On Selling Freedom," published in the Kansas City (Mo.) Star of March 24, 1950; an editorial entitled "Global Sales Campaign," published in the Meriden (Conn.) Journal of March 24, 1950; and an editorial entitled "A Constructive Plan," published in the Hamden (Conn.) Chronicle of March 30, 1950.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch of March 24, 1950]

PROMOTING DEMOCRACY ABROAD

At a time when most Congressmen are engrossed with the economic and political intricacies of budget slashing, including the State Department's information budget, Senator BENTON, of Connecticut, has had

the vision and the wisdom to issue a call for a greatly expanded information and cultural program to promote democratic ideals through the diplomacy of public opinion.

He was joined by 10 other Senators, members of both parties, in sponsoring a resolution calling for a six-point program to close the mental gap between ourselves and the peoples of the world.

The extent and urgency of the need, Senator BENTON knows full well from his service as director of the State Department's information program abroad. The Russian Army, he pointed out, is only the reserve in the cold war. The front line at present is manned by propaganda.

Each of his six points is sorely needed and could accomplish much good if prosecuted with sufficient vigor. They include: increased pressure for world-wide freedom of information; acceleration of the work of the United Nations Educational, Scientific, and Cultural Organization; expansion of the State Department's information and education programs; promotion of democratic education abroad, especially in Germany and Japan where our efforts have been no more than halting in this field thus far; coordination of the information programs of all non-Communist nations, and encouragement of the efforts of private citizens who are trying to attain these goals through nongovernmental channels.

The United States has been lagging badly in one of its most urgent and important tasks. It needs to encourage the development of democracy in the world. Here is a way to do it, at relatively small cost.

[From the Kansas City (Mo.) Star of March 24, 1950]

ON SELLING FREEDOM

Speaking from a background of public relations, Senator BENTON, of Connecticut, proposes that the United States organize a world-wide "campaign of ideas" against communism. He argues that the free nations so far have been losing the propaganda battle with the Soviet Union. He urges that they now coordinate their efforts and employ every resource of communication to spread the gospel of democracy. There is a good deal to be said for the Senator's proposition. It has the support of a sizable Democratic and Republican group in the Senate.

Communist propaganda for years has been highly centralized. Much of it may appear to emanate from the Communist parties of various nations. But it is all dictated from Moscow and a great part of it obviously is financed by the Soviet Government. The intended victims of this propaganda, on the other hand, have fought it singly. They have moved to concert their military, economic, and even political policies, without doing anything of a common-defense nature in the realm of ideas.

It may be objected at once that actions speak louder than words. They do. If the western democracies are to win the support, say, of the peoples of southern Asia or eastern Europe, they must themselves demonstrate the practical superiority of freedom to any authoritarian order, and they must show that they are not merely paying lip service to the ideals they profess. But in the face of a vigorous propaganda offensive against them, using every technique of distortion and misrepresentation, that is no longer enough.

We cannot wait for the truth to prevail by its own inherent virtue in some distant future—if, indeed, under modern conditions it can ever hope to prevail in competition with the censorship, deliberate lying and terrorism as practiced by a dictatorship. The time would seem ripe for a massive counterattack by the free nations at the informational level. Not only is the need self-evident but the Communists are becoming increasingly vulnerable in the very field of propaganda which they have been exploiting so actively.

Day by day the Soviet Union is emerging, in the words of an old-line German Communist, not as the liberator of oppressed peoples but as the inheritor of the political ambitions of Czarist Russia. The imperialistic ambitions of the Kremlin are becoming obvious even to the eyes of non-Russian Communists. The successful Tito revolt against domination from Moscow has created a rich opportunity for exposing the gigantic hypocrisy of the Soviet Government.

That hypocrisy must be underscored and placed in vivid contrast to a program of dynamic democracy. No one nation is in a position to do this alone. By the leading governments of the non-Communist world can—and should—do it on a cooperative basis.

They now have a chance to make themselves the salesmen of freedom, and, provided they can prove the article they are selling is as advertised and unadulterated, a master plan of democratic propaganda of the type Senator BENTON recommends ought to be invaluable.

[From the Meriden (Conn.) Journal of March 24, 1950]

GLOBAL SALES CAMPAIGN

Freshman Senator BENTON'S proposal of a global sales campaign in behalf of democracy should be taken seriously, for it comes from a source which has produced some of the most successful sales ideas ever launched into the world of advertising. After all, the production of sentiment favorable to democratic systems of government does not differ fundamentally from any other advertising job. It's merely bigger. And no job of promotion has ever been too big for BILL BENTON.

Sizing up the competition, it doesn't seem that the obstacles are insuperable. Those men in the Kremlin turn out terrible stuff. Their copy is amateurish. The claims made for their product—communism—are simply absurd, and would never stand up under a sampling test. That such advertising has pulled in droves of customers may be laid to the fact that it is directed to a market controlled by fear.

There's where the Benton plan faces a major difficulty. He can't make people listen, and he wouldn't want to, if he could. He can't even be sure of reaching his sales prospects while Russia is jamming up the air waves. But we'd bet that, given a free hand to perfect his organization, he'd find ways and means.

After all, Senator BENTON has learned a lot since he was teamed up with Chester Bowles in one of the slickest combinations that ever made a nation clamor for the stuff it was boosting. He has had other experience that counts: much of it under his present boss—Uncle Sam. He knows what the State Department is like on the inside. He raised the Voice of America from a feeble squeak into a clear and powerful organ for good.

The genius of the Senator is in his ability to organize: to lay out a plan and put it across. He has demonstrated that genius again and again. In his maiden speech in the Senate, he showed that his mind is still teeming with the stuff which won him his first success. He presented a solid, practical scheme. One of the best things about it is that it doesn't contemplate giving anything away. In many respects, it parallels the proved methods of commercial advertising.

First, there would be the sales conference—to be made up of representatives of non-Communist countries. Next, the business of establishing a world broadcasting network, arranging for time on this network, turning out movies with a selling punch for democracy, planting educational programs in the right spots—wrinkles which Mr. BENTON knows from A to Z.

Of course there's the possibility of a hitch. The Senator must first convince his colleagues, who are also, in a way, his clients. Many a good advertising scheme has come to naught before the board of directors. But BILL BENTON has had considerable success, too, in softening up hard-minded boards. Here's his first opportunity to show that his talents are not wasted in his present job. We shall see what we shall see.

[From the Hamden (Conn.) Chronicle of March 30, 1950]

A CONSTRUCTIVE PLAN

Senator BENTON has rung the bell in a speech before the Senate calling for a Marshall plan of ideas to promote the cause of democracy throughout the world.

The junior Senator from Connecticut has followed up his talk by introducing a resolution cosponsored by Senator MCMAHON in addition to 11 other Senators, calling for the United States to take the initiative and vigorously prosecute a greatly expanded program of information and education among all the peoples of the world with a view toward closing that mental gulf that separates the United States from other peoples and blockades hopes for freedom and peace.

Senator BENTON'S proposal is akin to a bell of peace resounding over the roar of war drums. His suggestion for the United States taking the initiative is a welcome relief from our perennial defensive maneuvers of dashing to and fro to plug leaks in the dike against the steadily rising tide of communism.

It is a constructive program which we hope his colleagues in the Senate will give the serious consideration it deserves. Certainly it cannot, or should not be cast aside as another impractical plan born of desperation to end the cold war.

The Senator points out that we have the advantage in such a propaganda campaign in that we don't need to lie. We might add to this priceless asset of having the world's best salesmen who are convinced of the superiority of their product.

Contribution of Imports to Business Activity and Full Employment

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, April 20 (legislative day of Wednesday, March 29), 1950

Mr. SPARKMAN. Mr. President, there is, on the part of all economic groups in this country, a growing interest in import problems. Those charged with carrying out our foreign policy have indicated that it is imperative that this country buy more from other countries in order to make it possible for those countries to get back on their feet, and and thus eventually permit a reduction of our foreign economic assistance. We have heard, however, in the last few

weeks, some growing resentment on the part of some on the ground that imports are hurting us, that they are increasing unemployment in this country, and that we should reexamine our whole tariff policy. I have been impressed by an article on this subject in the Commercial and Financial Chronicle of April 13, 1950, by Maurice Heyne, Belgian minister and commercial counselor, titled "Contribution of Imports to Business Activity and Employment." I ask unanimous consent to include a portion of Mr. Heyne's article in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONTRIBUTION OF IMPORTS TO BUSINESS ACTIVITY AND FULL EMPLOYMENT

(By Maurice Heyne, Belgian Minister and commercial counselor)

* * * * *

Now we might as well face the fact that there is considerable resistance to imports here in your country and abroad. In fact, in almost every country exports are considered its meat, imports its poison. As long as this situation exists world trade will continue to be jeopardized.

* * * * *

By reason of their interdependence one upon the other, imports and exports alike contribute to the well-being within a country. It can hardly be said that one creates business activity and employment and that the other detracts from it. A high level of domestic activity and full employment is always accompanied by a similar level in world trade. The opposite is also true.

* * * * *

In your country a double-barreled effect lends force to the resistance to imports. It must seem to the American people as if it should be enough to pay the bill for ECA in an all-out effort to put Marshall plan countries back on their feet. They are now being asked to turn around and buy what they have helped other countries to produce, in order to keep the ball rolling. Why, they ask, should they be required to accept foreign merchandise which may be in competition with domestic products, or which may be imported in such quantities as to cause dislocation in certain industries?

This is important, because the attitude toward imports is a major factor in selling them. The very publicity necessary to develop a market is likely to increase resistance in proportion to the aggressiveness with which imports are promoted.

Yours is a country which has built an enormous and dynamic productive machine. It accounts for half the world's output. Because of the dominant position of the United States, what happens here, and the policies you adopt, penetrate every nook and cranny of world trade.

The world needs what America produces. It does not have enough dollars to pay for it, however, unless you, in turn, buy enough of what the world has to sell. Despite the eminent success of the Marshall plan and the able administration of ECA, the dollar gap is still of such proportions that items such as shipping, tourism, investments, and loans that help to make up the international balance sheet, cannot possibly be expanded to achieve the necessary trade balance. This can be accomplished only by closing what Mr. Radcliffe has called the merchandise gap.

Thus, the attention of almost every country is focused on the United States as a market.

In spite of the rich bounty with which your country is blessed, imports are important to you. You recognize that fact. For in 1948, 60 percent of your imports were free of duty. Only 40 percent were considered in protection of American industry.

The major share of duty-free imports is, of course, in raw materials and commodities. These are either not available in the United States, or supplement domestic supply. Your country uses about half of the raw materials which enter into international trade.

The automotive and allied industries, a source of employment in many centers in the United States, import materials from all over the world. "Thirty countries furnished this room" was the caption of a recent advertisement in your magazines.

Almost half of your imports in 1948 were in crude foods and materials. Another quarter was in semi-manufactures, a total of over 70 percent imported for further fabrication. Without such imports, many of your industries would have to close down entirely, or greatly restrict production.

EXPORTS PROVIDE 5,000,000

Let us turn this over and look at the export picture. It is estimated that the rate of your current exports provides some five million jobs. In 1947, according to the Bureau of Labor Statistics, nearly half of these were engaged directly or indirectly in nonagricultural industries in the production of goods for export. In the durable goods industries, in mining, and especially in capital goods, export workers accounted for 14 percent of the employment.

This is borne out when we consider the character of your exports. In 1948, only 22 percent of all United States exports were in crude foods and materials; 11 percent in semi-manufactures, and 67 percent in manufactured foodstuffs and finished goods. In other words, two-thirds of your exports were the product of a high content of American labor. If we include semi-manufactures, the proportion rises to over 75 percent.

Normally, 7 to 10 percent of your output is exported. Averages, however, fail to reveal the degree of dependence of the American economy on its export trade.

American cotton represents 45 percent of the international trade in this commodity; American tobacco 42 percent. Although your production of rice is only a small percentage of world production, your exports since the war have accounted for almost 16 percent of all rice moving in international trade.

In 1948, 25 percent of your production of machine tools, 20 percent of agricultural machinery, 15 percent of motor trucks were exported. These percentages are not out of line with the proportion of production exported before the war.

Because your economy is geared to your mass-production industry, any sharp cutbacks in exports of these industries would be felt, not only in the labor market directly affected, but in the entire economy. A considerable drop in production would mean higher unit costs, less profit to industry, price fluctuations at the consumer level, and unemployment in both agriculture and industry.

Moreover, the size and complexity of American industry and production, and its importance in world trade, are such that repercussions from any curtailment are felt all over the world. We are all too familiar with the effect of the comparatively mild recession in 1949 for me to enlarge on this point.

But I do want to call your attention to a report published by the OEEC early in March. The New York Times had this to say: "Decisive measures to narrow the dollar gap are apparently being taken on the dollar side, where drastic cuts in exports from the United States and Canada are expected to account for more than 57 percent of the anticipated reduction of the deficit." As the flow of the Marshall Plan aid diminishes, the report continues, exports from these two countries will be confined to the rigid requirements of basic foods and raw materials.

The significant point here is that decreases in your exports are likely to be in semi-manufactures and finished goods—in effect, in the product of American labor.

* * * * *

According to the economist, Robert L. Gulick, in representative years before the war, strictly consumer goods, other than foodstuffs, comprised around 6 percent of total imports. In 1948, all imported finished goods going into your industrial and consumer markets, including foods, were less than one-third of your total imports. These represent merchandise with a high content of the labor of other countries. In contrast, two-thirds of your exports represented a high content of your labor.

Imports of raw materials and semi-manufactures contribute to the manufacturing processes of industry. They thereby provide employment in many industries which otherwise could not exist at their present levels.

Employment thus created or sustained means purchasing power for other products of domestic manufacture—in the same way that purchasing power is provided by those 5,000,000 jobs in export industries.

Moreover, as raw materials, commodities, semi and finished goods for industrial and consumer use, move through the channels of trade, they create employment in the distributive trades. They increase demands for insurance and services, they add to the activity at parts of entry, they are warehoused, and shipped to their destinations. Even though they may displace in competitive selling American goods of a similar nature, they still have to be handled in transit. Therefore, in distribution channels, they cannot be said to displace labor.

DISLOCATIONS ALWAYS OCCURRING

Certain imports may cause some dislocations in the manufacturing fields. But dislocations are occurring at all times in a world where nothing is certain but change. Substitute materials, or new products growing out of changed conditions, outmode or replace those long established. A factory moves to a new location, or a machine is invented which displaces labor. But such is man's resourcefulness and inventiveness that another factory replaces the old one, or a new invention is the start of an entirely new industry or group of industries.

I am not minimizing the distressing effects of these dislocations. They are very real to the people and industries involved. How to cope with these situations as they arise constitutes a domestic problem of utmost concern in my country as well as in yours. In a time of growing social consciousness, however, we most surely can—and must—arrive at an equable solution.

The dislocation caused by the volume sale of an imported product tends to be offset by two factors. One we have already mentioned—employment in the distribution and service trades.

The other is that the more a product—whether domestic or foreign—is promoted, the wider its sale. This sale is not entirely at the expense of customers of competitive products, but—if I understand rightly the thesis of American selling—the whole base of the market is broadened to take in new customers. Thus the luxuries of yesterday have become the necessities of today.

But, you say, wage scales abroad are lower than in the United States. Imports not only compete for the consumer dollar, but undersell the comparable American product.

Unfortunately, the spotlight turned on imports produced by excessively cheap labor

tars all imports with the same brush. The postwar problem of the majority of foreign exporters to the United States is how to get their prices sufficiently low to compete in your market.

It is also true that other countries with lower wage scales erect tariff and other trade barriers to protect their workers against the low American wage cost per unit.

Now, I want to ask you a question:

Do the people of Michigan say to the people of Mississippi: "We will buy your raw cotton for our automobiles, and you, in turn, buy our automobiles. But we do not want to buy your paper or canned goods, because we process those things too, and our wage scale is higher than yours."

AN INTEGRATED MARKET

The answer is an obvious "No." Why? Because you have here in America an integrated market, as Mr. Hoffman calls it, a market of 160,000,000 people, the same kind of market that he is advocating for Europe.

Full employment in a given industry or locality increases the purchasing power for necessities and luxuries alike, whether they are produced in the same area or elsewhere. By the same token, unemployment decreases that purchasing power.

The Wall Street Journal recently reported that New York's share of all goods entering the country by ship was 20 percent, compared to 33 percent in 1941. Part of this slump was due to competition with other ports, but a major cause was the interruption in the full flow of trade, when ships had to sail only partially loaded, or with empty bottoms. One out of every ten persons employed in the New York metropolitan area is in some way dependent on port activity and foreign trade. Where is the purchasing power of these people who may be thrown out of employment?

If your exports are sharply curtailed—I refer particularly to finished manufactures and consumer goods—the effect on employment will be felt in key industries, in key localities, at ports of entry, and in all distributive trades. It will be far greater than any possible dislocation caused by an increase in imports—particularly so, because such imports are diffused over large areas of population.

Therefore, is it the increased imports of the product of labor of other countries, or the decreased exports of the product of domestic labor which constitutes the real threat to full employment?

In spite of the unprecedented demand for materials and products of United States manufacture following the war, the total volume of your exports today is not abnormally high in relation to national income and production.

In contrast, the ECA commerce mission, headed by Mr. Wayne Chatfield Taylor, who is with us today, pointed out that had the prewar relationship between imports and the gross national product been maintained, ECA countries alone, in 1948, could have sold to you $2,000,000,000 more than they did.

* * * * *

In closing, I should like to quote a few remarks made by Dr. Amos E. Taylor, who is also with us today. As you know, he was for many years director of your Bureau of Foreign and Domestic Commerce, and is now director of Economic and Social Affairs for the Pan American Union. In a brochure prepared for the Committee on International Economic Policy, Dr. Taylor says:

"Not only does a substantial part of United States imports consist of raw materials and semifinished products essential to American industry, but certain other imported commodities are in increasing demand when the level of national income rises. * * * In order to avoid the mistakes of the past, we need to remove the traditional fears relative to imports. In a world of full employment, specialized production, and a high standard of living, imports should be viewed as benefits, not dangers to the economy. * * * Employment is not solely a national problem. It is an international problem, the solution of which can be found only in an expansion of world trade and economic cooperation. The modern interdependent world must do business with itself if peace and prosperity are to be more than an empty hope."

Investigation of Interstate Crime

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, April 20 (legislative day of Wednesday, March 29), 1950

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two recent editorials which have to do with the prosecution of former Representative Roger C. Slaughter, in which there is reason to believe the Department of Justice has been used by the administration as an instrument of political controversy.

One of the editorials is from the Washington Evening Star of April 19 and is entitled "A Political Prosecution." The other editorial is from the Washington Times-Herald of April 20 and is entitled "The Lobby Fraud."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of April 11, 1950]

A POLITICAL PROSECUTION

The Department of Justice has nothing to be proud of in its prosecution of former Congressman Roger C. Slaughter on charges of violating the Lobbying Act. On the contrary, the responsible officials should be ashamed of forcing a man to stand trial on the basis of evidence such as that produced against Mr. Slaughter.

This case had its inception more than 18 months ago, when the Justice Department was headed by Tom Clark, now a member of the Supreme Court. It came on the heels of a political fight between the President and Mr. Slaughter, who was a Member of the House from Kansas City. The President was determined to purge his fellow Missourian. The fraudulent voting in that contest, in which Mr. Slaughter was beaten, was investigated by the Department of Justice, but it can hardly be said that the investigation was conducted with vigor and determination.

Naturally, after that discreditable episode, there was some lifting of eyebrows when Mr. Slaughter was indicted. It looked then like a political prosecution. And that is what it looks like now.

A motion to dismiss the indictment was rejected several weeks ago by Judge Schweinhaut. But it was clear, from the language of his memorandum opinion, that he refused to dismiss because he had been led to believe the Government would produce evidence at the trial to support its contention that Mr. Slaughter had not acted merely as an attorney, but also as a lobbyist in the ordinary sense of that term.

When the case came to trial before Judge Holtzoff, however, the Government made a miserable showing. It produced nothing which could be called evidence to support its charge of lobbying. As evidence of lobbying, the prosecution offered to show that Mr. Slaughter had made telephone calls to Members of Congress which were paid for by some of his clients. But the Government attorneys admitted they did not know what had been said in any of these conversations.

In other words, they were willing to convict a man of a crime on the basis of sheer conjecture. Judge Holtzoff quite properly refused to accept such evidence as that and promptly found Mr. Slaughter not guilty.

On the record of this case, Mr. Slaughter seems amply justified in his contention that the charges against him were politically inspired. And it seems to the Star that Judge Holtzoff's verdict of acquittal amply demonstrates the wisdom of the founding fathers in removing our Federal judges as far as possible from the influence of partisan politics.

[From the Washington Times-Herald of April 20, 1950]

THE LOBBY FRAUD

The Truman gang's cruel and reckless use of the criminal law to abuse people they do not like politically, was illustrated in clear detail here 3 days ago, in the case of one Roger C. Slaughter of Kansas City.

This case equally well shows up the fraudulent and hypocritical nature of the laws restraining the ancient right of petition, now commonly called lobbying.

Here is a summary of facts about Slaughter and why he was brought to court charged with a crime that could have sent him to prison.

Slaughter is a Democrat who was elected to Congress in 1942 and defeated in 1946 because, as a member of the House Rules Committee, he refused to let the Truman gang dictate the way he should vote.

His independence was particularly offensive to the gang because he was, of all things, the representative from Truman's own home congressional district. For the crime of acting on his own, Slaughter became Truman's target No. 1 for 1946.

"If Slaughter is right," he said, "I am wrong." Truer words were never spoken, though the proving cost Slaughter and his family 4 years of expense and suffering.

Kansas City, being the Truman gang's headquarters, the boss' will on Slaughter in 1946 was naturally their command and so he lost at the polls.

As defeated Members of Congress have been doing for 150 years, Slaughter then looked around for a new job that could make use of his talents and knowledge of Government. He undertook to work here for people in the grain business, natural enough considering the part of the country from which he comes.

But the gang wasn't satisfied just to kick him out of Congress. The boss wanted Slaughter crushed to death. So, on November 23, 1948, he was indicted by a District of Columbia grand jury on two counts, charged with failure to register as a lobbyist.

ON TRIAL 1 HOUR

His case came on for trial here Monday, April 17, 1950, before Judge Alexander Holtzoff, who threw the case out of court within an hour after it started.

This says something not only about the integrity of the judge, the innocence of Slaughter and the black-hearted willfulness of the Truman gang, but also about the way the Government uses grand juries and about the laws on lobbying both as to their nature and their enforcement.

The Constitution of the United States says in article I of the Bill of Rights:

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press; or the right of the people peaceably to assemble and to petition the Government for a redress of grievances."

The grain men who hired Slaughter were following that guarantee of right. They had a grievance and they hired a man to explain it.

But their right of petition was abridged and denied because they hired the wrong man.

And if you want to understand that well, follow the proceedings of the House committee right now carrying on one of the perennial lobby investigations.

This investigation is headed by Representative BUCHANAN, Democrat, of Pennsylvania. If it wants to do anything about lobbying, why doesn't it point the finger at the way the executive branch of the Government uses its power to force congressional action? Why doesn't it tell the candid truth, that no influence can be exerted on legislation, except with the willing compliance of the legislators?

The place to clean up lobbying is obviously inside, not outside, the Federal establishment.

Protest Against Federal Hand-Outs

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 20 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Hero Rebels at Hand-Outs," published in the Oil City (Pa.) Derrick on April 11, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HERO REBELS AT HAND-OUTS

Recently the Governor of Connecticut addressed a State-wide audience in which he made a plea for greater Federal aid for his State.

As the Governor finished his address, a 24-year-old war veteran, hero of Guadalcanal and winner of the Purple Heart, walked to the platform and asked permission to say a few words. He was permitted to speak and speak he did:

"There is no such thing as Federal aid. It is all money taken from the people. In 1948 the Federal Government took $665,000,000 out of Connecticut in the form of taxes. And the Federal Government can never send back anywhere near the amount they took out because of the tremendous overhead.

"The growing popularity of Federal aid in States and large cities is becoming more and more contemptible due to the political cowardice of governors and mayors who are determined to stay in office come hell or high water.

"And they do this by making their administrations look less and less expensive to promote their own selfish craving madness for money and power regardless of cost. This is played right into the hands of the New Dealers, whose sole objective requires that the power of States be weakened and that State institutions be made dependent upon Washington hand-outs.

"Our dear old uncle is handing out the money with one hand while holding a club behind his back with the other, if you should fail to behave. A few States have been able to resist the rule of the three golden balls that ornament the Washington front porch."

Think it over.

Presidential Visits to Gettysburg

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 20 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "No Gettysburg Address?—Mr. Truman Just Too Busy," written by John M. Cummings and published in today's issue of the Philadelphia Inquirer.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NO GETTYSBURG ADDRESS?—MR. TRUMAN JUST TOO BUSY

(By John M. Cummings)

One of the great, decisive battles of the world was fought at Gettysburg in Pennsylvania's Adams County. Here the high tide of rebellion was checked. In the national cemetery on this battlefield rest the bones of many men who died in the bloody conflict.

President Lincoln dedicated the cemetery November 19, 1863. It was then he delivered what has since become known as the Gettysburg Address. "We are met on a great battlefield of that (Civil) war. We are met to dedicate a portion of that field as the final resting place of the men who here gave their lives that that Nation (the United States) might live."

In an unbroken line since the days of Theodore Roosevelt our Presidents have been proud to deliver the Memorial Day speech at Gettysburg. In more than 40 years Harry Truman is the only President to reject every invitation to attend the memorial exercises to the honored dead.

Five times since he became President on the death of Franklin D. Roosevelt, Mr. Truman has found an excuse for sending regrets. The latest, of course, was his rejection of an invitation to deliver the Memorial Day address next May 30.

Theodore Roosevelt, twice, once after he left the presidency, William Howard Taft, Woodrow Wilson, Warren G. Harding, Calvin Coolidge, Herbert Hoover, and Franklin Roosevelt, all have been at this national shrine on Memorial Day. Franklin Roosevelt also spoke there when the Eternal Light Peace Memorial was dedicated in 1938.

James F. Lind, the Democratic Congressman from the district in which the national cemetery is located; Francis J. Myers, the Democratic United States Senator; Pittsburgh's Mayor David L. Lawrence, a member of the Democratic National Committee, all importuned the President to attend the exercises next month.

"The President finds he must again decline this year," one of the Truman secretariat wrote Representative LIND. "His calendar for the month of May is already very crowded."

Of course he has a crowded calendar. Mr. Truman leaves early in May on a nonpolitical tour of the West. He will visit many towns and deliver many speeches in which he is expected to make nonpolitical appeals for the election of a Democratic Congress in the fall. And he'll cap the tour by attending the mid-month sessions of the Democratic National Committee in Chicago. Here, more likely than not, he will lay down the law for the conduct of the Democratic campaign.

Long before Memorial Day Mr. Truman will be back in Washington. No doubt he has other stints scheduled. Inquiry at the White House, however, elicited the information he has no fixed engagements for that day.

In the absence of anything definite, you can only speculate on the reason for President Truman's year-by-year rejection of the invitation to speak at Gettysburg. Certainly he must know the Civil War is over, that men who wore the gray of the South have visited the battlefield on which the hopes of the Confederacy were shattered.

Only a few days ago a grandson of Grant and a great-grandson of Lee met at Appomattox, where the last rite of the war was performed. Let's have the lowdown, Harry.

Carroll Binder Reports From Europe

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 20 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, I present and ask to have printed in the RECORD an additional report written by Mr. Carroll Binder, editorial editor of the Minneapolis Tribune, relating to conditions in Europe. This is the fifth report by Mr. Binder which I have had printed in the RECORD. Two appeared in the RECORD of Tuesday, April 18, and two in the RECORD of Wednesday, April 19.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HALT OF AID TO CUT JOBS IN AMERICA—1952 WILL THREATEN UNITED STATES WITH DEFLATION, EUROPE WITH POVERTY

(By Carroll Binder)

PARIS, FRANCE.—The American people and western Europeans have a rendezvous with destiny in mid-1952.

By that date the United States will have completed spending an estimated $15,000,000,000 to help western Europe get on its feet so securely that it can resist Soviet pressure and get along without further American subsidies.

What will be the shape of things on June 30, 1952, when Marshall aid has ended?

Five weeks' study of conditions in the 4 principal western European countries and talks with people familiar with the 14 other Marshall-plan countries leave me with a very strong impression. It is that the situation in mid-1952 is going to be much less satisfactory and potentially more critical than most Americans will be prepared for.

NONE ARE READY

None of the countries we are helping is in sight of self-sufficiency. The British, Scandinavian, and low countries hope that they will be able to maintain the present level of existence or at least tolerable standards if no further American aid is forthcoming.

But they will only be able to do so by the greatest austerity.

They will absorb far fewer American farm, factory, and mine products than they have been absorbing under the Marshall plan.

Some careful students of the post-1952 prospects doubt that even austerity and rigorous controls will enable all of those countries to keep their heads above water without continued American aid.

One of the greatest economists in England told me he knows of no official who in his heart believes there is the faintest chance of balancing accounts by the time dollar-aid runs out.

Belgium is a case apart but the fate of western Europe will not be determined by that little country's dollar balances. Because of its high agricultural productivity and other factors France probably can manage, if need be, without further dollar aid except when crops fail or the mines are tied up by strikes.

Austria and Greece will have to have continued assistance from the United States to keep going after 1952. So, it is generally assumed, will Italy and western Germany.

Nor will the impact of the end of Marshall-plan expenditures be confined to western European beneficiaries. Many Americans, few of whom realize they are beneficiaries of the European recovery program, seem destined to experience unpleasant jolts in the form of lost markets, lowered prices, and reduced employment.

DEFLATION INEVITABLE

That is, unless Uncle Sam finds quick ways of taking up the slack bound to result when he no longer gives western Europeans dollars with which to buy cotton, tobacco, cereals, metals, chemicals, and machinery.

Deflation seems inevitable unless the United States spends at home at least as much as it has been spending abroad to provide the purchasing power created by our postwar exports.

Western Europe will be no less receptive to such exports after 1952.

Without some of them unemployment will increase and standards of living again will decline. Europe will still need food and raw materials obtainable only through dollar purchasing power. It will not have recovered to such an extent that it can provide full employment and the necessaries of life to its increased population.

The United States cannot maintain exports at the current $12,000,000,000 level unless it imports much more than the present $7,000,000,000 level or gives western Europe dollar purchasing power by some post-Marshall plan of gifts, loans, or long-term investments.

Two-thirds of United States exports to western Europe are being financed by Marshall-plan funds at present. That represents a foreign market for $2,800,000,000 worth of American goods and services which otherwise would not have existed. For certain industries and regions of the United States it has meant the difference between good and poor prices, profit and loss, employment and unemployment.

But the Marshall-plan council has just issued a report estimating that under the most favorable circumstances western Europe will have a dollar deficit of $2,250,000,000 when the plan ends.

This estimate assumes that the level of business activity in the United States will remain at least as high as it was at the end of 1949. "Even small set-backs" in the United States economy would have disproportionately large consequences for western Europe, whose reserves are not great enough to sustain much strain, the council points out.

Whatever individual countries may do to get along without American aid after 1952, the "dollar gap" for western Europe as a whole will remain at least $2,250,000,000 and may go much higher if world economic conditions take a turn for the worse.

The discontinuance of Marshall-plan assistance thus seems certain to have a deflationary influence upon both the western European and the American economies. So did the discontinuance of American aid and investments in 1920–21 and 1931–31.

Was the Marshall plan then a mistake? Is our investment of $8,000,000,000 to date and $7,000,000,000 projected for the next 2 years money thrown down the drain?

Not unless we and the countries we are helping fail to build wisely on the foundations so hopefully laid.

We have bought time with which to try to save western civilization from eclipse. We still have an opportunity to save those political, cultural, and economic institutions to which we owe our present well-being and which are the only hope of the future. We have a chance to save them by less costly means than a shooting war for survival. But the methods have yet to be agreed upon.

We shall be called upon for more fateful decisions than any we thus far have had to make—Americans as well as western Europeans.

We Americans are like investors who have poured enormous sums into a concern threatened with bankruptcy which still is far from getting on its feet. Unless we make further investments all the $20,000,000,000 we have put up so far will be wasted and we shall be weaker than ever.

Our investments should not be primarily in further gifts, though aid to Greece and Austria cannot take any other rational form. We shall have to invest much more than we have been doing thus far in things Europe has to sell us or in the exports of countries which in turn buy from Europe. ECA is doing its best to prepare Europe to make things which can be sold to Americans and to prepare Americans to buy more in order that Europe in turn can buy more from us.

Paul Hoffman's goal of 1 to 1½ billion dollars worth of competitive imports is small when compared with our $250,000,000,000 gross national product. But makers of watches object to the entry of watches and dairy interests object to the entry of competing European products. It will not be easy to get quotas and tariffs down on those items in which any group of voters has a special interest and it is those which Europe usually is best situated to offer.

Nor will it be easy to get European manufacturers and exporters to make the extra effort required to penetrate the dollar market so long as they can sell without effort and at higher prices in soft currency countries. The rigidities of the European price structure, the distaste for the free competitive methods which are the life of a vigorous capitalistic system, the cartels and other restrictive agreements against which we crusade are so deeply ingrained in European practice that they are not going to disappear by 1952.

So long as any investment made in western Europe is subject to total loss if the Communists take over, so long as there is unfair competition from nationalized industries and hamstringing regulations, so long as profits remain subject to exorbitant taxation and not assuredly convertible into dollars there will be no large scale private investment to help bridge the dollar gap.

Paul Hoffman calculates that ever since World War I we have spent about 1 percent of our income for foreign aid in one form or another. That, of course, includes the loans we made in the twenties which were never repaid, as well as our gifts. Hoffman expects that we will continue to devote at least 1 percent of our income to maintaining conditions we deem essential to our security.

But spending is not enough. As I conclude this report on things present and likely to come in Europe I am impressed anew by the limitations of any program which is based on the United States trying to remain in one compartment and sending aid out to friendly nations living in other compartments.

Even if we should succeed in getting those nations into one compartment without ourselves joining them it is doubtful if the two compartments indefinitely could separately resist all the pressures to which they would be subjected by the Soviet power whose compartment grows ever larger.

This logically leads to a thesis long advanced by Clarence Streit and other advocates of a union of the free. It is advanced in a recent issue of Fortune: "Agreements, pacts, and alliances are no substitutes for efforts toward political union; subsidies and balances of payments are no substitutes for economic union." And no such union can succeed without United States participation.

A Legal Analysis of Unconstitutionality of Proposed Licensing of Motion Pictures

---

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, April 20 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, on March 15, I commented on the Senate floor, that following a rapid review of legislation introduced the day before by the senior Senator from Colorado [Mr. JOHNSON] to license the motion-picture industry, it was my opinion that his bill was completely unconstitutional. I have a deep affection and admiration for my colleague, and yet, without any further reference to personalities or individuals, I must regretfully differ strongly with him.

I want to point out, Mr. President, that when I entered upon the office of Senator and when other Senators entered office, we swore an oath "to protect and defend the Constitution of the United States." It seems to me that I, for one—particularly as ranking Republican on the Senate Judiciary Committee—cannot protect and defend the Constitution if I, or anyone else, stand silently by while legislation that is unconstitutional is introduced and is dignified by hearings. It seems to me, too, that it has always been incumbent upon the Congress to kill bad bills just as it is incumbent upon Congress to pass good bills.

I will not take up the time of the Senate to analyze in great detail this issue

on the floor. I do, however, want to ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a brief memorandum I have prepared on this subject as well as a legal analysis of the bill's unconstitutionality. While the latter item is rather lengthy, I humbly feel that its over-all legal implications are so significant, insofar as freedom of the press is concerned, that the analysis makes for constructive reading. Following that, Mr. President, I ask unanimous consent that there be printed in the Appendix of the CONGRESSIONAL RECORD excerpts from a few editorials which have been carried in the newspapers of my State opposing the licensing bill. I could add to these editorials almost indefinitely by quoting from hundreds of other messages throughout the Nation, but I do not believe that this is necessary and I will not take the space in the RECORD to do so.

Yes, some folks may ask why I take the time to take this obviously unconstitutional bill seriously and to make an extensive legal analysis of it. I want to point out, however, that when the day comes when we in the Congress regard with mere smugness unconstitutional legislation, then that will indeed be a black day for our country.

There being no objection, the memorandum, analysis, and editorials were ordered to be printed in the RECORD, as follows:

MEMORANDUM BY SENATOR WILEY OPPOSING LICENSING BILL

Mr. President, with around 12,000 bills pending before the Congress, with literally hundreds of crucial problems presented to the Senate Interstate Commerce Committee as well as to the 40 other odd Committees of the Senate and House, I am indeed sorry that major hearings have been scheduled by the Interstate Commerce Committee on this issue of proposed regimentation of the motion-picture industry of America.

I, for one, have never attempted to interfere in the jurisdiction of any other Senator. I am not a member of the Commerce Committee, but I respectfully submit to its distinguished and able chairman and to the membership of that committee that there are many issues to which the committee might better devote its attention than this licensing proposal.

HEARING SHOULD BE CANCELED

I earnestly suggest, therefore, that this hearing be canceled, and that the motion-picture industry be given the opportunity to work out on a voluntary basis its own solutions to this problem.

MY COMMENTS SHOULD NOT BE MISUNDERSTOOD

Let me reiterate my objections to setting up a gestapo over the American motion-picture industry are based primarily on legal and constitutional grounds and that: (a) I definitely would not want my comments to be misunderstood as condoning in the slightest the disgusting breaking of the moral law—the code of God and man—by a few individuals connected with films or by any other individuals.

(b) That my comments are not in any way meant to condone the appalling commercialization of sin that has occasionally marred Hollywood advertising (or for that matter, other business advertising that has violated good taste).

(c) And lastly, that my comments are not designed to condone in the slightest any other tendency which would serve to weaken the moral fiber of American people.

FLITGUN NOT SHOTGUN SHOULD BE USED

However, I stated on March 15, and I repeat, that Congress should not attempt to use a 100-barrel shotgun when an industry-used flitgun would more than suffice. Congress should not pillory a whole industry because of isolated misconduct of a few individuals.

PAST LICENSING PROPOSALS

I want to point out, Mr. President, too, that the suggestion for licensing made by the Senator from Colorado is not the first such unsound suggestion. A search which I have made shows that all the way back in the Sixty-third Congress, on March 21, 1914, Congressman Hughes, of Georgia, introduced bill H. R. 14895, which would have created a Federal Motion Picture Commission to analyze the problem of "obscene, indecent, immoral, inhuman pictures." The bill was reported upon but no action was taken.

In the Sixty-fourth Congress Congressman Hughes again introduced a bill on which hearings were held in January 1916. Then, on May 8, 1916, Mr. Hughes introduced still another bill along this very same line.

In the Sixty-ninth Congress Mr. Swoope introduced what was called a Motion Picture Regulation Act, H. R. 4094, on which hearings were held in April and May of 1926.

In 1925 Mr. Upshaw introduced bill H. R. 6233, which was referred to the House Education Committee. It, too, would have created a Federal Motion Picture Commission. Among its provisions, one would have banned the movement of film in interstate commerce unless a license had been granted by the whim of the Commission. Hearings were held on that issue, too, in April and May 1926, but nothing was done.

The years passed, and on June 12, 1933, Congressman PATMAN introduced bill H. R. 6097, designed for licensing films. Hearings were held by the Interstate Commerce Committee in March 1934, but nothing came of this legislation.

And so, Mr. President, the story of would-be efforts to regiment the industry goes. Through these many years as the motion-picture industry has grown from its swaddling clothes, we see that there have been repeated efforts, perhaps well-intentioned but nonetheless ill-advised, to establish a czar, a Kremlin-type dictator, over the industry. But always the good common sense of the Congress and of the American people has defeated these attempts, and I am sure that this will occur right now.

AMERICA'S MORALS NEED NO POLICE-STATE MONSTER

Surely, America's morals are not so weak; surely, our churches are not so defenseless that we need a police-state monster to safeguard our people. Let there be a spontaneous moral crusade among our people—led by our great churches, assisted by all the devout people in the cinema themselves, and let this voluntary crusade be the answer to the problem of immorality in Hollywood or anywhere else.

WHY RUN TO UNCLE SAM FOR ANSWER?

I am deeply sorry that there is in our land an affliction which we might call "governmentitis" which makes some few individuals run to the Federal Government every time they see some problem which they think ought to be corrected. Why must individuals always ask Uncle Sam to set up some new bureaucratic agency in order to handle problems which can be better handled by private industry? The Motion Picture Association of America, and organizations of independent producers and exhibitors are more than qualified under their present leadership to meet this problem.

I know that Mr. Eric Johnston of the MPA, a great patriotic American, is equally concerned with Senator JOHNSON in encouraging the finest possible motion pictures on the highest possible level and the finest possible advertising on the highest possible level for the industry.

Why, then, should hearings be held on this gestapo idea?

PICTURES CRUCIAL FOR COLD WAR VICTORY

Let me as a member of the Foreign Relations Committee point out that we are fighting a cold war throughout the world in order to save ourselves from a hot war—a war of blood and death. Motion pictures are a vital element in our winning that cold war.

The motion-picture industry in this connection has made preparations to assist in a gigantic peace-bond drive next month. Why should we attempt to cripple an industry which is one of the spearheads of our international crusade for peace and freedom?

Let no Senator be silent against this regimentation menace. There are no major motion-picture production companies in Wisconsin, or for that matter, in most of the other States. But this is a national issue, not a State issue. We are United States Senators, not State senators. Our concern is with freedom in all 48 States.

CONCLUSION

Mr. President, now let the legal analysis of this bill, S. 3237, speak for itself. This analysis demonstrates that the bill violates the first, fifth, and sixth amendments to the Constitution. It violates due process of law. It constitutes both a bill of attainder and an ex post facto law—both specifically banned by our Constitution.

Moreover, this legislation violates, I believe, the provisions of the Constitution relating to freedom of the press. The Supreme Court in 1948 held that "We have no doubt that motion pictures like newspapers and radios are included in the press, whose freedom is guaranteed by the first amendment."

Let us strike a lasting blow for freedom which future generations will not forget. Let us reject before it gets started unsound, unwise licensing legislation.

AN ANALYSIS OF THE CONSTITUTIONALITY OF S. 3237, EIGHTY-FIRST CONGRESS

The first question to be answered with reference to this bill is whether or not the subject matter thereof is one within the legislative power of the Congress.

As the Constitution of the United States does not grant the Congress any general police powers, the same having been expressly reserved to the States by the tenth amendment, *Hamilton* v. *Kentucky Distilleries and Warehouse Co.* ((1919) 251 U. S. 146); *United States* v. *Benken* ((WDSC) (1944) 55 F. Supp. 1, aff'd. 147 F. 2d 905, cert. den. 326 U. S. 374), the regulations of the motion picture industry proposed in this bill must be predicated upon the commerce clause (art. I, sec. 8, cl. 3). The power emanating from this clause is complete in itself and as an incident to it, Congress may adopt not only means necessary, but means convenient to its exercise and these means may be of the quality of police regulations. *United States* v. *Hall* ((1879) 98 U. S. 343); *Ex parte Curtis* ((1883) 106 U. S. 371); *Caminetti* v. *United States* ((1917) 242 U. S. 470); *United States* v. *Hill* ((1919) 248 U. S. 420); *United States* v. *Simpson* ((1920) 252 U. S. 465); *Brooks* v. *United States* ((1925) 267 U. S. 432); *Doherty* v. *United States* ((1938) 94 F. 2d 495, cert. den. 308 U. S. 658); *United States* v. *Parker* ((1939) 103 F. 2d 857, cert. den., 307 U. S. 642); *United States* v. *Darby* ((1941) 312 U. S. 100); and *United States* v. *Reginelli* ((1943) 1933 F. (2d) 595, cert. den., 318 U. S. 783).

While the rights of private individuals must give way to the authority of Congress to legislate in matters pertaining to interstate commerce and for the good of all the people, *Hollingsworth et al.* v. *Federal Min. & Smelting Co.* ((1947) 74 F. Supp. 1009), Congress cannot vest in bureaus and officials charged with the duty of regulating business activities of citizens inquisitorial powers that are not subject to the beneficent provisions of the so-called Federal Bill of Rights contained in the first 10 amendments to the Federal Constitution. *United States* v. *Goodner* ((1940) 35 F. Supp. 286, 291).

I will develop seriatim now that the constitutional rights and guaranties of the fifth, sixth, and first amendments and the first article are violated by the provisions of S. 3237.

VIOLATION OF FIFTH AMENDMENT

Due process

Section 3 (a) of the bill provides:

"The Secretary of Commerce shall, upon written application, issue to any eligible individual, (1) upon payment of a fee of $1, a license authorizing such individual to appear as an actor or actress in any motion picture, or (2) upon payment of a fee of $100, a license authorizing such individual to produce any motion picture. Such application shall set forth such facts as the Secretary may require for the purpose of determining whether such individual is eligible for such license under the provisions of subsection (b), and shall be signed by the applicant under oath or affirmation."

These provisions clearly impose upon an individual the necessity of obtaining a license to engage in the vocation of acting or to engage in the vocation of producing motion pictures. Assuming, although the section does not specifically so provide, that the provisions are only applicable to persons who are engaged in these activities in connection with the production of motion pictures to become products of interstate commerce, the provisions still would deny due process of law as required by the fifth amendment. *Gibbons* v. *Ogden* ((1824) 9 Wheat. 1, 198); *Monongahela Navigation Co.* v. *United States* ((1893) 148 U. S. 312, 336); *Lottery Case* ((1903) 188 U. S. 321, 362); *United States* v. *Chicago, Milwaukee, St. Paul & Pac. R. R. Co.* ((1931) 282 U. S. 311, 327); *Railroad Retirement Board* v. *Alton Railroad Co.* ((1935) 295 U. S. 330, 347).

The right of a citizen to engage in a legitimate occupation is a property right of which he may not be deprived except by due process of law. *Barn Ballroom Co.* v. *Ainsworth* ((1946) 67 F. Supp. 299). An attorney's calling or profession is property within the true sense and meaning of the Constitution. *Ex parte Wall* ((1883) 107 U. S. 265, 289). The right to earn a living is property within this clause. *Dotson* v. *International Alliance of Theatrical Stage Emp. and Moving Picture Mach. Operators of U. S. and Canada, Local 162* (Cal. App. (1948) 191 P. 2d 778). Membership in a trade union is a property right within this clause which the courts will protect. *DeMille* v. *American Federation of Radio Artists* ((1947) 187 P. 2d 769, 31 Cal. 2d 139, cert. den. 333 U. S. 876). The operation of a travel bureau for the purpose of bringing together persons who on their own responsibility may enter into agreements to make an automobile trip together, is legitimate and any attempt to eliminate it by regulation is unconstitutional. *Garland* v. *Brown* ((1943) 52 F. Supp. 401). The proposed statute, without providing for a hearing and without providing for an investigation of the character of the applicant but solely upon his former conviction or his forced admission of having committed a certain type of act (which act need not necessarily be a crime), takes away from the applicant his right to earn a living in his chosen profession.

Self-incrimination

The words, "or who admits committing acts constituting the essential elements of a crime involving moral turpitude," contained in section 3 (b), when read in conjunction with the provision of section 3 (a) to the effect that the application for a license "shall be signed by the applicant under oath or affirmation," require self-incrimination. The clause prohibiting compulsory self-incrimination must be construed to secure immunity from every kind of self-accusation (*Counselman* v. *Hitchcock* ((1892) 142 U. S. 562)); *In re Nachman* ((1902) 114 Fed. 995); to comprehend compulsion which subjects a citizen to some important disadvantage in order to extract the desired evidence from him (*United States* v. *Bell, C. C. Tenn.* ((1897) 81 F. 830)); to protect a person from being forced to produce and authenticate any personal documents that might incriminate him (*United States* v. *White* ((1944) 322 U. S. 694)); and to afford the constitutional guaranty of a fundamental right long regarded as a safeguard of civil liberty (*In re Grae* ((1940) 26 N. E. 2d 963); *Harris* v. *United States* ((1945) 151 F. 2d 837, aff'd. 331 U. S. 145, rehearing denied 331 U. S. 867)).

If a bankrupt need not answer incriminating questions (*Arndstein* v. *McCarthy* ((1920) 254 U. S. 71)); if a person accused of importing an alien unlawfully need not be a witness against himself (*Lees* v. *United States* ((1893) 150 U. S. 476, 480)); if in a suit for forfeiture of property under the customs laws a person need not be a witness against himself (*Boyd* v. *United States* ((1886) 116 U. S. 616, 634)); and if an attorney need not swear he has not borne arms against the United States (*In re Shorter* ((1865) 22 Fed. Cas. No. 12,811)). See also *Matter of Baxter* ((1866) 2 Fed. Cas. No. 1,118) a fortiori, a person need not answer under oath that he has committed an act involving the essential elements of moral turpitude.

Under the terms of the proposed provisions a person would be refused a license if he refused to apply and answer under oath as to whether or not he had ever been convicted of a crime involving moral turpitude or whether or not he had ever committed an act which involved the essential elements of moral turpitude. The refusal to issue a license on the basis that he did not so swear would in effect be equivalent to drawing an inference from his silence that he had been convicted of such a crime or that he had committed an act involving the essential elements of such a crime. Such an inference, and a refusal to issue a license on the basis of such an inference, would be violative of the prohibition against compelling self-incrimination. See *United States ex rel. Vajtauer* v. *Commissioner of Immigration* ((1927) 273 U. S. 103, 112).

VIOLATION OF SIXTH AMENDMENT

The provisions of section 3 which require an actor or producer to obtain a license for which he is ineligible unless he swears he has not committed any act containing an essential element of a crime involving moral turpitude, and the provisions of section 9 which impose a penalty of $1,000 for willfully accepting or continuing employment without a license, are violative of amendment 6 of the United States Constitution.

Generally speaking the definitions of this bill are so indefinite and vague that it is impossible to me as an attorney to conceive that it would be held valid under the fifth and sixth amendments of the Constitution. A new statutory offense must be defined in language understood by the common mind, and the prohibited act or acts must be described in reasonably explicit language. Although the language of the proposed bill requiring a license is explicit enough, the language describing the action which an applicant must swear or affirm he has not committed to obtain a license is not specific enough. See *Lanzetta* v. *New Jersey* ((1939) 306 U. S. 451, 453). For example:

"SEC. 2. (3) The term 'actor or actress' means an individual who appears in a speaking role in any motion picture, and who receives compensation for such appearance."

This definition is not limited to motion pictures intended for interstate commerce, and is not applicable to nonspeaking actors. As pantomime can be salacious, is the classification justified?

"SEC. 2. (5) The term 'distributor' means the person having primary responsibility for the leasing, rental, or sale for exhibition in the United States, its Territories, or possessions, of any motion-picture film."

What is the meaning of "primary responsibility"?

"SEC. 3. (a) The Secretary of Commerce shall, upon written application, issue to any eligible individual, (1) upon payment of a fee of $1, a license authorizing such individual to appear as an actor or actress in any motion picture, or (2) upon payment of a fee of $100, a license authorizing such individual to produce any motion picture. Such application shall set forth such facts as the Secretary may require for the purpose of determining whether such individual is eligible for such license under the provisions of subsection (b), and shall be signed by the applicant under oath or affirmation."

This definition refers to eligible individuals, and eligible individuals under subsection (b), but there is no definition of an eligible individual. Subsection (b) does not state who is an eligible individual but states two classes of persons who are not eligible.

"SEC. 4. (b) No motion-picture film made or produced in whole or in part in the United States, its Territories, or possessions shall be eligible for licensing unless the Secretary shall find (1) that all persons appearing as actors or actresses in such film possess, or, if deceased, possessed at time of death, unrevoked licenses issued under section 3 (a) (1); (2) that the individuals producing such film, who are required under this act to obtain licenses, possess, or, if deceased, possessed at time of death, unrevoked licenses issued under section 3 (a) (2); (3) that such film cannot reasonably be expected to contribute to juvenile delinquency; and (4) that such film is not reasonably calculated to encourage a contempt for law, or public or private morality."

What are the standards by which (3) and (4) of this subsection are to be controlled?

"SEC. 4. (c) No motion-picture film wholly made or produced outside the United States, its Territories, or possessions shall be eligible for licensing unless the Secretary shall find (1) that such film cannot reasonably be expected to contribute to juvenile delinquency, (2) that such film is not reasonably calculated to encourage a contempt for law, or public or private morality, and (3) that the producers of, and actors or actresses in, such motion picture are not criminals or persons of ill repute."

What are the standards for establishing that a person is one of ill repute?

"SEC. 4. (d) * * * Public notice of the issuance of any such license shall be given in such manner as the Secretary shall prescribe, and a copy thereof furnished to any interested person upon his application."

Who is required to supply the copy that is to be furnished to anyone interested?

Indefinite nature of "moral turpitude" term

The indefinite and loose wording of the act and particularly the reference to moral

turpitude reinforce my belief that the act is unconstitutional. The term "moral turpitude" has been defined any number of times, but all the definitions state more or less that moral turpitude is a vague and indefinite term which imports an act of baseness, vileness, or depravity in the private and social duties which a man owes to his fellow man or to society in general. *Neibling* v. *Terry* (177 S. W. 2d 502); *In re Pontarelli* (66 N. E. 2d 83); *U. S. ex rel. Manzella* v. *Zimmerman* ((1947) 71 F. Supp. 534, 537); *United States ex rel. Berlandi* v. *Reimer* ((1939) 30 F. Supp. 767). Crimes involving moral turpitude do not depend upon individual judgment but upon the commonly accepted mores, current at the time. *United States* v. *Francioso* ((1947) 164 F. 2d 163).

A statute which either forbids or requires the doing of an act in terms so vague that men of common intelligence must necessarily guess at its meaning and differ as to its application, is violative of due process. *Winters* v. *New York* ((1948) 333 U. S. 507, 515). A statute creating an offense must set up ascertainable standards of guilt. *United States* v. *L. Cohen Grocery Co.* ((1921) 255 U. S. 81, 89); *Smith* v. *Cahoon* ((1931) 283 U. S. 553, 564); *Champlin Refining Co.* v. *Corporation Commission* ((1932) 286 U. S. 210, 242).

From the foregoing it can be readily seen that it is almost too much to expect a person to swear to a statement that he has not committed an act which might contain an essential element of moral turpitude when the definition of moral turpitude is so indefinite and subject to change with the change in the moral conscience. It, therefore, may be asserted that the definition of this term is violative of the definiteness needed in criminal statutes in order not to violate amendments five and six of the Constitution. *United States* v. *Reese* ((1876) 92 U. S. 214, 220); *United States* v. *Brewer* ((1691) 139 U. S. 278, 288); *Connally* v. *General Construction Company* ((1926) 269 U. S. 385, 391).

Further, as stated in the case of *Lanzetta* v. *New Jersey* ((1939) 306 U. S. 451, 453):

"If on its face the challenged provision is repugnant to the due-process clause, specification of details of the offense intended to be charged would not serve to validate it. *Cf. United States* v. *Reese* (92 U. S. 214, 221); *Czarra* v. *Board of Medical Supervisors* (25 App. D. C. 443, 453). It is the statute, not the accusation under it, that prescribes the rule to govern conduct and warns against transgression. See *Stromberg* v. *California* (283 U. S. 359, 368); *Lovell* v. *Griffin* (303 U. S. 444). No one may be required at peril of life, liberty, or property to speculate as to the meaning of penal statutes. All are entitled to be informed as to what the State commands or forbids. The applicable rule is stated in *Connally* v. *General Construction Co.* (269 U. S. 385, 39): 'That the terms of a penal statute creating a new offense must be sufficiently explicit to inform those who are subject to it what conduct on their part will render them liable to its penalties, is a well-recognized requirement, consonant alike with ordinary notions of fair play and the settled rules of law.'"

VIOLATION OF FIRST AMENDMENT

Freedom of the press

The censorship provisions of the bill are included in section 4 (b), which reads:

"No motion-picture film made or produced in whole or in part in the United States, its Territories, or possessions shall be eligible for licensing unless the Secretary shall find * * * (3) that such film cannot reasonably be expected to contribute to juvenile delinquency; and (4) that such film is not reasonably calculated to encourage a contempt for law, or public or private morality."

These provisions would seem to be violative of the first amendment of the Constitution. Although the Supreme Court in 1915 in the case of *Mutual Film Corporation* v. *Industrial Commission of Ohio* ((1915) 236 U. S. 230), held that motion pictures could not be brought into a practical and legal similitude to a free press and liberty of opinion, it is of interest to note that the Supreme Court in 1946 in the case of *United States* v. *Paramount Pictures* ((1948) 334 U. S. 131, 166), stated, "We have no doubt that motion pictures, like newspapers and radios are included in the press whose freedom is guaranteed by the first amendment." It is not contended that this latter statement of the Supreme Court overrules the Mutual Film Corporation case, but as stated in *RDDR Corporation* v. *Smith*, decided March 6, 1950, by Judge Andrews in U. S. D. C., N. Ga. (18 LW 2435), the question appears to need reexamination in view of the statements made by the Supreme Court in *Gitlow* v. *New York* ((1925) 268 U. S. 652); *Winters* v. *New York* ((1948) 333 U. S. 507); and *Terminiello* v. *Chicago* ((1949) 337 U. S. 1). And, as stated in *Near* v. *Minnesota* ((1931) 283 U. S. 697, 713), the essence of censorship is whether a statute authorizing such proceedings in restraint of publication is consistent with the conception of the liberty of the press as historically conceived and guaranteed. In determining the extent of the constitutional protection, it has been generally, if not universally, considered that it is the chief purpose of the guaranty to prevent previous restraints upon publication. The struggle in England, directed against the legislative power of the licensor, resulted in renunciation of the censorship of the press.

As stated in *Schenck* v. *United States* ((1919) 249 U. S. 47, 52):

"The question in every case is whether the words are used in such circumstances and are of such nature as to create a clear and present danger that they will bring about the substantive evils that Congress has a right to prevent."

The censorship provisions of this section use the expressions "that cannot reasonably be expected to contribute" and "not reasonably calculated to encourage." These are rather broad standards by which to judge whether or not the film should be barred from distribution. In fact, under such wording, it would appear to be absolutely discretionary with the Secretary of Commerce to determine whether or not the picture was one to be shown. This is censorship of the most vicious type.

VIOLATION OF ARTICLE I

Article I, section 9, clause 3, provides:

"No bill of attainder or ex post facto law shall be passed" by Congress.

The bill is in the nature of a bill of attainder and is also an ex post facto law.

Bills of attainder

When our Constitution and Bill of Rights were written, our forefathers had ample reason to know that legislative trials and punishments were too dangerous to liberty to exist in the nation of freemen they envisioned. And so they rightly proscribed bills of attainder. *United States* v. *Lovett* ((1946) 328 U. S. 303, 317). They knew the danger inherent in special legislative acts which take away the life, liberty, or property of particular-named persons or classes of persons because the legislature thinks them guilty of conduct which deserves punishment. *Duncan* v. *Kahanamoku* ((1946) 327 U. S. 304). This clause precludes specific acts imposing punishment upon particular persons or classes of persons by legislative authority. See *Cummings* v. *Missouri* (4 Wall 277); *Ex parte Garland* (4 Wall. 333); *Drehman* v. *Stifle* (8 Wall. 595); *Pierce* v. *Carskadon* (16 Wall. 234); *Fletcher* v. *Peck* (6 Cr. 87); *Ogden* v. *Saunders* (12 Wheat. 213, 260); *Klinger* v. *Missouri* (13 Wall. 257). In the very recent case, *United States* v. *Lovett* ((1946) 328 U. S. 317), the Court stated inter alia:

"Neither of these cases (*Cummings* v. *Missouri, supra* or *Ex parte Garland, supra*) have ever been overruled. They stand for the proposition that legislative acts, no matter what their form, that apply either to named individuals or to easily ascertainable members of a group in such a way as to inflict punishment on them without a judicial trial are bills of attainder prohibited by the Constitution."

The proposed statute, just as the statute in the former cases mentioned, "operates as a legislative decree of perpetual exclusion" from a chosen vocation and just like those statutes is violative of this article.

Ex post facto

This bill imposes an additional penalty on a person who has been convicted and served his sentence for a crime involving moral turpitude and it also imposes a penalty, where none existed before, on a person who has committed an act which involves the essential elements of a crime of moral turpitude. An ex post facto law is one which imposes a punishment for an act which was not punishable at the time it was committed or imposes a punishment in addition to that prescribed at the time of the commission of the act (*United States* v. *Hall* ((1810) 6 Cr. 171); *Burgess* v. *Salmon* (97 U. S. 381, 384)); or alters the situation of the accused to his disadvantage (*Kring* v. *Missouri* ((1883) 107 U. S. 221, 228); *Medley, Petitioner* ((1890) 134 U. S. 160, 171); *United States* v. *Great Northern R. R. Co.* ((1907) 157 Fed. 288, error dismissed 214 U. S. 530); *Cases* v. *United States* ((1942) 131 F. (2d), cert. den. 319 U. S. 770, rehearing den., 324 U. S. 889)). And the ex post facto effect of the law cannot be evaded by giving a civil form to that which is essentially criminal. *Burgess* v. *Salmon, supra.* In *Cummings* v. *Missouri* ((1867) 4 Wall. 277, 323), the provision of the Missouri Reconstruction Constitution which required persons to take an oath of loyalty as a prerequisite to practicing a profession was invalidated because it constituted a bill of attainder and because it had an ex post facto operation. On the same day in *Ex parte Garland* ((1867) 4 Wall. 333), the Court invalidated on the same grounds an act of Congress which required attorneys practicing before the Supreme Court to take a similar oath. An accused must be clearly informed of the charge against him, the law which he is charged with violating must have been passed before he committed the act charged, and even after conviction no cruel and unusual punishment can be inflicted upon him. See *Chambers* v. *Florida* (309 U. S. 227, 235–238).

CONCLUSION

There are many other legally objectionable features of this bill, but it is believed that the above evidence amply supports my thesis of the bill's unconstitutionality.

Excerpts From Wisconsin Press Editorials

[From the Racine Journal-Times of March 23, 1950]

Senator Edwin Johnson, of Colorado, is so worked up over the antics of movie actors, actresses, and producers that he proposes to set up a Government licensing system to govern the motion-picture industry. Many persons will agree that the recent use of the sordid Bergman-Rossellini affair to promote the dull Stromboli at the box office was an attempt to exploit the immoral escapades of the film stars.

But however repugnant these escapades may be to our sense of morality, the Johnson proposal is not the answer. It would impose a governmental censorship that is just as repugnant to our system of personal freedom and liberty.

No one is forced to go to a movie. If an individual chooses to boycott films of the actors and actresses whose private lives do not meet his standards of morality, or for any other reason, the customer is free to do so. That, after all, would be the most effective deterrent. If Americans refused to attend films, producers would be quick to change their tactics.

[From the Wisconsin State Journal of March 16, 1950]

As for Senator JOHNSON'S actor-licensing proposal, the whole thing strikes us as ridiculous. This is carrying Government supervision of individual morals to the extreme.

RKO may have engaged in nauseating commercial opportunism by its shameless exploitation of Stromboli, but Senator JOHNSON doesn't have to go see the picture, nor does anyone else.

How do Miss Bergman's morals compare with the behavior of Alger Hiss, or General Vaughan, or John Maragon? Is Miss Bergman a greater sinner than J. Parnell Thomas or Congressman Andrew May?

There is a Judge that will decide these things. We doubt if He needs any help from a licensing system established by the Congress of the United States.

[From the Milwaukee Journal of March 19, 1950]

HITLER PURGE FOR HOLLYWOOD?

For fantastic suggestions to improve the moral tone of Hollywood and its films, Senator JOHNSON of Colorado deserves an Oscar.

His proposal that the Federal Government license actors, producers, and films got the lambasting it deserved from other Senators. Senator WILEY, of Wisconsin, did as telling a job as any.

Senator WILEY said that he was as shocked as anyone over the scandalous affair of Roberto Rossellini, a love pirate, and Miss Ingrid Bergman; also by the way Hollywood exploited their illicit conduct to promote patronage for their film Stromboli. But Senator WILEY went on to condemn the Johnson cure as unconstitutional and a police-state measure. It would open the way, he said, to an entire train of dictatorial legislation. Where it would end, no man could foresee.

One Hollywood comment hit that nail right on the head. What about a measure to control the moral conduct of United States Senators?

As Senator WILEY pointed out, those of us who are disgusted when Hollywood exploits scandal have effective remedies now within our grasp. He put it this way:

"When Hollywood learns that the American people will not patronize pictures featuring a particular individual, that individual quickly leaves the Hollywood scene."

The Land-Grant Colleges

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 18 (legislative day of Wednesday, March 29), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by President John A. Hannah of Michigan State College, at the annual convention of the Association of Land-Grant Colleges and Universities. I should like to point out that Dr. Arthur S. Adams, president of the University of New Hampshire, who is also president of the Association of Land-Grant Colleges and Universities, has inserted in this address in parentheses figures which are applicable only to the University of New Hampshire.

Mr. President, I am informed by the Public Printer that this address will make approximately three pages of the RECORD, at a cost of $246.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NOR LOSE THE COMMON TOUCH

We meet today—presidents, deans, and directors of the land-grant colleges and universities—as persons with a wide diversity of special interests, reflected in the programs we are to enjoy during the next few days. But we have a great common interest, too, and it is about that common interest I want to talk with you this morning.

I would have you recall that we all share a tremendous responsibility to the people of this Nation because we are the conservators of one of the best of America's great traditions.

We know it as the land-grant-college tradition, and we describe it generally as the conception that there should be equality of educational opportunity for every American, that higher education should be practical in the sense that it should fit students to live satisfying and useful lives, and that higher education has the responsibility to train young men and women to be effective citizens of this great democracy.

We who serve the land-grant-college system of America believe that we are in a manner of speaking disciples of Milton, who gave us a good definition of education in these words:

"I call, therefore, a complete and generous education that which fits a man to perform justly, skillfully, and magnanimously all the offices, both private and public, of peace and war."

Nearly as eloquent was the Michigan farmer who led the campaign which culminated nearly a century ago in the establishment of the first agricultural college in America. After describing the practical studies of the ideal curriculum for the college to be, Bela Hubbard added:

"Nor should the claims of literature and the fine arts be wholly neglected, as tending to polish the mind and manner, and add greater luster and dignity to life."

Much more recently, the president of a great eastern university, which has antecedents wholly unrelated to those of the institutions we represent, wrote something which might well be taken as a succinct expression of the philosophy which motivates, or at least should motivate, the institutions we represent. In General Education in a Free Society, President James Bryant Conant, of Harvard, wrote:

"The primary concern of American education today is not the development of the appreciation of the good life in young gentlemen born to the purple. Our purpose is to cultivate in the largest number of our future citizens an appreciation both of the responsibilities and the benefits which come to them because they are American and free."

To that sentiment each of us can subscribe, and Senator Morrill and President Lincoln would have applauded had a university president of their day expressed as well the idea which led to the establishment of the land-grant-college system of America.

Of course, we are not alone in our guardianship of the tradition of higher education at public expense in the best interests of the Nation. Many great universities and colleges share the trust. But I think that our friends in the State universities outside our own land-grant association would grant that passage of the Morrill Act was one of the most significant events in the entire history of this Nation in that it brought higher education out of the cloisters of the past and made it available to the people at large in the solution of their everyday problems.

Few thinking men question that the system of higher education growing out of the Morrill Act has been a powerful factor in the development of the American democratic system.

The introductory section of the annual statistical report of the Federal Security Agency put it neatly when it said:

"It is not easy to appraise in brief space the services of these land-grant institutions. They have broadened the base of higher education, bringing it within the interest and attainment of vastly larger numbers of people than would otherwise have been reached. They have spread widely the concept that higher education is something in which all the people have a stake. They have, therefore, a place of deep affection in the hearts of the people. They are growing in strength and influence with each passing decade."

How pleasant it would be to relax in the warmth of that praise from an impartial Government bureau and to take comfort in the contemplation of deeds well done.

But the statistical tables immediately following that very page of praise raise a sign of danger which we will be blind if we do not see, and derelict if we do not heed. It says, indirectly but plainly enough to make the message clear, that higher education in the United States as represented by all publicly supported institutions, and the land-grant colleges and universities in particular, is face to face with a serious financial crisis.

To understand the danger signals, we must keep in mind the special characteristics of the land-grant system. One of the important characteristics is that our land-grant colleges and universities are peculiarly creatures of the several States and Territories. True, they were established for the most part under the benevolence of the Federal Government, but through the decades each has been supported largely by the tax dollars of the State or Territory it represents, and each has served the special interests of its State or Territory.

A second characteristic is that these institutions have been devoted to the education of the agricultural and industrial classes—that is to say, those who labor with their hands and minds in the production of tangible goods and services. For that reason, these are known as practical institutions, although I prefer the phrases of a neighboring Canadian educator who refers to them as being established on the democratic, rather than the aristocratic, pattern.

A third important characteristic is that, of and by reason of their genesis and tradition, they are dedicated to the proposition that there shall be equality of educational opportunity, as nearly as equality can be achieved in a nation with as great a diversity of people and interests as our own.

As we near the midpoint of this difficult twentieth century, let us take a little time to see how we measure up to the standards set for us by those who preceded us as president, deans, and directors. Do our institutions continue to be the favored children of our individual States, cherished and nourished by the deep affection of the people? Are we still devoted to the service of the industrial and agricultural classes, seeking to improve their lots in life? Have we accomplished much by way of equality of educational opportunity for all classes of our citizens?

I would not presume to claim to have the complete answers to those three questions, but this would be a wasted opportunity if some of the evidence were not called to your attention on this occasion.

First, as to the matter of State support. The annual statistical report of the Federal Security Agency to which I referred indicates that we are losing, not gaining, assistance from our individual States, which are supposed to be the strong supporters of the land-grant colleges and universities. This is no place to quote tables of statistics, when they have been published for your reading and examination. But in support of my contention let me point out that while enrollments in all land-grant colleges and universities increased by 68.7 percent (New Hampshire 81 percent) from the 1945–46 school year through the 1947–48 school year, income from State appropriations increased a little less—65.6 percent (New Hampshire 57.9 percent). But most significant is the fact that income from student fees increased by 279 percent (New Hampshire 378 percent) in the same period, while total income was increasing by 746 percent (New Hampshire 98.6 percent).

Or put another way, the States contributed 42.5 percent (New Hampshire 30.4 percent) of the total income of all the land-grant colleges and universities in 1945–46, and only 40.3 percent (New Hampshire 24.2) last year. Meanwhile, the percentage of contribution to total income from student fees increased from 12.3 (New Hampshire 12.8) in 1945–46 to 30.4 (New Hampshire 31) last year. That was a relative increase of 147 percent (New Hampshire 142 percent) in the contribution from fees, and a decrease of 5.1 percent (New Hampshire 20.3 percent) in the contribution by the several States.

This merely substantiates, of course, the findings of the President's Commission on Higher Education that the percentage of educational costs being contributed by students has been creeping upwards for years, and has reached the point at which it endangers the whole program of public education in this country.

What many of us may have failed to realize, however, is the gradual disinclination or inability of State governments to support higher education on the accustomed scale is responsible for placing ever-growing burdens on students and their families.

This is true of both the land-grant colleges and universities and the other State-supported institutions as well. A recent study by the University of Michigan, which I am privileged to quote, found that enrollments in State-supported colleges and universities in 20 selected States have increased by 154 percent (New Hampshire 141 percent) in the 20 years since 1929, and that while appropriations in gross have increased at a slightly faster rate—162 percent (New Hampshire 160 percent)—appropriations per student in terms of 1948 dollars have declined by 14 percent (New Hampshire increased 8 per cent).

Of course, the record varies from State to State. For example, appropriations per student in terms of 1948 dollars increased in 5 of the 20 selected States, and decreased in the other 15. It may explain some of my concern that the decrease in Michigan has been 35 percent, compared with the average decrease of 14 percent.

To illustrate the importance of fees in our financial structure, one need but think where our land-grant institutions would have been without the $56,000,000 (New Hampshire, $624,318.41) in fees received from the Veterans' Administration in 1946–47, or the $85,000,000 (New Hampshire, $885,632.54) received last year. Last year, for example, VA fee receipts were almost twice what it cost to operate and maintain our physical plants (New Hampshire, $577,631.84); they were equivalent to more than 53 percent (New Hampshire, 67.7 percent) of the cost of resident instruction (New Hampshire, $1,008,912.64) in all our institutions.

Is any one of us so naive as to think that our State governments would have footed the whole bill if there had been no millions forthcoming in the form of veterans' fees?

And who will foot the bill when this source of funds dries up, as it is beginning to dry up?

Let us leave this disturbing topic for a moment, and consider how we have fared in our mission to provide equality of educational opportunity. Again, there is no need to quote figures and percentages, for the report of the President's Commission has made it abundantly and painfully clear that every year our high schools graduate thousands upon thousands of talented and capable young men and women for whom a college education is out of the question, simply because it is too costly for them. Most of them, beyond doubt, are from the families in the "industrial classes" our institutions were created to serve specifically. The recent studies in the State of New York bear out earlier findings that not only does parental income pretty much determine whether boys and girls go on to college but also the level of parental income tends to determine the curriculum to be followed by the youngster who is lucky enough to get into college. That, of course, means that the well-to-do parent can make a lawyer or a doctor of his son, and the less well-to-do parent will have to restrict his son's ambitions to the less remunerative fields of teaching, commerce, and the industrial trades.

Is here the revival of the social stratification which the founders of the land-grant college system sought to destroy by broadening the base of higher education? Their weapon, you recall, was inexpensive education, education practically free to all who qualified to receive it. Is the weapon to be broken in the hands of those who hold it now?

Prospects that the trend can be reversed are not encouraging, but reversed it must be, or the land-grant colleges which have been the pride, and in many respects the glory, of America, will lose their character and become merely institutions where those with means are welcome, and those without resources and special social qualifications are told to keep away. The people of this country rejected that kind of higher education 87 years ago, and I am convinced that they will not choose to return to it—if they have a free, enlightened choice.

The next questions follow naturally: What can be done to reverse this trend, to put higher education back within the grasp of the great majority of our young men and women? How can we continue to operate the great physical plants our colleges and universities have come to be? How can we pay the great teachers and scientists who make up our faculties when our incomes from fees begin to shrink?

The answer of the short-sighted and those who do not understand the value of a democratic society of a well-educated young citizenry will be to raise student fees to make up the difference. For us, this must be the last resort, if resort it be at all. Our efforts must be expended in reducing the cost of education for the individual student, not in finding ways to drain away more of his family resources.

The next most obvious answer is to increase public appropriations for higher education. This, of course, will be far easier said than done. Throughout the country this year there was evidence of great reluctance on the part of State legislatures to spent tax money in what fair-minded persons would say were adequate amounts for the support of institutions of higher learning. Experience varied from State to State, and by and large we have all been treated fairly well. But I wonder what the story will be next year, and the year after, when the veterans have finished their schooling, and the flow of comparatively easy money from the Veterans' Administration dribbles to a stop. What chance have we to compensate for the loss of income? Our chance is not a very good one, I fear, when we consider the competition for the taxpayers' dollars.

The competition is formidable. The most serious competition is in the field of social welfare, where there are a great many persons with a sizable stake. They far outnumber all our students and alumni, and all others who might be friendly to our cause.

Let me take my own State as an example. Back in 1937, when we were far less prosperous than now, the State of Michigan expended a little more than $7,500,000 (New Hampshire: $896,741.98) on a higher education out of a total budget of a little more than $160,000,000 (New Hampshire: $20,789,237.95), or 4.8 percent (New Hampshire: 4.3 percent). Ten years later—the fiscal year ending in 1948—it spent $22,000,000 (New Hampshire: $1,734,822.37) on higher education, out of a total expenditure of $461,666,667 (New Hampshire: $47,090,838.31), or 4.76 percent (New Hampshire: 3.7 percent).

Now, had enrollments remained the same, or even increased in ratio with the population, higher education would have fared comparatively well. But enrollments in our State-supported universities and colleges and increased by 25,750 (New Hampshire: 2,159), or 72 percent (New Hampshire: 118 percent), and it took $171 in 1948 to buy what $100 had bought in 1937.

Meanwhile, higher educations' competitors for State support had gained ground at an astonishing speed. State expenditures for public welfare, for example, jumped from $1,500,000 (New Hampshire: $1,363,050.13) to $14,333,334 (New Hampshire: $5,046,965.53), payments to local units of government for public welfare programs leaped from $21,750,00 to $69,333,334; payments for primary and secondary education increased from $38,500,000 (New Hampshire: $704,526.86) to $107,500,000 (New Hampshire: $3,292,044.37). Here is competition indeed.

In the face of facts such as these—and the situation is probably comparable in other States—we must begin to consider where the cuts are to be made when the current grumbling against high taxes swells into a roar which our legislators must hear. Will they reduce payments for old-age pensions, or for the care of crippled children, or for primary and secondary schools, or for the economic unfortunate who must subsist on a dole? Higher education is much more vulnerable, considering that those other recipients of governmental support represent far larger blocks of voting strength.

The land-grant system was established, and public support of higher education was strongest, in the pioneering era of America. Certainly, it was the demand for trained farmers and engineers and teachers in an expanding economy which was the great impetus for the land-grant-college movement. Perhaps we have reached the point at which we are turning away from the philosophy that there should be opportunities for every American to accomplish as much as his own ability and ambition enable him to accomplish. Perhaps we are turning toward the philosophy that a minimum standard of safety and security should be guaranteed for everyone, regardless of ability and effort. I should hate to think that the latter philosophy has the upper hand in America, for

under such circumstances the minimum has a way of becoming the maximum, and everyone lives on a humdrum level.

All that aside, we must recognize that advocates of public support for higher education in the future will have to work harder than ever before and develop better arguments, if they are to convince those who spend the tax dollars that they are the champions of one function of Government in which everyone has vital stake.

Amid these gloomy predictions there is at least one ray of light. It is that American parents still want the best possible educations for their children and are still sold on the notion that a college education is something every American boy and girl should have. We have all sensed that fact, I believe, but the recent Fortune survey produced facts and figures to substantiate our belief. That survey is worthy of the close study I am sure it has received from all of us. The thousands of words and figures are neatly and adequately summed up on the cover of the supplement:

"Americans want all (the higher education) they can get for their young people, and where they cannot foot the bill they think the Government should help out."

Despite all the critical things that can be said truthfully about higher education in the United States, the fact remains that the people themselves still believe in its value, and will slave and sacrifice to buy a college education for their children. On that foundation we must build our plans to meet the crisis which now confronts us.

I have no sure-fire plan for solving the financial problems of higher education. To a degree, I imagine that we will have to do more of what each of us has to do in his own university or academic school or extension service or experiment station—contrive, revise, adapt, compromise, combine, and struggle—to try to make $1 do the work of two. There never has been all the money that could be spent usefully and profitably, and the only safe prediction is that there never will be.

Financial aid from the Federal Government may be the solution; I do not profess to know. I recognize the dangers in such an approach. But I am not as alarmed as some educators, for I recall that the land-grant colleges have been working in fairly comfortable partnership with the Federal Government for many decades, and if a single one of them has surrendered its institutional individuality and accepted political dictation from Washington, I have yet to hear of it.

This I do know—if the tax-supported institutions of higher learning do have to turn to the Federal Government for succor, it will be because they have not received their just deserts at the hands of the State governments whose proper wards they are.

I am sure that hit-or-miss individual attacks on this program will not be enough. Some things we must do in concert, because as the current guardians of a great public trust, we must act together to protect the interest of the American people whom we serve.

It seems to me that any program of action must fall into the area of publicity and performance, just as do any good programs to improve public relations. By publicity I do not mean press agentry, but rather a program of information for the enlightenment of the people of this country. Publicly supported education needs spokesmen; it needs advocates, with a deep conviction in their souls and the energy to carry the great story they have to tell to the far corners of every State.

For example, the story of the land-grant movement needs to be written, not in the exact but tedious language of the historian interested only in the bare bones of facts, but by someone who can describe in readable, vivid language the great adventure which has brought our institutions to prominence and influence in this country. We need to have people understand that philosophy that gives a special sort of animation to the land-grant colleges and universities, and to have them appreciate the great things that have been wrought in their behalf in the years since 1862. There is a best-seller in that idea for some great writer.

Incidentally, the story of the land-grant college movement needs to be told over and over again on our own campuses, too. I fear that too many of our own faculty and staff members fail to understand why our institutions, came into being, and why they proved successful. Somehow, we must rekindle the enthusiasm for a practical ideal which marked those who had the land-grant colleges and universities in their charge in former years. Certainly there is no finer and no more inspiring tradition to claim the loyalty of the teachers of young Americans.

We need to make it clear beyond misunderstanding that the support contributed by the State and Federal Governments does not pay all the bills for college students. We should hammer it home in our State capitols that for every dollar in taxpayers' money spent on giving a young man or woman college training, the student spends at least $2 of his own, because the expense of living away from home—board, room, clothing, and incidentals—costs far more than instruction itself.

We need to destroy the false notion that current enrollments will soon drop back to prewar levels, and the pressure eased accordingly.

We need to hammer home the solid fact that for every penny of tax money spent on agricultural research, each State receives many dollars in return.

We need to tell over and over again the story of the agricultural extension service, what it has done to improve farming as a profession and farming as a way of life, and what it can do in the future if given the support it deserves.

I sincerely believe that we as administrators need to go personally to industry and say: We are training your engineers, your chemists, your salesmen, your executives—give us the active support we deserve. We must go to the primary and secondary schools and say: We are training your teachers for you—give us the support we deserve. We need to awaken the great learned professions to the necessity for maintaining universities fully equipped and staffed to train the lawyers and doctors and other professional people of the future.

And at this particular juncture, we just answer those who are attempting to mislead the people into the belief that publicly supported higher education is somehow unclean, and that high-minded education, free from political taint, is to be found only within the walls of the private colleges. My friend David B. Henry, president of Wayne University, answered those critics effectively in School and Society in the issue of September 3; I recommend it to your careful attention for what he has to say is sound and sensible, and worthy of wide quotation.

Probably all the things mentioned would be of some help to us, but it seems to be beyond question that they would not be enough. Certainly we cannot content ourselves with merely stating our case, and then sitting back to await a miracle. The gods help them that help themselves, as truly now as in Aesop's day.

At least some of our institutions are going to be called upon to reduce our costs wherever possible. In some cases, it may be possible to eliminate or reduce services, although experience has taught most of us that while the public will applaud the theory of reducing expenses in that way, the same public will be highly indignant if it is attempted.

It is probable that a more effective way of cutting costs will be found in the examination of teaching methods. It is doubtful that we have yet achieved the ultimate of efficiency in the transfer of knowledge, and if more efficient methods are capable of development, it is the inherent responsibility of the university and the college to develop them.

It is probable, for example, that even more effective visual aids to teaching could be developed with a considerable saving in teaching costs. We are only on the verge of the television era, and we may find before too many years have passed that it is possible for a great scientist or a great humanist to teach thousands of students by television where today he teaches hundreds, or possibly only scores. I am sure that television holds exciting possibilities for the agricultural extension service as well as for classroom teaching, and for the whole field of adult education.

One of the great foundations could render a tremendous service to higher education if it would sponsor and finance a study of the educational possibilities of television. Let me add that I sincerely hope that we do not miss as many opportunities in this exciting new medium as we did in radio.

It seems to me that there would be far more research within our own schools in the direction of developing better teaching methods. There has been some excellent work, but there must be more if we are to face the critics of the cost of higher education and say honestly, "We have done everything we can do."

It seems to me that we should give some serious consideration to the oft-repeated charge that our colleges and universities have grown too large. Much of their expansion to their present sizes has been forced expansion in response to public demands. Are we sure that a large, complex institution can operate more cheaply and teach more effectively than two or three smaller institutions? Certainly the point of diminishing returns must be reached sometime, but where is that point, and will we know when we have reached it? Are there graduate students in some of our institutions who can develop some facts by research into this problem?

Perhaps such a study would help each of us uncover some of the flaws which must have developed as we recruited staffs to meet the postwar demands for teaching services. I know, for example, that we found it possible to eliminate more than 60 teaching positions from the Michigan State College faculty this year, in the face of increasing enrollments, and no one was hurt seriously.

It would be embarrassing if unkindly critics detected any padding of faculty or administrative staffs, and it would be far better to eliminate the excess ourselves, rather than have it done for us, painfully.

But these too are but mechanical devices which can do little more than make a dent in prospective deficits. It seems to me that the greatest and most beneficial exercise in which we could engage would be some candid soul-searching, some quiet contemplation of the far distant and the more recent histories of our institutions.

It seems to me that we should consider seriously whether these great land-grant colleges and universities, which had the most humble of beginnings, have grown fat and proud and worldly with success. I wonder sometimes whether those who brought this great system of higher education into being would be as concerned as we are today with degrees, and accreditation, and the size of

our graduate schools, and research for the sake of research, instead of research for the sake of knowledge of value to the common people.

It is time to ask ourselves whether our institutions have lost a share of the public esteem and affection in which they used to be held, not because the people have grown away from us, but because we have grown away from them. It seems to me that we cannot hope to regain the unwavering support that the people once gave their land-grant colleges unless we concern ourselves far more with the wants and needs of the people themselves—what they say they want, instead of what we think they should have.

To determine those wants and needs accurately, our staff and faculty members must come into more intimate association with the people. There is no room for remote ivory towers on the campus of a land-grant college, and no place on its faculty for those who disdain to accept responsibilities outside their narrow fields of academic interest. Sometimes some of our staff people tend to look down their noses at some of the very vocational classes we are obligated to serve, and to avoid any contact with them. This is an attitude we dare not tolerate if we are to be the people's universities.

We must remember that not every student can absorb or usefully employ a 4-year college education. For many of them, 1 or 2 years would be enough to equip them to live useful, happy, and effective lives. But we do not have much time for those youngsters; we count our accomplishments in terms of degrees granted, not in terms of effective citizens trained, as we should.

And at the other end of the scale, it is not particularly to the credit of the land-grant universities and the State universities that are not land-grant institutions; that despite the tremendous growth in the population of the United States and the increased public interest in health and medicine, place was made for only 548 more medical students in 1947–48 than in 1936–37, and that the number of students of dentistry increased only 446 in the same period of time. Can it be said that our universities are fully responsive to the demands of the public when the records tell that story?

I am convinced that if the progress of the land-grant colleges and universities in the next decade is to compare at all favorably with the record since their establishment, they will have to be guided by the same philosophy as they were in those past years. We must remember that what has been done is interesting, but not very important. What will be done in the 13 years between now and the centennial year will loom far larger in the people's minds than what has been done in the past 87 years.

Our charter is so broad that it needs no amendment to make it effective in even an atomic age. We are charged with promoting the liberal and practical education of the industrial classes in the several pursuits and professions of life.

Methods and techniques, tools, and personalities, administrations and social outlooks, all may change, but our objectives remain the same: The training of enlightened citizens capable of performing their day-to-day tasks capably and efficiently so that each may win from life something of the beauty and happiness and satisfaction the Creator certainly meant each man to have.

And if we truly believe that the ultimate wisdom lies in the people, let us learn from them that we may be better teachers; let us follow them that we may be better leaders; let us accept their loyalty humbly that we may serve them better. There can be no other course for institutions created to serve the common people. In no other way can we deserve their deep affection and their trust.

The Government's Farm Price-Support Program

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article which appeared in the April 1950 edition of the Reader's Digest:

FARM POLITICS VERSUS THE PEOPLE

(Condensed From Fortune)

The time has come for a sensible, honest, radically new agricultural act. The Government's farm price-support program, after 17 years, is coming full circle to its logical, preposterous conclusion.

It has erected a false work of bogus values under the whole farm economy, which would collapse into ruin if the support were suddenly removed. It is forcing farmers to produce wildly in excess of any reasonable American capacity to consume. It is responsible for most of the $1,800,000,000 deficit in the last fiscal year and at least one-fourth of the larger current deficit. It is one of the most potent of inflationary influences.

Almost everybody has heard how the Government lost $204,000,000, by destroying potatoes or selling them for less than the price of their bags; how it fed millions of dollars' worth of California raisins to hogs. Such incidents may sometimes be exaggerated, but they are not fictitious. They are a fair illustration of what happens when the Government helps a special group maintain or increase its share of the national income regardless of the group's contribution to that income. John L. Lewis is trying to do the same thing for the coal-mining industry. But, at least, Lewis hasn't forced the Government to buy up surplus coal and give it away as railway ballast or burn it up in huge bonfires.

The Government's Commodity Credit Corporation has a current investment of close to $3,000,000,000 in loans, in products acquired when loans were called, in purchases and in agreements to purchase. Last year it actually took over 21 percent of the wheat and 26 percent of the cotton crops. It has managed to dispose of only relatively small amounts, mostly to occupied countries, ECA, charitable outfits, and organizations furnishing free lunches for school children. Thus, besides its loans, it is left with a fantastic $2,000,000,000 inventory:

Nearly 5,000,000 bales of cotton, worth about $750,000,000—about a 7-months' supply for the Nation's cotton mills.

Nearly 400,000,000 bushels of wheat costing around $900,000,000—enough wheat to give everyone in the United States more than one loaf of bread a week throughout a full year.

Nearly 600,000,000 bushels of corn worth around $900,000,000—one-fourth as much corn as was fed to United States livestock and poultry last year.

More than 70,000,000 pounds of dried eggs costing close to $100,000,000—enough to last United States bakers 5 years.

More than 100,000,000 pounds of butter costing more than $60,000,000—probably more than Russia's annual output.

About a quarter of a billion pounds of dried milk worth over $30,000,000—three-quarters of a year's supply for the United States.

This by no means exhausts the list. Huge stocks of tobacco, dried fruit, turpentine and rosin, wool, soybeans, turkeys, and peanuts are also piling up. This immense store could obviously supply food and clothing for millions of poor people, were it not that CCC is forced by statute to price the products so high that the poor cannot possibly buy them.

There is little hope that CCC's colossal inventory will melt away. On the contrary, present form policies are bound to increase it. The 1949 corn crop turned out so well that nearly 600,000,000 bushels will probably be put under loan. (The Government loans money on the crops as security; both parties know the farmer intends to keep the money and let the Government have the crop.) Prices of hogs are at 3-year lows, and CCC may soon have to buy pork on a grand scale. The western plains are enjoying another year in the "wet cycle," and another billion-bushel wheat crop is in sight. CCC may well exhaust its disbursing limit of five and a half billion dollars by next summer, and will need even more money in the fiscal year 1950–51. (In January, Secretary of Agriculture Brannan asked two billions more for crop purchases.)

What can the Government do under the present law? The Government is worried, not only by the sheer size of cost of the inventory but also by the lack of storage space. Commodities are being stored in oil tanks, hangars, gymnasiums, schoolrooms, and laid-up ships. This fiscal year at leat $80,000,000 is being invested in additional space.

The planners talk of selling the surplus cheap—i. e., of dumping it abroad at a loss, and cutting prices in the open markets (the complaint of competitors and the trade policy of the State Department notwithstanding), or bartering their surplus for foreign strategic products. The only sizable deal in sight, however, is a scheme whereby the United States would advance India a million tons of wheat against future delivery of strategic materials like mica and manganese. But even this Himalaya of wheat amounts to less than 10 percent of CCC's interest.

The Department of Agriculture's other solution is to limit output. The Department has asked farmers to cut acreage of wheat, cotton, potatoes, peanuts, and tobacco, but whether this will cut production is another thing. Better seed and more fertilizer may well maintain output despite somewhat smaller acreage. And acreage taken out of restricted crops will be shifted to other crops, causing new gluts, new purchase, and price pegs.

And even if acreage controls could restrict output considerably they would probably restrict it the wrong way. If there is one thing every so-called expert is agreed on, it is that production should be shifted somewhat from cereals and grain to livestock, that no fewer than 35,000,000 acres now planted in wheat, cotton, and perhaps corn, should be converted to hay and pasture. The domestic market for grain is strictly limited; that for competitively priced livestock and dairy products is immensely expansible. But politics will not let the Department of Agriculture allow commodities to find their own prices. Instead, it is pegging prices high by restricting production.

The time has come, to repeat, for a radically new farm act that will gradually ease the price-control falsework from under the farm economy, expose it to the genuine incentives of the open market, and get rid of the growing multitude of bureaucrats and hangers-on in the Government.

The prospects for this are not so bad as they may seem. The notion that the Government should maintain or increase the farmer's share of the national income regardless of his contribution to that income is

fortunately running into trouble. The reason was once put rather cruelly by H. L. Mencken, who remarked that it is a terrific job to ram even the most elemental idea into the average man but it is always easy to scare him. For the best part of 15 years the injustices and absurdities of price support were expounded and criticized by the experts and the press. The average taxpayer, far from being alarmed, was bored if not mystified by the intricacies of the arguments. He also suffered from the notion that all farmers were as poor as a few once were. Thus the only real pressure on Congress was the pressure on the farmers, who knew what they wanted.

In the past year, however, surpluses have grown so fast, the payments so large, the prospects of disposing of excess products so dim, that even the most indifferent citizen would have to be a dunce indeed not to be alarmed. The time has plainly come for the politicians to pay attention not only to the bureaucrats and to the farm organizations, but to the rest of the people as well.

Defense of the Constitution

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1950

Mr. ROGERS of Florida. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD I include an article by Bill Watson, a senior at St. Ann's High School in West Palm Beach, Fla. The article is a product of a recent American Legion oratorical contest and received first place. I thought this such a fine article that I wanted it placed in the RECORD so that everyone might read it. The article is as follows:

DEFENSE OF THE CONSTITUTION

Voices echoed throughout the typically colonial room of Independence Hall. At quick intervals men rose from their chairs to make proposals which showed strenuous thought and true feeling of heart. For each gesture, thought, and word was governed by recollections of the dreadful price, paid in brutality, hunger, utter destruction, devastation, and death before such words "of freemen" could be spoken. Here the scholarly James Madison, the lawyer Edmund Randolph, the aged but humorous Benjamin Franklin, the youthful Hamilton (and nearly 50 other patriots) argued, compromised, and decided. At the head of them sat their great, beloved countryman, George Washington, giving thanks to be able to share in and be a part of the ultimate climax for which his gallant soldiers left their blood-stained footprints indented upon the snow-clad fields of Valley Forge. Such was the birthplace of a new guardian and protector of our God-given rights, the Constitution of the United States of America.

It was a time for the patriotic colonists to rejoice, for those who had fought hard for freedom; like Hiram Jones who served as a rifleman in the war. His father had been dragged from his own home and imprisoned by order of the King. Now Hiram need no longer fear tyrannical kings. Under the new Constitution bills of attainder were abolished. Now men must be tried only by jury. At last the power to govern was seized from monarchism and placed into the worthy hands of the people. From this precious power, we the people of the United States must never loosen our grasp, no matter what the cost. We should live up to the Constitution and in time of peril go forth to defend our Guardian of Human Rights.

The need for such defense arose on a universal basis in 1917 when the threat of hostility swept from the German Nation, striking against the massive sides of our boulder-like Constitution. Alarm was sounded, and farmers laid down their plows; office workers left their desks; laborers let fall their tools; and young men flipped closed the pages of their books as all joined hands and fought to protect what was theirs—a government of the people, by the people, and for the people. Throughout generations many wars have been fought against opposing elements and forces, contrary to the ideas and ideals of freemen. Men whose families or who they themselves had witnessed tyranny, fascism, and other poisonous elements were glad to defend the Constitution. Like Mario Ferrari, whose parents were barred from going to the church of their faith, fought so that he, his wife, and children could continue to worship as they pleased. Mario was in the same convoy of the American troopship which sank to the bottom of the Atlantic, laden with soldiers of all religions in whose midst were a Jewish rabbi, a Protestant minister, and a Catholic priest. Our Constitution grants to all men freedom of religion. With Mario men fought to live for their country; to live free from ex post facto laws which menaced their ancestors by depriving them of the protection entitled to them in times of conviction; to defend, such writs of habeas corpus which protect them from being put into prison without formal charge and left there without hearing or trial.

After taking the same oath as all our great Presidents, "I do solemnly swear that I will faithfully execute the office of President of the United States and will, to the best of my ability preserve, protect, and defend the Constitution of the United States," President Abraham Lincoln said, "Half the country cannot remain free and the other half slave." These words were taken to heart by many of the colonial patriots. Not long afterward the defense of human rights and strengthening of the Constitution was begun in what climaxed the Civil War. Guns roared, blood was spilled, starvation prevailed, buildings burned to the ground, but from then onward people of every color, creed, and race were able to enjoy the blessings of the American Constitution.

Lincoln's message should be renewed in our minds today with a slight change of wording—half the world cannot remain free and the other half slave. This means the unfortunate countries upon which are cast the shadow of the hammer and sickle, symbolic of Soviet Russia bursting forth with infiltrations of communism. These are delicate times; even more trying than our ancestors have ever witnessed. We the people of the United States must be on guard more than ever before in defense of our Constitution. This defense is not accomplished only on the battlefield, but to a great degree can be accomplished here in our own home towns and communities. We the people should exercise our right to vote for local and national officers. And in doing so should be extremely cautious by electing only those who live up to their constitutional oaths and are free from any ties whatsoever with opposing forces of communism and the like. For these forces are aimed only at tearing apart and destroying that which was paid for by the courage and lives of young boys and men at Bataan, Normandy, Bastogne, Iwo Jima, and the tears of mothers and wives waiting, praying, and hoping here at home. When asked to serve on a jury, we should call to mind the not to distant years when courts lacked such juries of the people. We should consider it an honor to be chosen to fulfill the duty, in defense of the Constitution in seeing to it that the innocent are acquitted and the guilty convicted. We must take an active interest in Government affairs so that when undesirable bills and proposals arise in the Nation's Capital we can personally call it to the attention of fellow citizens and raise petition against them to our Congressman. In this manner we the people of the United States are defending our Constitution from enactments contradicting the basic principles of free men, upon which our Government was founded.

Alien hostilities, foreign systems, and fanatic powers have attempted to stampede the rights of our forefathers, but always our fellow countrymen's faith in what was theirs, a constitution of the people, held these destructful forces back. In this age of mechanical brains and atomic bombs and the threat of communistic rule, we the citizens of the United States must stand alert, willing, and able to defend what has in past years been defended for us—a free nation under a constitution of the people. We owe it to our posterity to defend the protector and guardian of human rights whose fruits of freedom and liberty have been enjoyed by us so that our Nation's citizens of the future need never fear tyrannical dictators who determine the right to live or die—nor live in constant dread that members of their own families will be dragged from their own homes to suffer punishment because of their race, color, or creed—nor ever weep for their children who have been snatched by the government to be molded into tyrants—nor need they fear death for expressing their own ideas openly. Through our efforts as citizens of the United States, let our Constitution always be triumphant in standing for the rights, ideas, and ideals of freemen. And let its principles be raised on high to serve as an inspiration for all oppressed men throughout the world to enjoy the rights for which our forefathers so gallantly fought.

Investigation by Committee

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1950

Mr. JAVITS. Mr. Speaker, the challenge to so many good Americans today is to hold the balance between the exposure and punishment of those who would subvert our institutions from within and the protection of the freedom of the innocent individuals whose names may come up in such investigations, for which we have so long fought. I am convinced that both these objectives are essential to our victory in the cold war and I am also convinced they are entirely consistent and can be attained. One of the great tests is in the activities of congressional investigating committees—a power which must be sustained and implemented—yet which must be safeguarded against abuse by unreasonable jeopardy of the reputations and means of livelihood of innocent individuals. The appended editorial of the New York Times of April 12, 1950 calls attention to this problem and to Senate Concurrent Resolution 2 introduced by Senator

LUCAS dealing with it; my own resolution along substantially the same lines being House Joint Resolution 20, introduced January 3, 1949:

INVESTIGATION BY COMMITTEE

By declining to review the cases, the Supreme Court has now, in effect, upheld the convictions of two Hollywood film writers and the chairman of an allegedly subversive organization for contempt of Congress. The two writers (and eight other writers and directors) had refused to state before the House Committee on Un-American Activities whether they were members of the Communist Party. The official of the suspect organization had declined to produce its records at the demand of the same committee.

Without going into the merits of these particular cases, it is clear that the power to investigate is one of the most fundamental and one of the most necessary powers of Congress. In a recent article in this newspaper, Senator LUCAS has called it, without exaggeration, "an essential part of the legislative process," without which "Congress simply could not discharge its obligation." If this be so, then it follows that the congressional committee, as an investigatory arm of Congress, must also have broad powers that will enable it to obtain all the facts that have any bearing on any particular question. The power of subpena is essential, and so, it seems to us, is the power to cite for contempt. Without such powers, any congressional investigation could be rendered meaningless.

What does not follow from all this is that congressional committees have unrestricted rights of persecution. The courts have held that the Un-American Activities Committee was within its powers in the cases mentioned above; but all too often this same committee—and, unfortunately, it is by no means the only one—has clearly gone very much further than could conceivably be justifiable or necessary in trespassing on the rights of the individual. Long ago Senator LUCAS introduced a resolution looking toward a code of fair practice for committees, and only a few days ago a Senate subcommittee made news by adopting, of its own accord, rules for the protection of witnesses and for orderly procedure. Congress must give serious attention to this problem, if the respect of the public is to be retained for the system of investigation by committee.

Menace of Imports

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article by Ernest H. Gaunt, general manager, Andover-Gaunt Textiles, Inc., Lawrence, Mass., which is a reprint from the Annual Wool Review appearing in a recent issue of the New York Journal of Commerce:

INDEMNITIES FOR LOSSES DUE TO IMPORTS URGED FOR WOOLEN INDUSTRY

(By Ernest H. Gaunt, general manager, Andover-Gaunt Textiles, Inc.)

Today our United States tariffs are being lowered, and face further lowerings in the name of world welfare by our own authoritarian State Department which is isolated from the people.

Formerly, tariffs were lowered or raised in the name of American general welfare by our own elected Congress which is close to the people.

Whether the general welfare of the world actually will be benefited by sacrificing certain American industries which are of the greatest importance as providers of employment and of vital strategic importance in wartime has been far from proved by our ivory-tower State Department.

MENACE IS REAL

To those industries selected to be sacrificed, the menace of imports is very real and immediate. It is no cry of "wolf." The proverbial last straw may soon break the camel's back in a number of industries vital to this Nation's general welfare. In the watch industry the "camel's back" has already been broken.

Bargains for American consumers in imports from foreign countries with low-wage, sweatshop or even slave labor may become boomerangs before the end of 1950. Within the United States, traffic between States in child labor, sweatshop products, is not allowed on moral grounds. And Europe does not have the high minimum wages enforced here. Is it not strange reasoning to allow such unfair competition in international trade?

LINCOLN'S VIEW

Abraham Lincoln was for tariff protection for our domestic industries on the ground that by trading with ourselves we had both the goods and the money ourselves.

It is doubtful that if he were alive today, he would think it was world humanitarianism for us to let our own house be pulled down to help foreigners to build their houses. Rather would he confine our help as a Nation to aiding foreign nations to rebuild their own houses, i. e., the Marshall plan, but not the tearing-down plan of our State Department low-tariff theorists.

In the present cold war with Russia these intellectualistic State Departmentists lack the common horse sense practically to be able to see the domestic effects of their world-scale planning.

Without sharing fully the current suspicion of possible Communists and present or "reformed" fellow travelers on the State Department staff, it seems clear that leftists as well as rightists in positions of power are everywhere and always authoritarian in their thinking; and their judgment is warped outside their own specialty, as demonstrated recently in the case of the brilliant British scientist, Dr. Fuchs. Such narrow specialists are highly dangerous in administrative positions because of their lack of sound over-all judgment.

IDEALISTS ARE IMPATIENT

Pearl Buck has written that the once idealistic, socialistic, intellectualistic humanitarians of Lenin-Stalin Russia grew impatient with the stupidity of the common herd. Harry Hopkins is reported to have said of our own American people that "they are too damn dumb to understand." These "superior people" in Russia assumed the attitude of papa knows best, and turned to the more and more cruel methods in the belief that these methods must be used for the Russian general welfare.

And the American counterparts in our State Department, also regarding themselves as superior people, are joined, in some degree, by those hard-headed American industrialists who want foreign trade for their own industries.

It is not without significance that Paul Hoffman, a splendid and able man personally, and a business liberal, but whose great business success was entirely with automobiles, is inclined to belittle the claims for indemnification from American industries hurt by tariff lowering.

Automobile manufacturers were once protectionists until the domestic market became saturated and they looked abroad for new fields to conquer.

Mr. Hoffman is reported to have said that such indemnification to injured American industries would be no more logical than if indemnities had been paid to buggy manufacturers who were displaced by automobiles. However, such reasoning is not parallel. The woolen-worsted, watch, glassware, pottery, and other American industries definitely already hurt by importations from foreign countries with lower wages and living standards—are being hurt by their own United States Government. The transition from buggy to automobiles was not caused by Government.

GOVERNMENT CAN BE WRONG

It is not true that the Government can do no wrong. No government, Russian or Nazi or Fascist or Falangist, British or American, is more just or wise than the men who control and operate it. And, if elementary and traditional Anglo-Saxon justice has for centuries required local governments to indemnify citizens who are injured by destruction of their real property for general welfare projects such as public highways—it is no less a requirement of elemental justice that Federal, National Government should also indenify the citizens whose jobs or property it injures or destroys.

The remoteness of a National Government from its citizens, as compared with the closeness of local governments, does not remove the requirements of human justice and moral responsibility. Errors or injustices by any government are errors and injustices done by persons.

It is a most dangerous fiction that by calling political governments or private corporations impersonal, they can be considered outside the area where moral distinctions, moral obligations, or responsibilities are applicable.

If Congress is convinced that our American general welfare at this time is best protected by saving the world, Congress must reassume the responsibility for tariff-making which it delegated to our State Department. Congress must enact laws at once to prevent further damage to domestic industries by any further lowering of tariffs, and provide for prompt and adequate indemnification by Government for damage already done by Government, and for future possible damage by our Government to American displaced workers and factory owners and stockholders.

For stockholders in the automobile or other industries helped by lower tariffs, to label such just indemnities as subsidies—is to evade the moral responsibility of one class of citizens to other classes of citizens, and to encourage the Government of us all to be likewise irresponsible for moral and economic results.

SUBSIDIES NOT NEW

Our American Government throughout its whole history, in honest pursuit of the general welfare, has run almost the whole gamut of subsidies to special economic interests or classes or groups, as banks, railroads, union labor, farmers.

These subsidies have always had a money-content whether by direct cash or grants of public property or by exemption from taxes or exemptions from laws.

In fact our American Government has become a subsidy state. But the theory, and mostly the honest attempt, has been to balance one subsidy against the other, for the general welfare.

The so-called welfare state is a subsidization of the numerically largest economic group of citizens, the consumers. Whether in Russia, Britain or the United States, consumers as such can be subsidized (or bribed) successfully in the long run, only if the general welfare is promoted.

OWNERS INDEMNIFIED

In Britain the Anglo-Saxon concept of justice has been at least partially implemented by indemnities or subsidies paid to those hurt by nationalization of industries. Government stock has been given to owners of private industries which have been nationalized; but Government stock cannot honestly pay dividends unless Government control or operation is in the black.

So far, as shown in a recent issue of Business Week, British Government control, regulation, and operation has not been successful except in one industry, and that one can go into the red if the British Government grants too great subsidies to the consumer in the form of too low prices.

In our new American role of Atlas sustaining the world we shall surely come to an internal break-down if we undermine our own national American economic health and general welfare by a weakening of such vital industries as woolen-worsteds, by unwise or too-rapid lowering of tariffs while seeking world general welfare.

INDEMNITIES NEEDED

Wherever our Government, wisely or unwisely, deems it necessary to sacrifice certain domestic industries to advance world welfare to keep us and the whole world out of war, or build up allies in case of war—it must, if it is to remain American, indemnify the workers, owners, and stockholders in those sacrificed industries.

Steps already taken in that direction must be pushed and strengthened and additional steps taken at once. The legislative steps already taken include House Resolutions 188, 199, and 200, April 29, 1949.

Indemnification to owners and stockholders should be provided for at once for concerns which have been shutting down or which have permanently gone out of business due to the tariff lowering already established under the Reciprocal Trade Act.

Provision must now be also made by Congress for indemnification for future damages resulting from still further tariff lowering under ITO or in any other manner.

RATES SUGGESTED

In the woolen-worsted industry the following suggestions should be studied and soon acted upon as a means to such indemnification:

Beginning with January 1, 1949, indemnifying all woolen-worsted cloth manufacturers for all lost production from normal, the year 1946 being taken as a standard of normal volume of production, at the following rates of indemnification: 50 cents per yard of lost production for goods which sold in 1946 or 1947 at the mill price of $5 per yard or over; 40 cents per yard of lost production for goods which sold in 1946 or 1947 at the mill price of $4 to $5 per yard; 30 cents per yard of lost production for goods which sold in 1946 or 1947 at the mill price of $3 to $4 per yard; 20 cents per yard of lost production for goods which sold in 1946 or 1947 at the mill price of $2 to $3 per yard; 10 cents per yard of lost production for goods which sold in 1946 or 1947 at the mill price of $1 to $2 per yard.

These indemnification payments to woolen-worsted cloth producing concerns should be continued so long as production of such goods in the United States continues to be lost, due to the imports of cloth of the sorts which have been, are being, and can be, manufactured here in the United States of America.

Indemnification should be paid to wage-workers and white-collar workers and other workers in the woolen-worsted industries for one year's wages retroactive to January 1, 1949—to allow them to retrain and readjust to jobs in other United States of America industries which the low-tariff and free-trade people say will absorb all workers now being sacrificed and about to be sacrificed by the export of their jobs to England and Europe, under the extension of the Reciprocal Trade Agreements.

The payment of these indemnification wages should be retroactive to January 1, 1949, although unemployment in the woolen-worsted industries started before then, directly due to the Reciprocal Trade Agreements would be extended and tariffs lowered still further.

EXPORTERS SHOULD CONTRIBUTE

Indemnification loss payments by the Government to woolen-worsted wage workers, and owners and stockholders of woolen-worsted companies, should be at least partially recovered from those United States exporters who will benefit financially from the suffering and damage to the woolen-worsted industries' wage workers and owners and stockholders.

Those United States exporters who will thus benefit financially from the extension of the Reciprocal Trade Agreement and from further lowering of our tariffs under ITO, are chiefly the manufacturers of automobiles, other machinery, and grain and cotton growers.

The indemnification losses paid by the Government should be apportioned to these United States exporters by means of special excess profits taxes applying only to such exporters: or by export taxes high enough to balance the payments of indemnification losses to those United States citizens who suffer by reason of those exports.

Mail Deliveries

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

NATIONAL ASSOCIATION
OF LETTER CARRIERS,
Washington, D. C. April 18, 1950.

Hon. EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSWOMAN ROGERS: We are seriously alarmed over the instructions contained in the Postal Bulletin of Tuesday, April 18. Having spent the greater part of our lives in the postal service and representing 102,000 letter carriers, we feel that the orders contained in the Postal Bulletin of April 18 will result in irreparable damage and the destruction of our fine postal system. It will make the great postal service—the Government function closest to the lives of the American people—a second-rate inferior Government agency.

We have always been mighty proud of the fact that the postal service rendered excellent necessary service. The service ideal is assassinated by the orders issued by the Post Office Department. Delivery of mail Nationwide is restricted to one delivery a day in residential districts and service is greatly reduced in business districts. Parcel-post deliveries are to be cut in half in business areas. Weekly magazines, such as Time, United States News, Newsweek, and all others that have become an important part of American life will no longer receive expeditious handling. The prompt mail delivery that the American people have been receiving will not be available.

Postmasters have been ordered to discontinue directory service on all ordinary mail other than perishable matter and parcels of obvious value. This order contains many other provisions, every one of them seriously restricting the fine delivery now being afforded the American people and imperiling the postal service itself.

These orders will result in tremendous money losses to American business and great inconvenience to the general public. Postal employees—particularly low-paid substitutes—will suffer greatly because of the reduction in the number of trips. All this despite the following statement of Postmaster General Donaldson, which appears in the infamous order:

"Splendid progress has been made and the productive effort of the employees has been increased as indicated by the accomplishments in the fiscal year 1949, compared with the fiscal year 1939. During that period, the revenues increased more than 110.72 percent, the number of pieces handled increased 64.70 percent, the weight of the mails increased more than 104.73 percent while the increase in the number of employees was less than 48.43 percent."

We appeal to you as a Member of Congress to take immediate corrective action against this devastating, ill-advised, and unnecessary order issued by the Post Office Department under date of Tuesday, April 18.

Sincerely,

W. C. DOHERTY,
President.
D. R. SULLIVAN,
Vice President.
JEROME J. KEATING,
Secretary.
R. B. KREMERS,
Assistant Secretary.

Let's Learn a Lesson

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Polish-American Journal:

LET'S LEARN A LESSON

Last week throughout the world persons of Irish descent observed St. Patrick's Day.

In this country there were huge celebrations, with parades, dinners, and other affairs.

And during these observances while people of Irish extraction were honoring their patron saint, they extolled the virtues and greatness of their heritage. Speakers lauded the sons of Ireland—their great statesmen, their great soldiers, their great poets, writers, and composers. They told of the contributions Ireland has made in the development of America.

Americans of Irish descent are proud of their ancestry, and well they might be. They are a fine people with an honored history.

They have done much to make this Nation what it is today.

Some persons of Polish descent might take a lesson from those of Irish extraction. Some persons of Polish heritage have inferiority complexes because their ancestors or they themselves came from Poland. Some are ashamed of the land from which they came.

Such an attitude on the part of anyone, no matter what his racial origin, is of course, ridiculous. All races have contributed their talents to make America great.

Persons of Polish ancestry can well be proud of their native land and the accomplishments of those of their race. Poland traditionally has always opposed oppression, tyranny, and subjugation. It has always fought gallantly on the side of justice and freedom. It is a country which has given the world great music, great poetry, great science. Copernicus, Madame Curie, Chopin, Paderewski, Sienkiewicz, are but a few names known to everyone.

And Americans of Polish extraction might well be proud of their history here. From the days of Pulaski and Kosciusko to the present, they have added their measure to that of their brothers of other races in the building of this Nation.

Let us not, then, be ashamed of our origin. Rather we should heed the words of Henry Cabot Lodge, who said: "Let every man honor the land of his birth and the race from which he springs. It is a pious and honorable duty."

Economic Jiu-Jitsu

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1950

Mr. BEALL. Mr. Speaker, under unanimous consent I include in the RECORD the speech made by Mr. Carroll B. Huntress, vice president, Republic Coal & Coke Co., New York City, and chairman, National St. Lawrence Project Conference at seventeenth annual meeting, Southeastern Electric Exchange, Greenbrier Hotel, White Sulphur Springs, W. Va., April 12, 1950:

ECONOMIC JIU-JITSU

As a member of an industry diagnosed as ailing by that master physician of Washington, I welcome the opportunity to meet with the southern leaders of another industry, one which has long enjoyed the envy, as well as the solicitude, of politicians. Here is involved no hazard of guilt by association but rather is contained certainty of invigorating influence. In fact, I have already been invigorated by the words of your president, Mr. McMeekin, and those of Elmer L. Lindseth and Charles E. Wilson.

The aggressive attitude which the private electric-power companies have taken augments hope for the preservation of a free society. Opposition to your industry has been the vehicle on which many demagogs and phonies have ridden into political office. However, the broad program of dissemination of the truth, in which your industry is now engaged, is bound to reverse that trend.

The public-power boys resemble the professional drys of old. They are so much like those zealots, with the same disregard for facts, the same furtive cunning, the same technique of smear. And, like those professionals, they have but one test of a candidate for office, scalawag or what not, and that is, does he lisp their refrain. The result is that we have men in Congress, in other places of public life, whose only claim to the office is that they are against the electric-utility industry, for public power. This is the sole subject on which they can articulate; the one tune to which they dance. But make no mistake about it, those evangelists are numerically and politically strong. The carnival medicine men, vendors of swamp-root drugs, longer life guaranteed in every bottle, were angels as compared with these modern racketeers, babbling behind the banner of public and cheaper power.

After all, why not call a spade a spade in speaking of these fraudulent soul-savers of politics, from the late George W. Norris, up or down. I come up with a feeling of loathing, disgust, at tirades against the so-called Power Trust and mention of its alleged machinations against the public weal. The most ruthless, selfish lobby today, barring none, is that of public power, composed of certain labor bosses, ambitious bureaucrats, parlor pings, meditative Socialists, leftists, plain Reds, "lame duck" politicians, and mush-headed intellectuals; a power-thirsty crew. Their gall is monumental. Imagine a crowd prating about the Government giving the people cheaper power by bookkeeping gymnastics, when that Government is taxing them at an all-time high.

Every branch of American business should not only acclaim but also aid and abet the program of your industry to expose the insidious propaganda calculated to fix you in the public mind as the entrepreneurs of some sort of con game and unworthy of attention in public affairs. The public-power apostles have worked assiduously, and to some extent successfully, in making the private operators synonomous with greed, while those apostles appear as benefactors of mankind, workers in the vineyard of humanity. I was amazed that flags were not flown at half-mast when that selfless public servant, Leland Olds, was turned down by the Senate last year. The selfish interests got him, moaned Mrs. Roosevelt in her column, along with the leftist and pinko writers of the syndicated press—got this man who had saved millions of dollars to the users of electrical energy. The reason this national calamity was soon forgotten may have been due to the fact that citizens, having one-fourth of their earnings taken from them, could not bring themselves to an appreciation of the alleged savings.

However, there are some who fear it may be premature to celebrate the political demise of Mr. Olds, for he has been appointed to the Water Resources Policy Commission. It wouldn't be surprising if he soon bobbed up in New England, with his pencil and pad, intent upon harnessing all the rills and brooks and tying them to Passamaquoddy, the rapids of the St. Lawrence, and the falls of the Niagara to furnish another and an unwanted TVA.

The avowed mistreatment of public servants such as Mr. Olds calls to mind the experience of a public power Lochinvar out in Pennsylvania, back in the thirties. In the political upheaval of those days, he was elected to Congress. His highest annual income had been $3,500. Sensing that the district would go back to normal 2 years later, he became a bold foe of the so-called Power Trust; all the while loudly voicing the conviction that he was signing his political death warrant because that ogrelike trust would get him. So effective was public-power propaganda that he grew to tremendous stature as a sacrificer and won the sympathy of all people against sin everywhere. Well, he was "got" in the next election. To the best of my knowledge, no power company lifted its voice; the people of his district disposed of him. But in the great game of buncombe practiced upon the people, he had a good knowledge of the cards; to wit, the leftists made him a trustee of a utility-holding company which had been thrown into bankruptcy—and he took over at $40,000 a year.

Indeed, Americans should rejoice that you do not cow before your traducers, not one of them able to claim a single constructive accomplishment. You are now speaking up and are being heard. You were among the very first to sound alarm at the socialistic trend of our Government, and many of your fellow members in the chamber of commerce thought you were idly crying "wolf." Why shouldn't we, your fellow chamber members asked, take this bit of Government bounty for a local power project? That's not socialism, it's simply getting in on the Government gravy train, they pleaded. That's what they thought. We have seen this thing grow. Witness the fight of the doctors to head off socialized medicine. Read the Hoover Commission Report that the Federal Government owns or has investments in over 100 kinds of business, totaling approximately $20,000,000,000, with congressional authorization for over $14,000,000,000 more. And the end is not in sight.

The presentation this morning of What Can One Man Do? by Elmer Lindseth, was inspiring. In this audience I see former associates of Wendell Willkie. They remember how one man fought, what one man did, in the late thirties. Conversely, I emphasize the evil that one man can do. Practice of opportunism by a business executive makes mockery of solemn resolutions of the civic organization which he heads. More than that, it breeds widespread cynicism. It explains intellectual pessimism. Again, on the score of the evil one man can do, a certain cross-country supposedly nonpolitical trip in May should be watched closely, and for every blast directed at you, two bigger and better ones should be returned.

Approaching the subject from another angle, we were told by H. S. Rausenbush, back in the twenties, "One good man with his eyes, ears, and wits about him, in a Government department, can do more to perfect the technique of control of industry than a hundred men outside." Shortly Mr. Rausenbush found for himself a vital spot in Interior and proceeded to promote his program of encroaching control, which he predicted would gradually socialize the power industry. At that time, only 3 percent of the industry was under political management, as against the present figure of 20 percent under Government ownership or political management. Whatever the word used by our sophisticated conservatives who profess to see no danger in this trend, Mr. Webster calls it socialism. Because there are so many enemies of the free-enterprise system, working in divers and devious ways, with your industry the principal target, America must be alerted. The revolution by nibbling, as Dr. Robert E. Wilson, chairman of Standard Oil Co. of Indiana, called it a few days ago, is taking a frightful toll. Power seekers, in and out of Government, are hacking away at personal and business freedom, with disastrous results.

Since the days of Rausenbush—and before, for that matter—the collectivists have relied on processes which I choose to label economic jiu jitsu, to assure the destruction, economically, politically, and spiritually, of freedom. I label them economic jiu jitsu because they make our own strength work against us and are effective, whereas a straight-out conflict would be hopeless. The American people, even today, far down

the road as we have gone, if asked to adopt socialism frankly recognized as such would unequivocally reject the proposition. Recourse, therefore, has been had to a variety of devices designed to accomplish by indirection the end desired by the collectivists.

Without a too close pursuit of this analogue, I would say that a principal device for the destruction of liberty in this country, which pioneered political institutions planned to assure personal freedom under the aegis of its Constitution, has been to create an obsessing fear of various isms and preoccupation with plans ostensibly for protection against them, so that our strength should be made to fight against us. This is no new thing. A score of years ago it was bruited about that the country would go communistic if we didn't throw out the then incumbent rascals. Whether rascally or not, they were ousted; and then we were told that this, that, or the other enterprise by the State was necessary in order to prevent the loss of our four freedoms to socialism. We demonetized our currency; we set up a so-called social security, and we plunged the country into the horrors of a managed economy under the short-lived NRA; all in order that we might preserve our way of life.

We have gone a long distance beyond what in the thirties we used to call the middle way. Authoritarian proposals are daily made and set forth in the press, on the platform, in the halls of our legislative bodies. The shock is not so much that they can be made but that they are received as a matter of course; that there is not a flaming outburst of editorial denunciation of the very proposal of these infractions of human liberty. Can it be that the Washington planners are proceeding on the premise that the people are disposed to entertain a proposition to swap their birthright for a mess of pottage? I am not cynical enough to believe that all the advocates of these myriad devices for reducing man to mathematical formulas are consciously trying to wreck our Government. On the other hand, I am not naive enough to believe that every last one of our social planners is innocent of an ulterior purpose to do just that. It is sufficient to say that, whatsoever the motivation, the end result of a managed economy cannot be other than the removal of volition from the people and the substitution of authority vested in little bureaucrats or omnipotent commissars—call them by whatsoever name.

Local communities and individual business concerns, various categories in the population have evinced an eagerness to accept class or special legislation, subsidy or protective preferential treatment by quasi-public bodies in order to gain material benefits; when it must be as clear as day that acceptance of these benefits implies, as always does the taking of the King's shilling, a subordination to a master.

There is only one way to avoid this sort of thing and that is to oppose, with all one's strength, the specious individual proposals, one by one, as they arise; to scrutinize every Government undertaking and determine whether it is a necessary and legitimate function of a Government of a free people. On every count, the St. Lawrence waterway and power project fails to meet this test. It would be another step along the road to socialism; which, according to Harold J. Gallagher, president of the American Bar Association, is the same as the road to communism.

Lately, we have heard a great deal about the necessity for the navigation features and the power capacity of the St. Lawrence project as instruments of national defense. It seems that all one has to do in order to justify increased taxes, swollen national debt and usurpation of enterprise by bureaucracy is to talk of the necessity for national defense. Anyway, it appears to placate the peasantry. I'd like to spend a few minutes on the power aspect, analyzing with you its value as a defense instrument. I am of the opinion that the St. Lawrence development is substantially worthless for that purpose, and that what is said with reference to power can also be said with reference to navigation.

There is no need to stress with you the fact that 570,000 kilowatts of firm power which could be developed on the American side of the river would be scarcely a drop in the bucket; certainly not the indispensable thing for national defense that has been pictured by the more ardent of the advocates. Again, there's no need to point out that, small though the St. Lawrence development would be in the total picture, it would, nonetheless, represent an ideal objective of aerial warfare, particularly when combined with the bottleneck features of transportation to and from the Great Lakes Basin. The St. Lawrence proponents cheerfully pass up the hundreds of millions of dollars of defense installation and the thousands on thousands of defense personnel necessary to guard this concentrated facility against attack from the air, from the Gulf of St. Lawrence—even from the upper St. Lawrence River itself. It may be trite to note that one well-placed bomb would wreck the entire project. Army engineers have stated that one bomb could destroy the Panama Canal. The St. Lawrence is a more accessible target.

What I wish to accentuate is that there is only one way to provide power capacity for national defense beyond what would be created by the natural operation of economic process. That way is to create the capacity and hold it idle against the day when more power may be needed than can be dug up by conversion of industry and by operation on a three-shift basis. As a hard-headed, practical matter, if we must have idle capacity in preparation for war, the best way to have it is as extra reserve capacity in the diversified power plants scattered throughout the country, reasonably close to the munition industries. Even the advocates of the St. Lawrence seem to recognize the fact that the project would not create idle power capacity, since, in their enthusiasm for a really good story, they envisage a managed economy whereunder industry would be brought to the region from less-subsidized parts of the country, and all the capacity, both firm and infirm, utilized right up to the hilt under a preferential process of definitely socialistic character, and this quite regardless of defense needs. We have then an interesting device whereby, in the guise of equipping us to fight a war for freedom, an additional collectivist undertaking is advanced.

Of the three devices which I have described and defined as economic jiu jitsu, two are most practical in their operations—the one which professedly pertains to protection against "isms" and the other which concerns subsidy and preferential treatment. The third is more real and more devastating, though less apparent. It could lead to such a thorough loss of individual freedom that it would become of little point to strive further toward warding off collectivism. If we can be persuaded to lock up any of our resources by foolish expenditure, to that extent we weaken our economic means of defense. Remember the Maginot line. No nation—not even ours—has a fund of resources beyond its needs. What we squander must come out of what we should usefully employ. What we waste on a fictitious defense must be at the expense of our real ability to take care of ourselves or must mean adoption of a lower standard of living. Every capital expenditure put into the hands of Government is, with the personnel related to it, just so much of our strength frozen into the rigidity of superorganization.

There is new, startling evidence of economic jiu jitsu in the Southwestern Power Administration, an offshoot of the United States Department of the Interior, commissioned to operate in 10 of your States. This is setting out to be an empire of power, both electrical and political.

The electric power prospects are described by the newly appointed Administrator as over a million kilowatts of federally generated power by the end of 1955, and double that amount a little later. He boasted that these Government power plants in the 10 States will probably be linked with a web of federally owned transmission lines.

The political power prospects are more important but less obvious to the general public. They result from both the outpouring of Federal funds for construction and the manipulation of the federally subsidized power supply. Such activities have already been found handy by the ruling political clique in buying public support here and there. They are being counted upon in this case as one means of turning people away from that strong element of political leadership in the South which is not sympathetic with the leftists in Washington.

I hear talk within your industry that the thing to do is to come to an understanding with the Federal Government as to where its activities will stop and where the industry can operate in peace. In my opinion, any hope of such an arrangement is utterly unrealistic. Less than a couple of years have elapsed since the famous Alatoona contract between one of your companies and the Department of the Interior. That contract seemed to do just that. But the policies of the Interior Department have already moved far beyond the Alatcona contract. More recently, the stipulated preference for public agencies and rural-electric cooperatives, contained in Federal laws, has been interpreted by the Interior Department as a prohibition against any long-term sales of firm power to utility companies—even by State agencies. I refer to the correspondence between the Secretary of the Interior and the Governor of South Dakota.

For helpful suggestions that I might pass on to you, I inquired of an old friend of yours and mine, Tom Martin, of Birmingham. His one suggestion is, "express your convictions." In the light of many years of work having to do with politics, of having to know the mechanics of politics, I am convinced, gentlemen, that no appeasement program can stop this public power gang. They are bent on complete collectivization of electric power supply and they are confident they can get it. Only the votes of the citizens of this country can stop them. Only public appreciation of the superior services your companies render, public respect for enterprises that are competent, self-supporting taxpayers, and public disfavor for agencies that waste public resources in unjustifiable projects can produce those votes. To that end, I know you are dedicating your all-out efforts. The extent to which those and like efforts bear fruit will be a determining factor in the destiny of this land.

Address of Hon. Katharine St. George, of New York

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the Appendix

of the RECORD, I am inserting an address made by my friend and colleague, the Honorable KATHARINE ST. GEORGE, at the dinner of the Republican Activities Committee in honor of William Davis, chairman of the Republican Town Committee of Manchester, Conn.

I take particular pleasure in inserting this eloquent speech because I believe that it is a notable example of the conscientious and distinguished service which our colleague Mrs. ST. GEORGE has been rendering in the Eightieth and Eighty-first Congresses.

The address follows:

We are gathered here this evening to honor the town chairman of Manchester, Mr. William S. Davis, a good Republican. I know enough about these chairmanships to know that you have to be an unselfish and high-minded idealist to take the job of Republican chairman, sir, in this day and age.

The reason for this is that our party has little or no patronage to offer and the Republican chairman can only hold his workers and the citizens together through sheer personality, hard work and conviction. The chairman himself never gets any reward. I know this because for a few years I was chairman of my county committee.

When you win elections, it is always the successful candidate who gets the bows and take the applause but when you lose, it is always because the chairman was a knave or a fool, or both.

So, I am happy that the Republicans of this great State have seen fit to honor one of their town chairmen and I am most happy to be here with them on this most pleasant occasion to join in paying my tribute to one whose fine services to our party are being fittingly recognized.

Now, this brings me to the subject I have come here to discuss with you tonight and that subject is how to win elections. That is the one question to which we Republicans must find an answer and, in my humble opinion, we must find it now or we may well find that our days are numbered and worse even than that, that the two-party system has died in America and the world.

First, the Republican Party has got to have convictions worth fighting for. They have got to be positive and they have got to be bold in their approach. Then let them get out and fight. Never look back and never be afraid of being licked.

The first requisite for a politician, the most necessary qualification is: can he or she stand up to defeat? It is a good thing for us all to be defeated in our political battles occasionally, just to show the stuff we are really made of. No one has proved this better in our day than President Hoover. As a result, he has grown immeasurably in the hearts of his countrymen. If ever a man had a just cause to be bitter and angry at the smear campaign leveled at him in 1932, it was Mr. Hoover, but he rose above it and continued to devote his life to the service of his country, culminating in his tremendous work in heading up the Hoover Commission and carrying the work of this Commission through to a successful end. Why did he do this? Because he had strong beliefs and convictions that made it possible for him to rise above pettiness in defeat and to continue his labor for causes he loved and for his country which he put ahead of all personal considerations.

No, if defeat is going to stop us we had better give up at once. At this time in the country's history we need people who do not fear defeat and, above all, people who will not sell their birthright for a mess of pottage.

The Republican Party is the party of reform. It was so conceived and it was born into the world for that purpose. It first saved the Union and abolished slavery. In its best days it was the party of the farmer, the small-business man, in short, the party of the individual American. By its name the Republican Party typifies American ideals and philosophy. Our country was founded as a Republic, not a Democracy, and it is well to remember that Thomas Jefferson, the patron saint of the modern Democratic Party for whom all these $100 tax-free dinners are given, always called himself a Republican. Later in our country's history it was our party, the Republican Party, that reformed big business which had become arrogant and proud and said: "The public be damned!" Yes, it was the Republican Party that fostered the antitrust laws that prevented big business from over-reaching itself and controlling not only our economy but our political life as well.

We are now once again in an era when reforms are needed and are long overdue. We need first of all to reform our Government, to clean and purge it thoroughly and completely. There is only one way to do this: It is by turning the present party in power out and putting the Republican Party, the party of reform, in.

The United States is suffering at home and abroad from lack of confidence in our Government agencies and in many of the heads of these agencies. This is notably true of the State Department.

The American people are shocked beyond measure at the revelation of moral corruption and perversion revealed in the testimony of Mr. John E. Peurifoy, Deputy Under Secretary for Administration, that the State Department had had to get rid of 91 employees as bad security risks and Mr. Peurifoy adds that they were all homosexuals.

Now I for one, have always believed, and still believe, that a person's private life and morals are no concern of any political opponent and are matters that concern his own conscience. As one who lived through the noble experiment of prohibition, I also know that you cannot make people good by legislation, however well intentioned. But, these unfortunate people are a grave security risk. They are preys to the blackmailers and spies, in fact, it is well known that General Cannarsis, one of the heads of the German Intelligence under Hitler, had a list of the homo-sexuals in our Government and what information could be obtained from each and everyone of them. It is well also to remember that the Germans and Russians were Allies up to the year 1941 and that they pooled their information up to that year. So these people are a very real menace and have already done grave harm to our country at home and abroad, in fact, they have in very truth been traitors to the Nation they have sworn to serve.

How and why anyone should feel that they are being unjustly treated is inconceivable. They should be held up to scorn and the Department heads should hang their heads in shame at having only cleaned up part of the mess, when they were forced to do so by congressional committees, spurred on by public indignation.

This is not a time for the Republican Party to stand aside and be squeamish. This is not a time to hold one's nose and pass on, on the other side of the street. This is rather the time for the Republican Party to take up the challenge and once again to play its part as the Party of Reform.

And today the matter in hand will be the reform of the United States Government. The people are ahead of the Congress in this and in many other matters, so no Republican need be afraid to carry the story to them. The people of the United States are sick of platitudes and well-chosen words. They are looking for someone to lead them out of the wilderness of corruption, waste and extravagance in which they know this country is floundering.

One of the big reforms that is long overdue is: The complete over-hauling of the financial and tax structure of the Nation. Thomas Jefferson said: "I place economy among the first and most important of Republican virtues and public debt as the greatest of the dangers to be feared."

One wonders what Thomas Jefferson would say today if he could see this Nation in an era of peace and prosperity with a national debt of two-hundred and fifty-eight and a half billions and a deficit budget of between five and eight billions for the present fiscal year. Some will say: "Oh, but we are far bigger and far richer; our income is more, and therefore our debt and our expenses must be greater."

This would be true if the income and expenses had kept pace with each other, but, unfortunately, that is far from being the case. Here are the figures: Since 1939 the national income of the United States has more than trebled, but the national debt has gone from forty and a half billions in 1939 to two hundred and fifty eight and a half billions in 1950, or a jump of over six times the 1939 amount.

Then we have the food prices and the surpluses and when we look into that we can only paraphrase the words of your own great citizen, Clare Boothe Luce, and say that the Department of Agriculture must be a lunatic asylum run by the inmates.

From July through December, Canada sent 1,587,000 dozen shell eggs to the United States; during the same period Communist China shipped 1,746,000 pounds of dried eggs to the United States; 283,000 pounds of frozen eggs also were received in the United States; the Government stock pile of eggs on December 31 totaled more than 73,500,000 pounds of dried eggs, and the Department was still buying them at the rate of more than 2,000,000 pounds a week.

Again, to quote that great Republican, Thomas Jefferson: "Nothing betrays imbecility so much as being insensible to it."

Art Wardner, a Minnesota farmer, sold 160,000 pounds of potatoes to the Government at $1.46 a hundredweight, and immediately bought them back for 1 cent per 100 pounds. Wardner never lost possession of the potatoes in the deal. He simply received a Federal check and then wrote out one of his own checks to buy back the potatoes.

As this Government bureaucracy grows, business (and especially small business) declines. We know that unemployment is on the increase. Government has grown to the extent that it is the biggest single enterprise in the United States today. People in 21 States get more money from Federal, State, and local governments than they receive from industrial pay rolls. In 15 other States payments are more than half as big as the wages paid by manufacturers. Payments by Government to individuals total about twenty eight billions a year. The manufacturing industry has payments totaling about forty six billions a year.

It is estimated that nearly 6,000,000 civilians depend upon some form of government activity for their livelihood. They form about one-tenth of the total number of all employed. In addition, several million farm owners receive price support and conservation funds from the United States Government. Still many other millions are receiving pensions, relief payments and other forms of Government aid. Only in heavily industrialized States are the factory pay rolls larger than Government payments as a source of

income. In California, Government payments exceed factory pay rolls and in New York State they are 60 percent as large. Government payments approximate 14 percent of the income received by individuals. This is constantly growing and has already exceeded the farm income.

In the face of all this we get this kind of extravagant nonsense paid for with the taxpayers' money. The Department of the Interior has put out quantities of the following pamphlets:

"Determination of Age in Fishes"

"Concerning Mortality of Soft Clams at Essex, Mass."

"Biology of the Atlantic Mackerel; Early Life History"

Of course, we can count on several more volumes on the middle and later life of the mackerel. These things may be interesting and even of a certain value to a few of our people, but they are a criminal extravagance when the country is running a deficit of over 5 billions annually. It was President Roosevelt who said, in his first campaign:

"Taxes are paid in the sweat of every man who labors because they are a burden on production and can be paid only by production. Our workers may never see a tax bill but they pay in reduction from wages and increased cost of what they buy."

And on that I must agree with him, but he certainly got over that idea very quickly after his election.

So now, after 16 long years going from extravagance to greater extravagance and from deficit to ever greater deficits, we must have a change of leadership if this Republic is to survive.

Pray God that the Republican Party may be ready and able for that leadership, because if it is not, some leader will arise—someone with a delightful voice and agreeable personality who will promise the people these reforms if they will but surrender the power of the state to him. That has happended all over the world. It can happen here. Remember Hitler and Mussolini, both gave the people honest and efficient government with all the most advanced social services such as agrarian reforms, social security, old-age insurance and pensions, socialized medicine, but at the same time they took their liberty.

"We shall banish want. We shall banish fear. The essence of national socialism is human welfare. National socialism is the revolution of the common man. National socialism means a new day of abundance at home and a better world abroad."

Those are the words of Adolph Hitler. They have rather sickening familiar ring. That is one of the cures for corrupt government—dictatorship. The other solution, the solution of free men and women, is to turn the corrupt administration out and put the reformers to work.

To do this the Republicans must be aggressive. We must point out corruption in Government wherever it is and let the chips fall where they may. This year every congressional district must elect a representative. You will find that you are going to hear all the old familiar catchwords and all the alerts and emergency calls for help trotted out once again. We are beginning once more to hear that war is nearer than we think and soon you will hear that we must not change horses in mid-stream.

I would like to remind you that here again it should never be forgotten that war solves many problems. It puts an end to all criticism of the administration in power. It permits unlimited spending and extravagance. It puts an end to unemployment, even if that end is the grave.

War also puts an end to the freedom of the individual. Instead, it regiments and leads him regardless of his own will. War and freedom cannot long endure together. We would do well to pause and remember that we have had two world wars under the leadership of the Democrat Party and that on both occasions we were told we were fighting for freedom and to promote a free world.

What has happened? There is less freedom in the world today than since the Dark Ages. There is more nationalism and less free interchange of goods and ideas than at any time in modern history. And finally, there is more isolationism in the world today than ever before. At this very minute 800,000,000 people are dominated by the Soviet Union and isolated behind the iron curtain and that isolated area of the world is pushing forward slowly but surely every day.

That is what has happened in these last 16 years. Don't you think we need a change?

To get this change we must have teamwork. The Republicans in the Congress are making the Republican record and it is this record that the national candidates, both this year and in 1952, must stand on. Therefore, we must be forthright and even though we may disagree on minor isues, we must stand together on the big fundamental ones, and above all, on the main issue: Can a republic of free men endure in the modern world? The answer to that question must be given soon or our two-party system will disappear and when that happens, the Republic will collapse because the two-party system is the cornerstone of the building.

The plans to scrap this Republic are well advanced. There are two bills now pending that are being gently pushed by the administration. When they pass, they will put an end to individual rights and freedom in this country. One is S. 1971, introduced by Senator THOMAS of Oklahoma—the bill embodying the so-called Brannan plan. This measure consists of 86 pages, 15 of which are a list of penalties that the American farmer will be subject to if he disobeys any of the regulations and provisions embodied in the act. He will be liable to fines, imprisonment, or both if he does not fill out all the forms and if he does not sow and reap according to the regulations of an all-seeing Government bureaucracy. Thomas Jefferson surely must have been looking at this country with a prophet's eye when he said: "If we were to be told from Washington when to sow and when to reap, we would soon starve." The Secretary of Agriculture says he has no idea of the cost of this program and its enforcement, but obviously it will be tremendous and the American farmer will be nothing but a Government employee at best, or a slave of the State at worst.

The other bill that will finish the work of regulating the lives of the American people is the Spence bill, H. R. 2756, introduced by Congressman SPENCE, of Kentucky. This measure, which would practically give complete power to the executive branch of the Government, caused so much indignation when it was first revealed to an astonished Congress that it is being carefully held in abeyance for the present and will not be brought up for consideration at the present session of Congress. If the Democrats win many more congressional seats this year, you may be sure that both these measures will be introduced and probably passed by the Eighty-second Congress.

These measures would spell the end of the two-party system in this country because the vast majority of the people would be directly beholden to the executive branch of the Government for their living. The Congress would be a rather second-rate debating society whose highest function would be to act as a go-between for constituents and the all-powerful Government departments.

Such a government would, of course, be upheld by the modern police-state methods and, mark you, that is something that no one has yet found a way to overthrow—the modern police state.

My friends, you may think I am an alarmist, but I submit to you that many great nations have gone this way and we must look ahead. Hindsight never pays.

These reasons are the reasons why we Republicans must go forth this year bravely and without compromise and fight the good fight, with confidence that right will triumph, with conviction and belief in our cause and its justice. We must tell the people the truth. We must be honest with ourselves first and with those to whom we are going to preach the gospel of the Republic. In Maxwell Anderson's play, Valley Forge, George Washington says:

"This liberty will look easy by and by when nobody dies for it."

Yes; we take all this for granted. We forget those who died for liberty. But we have come to the time in our history when liberty will perish from the earth if no one will fight to preserve her.

We Republicans are the only ones today who can make that fight. Let us march on with courage and humility to victory, freedom, and peace.

Four Billions Not Saved

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald of April 14, 1950:

FOUR BILLIONS NOT SAVED

If the present national administration desired to manage Government affairs economically and efficiently, the tools to do so are at its disposal. A non-Partisan Commission, created by Congress in 1947 and headed by Herbert Hoover, studied Government organization, functions, and methods for 2 years and had come up with plans for reorganization which would have saved at least a billion dollars a year, while improving the quality of work that was done.

The Hoover Commission was no muckracking group seeking to make capital for a political party and gain publicity for ambitious politicians. Neither was it an undertaking of academicians without practical experience in the affairs of Government and business.

COMMISSION WELL QUALIFIED

Four members of the Hoover Commission were appointed by the President, two of whom were high-ranking officers in his administration and two from private life. Four members of the Commission were appointed by the Speaker of the House, two being able Congressmen, one from each party, and two from private life.

One of the latter was Mr. Hoover. The four members to round out the 12 were appointed by the President pro tempore of the Senate, who named two able Senators, one from each party, and two non-Government men.

The Commission was the best qualified group ever created to seek improvement in

Government and reduce costs of administration. It went about the job with great intelligence and drive. Three hundred experts were employed and assigned to 24 committees, each dealing with a specific function, area, or group of problems.

The research reports were review by the Commission and made the basis of comprehensive plans for eliminating duplication of work, cutting red tape, and revising administrative methods.

The commission did not concern itself with the billions spent by the Government on activities which could well be eliminated. It found ways of saving $4,000,000,000 without eliminating any Government functions.

For the citizen who wants to inform himself about the economies the Hoover Commission pointed out, there is a little book entitled "A Hook in Leviathan," by Bradley D. Nash and Cornelious Lynde.

A wise and able President would have utilized the enthusiastic popular reception of the Hoover report to put it into effect in its entirety. But that is not what Mr. Truman did. What he saw in the Hoover plan was backing for petty moves of advantage to himself.

The Commission proposed that the salary of the President be increased from $75,000 to $100,000 and that, in addition, he be paid $50,000 a year of tax-exempt money. Mr. Hoover himself appeared before a congressional committee to approve this.

That had Mr. Truman's complete endorsement and a bill was rushed through Congress so that the President could get the extra money from the beginning of his second administration.

Mr. Truman also was happy to have the authority of the Hoover Commission back of a transfer of the public employment offices and the unemployment compensation machinery from the social security board to the Department of Labor.

RECOMMENDATIONS ARE DELAYED

Congress had on three occasions vetoed his request for the transfer. This was a move dear to the heart of the President because he owed something to Secretary of Labor Tobin, who took the secretaryship in 1948 when no one else would.

After dwadling a year and a half, while the Government went into the red 5 or 6 billion dollars, Mr. Truman on March 13 sent to Congress a batch of 21 plans for administrative changes. One of the plans called for abolishing the office of General Counsel of the National Labor Relations Board, as proposed by the unions. This was not a part of the Hoover plan at all. It had never even been discussed by the Hoover Commission.

Other plans have been so long belated that opposition has been allowed to develop which may prevent their acceptance by Congress. Mr. Truman has used the Hoover report when possible to serve his personal and political ends and otherwise has reduced its effectiveness. Even at this late date he admits he has done nothing about half of the things suggested.

If anyone ever supposed that the Truman administration was interested in economy, a look at a recent report of the Armed Services Committee of the House would correct the impression. It mentions:

"A budget request is pending for a new $18,000,000 veterans' hospital in the Los Angeles area, while the Navy is closing the 1,500-bed Long Branch naval hospital in the same area.

"A 500-bed veterans' hospital is being built in Philadelphia, while the Army is closing the 2,000-bed Valley Forge hospital 20 miles away.

"The Veterans' agency plans to build 1,000-bed hospitals in Boston and at Brockton, Mass., while the Army is closing Murphy General Hospital at Waltham, Mass.

"The Veterans' Administration wants to build a 500-bed hospital in Atlanta, while the Army is closing Oliver General Hospital at Augusta, Ga.

"A 500-bed veterans' hospital is planned at Ann Arbor, Mich., while the Army is closing the 1,600-bed Jones Hospital at Battle Creek."

There won't be any Government economy until there is a different kind of a man in the White House.

Safety Rally at the Brooklyn Navy Yard

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. MULTER. Mr. Speaker, it was my pleasure to be able to accept the invitation of Rear Adm. Paul B. Nibecker, commander of the New York naval shipyard, to attend a safety rally at the yard on April 6, 1950. We who live in Brooklyn, of course, always call it the Brooklyn Navy Yard.

The officers and enlisted men, together with the entire civilian personnel, are to be congratulated for their very fine safety record. I believe it can well be held out to the entire country as an excellent example of what men and women can accomplish when they set their minds to it.

The over-all yard record was 77 days without a single lost-time accident. That is exceptional in the light of the tremendous number of men and women working there under all sorts of conditions.

The record of the three top shops is particularly outstanding. The pattern shop did not have a lost-time accident in 2,923 days; the sail and flag loft did not have one in 1,510 days; and the electronics shop, none in 746 days.

Admiral Nibecker has every reason to be proud of these fine accomplishments.

Truth on Civil Rights

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks, I am inserting in the RECORD an editorial entitled "Truth on Civil Rights" which appeared in the Washington (D. C.) Times-Herald of yesterday, April 19.

It is high time that the American people know the truth about the Democratic Party's position on the civil-rights program. The truth is that the Democratic Party, under the leadership of President Truman, has no real intention whatever of advancing the program. As the editorial so well points out, the administration is engaging in a lot of double talk in an attempt to deceive the people.

Let me remind you that the Democratic Party has been in power around 18 years with substantial and overwhelming majorities in Congress. In all these years not a single major civil-rights measure has been enacted. In this Eighty-first Congress the Democratic Party has a substantial majority in both the House and the Senate, but to date the civil-rights program has received little more than lip-service from the Democrats. While they profess great interest in civil rights, the Democratic leadership in the Congress repeatedly postpones consideration of the program.

Abraham Lincoln once said to a caller at the White House:

If you once forfeit the confidence of your fellow citizens, you can never regain their respect and esteem. It is true that you may fool all the people some of the time; you can even fool some of the people all of the time, but you can't fool all of the people all the time.

The editorial follows:

TRUTH ON CIVIL RIGHTS

The Democratic Senate Policy Committee has announced that consideration of the civil-rights program, and particularly of the Fair Employment Practices Commission, has been indefinitely deferred in favor of more urgent matters.

To members of racial and religious groups who take the professions of Mr. Truman's party at face value, we commend the following remarks of Senator LISTER HILL, of Alabama, a stalwart Truman Fair Dealer, made in a radio speech April 12 to his constituents:

"I tell you it is the power and influence of your Senators and Congressmen that has made possible defeat of FEPC and other so-called civil-rights bills. They hold this power and influence as members of the Democratic Party.

"The anti-poll-tax bill is bottled up today in a subcommittee of the Senate Rules Committee. Senator JOHN C. STENNIS, Democrat, Mississippi, is chairman of this subcommittee because of his membership in the Democratic Party. If he were a member of the Dixiecrat splinter party, he could not be chairman and could have little influence in the fight against civil-rights bills.

"The general civil rights bill (containing a combination of the controversial programs) is bottled up today in a subcommittee of the Senate Judiciary Committee. Senator JOHN EASTLAND, Democrat, Mississippi, is chairman of this committee. If he were not a Democrat, he could not be chairman of this or any other committee."

ONLY FOR HOME CONSUMPTION

"As a Democrat, I hold a place on the Senate Committee on Labor and Public Welfare. I led the fight in committee against the FEPC bill, and the committee dropped it like a foundling on the Senate's doorstep—without a word in its favor." (The committee reported the bill to the Senate Calendar without recommendation.) "If our group of southern Senators is to continue to defeat these rights bills, we must keep the power and influence we hold as members of the Democratic Party. I also warn that the Republicans are committed to civil rights."

When Senator HILL was asked how these statements were to be matched with the Democratic Party's claim that it is a party of tolerance, abhorring racial and religious prejudices, he made the classic response:

"I was speaking to the people of Alabama."

In other words, the Truman party shows one face and speaks with one voice when it is seeking the white supremacy vote in the South, and it shows the opposite side of the face and speaks with an entirely different voice when it is appealing to the vote of minorities in the North. Senator HILL has exposed the trick.

Has Mr. Truman the guts to pull out his party's supposed passion to institute a civil rights program once again in the fall congressional election as a means of wooing the minorities? If so, he must think the gullibility of the people is beyond exaggeration.

Postage Stamp in Honor of the Late Col. David (Mickey) Marcus

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1950

Mr. MULTER. Mr. Speaker, on April 6, 1950, I introduced H. R. 8053, for the issuance of a special postage stamp in honor of the late Col. David (Mickey) Marcus, who was killed in Israel on June 10, 1948.

The bill authorizes the Postmaster General to issue the special stamp within 1 year after enactment of the measure. The stamp is to bear a likeness of Colonel Marcus and its denomination is to be determined by the Post Office Department. In view of the fact that Marcus was a resident of Brooklyn, I suggested in my bill that the stamp be placed on sale in Brooklyn 1 day before it is made available to the public elsewhere.

Colonel Marcus, a graduate of the United States Military Academy at West Point in 1924, had gone to Israel to help lead its forces in the struggle for independence after the Arab states invaded it in 1948. He instilled a spirit of modern warfare among Israel's forces and planned its military strategy. He is one of the great Jewish heroes to emerge from Israel's modern war for independence.

David Marcus was born on New York's East Side. After his graduation from West Point, he served as a lieutenant in the infantry until 1926. He attended Brooklyn Law School, passed the bar examination in 1927 and received a doctor's degree from the same law school in 1928. He then served successively as assistant district attorney, as assistant United States attorney, and commissioner of correction in New York City under Mayor LaGuardia.

Marcus remained in the Army Reserve throughout his civic activities. During World War II, he went back into service as a lieutenant colonel, first as a Judge Advocate and later as a provost marshal in the Twenty-seventh Division. He parachuted into Normandy on D-day and was with American troops during the fighting in Sicily.

Liability Insurance for Private Plane Owners

EXTENSION OF REMARKS

OF

HON. JOHN A. McGUIRE

OF CONNECTICUT

IN THE HCUSE OF REPRESENTATIVES

Thursday, April 20, 1950

Mr. McGUIRE. Mr. Speaker, recently at a hearing of a subcommittee of the Interstate and Foreign Commerce Committee, I was disturbed to learn that a serious gap exists in our aviation laws. Upon questioning a responsible official of the Civil Aeronautics Administration, I discovered that not many private planes carry insurance to cover injuries they may do to persons and damage to property.

Since there are more than 90,000 private planes in this country today, and since no law requires their owners to show they are financially responsible for any damage they may cause, it is time that Congress ends this current state of irresponsibility. In recent months several planes have crashed in residential and business areas. In the months ahead we may expect more.

Americans are home owners and many of them invest their life savings in their homes. Unless the home owner carries comprehensive insurance, and not too many do, a freak airplane accident may wipe out his security and well-being.

The chances of a private plane being involved in an air mishap are certainly greater than for a commercial plane, which must meet strict safety standards. Commercial planes carry liability insurance. Many States require car owners to carry liability insurance to protect individual life and property. There is no reason why private aircraft should be treated differently.

For this reason, I have today introduced H. R. 8126, which will require all planes to furnish proof of their financial responsibility in case of accident. Officials of the Civil Aeronautics Administration, who will prescribe the standards of financial responsibility when this bill is enacted into law, are agreed as to its essentiality. With 90,000 private planes in the air, we are past the age of curiosity and experimentation. We have a responsibility to all property owners in the United States and to all parents to lessen the danger and fear of air mishaps.

Address of Charles H. Silver

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1950

Mr. COUDERT. Mr. Speaker, on April 12, 1950, the Jewish War Veterans of the United States held their fifty-fifth anniversary dinner at the Waldorf Astoria Hotel in New York City. The guest of honor on this noteworthy occasion was Mr. Louis B. Mayer. Mr. Charles H. Silver, a distinguished citizen, well known in civic, philanthropic, and business affairs in the city of New York, served as chairman. Under leave to extend my remarks in the RECORD, I wish to include the address delivered by Mr. Silver to the guests assembled:

I consider it a distinguished honor to be chairman of the fifty-fifth anniversary dinner of the Jewish War Veterans of the United States. It is more than half a century since soldiers of the Jewish faith formed an organization and, while vast changes have been wrought in the life of our Nation during the intervening years, the spirit which animated the founders has never changed—the spirit of Americanism and brotherhood.

The Jewish War Veterans of the United States were cradled in the American way of life. When they came to maturity they grew in stature and influence because they were rooted in genuine American ideals. They are part and parcel of a system of society that has made this Nation great and glorious and that will never be changed by those who would try to tear down this system.

The boys of Jewish blood who stood beside their Christian comrades in the foxholes never asked those with whom they fought to what religion they belonged and they, in turn, were never questioned about their faith. The men in the foxholes had a common religion—Democracy. Yet each worshiped God in his own way.

The Jewish war veterans who have emerged from the slime and dirt and heartbreak of the battlefields have now taken their place in the forums of peace. It is worth mentioning and repeating from time to time that these men who fought so valiantly so that Democracy might survive are now engaged in another monumental struggle—the fight to create a peace that will banish the fear of the atom bomb and make the hearts of men and women glad that there is no longer any prospect of wanton and needless slaughter.

At this time I should like to say a word about this organization which has become a permanent part of the general pattern of American Democracy. Over in Europe, for centuries Jews were not permitted to volunteer to fight for their country. And in this country Asser Levy, the Dutch Jew, was denied permission by Gov. Peter Stuyvesant to participate in the defense of the colony of New Amsterdam.

Of course Peter Stuyvesant was merely reflecting the prejudice that colored the minds of European sovereigns. Levy had to plead with Stuyvesant to be allowed to risk his life in the common defense of the colony before he was accepted for service.

All this changed when America was born. It was one of the few countries that permitted Jews to wear the uniform of their country as honorable volunteers. And it is very interesting to note, my friends, that among the Jews who fought in the Civil War were immigrants who would have been denied the right to volunteer for military service in the countries of their origin. More than 10,000 Jews fought in the contending armies of the Civil War. Seven of these men were awarded the Congressional Medal of Honor.

My friends, I could go on and on giving you the record of the Jews and it is a story replete with deeds of heroism and sacrifice. I could give you figures that would astound

you but they need no praise from me. But I would like to point out that some 250,000 Jews saw service in World War I and more than 550,000—over half a million—served in World War II.

Among them were those who had recently become citizens. Many of these were the descendants of those who were forced to wear the Yellow Star of David under German and Russian tyrants and who emerged from the war wearing the Purple Heart for wounds received in the service of democracy.

I think that all of us—Catholics, Protestants, and Jews—may well be proud of this splendid record. For what they have done is more than a tribute to these men of the Jewish faith; it is a reflection of the splendid faith which we of all races and creeds have in the strength and nobility of American democracy. It is democracy as we practice it in this country that has been a springboard for the vast strides that we made in so short a time and will continue to remain the motivating factors of our daily lives.

What the Jewish veterans have done in the past is now part of the history of this country. What about the present? What are they doing now? What are the problems they face and how are they trying to solve them? Again, I say I could quote figures and statistics which would amaze you. But I want to briefly tell you about their vast program in the field of human relations. In the present state of the world human relationships have become a very vital part in the planning for a permanent peace.

This organization, my friends, is now engaged in fighting every form of tyranny, bigotry, and intolerance. The Jewish War Veterans of the United States were among the very first to speak out boldly against Hungary's persecution of Cardinal Mindszenty and the oppression visited on the Protestant clergies in central Europe. They have been assailed by the Communists as a tool of big-business interests on the one hand and by Gerald L. K. Smith's anti-Semitic cross and flag on the other hand.

What has been the answer to these attacks? A program of action in the field of human relations. They have worked with the American Legion, the Catholic War Veterans, and other major veterans' organizations. They are reminding 18,000,000 ex-servicemen in America that racial and religious disunity can be just as harmful and menacing to the country's welfare in peace as it would have been in war.

Let those who would cast slurs on our way of life remember this very important fact. The Jewish War Veterans' service program, staffed by hundreds of professional and voluntary counselors, serves more than 110,000 veterans and veterans' dependents of all faiths. More than 30 percent of those who have been aided are non-Jewish. There, my friends, you have American democracy in action—action that is unfettered by any consideration of race, color, or creed. That is something that is worth fighting for and keeping so that we and our children and our children's children may enjoy the blessings of our glorious way of life.

If I have been enthusiastic about the past achievements and present status of the Jewish War Veterans of the United States, you will understand why; I have attempted to give you a rather quick picture of an organization that has never faltered in its efforts to obtain its noble objectives.

We are engaged today in a struggle for the minds of men. We are trying to show those who do not share our philosophy of life that it is only in a democracy that man attains his full dignity as a human being. It is a tremendous undertaking. It is, I believe, too great for any individual to direct; what is required is a harmonious working of all forces striving in various directions to create a peaceful world.

There are many organizations in this country which are trying to coordinate these efforts for world peace. All of them should be encouraged. That is why it is important that we should give our support and sympathetic cooperation to the Jewish War Veterans of America in the general plan that is slowly being evolved to bring the peoples of the world together. Organizations like the Jewish War Veterans must play a very vital role.

We are indeed honored this evening by the presence of one of the great spiritual leaders of our times, His Eminence, Francis Cardinal Spellman. It has been my good fortune to be associated with him in his untiring labors in behalf of a great hospital in this city. To know him is to grasp a true understandng of what is meant by the word charity. For to him, charity means friendship, compassion, tolerance, and help for those who suffer or are in need. His philosophy is as broad as the philosophy of humanity in its noblest sense. He holds in his heart love for people of all races and creeds. I have been very fortunate in having the pleasure of his comradeship, his advice, and wisdom.

Tonight the Jewish War Veterans of the United States are honoring one who is known throughout the land as a great patriot and who has earned the respect and admiration of his fellow citizens for his achievements as a worker in behalf of many worthy causes—Mr. Louis B. Mayer.

He has done much to bring about a world understanding of American ideals and principles and that, to my mind, is as important a job as any man can do these trying days. It is especially for this that we honor him this evening, an honor that has been well earned. And I want to take this opportunity to add my word of tribute to those of the other speakers whom you will hear this evening.

So I close by saluting the Jewish War Veterans of the United States. May the coming years bring them greater strength to follow through with their plans for peace and brotherhood.

Nice Showing for Arkansas

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Helena (Ark.) World:

NICE SHOWING FOR ARKANSAS

Arkansas, in 1949, ranked seventh in cash income from livestock among the 15 Southern States. Our farmers got something over $155,000,000 from this source, putting them out in front of Alabama, Mississippi, Louisiana, Florida, North and South Carolina, and West Virginia.

That's a mighty nice rating. It would be a happier one, of course, if we stood higher, but our livestock industry is pretty much a recent development. It was largely a "depression baby," taken up by many of our farmers in that harsh time of the 1930's.

In the States which lead Arkansas livestock has been an important part of their farming for a long time. These States are Texas (really three or four States in one), Oklahoma, Kentucky, Tennessee, Virginia, Georgia, and Maryland. And the last two are ahead of Arkansas by only a few million dollars each.

Now, a lot of our farmers have the "know how" with livestock. They have much idle land, a chunk of it taken from restricted cotton and rice crops, to find use for. And good blood for improving livestock herds is available in the many fine breeding herds now established in the State.

So Arkansas might well expand its livestock farming and step up a notch or two in the State's rank. The income from this source could be doubled, possibly tripled, over a period of years if all the resources were fully used.

Our towns and cities would benefit greatly from such an advance. Farmers would have more money to spend in them, and they would get a lot more of the processing plants which prepare livestock and its products for the consumer. The present sprinkling of these plants adds millions of dollars annually to the farm value of the livestock output.

Here is one of our real opportunities.

Development and Maintenance of American Flag Shipping on the Great Lakes

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolutions:

CITY OF BUFFALO,
OFFICE OF THE CITY CLERK,
April 18, 1950.

Hon. ANTHONY F. TAURIELLO,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: Pursuant to the direction of the Common Council of this city, I am enclosing herewith copy of Resolution No. 108 relative to introductory bill, H. R. 7520, "to aid the development and maintenance of American-flag shipping on the Great Lakes," which resolution was passed at the council session of April 4, 1950.

Very truly yours,
Dr. JOSEPH J. TRONOLONE,
City Clerk.

No. 108

ANTHONY F. TAURIELLO, Member of Congress, re introductory bill H. R. 7520, to aid the development and maintenance of American-flag shipping on the Great Lakes and for other purposes

Mr. Rybka moved that the petition be received and filed and that it is hereby resolved that the Common Council of the City of Buffalo hereby approves introductory bill H. R. 7520 amending the Ship Sales Act to permit lakes operators to purchase vessels for conversion for services as package freight and/or passenger ships for exclusive operation on the Lakes and to aid the development and maintenance of American-flag shipping on the Great Lakes and that the Members of Congress representing districts including the city of Buffalo as part of its territory be and they hereby are urged to support said bill to the end that it may be enacted into law, and that the city clerk be and hereby is directed to forward copies of this resolution to such Senators and Congressmen.

Passed:

Ayes, 15; noes, none.

Mrs. J. Borden Harriman's Address to the United Jewish Appeal Conference

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. MULTER. Mr. Speaker, I want to commend to the attention of my colleagues a heart-warming address delivered by Mrs. J. Borden Harriman at the national conference of the Christian Committee of the United Jewish Appeal, held in Washington, D. C., April 16. Mrs. Harriman, who is a former American Minister to Norway, is now chairman of the women's division of the United Jewish Appeal Christian Committee, in which capacity she is particularly interested in aiding homeless Jewish orphans overseas and bringing them to Israel, where they will find a home.

Mrs. Harriman's address is as follows:

Shalom!

I greet you today with the salutation of the people of Israel. I greet you with the one word—"Peace!"—which I think symbolizes the ideal for which Israel is striving, the ideal which motivates you who have come to this conference to plan assistance for your fellowmen.

When I speak of peace, I mean more than the absence of war between nations, although that is the most important meaning of the word. I am thinking rather of that inner peace and security, that feeling of being loved and wanted and living among friends, which is the greatest possession of any free man or woman.

I imagine that the absence of this feeling of security has been among the most tragic experiences of those who suffered through the long years of war and oppressions that have marred our times. In the concentration camps, and later in the DP camps, the individual must have felt completely alone and forsaken.

It has been a slow and difficult task to help these people return to normal living. So deep are the scars they bear, that many of them require the most devoted and prolonged care to restore their faith in human nature.

This to me has been Israel's most important achievement. This work of human redemption has drawn me to active participation in the campaign of the United Jewish Appeal. I think it is this aspect of your activities which means the most to the people of America, for it is in the tradition of our country to place the highest worth on human values.

I have read with interest the statistics of the work performed by the United Jewish Appeal. The figures are impressive—many hundreds of thousands brought to Israel, great numbers in other lands receiving our help. And most important of all, many hundreds and thousands of others still facing danger, still fleeing from persecution.

But it seems to me that the human aspect is too often lost when we become immersed in statistics. To me, they assume real meaning only when I think in terms of the individuals whom we are trying to help.

As a woman, it is heartening to me to know that the thousands of children who were the remnants of Hitler's war are being given a chance in the postwar world. For as we know, childhood experiences determine in a large part what kind of adults will shape the future of mankind. A bitter, frustrated, and cynical youth can only result in a hard, calculating, and hopeless adult.

Certainly, European youth was headed for just such a future. We all read and saw pictures of the wild children of Europe, boys and girls who knew all the wrong answers much too early in life. The Jewish youth of Europe was particularly affected. They spent most of their formative years behind the barbed wires of concentration camps, next to the incinerators which devoured their mothers and fathers. They lived in forests, basements, closets—hiding from the Nazi monsters. They were the disinherited.

Now these children are being given a chance. More than 20,000 orphans have come to Israel since the proclamation of the Jewish State. Their rightful heritage is being restored to them. Some of them don't know quite how to accept this bounty of enough to eat, a place to sleep, and an education. The simplest things are miracles to them, miracles which you, in your generosity and understanding, have made possible.

But much remains to be done. We must still care for thousands of orphaned children who are being kept in child-care centers, hospitals, and rest homes. What would happen to these youngsters if you were not supporting them? They might be roaming the streets, friendless, homeless, drifting along on the tides of fortune, taking what charity and chance offered them. Without you they would constitute a pitiful, lost generation. And there are thousands of others who are being given a new chance through a special foster home program.

It is particularly heartening to think of the miraculous work being done for the children and young people in Israel. But we must not close our eyes to the needs of those great numbers of children who have not yet benefited adequately from our aid. Thousands of immigrant children still live in the reception camps in conditions which are unsuitable for even a vigorous adult. Their situation must be remedied. We cannot permit these youngsters to spend any more time in camps and temporary installations. They are entitled to normal lives in normal home surroundings—and the United Jewish Appeal must receive the money to give them what they need.

I have spoken about the children whom we are helping, because they are so close to my heart. But our work for the adults, for the aged, the sick, and the disabled, must be carried on with equal vigor. All of them—the men, women and children who have been hunted and hated and persecuted—must be given their chance to live again.

These people have suffered greatly through no fault of their own. You or I—any of us here today—might have been in their place but for the grace of God. Helping them is a challenge and a responsibility that all of us, I feel, must gladly assume.

And when I say all of us, I mean Americans of all faiths—Christians as well as Jews. I am proud of the great number of my fellow Christians who are taking part in this great work of the United Jewish Appeal. I am particularly gratified by the response that Christian women in all parts of the country have shown to the formation of our women's division.

It is perhaps tactless of me to say this before an audience consisting mainly of men, but I feel that the women of America can contribute something to the drive of the United Jewish Appeal that is frequently lacking in our charitable efforts. I refer particularly to the quality of heart and an understanding of the needs of human beings. Men are not incapable of showing these qualities, but I think it takes the woman's touch to breathe real humanity into a philanthropic campaign—even one of such scope and importance as this one.

As a Christian, I am deeply moved by the opportunity for service which the UJA drive offers me. To feed the hungry, to clothe the naked, to provide hope for the downtrodden and homes for the dispossessed—these are consonant with the highest traditions of Christianity. These principles are part of the Jewish tradition as well, and mark another one of those many areas in which our religions have a common heritage.

Our joint effort for the United Jewish Appeal brings that basic harmony into the realm of practical, everyday life. And nothing can be more practical than the job we have undertaken. For the UJA program of immigration and reconstruction is playing a key role in repairing the damage wrought by the horrors of the past decade.

We have a big job to do in 1950. I need not itemize the tasks to be done—you know them as well as I do. I look forward to great things as a result of this conference. And I think you know that, in all your work, the women of America will give you the fullest support.

A Notable Virginian

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Richmond Times-Dispatch, of Richmond, Va., which pays a well-merited tribute to Admiral Lewis L. Strauss, who recently resigned as a member of the United States Atomic Energy Commission.

Admiral Strauss was a boyhood companion of mine and our friendship has grown through the years. I have followed his brilliant career with interest and admiration. During World War I he served as private secretary to the Honorable Herbert Hoover, United States Food Administrator. Following the war he assisted Mr. Hoover in his American Relief Administration and peace-conference activities. When these duties were completed he returned to private life as a partner of the banking firm of Kuhn, Loeb & Co., of New York. This connection gave him an opportunity to display his unusual talents and he soon became one of the leading young businessmen of America.

During World War II, Admiral Strauss entered the Navy and became the first Reserve officer to attain the high rank of rear admiral. He served as Navy member of the Army-Navy Munitions Board; Inter-departmental Committee on Atomic Energy; and as a special assistant to the Secretary of the Navy.

Admiral Strauss has been awarded the Legion of Merit and Gold Star by the Navy; Oak Leaf Cluster by the Army; Legion of Honor by France, and decorations from other governments.

When the Atomic Energy Commission was created, Admiral Strauss was appointed by President Truman as a member of that highly important agency of

the Government. He is a pioneer in the field of nuclear energy where his achievements will stand as an enduring monument to his outstanding abilities and services. Virginia is proud of the record he has made and extends to him her best wishes in his future undertakings.

The editorial referred to follows:

A NOTABLE VIRGINIAN

Lewis L. Strauss, one of the most distinguished of living Virginians, is entitled to resign his membership on the Atomic Energy Commission, after undergoing more than 3 years of strain and overwork as a member of that body. His service there followed 5 years in the Navy, where he rose to the rank of rear admiral.

President Truman's decision to proceed with the manufacture of the H-bomb apparently was in part due to the urging of AEC member Strauss. This is only the latest example of the remarkable public service performed by this remarkable man, who is still only 54.

He attended the public schools in Richmond, and although he did not go to college, he was elected last year to the presidency of the world-famous Institute for Advanced Study at Princeton, N. J. He is one of the Nation's leading bankers, having risen to a partnership in the New York firm of Kuhn, Loeb & Co. at the age of 33. He left Richmond in May 1917, at the age of 21, for Washington, and soon became secretary to Herbert Hoover. He remained Mr. Hoover's secretary during the period when the President-to-be was directing relief activities for multitudes of starving peoples overseas.

His services in the recent war were so conspicuous that he was awarded various decorations and citations by both the Army and the Navy. He was already the recipient of decorations from half a dozen foreign governments.

It was his physics textbook at old John Marshall High School, when he was a student there, which aroused the interest of Lewis Strauss in science. As a result, he was instrumental years later in the construction of a laboratory at California Institute of Technology for research in the field of atomic energy. His appointment to the Atomic Energy Commission by President Truman was the natural outgrowth of his long-time interest in the latest atomic developments.

Mr. Strauss has also been preeminent as a lay religious leader, having been president of Congregation Emanu-El, in New York. He is likewise a foremost patron of music and the arts, and is a director both of the Metropolitan Opera, in New York, and the Virginia Museum of Fine Arts, in Richmond.

Although he is hale and vigorous, and apparently a long way from retirement, Mr. Strauss' admirers and friends in Virginia are glad to note that he has a country estate near Brandy Station, Culpeper County. If he doesn't retire eventually to his old home town of Richmond, Richmonders will count on him to settle no farther away than Culpeper.

Promoting International Understanding for World Peace

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1950

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I should like to bring to the attention of the members a very timely and informative article by Msgr. Frederick G. Hochwalt, entitled "UNESCO and Agreement of Men's Minds," which appeared in the April 15, 1950 issue of the weekly review, America.

This lucid explanation of what the United Nations Educational, Scientific and Cultural Organization is trying to do to win men's minds toward international understanding is excellently presented and deserves wide reading. The article follows:

UNESCO AND AGREEMENT OF MEN'S MINDS

When UNESCO began its career in 1946 it was the victim of a gentle pun, often quoted. "What is it," people asked, "a tea biscuit?" The United Nations Educational, Scientific, and Cultural Organization is 4 years old now. Most of its critics would agree that it is less like a tea biscuit than like the K-rations of war days—too dry to be immediately tempting but potentially too valuable to discard.

As an organization affiliated to the United Nations, UNESCO has for its special concern the areas of education, science, and culture in their relationship to international peace. "Since wars begin in the minds of men, it is in the minds of men that the defenses of peace must be constructed," says the preamble of UNESCO's charter, a product of the versatile pens of Etienne Gilson and Archibald MacLeish. These intellectual leaders, like the others who joined with them in the creation of UNESCO, were convinced, apparently, that the road to peace was not one trod solely by politicians and statesmen. They found common cause among many groups in the determination to use every avenue to achieve the goal of international understanding, and to build peace upon the dignity of the human person.

Such an idea was not entirely new. Out of the shambles of World War I had come a similar organization that was related to the League of Nations but never earnestly or completely supported by the League. This organization, the Institute of Intellectual Cooperation, did bring together important leaders in the cultural and educational fields who worked hard at the task of bringing about an international understanding of and sympathy for divergent cultures. The distinguished Ambassador of France to the United States, M. Henri Bonnet, was the executive director of the Institute. It is no discredit to him to report that the organization was not very successful.

The program of the Institute, and similar ideas, were all laid aside during the early and middle periods of World War II. But in the late days of the war a movement began in the United States to establish a new kind of International Office of Education that would promote knowledge and understanding among the nations looking toward the final goal of world peace. Similar undertakings were reported from France and England. Finally, our own Government began private talks with leading educators designed to produce a charter for such an international organization. The movement was given impetus by the inclusion of education among the items considered at the Charter Conference of the United Nations in San Francisco, April to June 1945, and came into its own in London in November 1945, when UNESCO was formally launched.

If the Institute of Intellectual Cooperation failed to achieve its desired ends, that failure was ascribed in large part to the inability of the Institute to interest a large cross section of people in member nations. UNESCO, determined not to make the same mistake, provided in its constitution for the creation of national cooperating bodies or national commissions which would enlist the support of as many cultural groups as possible.

In the United States the United States National Commission was relatively successful from the very beginning. Sixty important national organizations named delegates to its meetings, while many more clamored for the right to be associated with the work. Forty individuals were added, as representatives of national, State, and local government, to bring the membership in the national commission to 100. Meetings have been held twice yearly. Plenary sessions have been scheduled in Washington, Philadelphia, Boston, and Cleveland. Despite the large number of individuals and organizations participating and regardless of the attention given to the United States National Commission in the daily press and in many periodicals, the parent organization and the Commission remain largely unknown in the United States, especially along the eastern seaboard. In Kansas and in certain other Western States there are State-wide, county-wide, and city-wide UNESCO units dedicated to bringing the message of peace and understanding to the man in the street in terms he can understand and cooperate with. Despite these special efforts, however, UNESCO and the National Commission remain for the most part a mystery to most people.

This apparent neglect of UNESCO might derive from any number of causes. The average citizen may distrust his own ability to make a contribution to peace, regarding the problem as the affair of statesmen. Or he may distrust the intellectuals and the program they envision under UNESCO, dismissing it as an idea of dreamers who are tinkering with social problems in an ineffectual, harmless way. Yet it should never be imagined that the citizen is not interested in peace or the ways of achieving it. Perhaps there is just enough cynicism about the United Nations to create a distrust of any organization that is affiliated with it. Those who attack UNESCO directly do so because they dislike the program or some of the individuals who are responsible for its execution or administration. Despite external criticism and internal tensions UNESCO has a fair record of accomplishment to mark its 4-year history.

HEADQUARTERS AND STAFF

The international headquarters of UNESCO is Maison UNESCO in Paris, once the Hotel Majestic, where now the clatter of typewriters and the buzz of conferences and debates has succeeded the click of hard-heeled Nazi boots that once echoed through these same corridors during the days of German occupation. It seems fitting that UNESCO has accomplished a sort of metamorphosis from peace to war in its historic headquarters. There are those who regard this change as presaging what UNESCO can do in the realization of peace and understanding.

The staff at UNESCO House who shape the program and guide it throughout the year depend for their directives on UNESCO's Executive Committee and on the annual General Conference. Four conferences have been held, two at Paris, one at Mexico City, one at Beirut; a fifth conference at Florence is now in preparation and is expected to convene about May 18 and conclude June 20, 1950. Fifty-four member nations will assemble at Florence for 16 plenary sessions and about 84 working meetings which will be needed to analyze and develop UNESCO's seven-point program. Resolutions and directives will be worked out for specific programs in the field of educational reconstruction for war-devastated countries, education, national science, social science, philosophy and humanistic study, cultural activities, and communication. The activities in all these fields must be geared to a limited budget and to a stimulation of programs that will in a much larger way become the ultimate responsibility of the independent member states rather than of UNESCO itself.

To demonstrate that the stimulating function of UNESCO is deemed to be its most important role one has only to look at the quite modest budget of $8,000,000 that is earmarked for the execution of the annual program. Directives adopted at the third conference in Beirut required the limitation of program and policy to approved projects, and placed the emphasis of an enlarged program on international governmental and nongovernmental organizations pursuing in specialized fields ends similar to or relative to those of UNESCO.

OPERATION

How does UNESCO operate in the seven above-mentioned fields? In various ways. For example, consider education. In 1950 UNESCO was directed to work more closely with the International Bureau of Education to determine problems involved in making free compulsory primary education more nearly universal and of longer duration throughout the world. Among the educational projects to be undertaken were the direction by UNESCO of two international seminars, one on the teaching of geography and the second on the improvement of textbooks, particularly history textbooks.

In natural science UNESCO is instructed to carry on the activities of a world center of scientific liaison. These include such tasks as promoting the exchange of scientists and the facilitation of their movements across frontiers, the exchange of information about films on scientific research, abstracting, rationalization, and other aspects of scientific documentation. An attempt is being made to establish a world registry of scientific institutions and scientists.

The present program of UNESCO in philosophy and humanistic studies calls for the increase of international cooperation in the field of philosophy and humanistic studies by grants-in-aid on contracts for financial assistance to the International Council of Philosophy and Humanistic Studies, and for the organization of round-table discussions dealing with philosophical concepts that have special concern for UNESCO's purposes.

UNESCO has complied with one of its directives in the field of human rights by publishing in 1949, a symposium on this subject, with an introduction by Jacques Maritain, containing 32 essays by distinguished philosophers.

Space prohibits more detail in describing the program but one cannot conclude without at least a passing reference to the UNESCO book-coupon scheme that permits soft-currency countries to profit by an exchange with hard-currency countries, or the UNESCO-CARE book program that has made it possible to distribute books valued at more than $50,000 to 17 countries and territories.

Despite a fair number of contributions to the cause of international understanding UNESCO has not fared well at the hands of its international critics. The first broadside launched against it resulted from the choice of Julian Huxley as Director General. His naturalistic philosophy made him the target of sharp criticism by philosophers and idealists. Later, when he seemed ready to plunge the organization into an administrative morass, it was hinted that matters were saved only by the organizing genius of the deputy director, Walter Laves, of the United States.

When it began its work UNESCO almost sank under its own weight because the program was loaded down with the hobby-horses of private as well as public interests instead of workable projects that could be realized at an early date. A certain amount of internal strife within the organization itself slowed it down. Human nature being what it is, this particular difficulty was a predictable one. The seven interests represented on the program began to vie for major portions of the budget and for a large place in the over-all plan. With the advent of Torres Bodet as Director General in 1949, order began to emerge. Although natural rivalries may be expected to continue, the program should now begin to take on a definite pattern with proper emphasis on the major areas to be studied and reported.

At home, the United States National Commission has fared much better in most areas than has the parent organization. During its first 3 years it enjoyed the magnificent leadership of Milton Eisenhower, whose administrative ability, vision, and general good sense were the delight of all who were privileged to work with him. Although the American press failed to perceive it at the time, the National Commission was also fortunate in having WILLIAM BENTON, and later George Allen, as Assistant Secretaries of State for Public Affairs. Senator BENTON, in his recent speech proposing a Marshall plan of ideas, has justified the promise he showed in his early work with the Commission. Many thoughtful persons would agree that the United States must close the mental gap between its citizens and the rest of the world, while yet avoiding, if it can, the charge of cultural imperialism. The Benton resolution (S. Res. 243), now before the Senate, calls for, among other things, the acceleration of the work of UNESCO to the point where, with effective leadership, it has a chance to make a significant, perhaps decisive, contribution to world peace.

Religious leaders have been and are fearful that UNESCO and the National Commission may ficunder on the rocks of secularism, since the program of UNESCO has paid little attention to the fact that peace must be established by transforming man from the interior and not merely by erecting external structures. Lecomte du Noüy has reiterated for us a position that religious leaders have been insisting upon: The source of all wars, the source of all evil, lies within us. Outside protection will not suffice if we allow the enemy in our heart to live. Noüy is paraphrasing the Holy Father when he says that there is only one method by which it is possible to establish peace.

"First, to reestablish the cult of historic truth, by feeding the youth of the entire world with the same substance, thus establishing a basis for mutual understanding. This is a preliminary step and it can be taken immediately. Next, to strive to establish the cult of individual human dignity and to improve man by stifling his archaic instinct. This will be the work of centuries to come."

Negative criticism alone, however, will accomplish little for the UNESCO ideal. Men with profound religious convictions must establish the truth that love and justice among men are not only the purpose but the connective tissue of international society.

The Popes Point the Way to Social Justice

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. BIEMILLER. Mr. Speaker, two of the great social documents of modern times are the Rerum Novarum of Pope Leo XIII and the Quadragesimo Anno of Pope Pius XI. Despite the 40 years which separate their publication, they are remarkably similar pleas for social reform. And although almost 20 more years have ensued since the publication of the second, both contain remarkable applications to the problems of our time.

Dr. Philip Taft, chairman of the department of economics of Brown University, has written a sound analysis of these two papal encyclicals in the April 22 issue of the magazine America. Titled, "The Popes Point the Way to Social Justice," the article is a reminder that the two documents hold important meanings for Catholics and non-Catholics alike.

With permission to extend my remarks in the RECORD, I attach a copy of the article:

THE POPES POINT THE WAY TO SOCIAL JUSTICE

(By Philip Taft)

The modern world is continually faced with the need of deciding basic economic policy. Not only must we evolve institutions that will assure equity and justice; we must here and now avoid anything that looks like a major depression. Serious industrial dislocation and wide unemployment would not only cause great distress but would weaken and perhaps even destroy our power to resist infiltration by totalitarian groups.

While the present generation faces the grim task of defending society and its traditions against corrosion from within and attack from without, the problems themselves are not new, and guidance on these questions can still be found by non-Catholics as well as Catholics in the papal encyclicals, Rerum Novarum and Quadragesimo Anno. Despite their age, these documents have a vitality and freshness absent in many contemporary pronouncements on social issues. Not only do they accurately diagnose the economic maladies of our time, but the remedies prescribed have been found effective in the past and are sufficiently potent to be helpful in the present.

RERUM NOVARUM

Rerum Novarum appeared in 1891, soon after the modern Socialist movement had established itself upon an international basis and was for the first time attracting to its standards large masses of industrial workers in continental countries. The spread of Socialist ideas could be primarily traced neither to the attractiveness of its doctrine nor the logical cogency of its arguments, but to the unbearable burdens imposed upon the wage earner by aggressive and expanding capitalism.

While modern industrialism raised living standards, it also encouraged sprawling city slums, overwork, and the brutal exploitation of the young and the weak. These conditions were justified by a theory of laissez faire whose tenets received an unenthusiastic reception among industrial workers. Instead they began to turn toward socialism. Germany witnessed the formation of the first modern Socialist Party in 1863, inspired by Ferdinand Lassalle, who outlined his program in his Open Letter. Within the next 20 years, Socialist parties were functioning in every European country that allowed free political activity.

The causes for the spread of radical doctrine among the industrial population were clearly perceived by the Catholic Bishop of Mainz, William Emanuel von Ketteler, who recognized the evils of modern industrialism and insisted that the church take the lead in eradicating them. His Christianity and the Labor Question not only attacked evils but prescribed remedies. The view that society should leave economic problems to the free play of economic law was challenged, and the theory that nothing could be done to mitigate the hardship of the worker rejected. Bishop Von Ketteler's work was carried further in Germany, and similar movements

were inaugurated in other European countries. All were founded on a belief that unregulated industrialism was not only guilty of inhuman treatment of the worker but, by its excesses, it was driving the worker into the arms of the revolutionary legions clamorously appealing for support.

Out of this awakening among Catholic social pioneers grew Pope Leo XIII's Rerum Novarum. It addressed itself to the social and economic problems raised by a laissez-faire capitalism, and prescribed a broad program for their solution. The encyclical showed that between the demands of the rugged individualist for no interference with the working of economic law and the revolutionary theorist for complete government control over economic resources, a third road was available, one of orderly, gradual adaptation to change.

One notices this feature of Rerum Novarum: it is a reformist and not a revolutionary document. Its approach to social problems is pragmatic, not doctrinaire, simple and direct rather than devious and complicated. Evils exist, a remedy is presented. Although the encyclical is almost 60 years old, it reads today like a current document, for our world has learned at the price of much suffering that complete and one-shot remedies for complex social problems are an illusion, that man is too limited, fallible and stubborn to find an easy, complete answer to the problems that beset him.

The tone of Rerum Novarum should be described as reformist, in the sense that it is more concerned with the eradication of evils than the transforming of institutions. The Pope sees the modern worker exposed to many evils and oppressions. He rejects the remedies offered by the Socialists of his time. He suggests as an alternative a program of reform, of guaranteeing the worker the right to organize, of placing a floor under wages, a ceiling upon the hours of labor, of protecting the young and weak against exploitation. He is intent on applying ethical principles, but to the existing order.

In examining the economic system of his time, Leo XIII did not deal with abstractions, as do the Marxists and the economic liberals, but with the impact of the new industrialism on individual men and women. He insists that the poor, who contribute by their labor to the welfare of the community, must not be neglected; that the prizes must not be monopolized by the strong and powerful, Rerum Novarum emphasized, therefore, the necessity of establishing those legal safeguards for the worker which have since been partially or entirely adopted in western Europe and the United States. "Government policy," said the Pope, "must be so arranged as to produce * * * public well-being and private prosperity."

The argument in behalf of such measures is based upon the inequality of bargaining power between employer and employee. The right of workers to form associations for the advancement of their interests is affirmed, and every precaution should be taken not to violate the rights of individuals, and not to make unreasonable regulations under the pretense of public benefits. This warning directed against governments controlled or influenced by the wealthy classes is even more applicable to the contemporary totalitarian regimes, which in the name of public interest either subordinate or destroy every expression of individual or group independence. Rerum Norvarum outlined the methods by which the workers' welfare and dignity could be protected. It also chastised those who accepted the then dominant belief that an overweening lust for gain was a high social virtue.

The view that economic activity must be the servant and not the master of man was a blow at both the insatiable demand for ever greater profits, and the theorists who insisted that society and the great variety of its institutions only reflected the changing aspects of economic activity.

QUADRAGESIMO ANNO

The 40-year period between the publication of Rerum Novarum and Quadragesimo Anno witnessed the expansion of the labor movement, and the introduction of many reforms envisaged in the earlier encyclical. It also saw a division of world socialism, with the extreme wing setting up a movement of its own under the name of communism. Quadragesimo Anno was issued when the doctrine of laissez-faire in economic affairs had lost most of its appeal, and when the economies of Europe and the United States were in the throes of a severe crisis. The automatic adjustments and the optimum distribution of capital and labor by the market had failed to solve the severe difficulties engulfing most of the world.

Whatever the explanation may be, the greater significance of trade-unions and of government in economic life could not be denied. Limitations on the use and even ownership of property had taken place in virtually all parts of the world. The subordination of property rights to the needs of society had been increasingly accepted. Control upon the use of wealth in behalf of the community was no longer regarded as interference with the legitimate rights of property, a view excellently expressed in Quadragesimo Anno:

"However, when civil authority adjusts ownership to meet the needs of public good it acts not as an enemy, but as a friend of private owners; for thus it effectively prevents the possession of private property * * * from creating intolerable burdens and so rushing to its own destruction."

Reform is justified not only on moral grounds, but as the most effective protector of the institution itself. Certainly the New Deal and Fair Deal programs are based upon similar assumptions. Inferentially the encyclical recognizes that the institution of private property is in danger not only from those who would overthrow it, but from those who insist upon continuing the injustices that arise as a result of unrestricted use.

The pronouncements with respect to labor are more explicit in Quadragesimo Anno than in Rerum Novarum, owing to the changes that had taken place in the interval between their publication. The latter was in a real sense a pioneer statement of a more sure if less spectacular road to social and economic progress than the one offered by extremist doctrinaires.

Quadragesimo Anno advocates a wage policy that will allow the worker to earn a sufficient amount for the proper support of his family. However, the wage policy must be sufficiently flexible to take into account the position of the single enterprise so that wages, considering also the basic needs of the worker, will not be so high as to cause unemployment. The Pope recognized that while such decisions can be made only by examining particular conditions, a policy that leads to unemployment is not merely harmful to the individual but socially dangerous as well. No specific wage policy is laid down, and the great diversity in the condition of individual business is recognized.

The test of a wage policy, in addition to minimum levels, must be its effect on employment—a good modern view. Severe unemployment, said Pius XI, is a dreadful scourge; it causes misery and temptation to the laborer, ruins the prosperity of nations, and endangers public order, peace, and tranquillity the world over. In a few simple lines, the dangers inherent in widespread unemployment are eloquently expressed. In the discussion of wages, the emphasis is on common good rather than on individual or group advantage. While minimum wage standards should be observed, the Pope recognized that the rates paid for different occupations and grades of work must be related. Otherwise there is not only a tendency for some groups to profit, but distortions in the wage structure may cause unemployment.

The Pope shows an awareness of changes in corporate organization, and his view—that "immense power and despotic economic domination is concentrated in the hands of a few, and those few are frequently not the owners, but only the trustees and directors of invested funds, who administer them at their good pleasure"—might have been taken out of the report of the Temporary National Economic Committee. The concentration of economic power is not only a threat to domestic order but to international peace. Few secular documents contain as sharp an assault upon free competition, nor is it often stated in language as direct and simple.

In dealing with socialism the Pope recognized the changes that had taken place since the 1890's, and some of his observations foreshadow the evolution of the third force which has played an important role in stemming the Communist tide after World War II. After World War I the Socialist movement became divided into hostile factions. The seeds of this division had long existed, for in the Socialist camp were found extreme revolutionaries as well as moderate reformers. The victory of bolshevism in Russia in 1917 ended the artificial unity. Extreme Socialists began to call themselves Communists, while the moderate Socialists retained their old name.

From the beginning the Socialists opposed dictatorship, the one-party state and suppression of minorities. Moreover Pope Pius XII recognized that their emphases upon human dignity and moderate reform rather than revolution "often strikingly approach the just demands of Christian social reformers." While still critical of some of the doctrines advocated by Socialists, the Pope saw the reasonableness and the utility of many of their demands. "For it is rightly contended that certain forms of property must be reserved to the state, since they carry with the man opportunity of domination too great to be left to private individuals without injury to the community at large." While specific criteria are not laid down, the Pope states that same types of industry might have to be nationalized. The test in this instance is not that nationalization is in itself desirable, but that private controls over some areas of economic life allow some people too much power over others.

CONCLUSION

Both Rerum Novarum and Quadragesimo Anno show a keen insight into the problems of their time. Both encyclicals stress reform by moderate means. While they denounce the doctrines of laissez-faire, they see great evils in the complete subordination of the individual to an all-powerful state. The method of achieving improvement in economic relations is through groups such as trade-unions, and laws directed against specific evils. There are no all-embracing panaceas, but readers of the encyclicals, irrespective of religion, can find there eloquent appeals in behalf of justice and human dignity. In Quadragesimo Anno the Pope sensed the crucial issue of the century: Whether men are to remain free or be swallowed up in a new slavery. He extended the hand of fellowship to all men desirous of correcting the evils of our industrial society and at the same time holding fast to the traditions of human liberty.

Will Americans Be Enslaved?

EXTENSION OF REMARKS
OF

HON. PAUL W. SHAFER
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1950

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks I include a radio address delivered by me over WJR, Detroit, Mich., April 14:

Ladies and gentlemen, it is my belief that you, as free men and women under the Constitution, have awakened to what is being done to our liberties and our free institutions by political freebooters; a group of men who have stultified the principles of their political party; a group of men who would enslave us all under the dead hand of socialism, while continuing to protest a tender regard for our social and economic welfare.

Most of you have lived through the period in which Soviet Russia has pursued a policy of Communist expansionism which today threatens to engulf the entire world in a new total war. Many of you will recall that before the end of the First World War the Russian Czar fell before the onslaught of men who called themselves Socialists. You may recall that these men set up a revolutionary government which they called a Socialist government.

You may recall, too, that the necessities of the Socialist state led on, within a few years, to the Communist state, with its excesses of summary arrest, torture, and imprisonment without recourse to courts of law, forced labor in political slave camps, and a general reign of terror.

The history of Russia since the fall of the czars has proved to all the world that socialism is merely the last stage on the road to communism. We have seen how the Labor Socialist Government of Great Britain has led that once great nation to the brink of political, social, and economic disaster.

But here in the United States we have still in power a political party whose aims have been prostituted by the gang in control of it. We have a left-wing administration which is dead set toward imposing upon the American people exactly the same socialism which has come near to destroying the British Nation and which led to communism in Russia. Many things now going on in Washington offer proof positive that this is so.

Most significant of these proofs—to my mind at least—is the fact that known Communists and hordes of Communist fellow travelers have been, and are now, harbored in various executive departments and agencies of the Government. Not only these, but hundreds of men whose unmentionable crime against the social order render them easy prey to blackmailing Communist spies, both in and out of the Government.

None of you, I trust, has forgotten the Alger Hiss case, nor the so-called Amerasia case, in which the FBI seized hundreds of top-secret Government documents connected with national security, which had been stolen and transmitted to the New York offices of the left-wing magazine called Amerasia. The editor and owner of that publication escaped with a small fine; others escaped scot free. But it looks now as if the Amerasia case will be reopened, with frightening revelations to be expected.

Neither, I trust, has any one forgotten the Fuchs case, wherein an American scientist in England gave the hydrogen bomb secret to the Russians and was imprisoned for a term of 15 years in a British prison.

Yet, the President has talked about "political red herrings." He has refused to dismiss Secretary of State Acheson after Acheson lost the confidence of the American people by his post-trial support of Alger Hiss.

The President has refused point-blank to permit the FBI, the State Department, and the Departments of Army and Navy, to open their security files to the Senate committee now investigating open subversion, to say nothing of perversion, in the State Department. It is just as if, in a criminal court trial, the defense were permitted to impound and conceal the evidence, and defy the prosecution to prove its case.

The President and his friends cry out that disclosures by Senator MCCARTHY discredit this country abroad. They should have thought of that long ago, when they were permitting Communist infiltration of the Government departments and agencies.

At the beginning of this broadcast I made the assertion that the gang in control of the Democratic Party, and hence of the Government, seeks to impose socialism upon the American people. This raises the question of how they are going about it. The answer, of course, is not difficult. They propose to do it by means of what they call the welfare state. The poorhouse state is a better name.

The welfare state is touted as pure democracy—pie right out of the sky for the labor unionist and his forgotten white-collar brother. As a matter of fact, it is pure socialism, of the Fabian English variety. The welfare state is a state of regimentation for everyone. The welfare state is a state of slavery in the long run, because it is the precursor of communism.

Now the technique whereby it is sought to impose welfare statism upon the American people has two parts. The first part consists of persuading the people that the Federal Government can do better for them the things they always have done for themselves as freemen. This doing consists of subsidies for industry and business, pensions for everybody, free medical care, more and more pay for less and less work by Federal law, Federal grants to municipalities and States in lieu of the money from tax sources the Federal Government has taken away from them.

The second part of this technique consists of more and more taxes—you get the point; more and more pay with which to pay more and more taxes. Less and less work, of course, means fewer and fewer things people can have to enjoy. Taxes now take nearly 37 percent of all individual incomes, and at least an equal amount of corporate incomes. When the tax take exceeds 40 percent, economists point out, people will not have enough income left to pay for a decent standard of living without Federal Government help.

We see these things going on all about us. We all know about the subsidies, the pensions, the grants-in-aid; and we hear about the proposals for free medicine, Federal aid to education, vastly increased social-security coverage. We know that the country today is staggering under a well-nigh insupportable burden of taxation; and we know how the Fair Dealers fight against Republican proposals to reduce excise taxes. We hear the President's demands for higher income taxes with which to pay the prospective costs of his Fair Deal program.

In the light of these things, do you have any doubt that Fair Deal welfare state-ers plan eventually to pauperize the people, to reduce them to helpless dependence upon the state? Have you any doubt that they plan to render the people willing to depend upon the state by telling them that Uncle Sam's purse is inexhaustible and that the bureaucrats are good-hearted fellows who seek only to make life easy for the populace? I hope—I believe—you are not fooled by the talk about the welfare state. It would be a poorhouse state, indeed.

It is my conviction, too, that all of us now understand that when the Federal Government takes in taxes, the money people need for every day living, when the Federal Government takes in taxes the money needed by business and industry for their ordinary operations, then economic chaos results. Then the time comes, as certainly as night after day, that the Government takes over all capital, all means of production, all personal property, all real estate, everything, in order to keep the national economy running.

This means socialism, pure and unadulterated. Americans no longer would be free. No man is free when his earnings are confiscated, and the ordinary necessities of life are obtainable only through the favor of bureaucratic officeholders.

Some of my listeners may disagree with me as to the excessive tax burden. Let me point to the undeniable fact that the average wage earner, with a family of four to support and earning $1,800 a year, now works from January 1 to April 28, just to pay his Federal taxes. Only after that is he free to turn a hand for himself and his family. It takes an average of another month's earnings to pay State and local taxes.

Nearly 5 months' earnings go to the tax collectors. But even then, the earner is not entirely free of taxes. Hidden taxes, excises on goods and services, and the like, take about 18 cents out of every dollar he has left. Small wonder so many people in this high-wage era find it hard to get by, debt free at the end of the year.

Yet in the face of this, President Truman submitted to the Congress a 1951 budget totaling $42,500,000,000, or approximately $5,200,000,000 more than the estimated Government income of $37,300,000,000 for the year. Then in addition—and this is something few people have been told about—his budget included $9,200,000,000 in so-called contract authorizations. These are authorizations for such Federal agencies as the Army engineers and the Reclamation Bureau to spend in advance of congressional appropriations. The money is spent in the same sense that each of you spends $2,000 or more when he contracts to buy a new automobile. You do not have to pay all of it today, but you surely will have to pay it over a number of tomorrows. You cannot use the money for anything else.

On this basis, next year's deficit might have reached $14,400,000,000, if Congress had not acted to cut down the total. The present year's Government deficit will be in excess of $5,000,000,000, in spite of the budget cutting done last year.

Now it is worth while to consider the impact of the "squandermania" of the Fair Deal; to consider where it is most severe. You, Mrs. Housewife, know where that is. The inflationary spending of the Fair Deal hits hardest at your household expense fund. You know that New Deal and Fair Deal spending, even more than the war itself, have cut the buying power of the dollar in half. A dollar buys today little more than half as much in food, clothing, shelter, medical care, and amusements as it did only a few years ago.

Do you think, perhaps, that things are going to get better? If you do, you are mistaken, so long as the present spending policies are continued. This spending, in largest part, is made possible by the taxes you pay without knowing about them, at the grocery store, the meat shop, the drug store, and everywhere else you go on your shopping tours.

Of course, there is a way to correct these evils. The Republican Eightieth Congress

set up the Hoover Commission on Reorganization of the Federal Government. The Commission recommended the changes that should be made for economy and efficiency in government, and for the preservation of our freedoms. But has the Fair Deal administration given anything more than lip-service to the Hoover program? It has not. The President's effort to hamstring the Taft-Hartley Act, the true magna carta of American labor, by putting all National Labor Relations Board power in the hands of a single Presidential appointee, is an example. This was because Congress had refused to repeal the Taft-Hartley Act. Congress knew that the act, in truth, is not a slave-labor law but is a law which sets labor free to run its own business, without the dictatorship of dishonest labor leaders or dishonest industrial management, in those instances where they exist.

So there you have it. The Fair Deal plays footsie with Communists, and defends and supports Communist stooges in the Government. The Fair Deal would impose socialism upon the American people, first by pauperizing them and then by rendering them wholly dependent on the Federal Government. The Fair Deal refuses honestly to put the Hoover recommendations into effect, because that would prevent realization of the Fair Deal's socialistic aims.

A national election was won in this country, once upon a time, with a slogan which said: "Toss the rascals out." Possibly that should be the campaign slogan of the American people this year and in 1952.

Dr. John C. Ball

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. RANKIN. Mr. Speaker, I desire to pay my humble tribute to one of the finest Christian leaders I have ever known, Dr. John C. Ball, pastor emeritus of the Metropolitan Baptist Church, here in Washington, who passed away last night, at the age of 87.

I have known Dr. Ball intimately for a long time, and my admiration for him has grown with the passing years.

He was converted by, and for a long time associated with, Dr. Russell H. Conwill, one of the most outstanding evangelists this country has ever known, whose famous lecture "Acres of Diamonds" will ring down the centuries.

I realize that owing to his extreme age, Dr. Ball's passing was not unexpected, but it will be difficult indeed, if not impossible, to ever replace him.

Many years ago, I was rambling through the Georgetown Cemetery, here in Washington, when I came across the tomb of Howard Payne, the author of Home Sweet Home. On it was a little verse which, to my mind, applies to Dr. Ball.

It went something like this:

Lo, when his blessed spirit fled
To realms beyond the azure dome,
With outstretched arms God's angels said
"Welcome to Heaven's Home Sweet Home."

The Great Need: An Informed Opinion

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. JACKSON of Washington. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD an article by Mr. Lester Markel, Sunday editor of New York Times, entitled "The Great Need—An Informed Opinion," which appeared in the New York Times magazine on Easter Sunday, April 9.

As Mr. Markel points out, the problems and issues with which America, as the leader of free nations, is confronted, are more complex and difficult of solution than ever before in our history. Mr. Markel deals here primarily with international problems, but our domestic affairs are no less complicated.

Here in Washington it is at least possible to get hold of a good many pieces of the puzzle of world affairs, and to put a few of them together. Even then, the picture is far from complete or clear.

The picture is portrayed to the Nation primarily through our daily newspapers, which, often of necessity, chop it up into small pieces, which are displayed irregularly. The bright colors of the spy scares and the crimes are made most prominent, while the more drab details of the picture—which may be more important to an understanding of the whole picture—are often cast aside or shoved off into a corner.

Very properly, Mr. Markel picks out Members of Congress as one group which can and should bring to the citizens of America a picture of the problems they must consider in which at least some of the pieces have been put together so as to be intelligible. I believe that the American people want, need, and deserve leadership. During the summer months, every Member of this Congress will be seeing and talking to great numbers of Americans. I hope that we will all heed the lesson of this article. I hope that we will all take the facts of the world and the national situation back to our constituents.

THE GREAT NEED: AN INFORMED OPINION—WE HAVE ALL THE EQUIPMENT AT HAND FOR GUIDANCE AND LEADERSHIP, BUT WE MUST PUT IT TO USE NOW

(By Lester Markel)

In the year 1 of the hydrogen age, Washington is beset by uncertainties. It is unsure about the world; it is unsure about the Nation; most of all, it is unsure about itself.

This indecision is not unique to Washington; it is characteristic of the age. From the beginning of history, man has been largely preoccupied with the task of controlling nature. Now, long before that task has been completed, he is confronted with another and even more difficult one—the task of controlling man.

Everywhere there is this uncertainty. Even in Russia. At midnight in the Kremlin, the 13 stern, secretive men must have their misgivings and their doubts, too. But Washington's indecision is far more meaningful than the indecisions of other capitals, because it is the capital of the free world, representing power such as history has never before known and making judgments that will reach far into the future.

Washington's mood is a reflection of the mood of the Nation; its indecision means that the Nation, too, is unsure. The Capital tries to discover and to anticipate the wishes of the voters. Now it feels it has no clear directives and it gropes for them.

But the Nation does not have, in the vital area of foreign policy, either the information or the compulsion to give clear directives. There are disturbing reports: that about 3 out of 10 voters are unaware of almost every effort in American foreign affairs; that only 25 out of every 100 voters are reasonably well informed. This means that the Nation is likely to move by emotion rather than by intelligence; by prejudice rather than by conviction; that it may be deceived into wrestling with bogies rather than grappling with facts.

It becomes clear that the great need is the education of American public opinion; it becomes clear, also, that Washington is required to lead, not merely to follow; to search out the minds, not solely the votes, of the Nation.

The atmosphere of the Capital today impresses on the visitor the proportions of the task.

I. THE POLITICAL SHADOWS

Washington is unique among the great capitals of the world. London suggests the black and gray of empire—Paris echoes with the memories of the Sun King—Rome is both an imperial city and a religious city. These capitals dominate government. But in Washington Government dominates the city; there the political rather than the global view is apt to prevail.

At no time has this preoccupation with politics been more apparent than it is today. The elections of 1950 and 1952 are casting their murky shadows before; the politicians are searching feverishly for paramount issues.

The capital is a vast listening post, straining its ears and nerves to catch every whisper throughout the land. It has devised a large assortment of apparatus, scientific and otherwise, to tune in on the men in the streets—polls, overt and covert; personal pipe lines; correspondence with constituents; conversations over fences in process of being mended. In view of the vastness and diversity of the currents that run through the Nation one wonders how effective is all this activity. Nevertheless Congress has distilled its samplings into certain basic beliefs.

On the domestic side, three predominate: beliefs in the pocketbook vote, in the pork barrel and in the balanced budget. Congress is likely to cut any international fund in favor of a domestic bounty, even though it may be more than half convinced of the dangers of such a cut. In the deep recesses of the pork barrel the balanced budget concept is often lost.

In foreign affairs, also, there are certain cardinal credos: an instinctive suspicion of foreign lands and foreign peoples; a belief that the Europeans play us for suckers; a deep concern about China—a reflection of a sentiment that echoes back to our missionary days and to our special role in the Pacific war. Russia evokes both vast distrust and vast anxiety; as a result there are startling ranges of sentiment, from demands for atomic intervention to proposals for quick appeasement.

Congress has much more assurance about domestic affairs than about foreign; there-

fore it has always looked with some suspicion on the State Department. Moreover, the Congressman has always been inclined to view State Department personnel as outsiders—foreigners dealing in foreign affairs; "cookie pushers," "long-haired boys," certainly not folks. There has been also a feeling that Congress was being disregarded—"snooted" is the word on Capitol Hill.

Now there is inquiry—searching, unrelenting inquiry—into the ideology and morals of the Department. At a moment when our most momentous international decisions face us, foreign policy has become a focal point in the political struggle. The overtones and the undertones of that struggle are clearly heard at the current hearings.

The observer, attending one of these sessions, has the curious feeling that he is sitting in at the production of a television show, rather than at an inquiry. The newsreel men and the photographers seem to dominate the proceedings, moving freely about the chamber, exploding their bulbs with complete extroversion. The cameras hum at the sensational moments; in periods of calm refutation they are likely to be silent.

You wonder whether the answers ever catch up with the charges; whether any of the accused, no matter how convincing the defense and how complete the vindication, will ever again be fully clear of smirch. You ask why any man should seek public office if he is likely to be subjected to this ordeal by fire, ink, and film. These may be part of the processes and the rumbling of democracy, but you understand why there are demands for curbing such licenses, especially in time of emergency.

Emergency? Many in Congress do not seem to recognize it through the mists of politics. But in the sensitive departments of the Government, the observer comes upon problems and questions that give the word sharp impact.

II. THE VITAL TRIAD

In foreign affairs, this is Washington's vital triad: State, defense, and ECA—diplomacy, arms, and economics. The three are closely related; action cannot be taken in one area without affecting the others.

The men who head up the three departments provide three absorbing studies. If, in painting your Washington portraits, you are not bothered about oversimplification, you might characterize the three this way: Acheson, the intellectual man; Johnson, the political man; Hoffman, the businessman.

In Mr. Acheson the visitor feels a deep conviction about our international role. It is, he holds, a tremendous responsibility; the rest of the free world depends on us, is sustained by us; a weakening on our part is likely to bring down all the others. The Russians see this clearly and try their utmost to create confusions and fears among us. We must see it just as clearly. He quotes Donne; never was it more true that if the bell tolls for one it tolls for all men.

You soon discover in the Secretary his quick intelligence. You suspect this gets him into trouble, because though he may not mean to condescend, he seems often to be condescending. Perhaps statesmen should learn to hide their brightnesses under bushels lest their light dazzle those with whom they deal and so lead to accusations of superiority.

These are trying days for State and for Mr. Acheson personally. This is not the kind of fight he has ever had to make before, this sheer, unashamed onslaught. Yet, he seems to be facing up to it squarely and without flinching. The question is whether he can communicate to the Congress and to the country the feeling that his manner masks.

Secretary Johnson, the political man, would have less difficulty in countering this kind of barrage. He has been brought up in the rough-and-tumble of the political ring and he is accustomed to this kind of ruction.

The diplomatic operation is, to be sure, one much more delicate than the defense operation; the ingrained discipline of the military cannot be expected of State. But, as Mr. Johnson emphasizes, they are both part of the same over-all strategy; the military problem cannot be separated from the diplomatic or economic. It is one team, he says, and it is working as one.

Mr. Johnson expresses complete confidence; he is, he says, a born and insurable optimist and you believe it. He holds that our defenses are good and that unification is being achieved.

Yet the visitor is conscious of the large problems that concern the Pentagon. How much shall we spend on defense? What sort of defense shall it be? Again the observer realizes that there are many more questions than answers in Washington.

Some of the toughest of these questions are put to Paul Hoffman, who has moved so amazingly from big business into big diplomacy. When you call Mr. Hoffman the businessman in government, the phrase should be carefully defined. He has always been a leader in the most enlightened group in industry. He has always believed and continues to believe in enterprise as unfettered as possible, but he holds that this freedom cannot be maintained at the expense of other freedoms and that business must be ready to make sacrifices, for its own and for the public good.

The first of the ECA assignments is to work out an economy for Europe and so save it from communism. The Marshall plan has succeeded beyond all expectations, but as Mr. Hoffman is the first to point out, many dangers remain. The great shadow is the year 1952 when Marshall-plan aid will end, even though the need will continue. So there is now a second assignment of equal importance: to persuade the American people and especially American business that our economic isolation, like our political isolation, is forever ended.

There is no complacency in these key departments. As there is no complacency in any part of a world groping in a new kind of darkness.

III. THE BASIC ISSUES

To these makers of our foreign policies you put this question: If the American people were really informed, if they were reaching sound decisions, what would their conclusions be? These are the answers you get:

Atomic weapons?

The H-bomb cannot win for us. We cannot gain a real or a lasting victory through force. We can gain it only through ideas. We are involved, as Mr. Acheson puts it, in a basic moral conflict, a conflict of the human spirit that must go on until it is settled.

War with Russia?

This kind of struggle does not mean hot war with Russia. The Russians, cut off as they may be from the world, must realize how great is our industrial machine and how quickly it can be mobilized; the lesson that Hitler learned is surely not lost on Stalin. But this does not mean peace. We must prepare our defenses unstintingly and we must exert what Mr. Acheson calls total diplomacy, total effort in the political, the economic and the psychological fields, until the Russians recognize our firmness of purpose and come to terms.

Help for the world?

We must be ready to pay, with money and in energy, for world peace. The cold war is economic rather than political or military; communism prevails only where conditions are such that men turn to it as a last resort. Thus we must be prepared to provide aid to Europe beyond 1952 and to give generous support to point 4, which means help for the rest of the democratic or potentially democratic world, especially the Far East. We must realize that these appropriations are not charity for others but insurance for us. And, as Mr. Hoffman will point out, they are relatively inexpensive programs; for example, the cost of ECA, designed to prevent war, is about $850,000 a day; in 1945 World War II was costing us two hundred and seventy millions a day.

Our economy?

We must be watchful of our economy, for this is our basic defense. Russia counts on the "inevitable decline" of capitalism, rather than on military marches. There is danger (and Mr. Johnson emphasizes this) that the military budgets will become so large that our economy will be thrown out of kilter. The delicate balance must and can be maintained; we must not allow the Russians to stampede us either into overspending or cajole us into underspending.

And tariffs?

We have to learn the economic facts of life; that we cannot exist in economic isolation; that we cannot sell without buying; that tariffs may become hazards instead of protections. Mr. Hoffman urges that we take more of the products of Europe. That does not mean any great expenditure; it is estimated that to close the dollar gap we need to increase our imports by only a billion dollars—which is less than four-tenths of 1 percent of our national production. The real solution lies not in restrictions on trade but in opening up new markets (in brief, by the application of point 4).

Our attitude?

We must learn to be humble, to walk softly even though we carry a big stick and possess 60 percent of the world's gold. Agreed that our democracy is the best form of government yet devised, nevertheless it is not yet perfect. Even though we believe we are right and, more, that we are righteous, a good part of the world is still suspicious of our motives—and we must do our utmost to dissipate that suspicion.

The cold war?

Above all, we must avoid hysteria in our conduct at home and in our dealings abroad. We must not make the Nation fearful and suspicious through witchhunts, either ideological or political. We must have a genuinely unpartisan foreign policy; we must make our international decisions calmly and convincingly. Cold war calls for cool heads.

To the listener, impressed with the conviction with which they are given, these analyses and these injunctions seem right and almost obvious. Why then, he asks, does not the Nation recognize and accept them? Or at least why does not the Nation debate them in these terms, without emotion and without prejudice?

Is it because the people are apathetic as well as poorly informed? Or is it because the issues have not been made clear to them? There are many signs that this last is true, that the people are seeking facts; that, if they had them, they would eagerly respond; and that, in instinct, even now they are ahead of their leaders.

It may well be, therefore, that the essential problem confronting us is the problem of leadership.

IV. THE LEADERS

These are the three great educating forces in public opinion: Government, press, and citizen groups. They are like streams moving in to form a river; individually they are weak; united they are potent.

In the formulation and explanation of foreign policy, the President obviously is the prime figure. Because of the development of mass communication, he has attained great power, for good or for evil. If he can speak eloquently and convincingly to the Nation, he will win full support.

The Secretary of State likewise can exert a wide influence. To his desk each day are channeled reports from all over the world; he, more than anyone else, has the opportunity of acquiring the global view. If his is a strong personality, his advice will be the main mold of the President's international decisions. And he, too, has ready access to the presses and the microphones.

Lately there have been signs in both White House and State that the need for educating opinion is having increased attention. It is being recognized that, without public support, the best of programs can be too easily scuttled.

In the State Department especially the effort is noticeable. That is as it needs to be, for the State Department—our Foreign Office (as Mr. Acheson is likely to call it), the GHQ of our international forces—is responsible for the day-by-day formulation of foreign policy and for the decisions as to how much of it shall be made known to the country and when and in what form it shall be published.

The State Department has always been inclined to regard itself as largely outside the congressional purview and beyond the public gaze. The white-shuttered doors in the old baroque structure opposite the White House were almost symbolic—combinations of iron curtain and Victorian barrier. When State, some 3 years ago, moved to its present building—a khaki home built for the Army—those doors were figuratively moved with it.

Only now, after long years and under steady pressure, the passion for secrecy is slowly yielding. Mr. Acheson believes, too, that the great problem is to make the people aware. He has begun a series of talks to explain foreign policy to the Nation. In this effort, he says, he feels at times like a man standing on a dock with an oar, trying to make the dock move. Perhaps he exaggerates the task, but it is surely a formidable one.

Because of the size and complexity of the problem, there is a strong feeling in many quarters in Washington that the opinion operation must be more extensive, that it must be infused with larger elements of system and continuity.

The suggestion is made that the fireside chat formula be revived. It is argued that, with the country as uncertain as it is, these reports to the Nation are as urgent now as in the time of Franklin Roosevelt. It is proposed further that the Government supply to the media of mass communication a full measure of information—which means the facts plus the background needed for understanding. This would be done through press conferences and generally through a news policy as liberal as the requirements of diplomacy permit. Certainly the press should not be regarded as an imposter sanctioned by the Bill of Rights, but as an agent of the people and as a reporter to the people.

The Members of Congress can also make their contributions, through speeches and through explanations to constituents. Some of them do. But too many are engaged only in the vote-hunt. They talk as though they are moving to the lofty realms of leadership, but they never raise their ears from the ground. It is a neat trick if it can be done.

There is much, then, that Government can do to inform and to lead. But even if it speaks frankly to the Nation, even if it briefs the press fully, it cannot do all of the job or nearly all of it. The enlistment of the other agencies of illumination in the effort is vital.

Education, it is contended, should be linked more closely with the outside world so that the present will be made as intelligible as the past and that the future will not be blackness. World affairs should have a definite, not a casual, place in the curricula of our schools and colleges. Adult education should join in the operation; and the citizen groups also—the public forums, the women's clubs, study groups of various kinds.

The newspaper has an especially important role. We have a free press, but we have yet to develop a fully responsible one. Too many newspapers are preccupied with entertainment and lose sight of the basic reason for their being, as disseminators of the news. The smaller newspapers, daily and weekly, can be a much more effective factor in opinion if they will undertake to interpret programs such as the Marshall plan and Point Four in terms of the Main Streets they cover, instead of depending for such interpretation on the cosmic columnists.

Radio and television, too, have assignments to fulfill. True, they are primarily entertainment media (in contrast with the newspapers), but they also are endowed with public service aspects and so they, too, are required to maintain high standards of objectivity and responsibility.

The task, then, that confronts us is a gigantic task of education, almost a crusade, requiring the mobilization of all the forces of potential enlightenment—Government, mass media, schools, the instruments of adult teaching.

This means, basically, that in all these fields leadership is essential. It is important that we define clearly what leadership means. What, emphatically, it does not mean is the fuehrer principle. In a dictatorship there is the word and then the march; fiats are substituted for public opinion. In a democracy there must be understanding and conviction; there will not be blind support of a policy proclaimed from above.

The real leader explains and persuades. And he inspires. He does not wait to be forced onward from behind; he chooses the course which, in his judgment, is right and he holds to that course, no matter what the politicians and the commentators shout.

V. THE WHITE FAITH

There must be leadership, but there must be response to leadership also. In time of actual hostilities, when dangers and fears are concrete and immediate, the citizen will answer the summons. The cold war may not be as dramatic as the hot war, but it is surely as fateful; it requires of the citizen an effort as unstinting as that of 1917 or 1941.

There is the story of Michael Shipkov, employee of our legation in Sofia; he was captured by the Communists; he was then released to spy in the legation, instead he prepared a statement describing his imprisonment, to be published if he were captured again, he was captured again and now he has vanished into the darkness of a Communist cell.

In that statement Shipkov wrote of those who questioned and tortured him: "They are disciples and fervent followers of the dogma. Not much imagination, nor quick brains nor much intellectual baggage nor sensitivity—but undeviating loyalty to their creed, fanatic belief in their own cause, fanatic hatred and mistrust of anything else."

"Fanatic belief in their own cause"—there is the challenge. We must feel as strongly about democracy, about our cause, as these Communists feel about theirs; we must build a white faith to counter the dark one that confronts us.

There is a basic strength, and a basic unity in the Nation. In the long run our decisions have been right; we have come through in the crises. If there is leadership, and response to leadership, there are no reasons for doubt now.

"One person with a belief," wrote John Stuart Mill, "is a power equal to 99 who have only interests."

Belief is the key word—the belief that derives from conviction and from courage; the faith that alone dispels fear and indecision.

Closing of Army and Navy Medical Facilities

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. GAVIN. Mr Speaker, on the 15th of February, the Secretary of Defense announced the imminent closing of a number of Army and Navy hospitals and medical facilities, and the reduction of others. According to the press release, and statements of officials, the purpose of this move was to save money by inactivating installations no longer required for military personnel, veterans, and other authorized patients, and the consolidation, where practicable, of other facilities. Claims of large savings in cost were made on behalf of this move.

Like many other administrative actions, this important step was directed without any prior notice or consultation with the Representatives in Congress, even those on the Armed Services Committee, who are supposed to represent the people in formulating the policies of the Military Establishment. The chairman of our committee, the Honorable CARL VINSON, has remarked at length on certain matters concerning the functions and responsibilities of the Congress. In this case, he appointed a special subcommittee, headed by Congressman L. MENDEL RIVERS, of South Caroline, to inquire into this proposed action. Meanwhile, he requested the Secretary of Defense to defer carrying out this measure until the committee had examined into the matter and made a report. Secretary of Defense Johnson was unwilling to defer action on this proposal, but did agree that none of the equipment and properties at the hospitals to be closed would be transferred, pending the outcome of the investigation.

I am, of course, in full accord with any proposal which will achieve real economy in the operation of our Government and save money for the taxpayers. However, as soon as the committee began its investigation, the amount of savings to be made began to shrink. It has now practically disappeared. What savings are achieved will apparently be made at the expense of medical care afforded our service men and women, their depend-

ents, and the facilities available for the treatment of disabled veterans of World War I and World War II. This is an odd, and I think, an inappropriate place to begin saving, especially after the House has so recently approved expenditures of nearly $3,000,000,000 in foreign aid for the next fiscal year. Apparently, there is ample money to rehabilitate the factories, oil refineries, transportation systems, and tourist hotels in Europe; there are funds to rehabilitate the economy of Japan; there is ample cash to develop the so-called backward areas; and there is no shortage of credit or aid for the Koreans, the Chinese, the Iranians, or any other group—except for the defenders of our country, their dependents, and the veterans of World Wars I and II. This is not a partisan issue, and I do not desire to approach it on that basis; but I am totally unable to comprehend the reason or justification for seeking an illusory and unreal economy in this field.

The hearings of the subcommittee held in Washington developed conclusively that the reduction in medical facilities and care had been directed without any prior consultation with the Surgeons General of the Army, Navy, and Air Force, or with Admiral Boone, whose distinguished record and outstanding capabilities were evident when he testified before our subcommittee. The best that can be said for this closing order is that it was hastily conceived, on the basis of inaccurate data and incorrect or outmoded statistics. While some mistakes and errors of judgment are inevitable during the course of war, or in time of emergency, this present program is a piece of stupidity, with no necessity or justification, 5 years after the end of the shooting war.

The subcommittee which I mentioned has also made two trips, one to the Middle West, the Pacific coast and the South, and a second to Pennsylvania and New England. While I was not able to go on the first trip, I did visit Valley Forge General Hospital, near Phoenixville, Pa., and Murphy General Hospital, near Waltham, Mass. At the latter point, we also heard representatives from the United States Naval Hospital at Portsmouth, N. H.

VALLEY FORGE GENERAL HOSPITAL

On April 3, the subcommittee talked with the commanding officer and staff of this hospital, and had the benefit of hearing several eminent physicians and surgeons who serve as consultants in various fields for this hospital. These men testified that Valley Forge General Hospital has been a major facility for ophthamologic—eye—surgery, and plastic surgery for the Army and the Air Force. I need not remind you that such work requires the highest degree of professional skill and competence and requires hospitalization for an extended period. In addition, Valley Forge General Hospital has been preeminent throughout the Nation in the conduct of the controlled research on infectious hepatitis. This disease, commonly known as yellow jaundice, resulted in over 400,000 cases during World War II. Operations in the Southwest Pacific, especially New Guinea and Guadalcanal, were at one time seriously handicapped by the numbers of men disabled by this disease. I am told that at the peak one division had 7,000 men sick from this condition. In Italy, during the fall and winter of 1943, yellow jaundice was a major problem of our forces, and resulted in more hospitalization than battle casualties. According to the testimony of the eminent physicians who appeared before our committee, the period of hospitalization is from 30 to 60 days. It is obvious, in view of our numerous cases during World War II and the extended time during which victims were unable to perform duty, that the control and conquest of this disease is of major military importance. Some progress in the research necessary to its control has been made; but the Surgeon General of the Army and the consultants at Valley Forge General Hospital both assured the committee that the problem is not yet solved. In view of this, and the emphasis which is being placed on research and development in other fields, it seems incredible that the Department of Defense would close the only institution where advanced work of this type is being carried on for the Army and the Air Force, with the sponsorship of the National Research Council.

So far as the buildings and facilities at Valley Forge General Hospital are concerned, it may be noted that this institution was built during the latter part of 1942 and opened in March 1943. Construction is generally of brick facing, on concrete- or cinder-block base. At a rate of 100 square feet per patient, the capacity is 1,700 beds. On the basis of 72 square feet per patient, it is 2,000 beds, and with the use of some temporary shelter it could care for a wartime patient load of over 2,500. Prior to the order of February 15, Valley Forge General Hospital had an authorized operating capacity of 1,650 beds. When it was built in 1942–43, this hospital cost a little over $10,000,000; to replace it now would probably cost two or three times that amount. Since the end of hostilities of World War II, Valley Forge General Hospital has been thoroughly overhauled and reconditioned. During the period July 1949 through January 1950—just 6 weeks before it was ordered closed—$635,000 had been spent on the plant. New roofs have been placed on several buildings, copper water lines have been installed, a new diet kitchen has been built at a cost of $100,000, and the interiors of the ward buildings have been redecorated at the cost of another $100,000. In addition, application has been submitted, through the Department of the Army, for the approval of a FHA housing project, under Public Law 211 of this Eighty-first Congress—known as the Wherry Act—to provide essential accommodations for military and civilian staff. Projects of this type are limited to those on or in the vicinity of permanent installations; and so far as anyone knew, Valley Forge General Hospital is in that category.

As to the work this hospital is performing, there were 1,460 patients on January 31 of this year. Nine hundred and sixty-two of these are Army and Air Force personnel on active duty, 4 were retired, 163 were veterans, for whom the Department of the Army was reimbursed, and 70 were dependents of military personnel. Of the above number 233 were neuropsychiatric patients, of whom over 175 were in closed wards for the protection of themselves or other people. Most of these psychiatric cases are ultimately transferred to the Veterans' Administration, but that agency has inadequate facilities now in Pennsylvania to take care of such cases and it is compelled to contract out to private mental hospitals and sanatoriums for care of numerous veterans. Two veterans with service-connected mental disorders were recently burned to death at the tragic fire at the Bella Vista Hospital, near Philadelphia, where nine patients lost their lives.

As I stated before, there are no facilities to take care of many of these patients at the present time, either by the Army or by the Veterans' Administration. The committee also inquired as to the possibility of institutions in Philadelphia providing necessary hospital care for servicemen and dependents. We were told by well-informed civilian physicians and surgeons that the Philadelphia hospitals are now overcrowded, and that doctors wait up to 3 weeks before patients can be admitted for ward care and up to 3 months before private or semiprivate rooms are available. Even if such facilities were available, the dependents of enlisted men, many of whom receive salaries of $100–$150 per month, would be unable to pay the cost of such hospitalization.

Finally, in considering the effect of closing Valley Forge General Hospital, it is necessary to consider the impact on the training program of the Medical Corps of the Army and Air Force. If that organization is to furnish first-class care to individual service men and women, it must attract able graduates of medical schools. This can only be done by affording adequate opportunities for professional training and experience. Located, as it is, upon the outskirts of Philadelphia, where there are three outstanding medical colleges, Valley Forge General Hospital was very favorably situated to obtain the services and instruction of highly-qualified physicians and staff doctors for teaching purposes. As of the end of February, there were 27 interns participating in residency training programs, in some six special fields at Valley Forge General Hospital. In addition, there was a rotating internship program, with 11 Army interns and 4 Air Force interns. The effect of terminating such training programs cannot be other than adverse with respect to the recruitment of medical officers for our armed services.

In summary, any savings effected by the closing of Valley Forge General Hospital will be at the cost of medical care furnished our service men and women, research in vitally important fields, reduction in the limited care now available to veterans, and curtailment of the recruiting and training program of medical

officers. I cannot believe that this is the proper area in which to begin Government economy.

MURPHY GENERAL HOSPITAL

The situation at Murphy General Hospital is much the same, while Murphy General Hospital is an institution with the bed capacity of only 471, is similar in that it is situated on the outskirts of Boston, and has available the professional services of eminent doctors on the faculties and staff of the medical schools in that metropolitan center.

Murphy General Hospital is the only institution of its type operated by the Army or Air Force in the entire New England area, where there are 19,000 service personnel on active duty. In addition, there are substantial numbers of dependents and retired personnel, and during the summer large numbers of Reserve and civilian component personnel on active duty. The work of this hospital has been largely in orthopedic surgery, particularly that involving or requiring the use and fitting of special footwear. Boston is, of course, the logical center for such work, and many cases have been transferred there from other hospitals.

During the past 2 years the Surgeon General of the Army in an effort to develop plans for more efficient utilization of our personnel resources in time of war has conducted at Murphy General Hospital a program of utilizing members of the Women's Army Corps and Women's Medical Specialist Corps to the maximum extent practicable in replacing male personnel. When one considers the shortage of military manpower which developed in this country during the last war, and the terrible requirements which we would face if we became engaged in another conflict, the importance and significance of such tests and management studies become apparent. The results to date have been very satisfactory, and had this hospital remained open it is likely that the information and data obtained could have been used as the basis or pattern for operations elsewhere in time of war.

The buildings at Murphy General Hospital are of brick facing, on a concrete, or cinder block base, and are in excellent state of repair. The plant has been thoroughly overhauled and modernized in the last 4 years, and is well equipped to meet the needs of that area for a military hospital. It was constructed in 1942, at a cost of about 2½ million dollars; and to replace it at today's costs would probably take at least 5 million dollars. In place of that modern, well-equipped facility located on the outskirts of Boston, with ready access to eminent consultants, transportation facilities, and so forth, it is proposed to rehabilitate and reoccupy several vacant buildings at the former Lovell General Hospital at Fort Devens, Mass. This latter is a wartime, temporary wooden barracks-type installation, built in 1941 and 1942 to last 5 years. Some facilities are now operated there, for 100 patients from that post. Even with a much smaller number, the cost of heating the wards and the buildings there exceeds that of Murphy General Hospital. It is difficult to see where there is any economy in abandoning a modern, well-equipped permanent-type hospital and attempting to rehabilitate worn-out, temporary facilities suitable only for wartime use. Furthermore, it must be noted that the location of Fort Devens, while suitable for a wartime mobilization center, will increase the cost of transporting patients and greatly hinder if not entirely preclude the procurement of consultants from the distinguished medical colleges and hospitals in the Boston area.

So far as the situation with respect to dependents of military personnel is concerned, the situation here is much the same as in the vicinity of Philadelphia. Civilian hospitals are greatly overcrowded; and even where available, the rate for ward care is from $10 to $12 per day, or a private from from $14 to $30 per day, in addition to the other costs and charges involved.

Here again it appears that whatever economies are achieved—and they are very doubtful, if not illusory—will be at the expense of adequate medical care for servicemen and women, retired personnel of the armed services, and their dependents.

In conclusion, we must remember that we are not yet at peace. The present condition has been called a cold war but it is nonetheless a real and bitter struggle against a determined enemy who will not hesitate to use any means at his disposal if assured of success. The President announced some months ago that Russia had apparently solved the basic problems of an atomic bomb. Subsequent disclosures, such as the trial of Dr. Fuchs in England, have clearly shown that the Russians received valuable information and assistance in this line. While I sincerely hope that we shall not be thrown into the horrors of an atomic war, we must, during this period, make our preparations meet such a contingency. During World War II, the Philadelphia area was a major war production center accounting for approximately 10 percent of our total military output, and far exceeding New York City which is principally a shipping and distribution area. A war production center of this importance will certainly be a target in any future war. Distinguished civilian doctors who testified before our subcommittee stated that practically all the hospitals in Philadelphia were in the downtown metropolitan area, or so close that they would in all likelihood be seriously damaged, if not destroyed, by any atomic bomb exploding in that vicinity. Such a condition would call for greatly augmented medical and hospital facilities, outside the bomb damaged area. Under these circumstances, it would appear the part of ordinary prudence, under the present conditions, to retain in operation the only large modern, well-equipped facility able to meet some portion of the heavy load in the event of an attack upon Philadelphia. Valley Forge General Hospital, located some 10 miles from that city, is favorably situated in this regard; and for this reason alone should, in my opinion, be kept in operating condition until our foreign relations are in far better condition than exists today.

The Balance Sheet in Foreign Affairs

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Robert P. Patterson before the New York State Society of Certified Public Accountants at the Hotel Roosevelt, New York City on Monday, April 10, 1950:

It is indeed a pleasure to be with you at this meeting of the New York State Society of Certified Public Accountants.

I have called this talk the Balance Sheet in Foreign Affairs. Since the world is lining up into two opposing camps, the balance sheet could just as well be entitled "Freedom Versus Communism," or even more specifically "United States Versus Russia."

The purpose of the foreign policy Americans believe in and stand for can be summed up, I submit, in the words "maintenance of peace without surrender of freedom." Peace can, of course, be achieved at the price of submission to foreign dictatorship, but it would be the peace of the prison or the graveyard. Life under that kind of peace would be a surrender of civilization itself and hardly worth living. Peace, yes, but not at any price.

If we go back a few years, we recall the hopes held almost universally by Americans at the close of World War II. The menace of Germany and Japan was a thing of the past. The San Francisco Charter had just been signed and the United Nations was on its way. Here was the bright promise of organized world peace. The pledges were firm—the pledge of saving future generations from the scourge of war, the pledge of living together as good neighbors, the pledge of taking united measures to remove threats to the peace. Higher pledges were never put down on paper. The ways and means of performing those pledges were also agreed on by common consent, through the Security Council and General Assembly of United Nations and through provision for combined forces to support the decisions of the United Nations. All nations, large and small, signed up. There would be no more aggression by the strong against the weak, no more armament races, no more balance of power. The sky was blue. It remained only for nations or those in control of nations to live up to their engagements.

We recall how quickly our hopes for achieving a system of peace through collective world action faded, how soon the blue in the sky was followed by an overcast sky. It was only a matter of months when the proof began to pile up that the men in charge of Russia's destinies were not minded to work with free nations for removal of threats to the peace. The record of Soviet obstruction is a dreary one and there is no need to dwell long on it—Soviet resistance to control of atomic energy, Soviet opposition to ending the war against Greece, Soviet aggression against the countries of eastern Europe, Soviet ambitions in China and Korea, Soviet maneuvers to push us out of Berlin, Soviet

efforts to defeat economic recovery in western Europe, Soviet fifth-column sabotage in the free countries—to say nothing of the monotonous Soviet vetoes and walk-outs in the United Nations—to say nothing of the charges that come monotonously from Moscow of American war-mongering, American imperialism, American encirclement. In that hostile and threatening behavior of the men in the Kremlin we suffered a defeat of our foreign policy, the preservation of peace through United Nations. It was a defeat that no amount of skill and diplomacy on the part of our Government could have avoided, a defeat shared by the other nations that subscribed to collective efforts to prevent war by means of United Nations.

That hostility by the 14 rulers of Soviet Russia is the most tragic fact we face as of today in the second half of the twentieth century. It has brought about the indefinite postponement of attaining peace by united world action. If war is to be avoided, it must be by other means and other measures.

Appeasement, like collaboration, is a word with a bad reputation, and deservedly so. By bitter lessons, the world has been taught that appeasement settles nothing in dealing with restless dictators; it is taken as a sign of weakness and merely serves to sharpen their appetite for more of the same. While the word appeasement is not used, there nevertheless is still a feeling in some quarters that our differences with Soviet Russia are merely due to misunderstandings, each side being actuated by good faith, and that the differences could readily be cleared up if the President would only invite Stalin to sit down with him at a table and candidly talk things over. The good-natured people who hold that opinion close their eyes to the proof that it is not the policy of Stalin, any more than it was the policy of Hitler, to have friendly relations with the United States. There are many Americans, too, who feel that somewhere there must be a fairly easy answer to the Russian problem, many who hope that before long someone in the Government will hit on it.

The answer is simple, but it is not easy.

The plain fact is that the free nations, this one included, are face to face with a set of men who control the resources of a powerful country, who are fired with the ambition to rule the world out of Moscow, who have no scruples on the means of gaining their goal. Covenants, engagements, and commitments are made only for the purpose of deceiving the other side. A twist is given to words as familiar as democracy and freedom, a twist that utterly perverts their meaning. The aim is not merely world communism; from the case of Tito and Yugoslavia we know that in all other countries the communism must be a puppet communism, directed and operated through strings that run straight to the Kremlin. Any phase of our foreign policy that fails to recognize that Moscow respects nothing but the facts of force is foredoomed to failure. At Potsdam, when Stalin, on mention of a statement by the Pope, inquired "How many divisions has the Pope?" he summed up his entire foreign policy in those six words.

There is nothing new in that, except for the scale of it. Plutarch, in his life of Theseus, wrote of a band of outlaws in ancient Greece:

"All respect for others, all justice, they thought, all equity and humanity in no way concerned those who were strong enough to win for themselves."

Little as we like it, we must conform our conduct to the truth that there is no easy answer, that a meeting across the table will not give us a swift ending of the cold war, that the road ahead will not be a smooth one, that the most solid assurance for preservation of peace will consist of the strength of our resources.

For quick assets we have the Military Establishment—Army, Navy, Air. No matter how well conceived our diplomatic measures may be, the record will finally be written in red ink unless those measures are backed up by the presence of armed strength.

If polls are still of any value, public opinion is all but unanimous on the necessity of armed strength. Americans from Maine to California are in accord that our expenditures in maintenance of the national defense should be as large as is consistent with our economic health; beyond that point no one would care to go under present conditions.

As for organization, we have the unified Department of Defense, in place of the old, out-dated structure of separate departments. We have a single team under single leadership, instead of the divided effort inherent in the system of independent services under independent departments. The new plan is logical, and it is working well. There are officers, it is true, who have found it hard to adapt their ideas to the principle of combined command. They are few, however, and becoming fewer day by day.

The differences of opinion that exist have to do with the composition of the Military Establishment. It is a waste of effort, I submit, to try to be strong everywhere, a waste that we cannot afford. The most effective deterrent to an aggressor, it would seem plain, is the ability to strike deep at his vitals. Until the day of push-button warfare, a day in the far distant future, that cannot be done save by long-range air power. Atom bombs, and hydrogen bombs, too, if they come, are utterly useless without the means of delivering them at the targets. We have no means unless we rely on air power. If these premises are sound, we will speak less about maintaining "balanced forces" and about spending one-third of our funds for national defense on each of the three arms, as if each had an equal claim on the country. Instead, we will put the emphasis—heavy emphasis—on our air strength. While it happens that my military career was confined to the infantry, I trust that I am not deserting the cause of the foot soldier by stating it as my conviction that our future security lies in air power. American air power in the twentieth century, if made unmistakably predominant, can have the same sobering effect on disturbers of the peace that British sea power had in the nineteenth century. As matters stand today, we are not devoting to the air branch the proportion of our total effort that the situation calls for.

A second asset for maintenance of peace that is under our own control is the enactment of industrial mobilization measures now, to be put into operation any time later by joint resolution of Congress. Mr. Baruch last week made a powerful appeal for action to cover this need. I subscribe to everything he said on the value of making prompt provision for priority powers, price controls, wage controls, industrial and manpower controls. In World War II we endured the wasteful experience of makeshift devices. We did win our way to mobilization of the industrial plant, through requisitioning powers, the authority to place compulsory orders on industry, and control of profits through contract renegotiation. We never did succeed in getting manpower mobilization, though almost every other nation at war lost no time in adopting a program of that character. Instead, we had the mortifying spectacle of shortages of workers in war industries and in other vital activities when there were plenty of people in unessential pursuits who were allowed to take a free ride for the war. To those who had responsibilities for keeping the men in the fighting forces equipped and supplied, the failure of Congress to pass a work-or-fight law was our greatest shortcoming on the home front.

The third asset is directly in the field of foreign relations. It consists of strengthening the forces of freedom in nations overseas. Plainly, if by assistance to people in western Europe and elsewhere who have the same devotion to the principles of free government that we have, we can help them to preserve their freedom, the risk of a march out of Moscow is reduced. Aid to Greece and Turkey, the Marshall plan, the North Atlantic Defense Pact, and the Military Assistance Law were steps taken in pursuit of this policy, and they have been attended with success.

We cannot say as much for the Far East. China has been overrun by the Communists and for the time being at least has become a Russian satellite, managed by Moscow. There is no denying that this stands as an accrued liability in the balance sheet of our foreign affairs. We have not won every time.

In the performance of its task in these difficult times the State Department, I submit, is entitled to have the full confidence of the American people. Without that confidence it cannot manage its activities to the advantage of the Nation. Surely, the unproved charges that have been made so recklessly from the immunity of the floor of the Senate must not be allowed to impair that confidence. Our foreign relations, we may be certain, could not be in hands more capable or more trustworthy than those of Secretary Acheson. He has shown keen insight and clear understanding of the aims and purposes of the Russian Government. His political nonpartisanship in the conduct of foreign affairs, consistent all along, has been further attested by the appointment of two eminent statesmen of the other party to posts of high authority in the Department.

The balance sheet in foreign affairs is one that cannot carry dollar values. On the liability side we have the single item, the risk of war with Soviet Russia, and it is a risk that should not be minimized. The risk of war is always present when an ambitious dictatorship has the resources of a powerful nation under its thumb.

On the asset side we have our military forces in being. We have the priceless asset of a productive economy, with an industrial plant far beyond anything that Soviet Russia can hope for, and the priceless asset of political institutions that put up no barriers against the vigor, energy, and enterprise of men and women. Those assets, provided we manage them with a clear vision of what we are up against in world affairs, should give us a fair margin over the liability side in the days ahead. But we will not manage them wisely if we have any fuzziness in our thinking about the present and future hostility of the Soviet dictatorship. It is a hostility that no amount of argument on our part will dispel. The price we will pay for that kind of fuzziness might well be the loss of our existence as a free people.

The chances for peace will vary directly with the world-mindedness of the people of this country. The day of isolationism, we trust, is past. We cannot afford to lose sight of the position of the United States as a bulwark in the struggle for freedom.

How long will the war of nerves continue? How long must we keep on with the policy of building our military strength? The answer depends on how long the enslavement of the Russian people lasts.

From history we know that all tyrannies have finally collapsed. One day the censorship of information, the suppression of freedom in Russia will break down. One day the Politburo will no longer be able to control the destiny of 200,000,000 Russians by wish or whim. When that time comes, the world will be able to go ahead with disarmament. Not until then will the threat to peace disappear.

Russian Crab Imports

EXTENSION OF REMARKS
OF

HON. RUSSELL V. MACK
OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1950

Mr. MACK of Washington. Mr. Speaker, I have repeatedly called the attention of the House to the fact that during recent months 59,000 cases of Russian canned crab, valued at $3,000,000, have been imported into the United States. Also, I have said that the Russians probably have another 400,000 cases of this canned crab which they will dump into this country unless steps are taken by our executive departments to ban these imports.

The laws of this country say definitely that the Secretary of the Treasury may ban imports from foreign countries where the imported goods are produced by forced labor, and forced labor in that law is defined to mean involuntary labor.

It is common knowledge that much of the labor employed in Russia is slave or forced labor, on the ground because it is involuntary. I have urged Secretary of the Treasury Snyder to enforce this law against Russian canned crab and thereby bar further Russian crab imports and thus save our prosperous crabbing industry from destruction by Russian slave-labor competition.

Under leave to extend my remarks and include extraneous matter, I include with this speech a column, Inside Labor, by Victor Riesel. This column has appeared in 154 American newspapers having a total circulation of many millions. Mr. Riesel's column follows:

INSIDE LABOR

(By Victor Riesel)

In any one of a hundred restaurants you don't have to rub a magic lamp and wish for a genii in order to be served by some remote slave. Just order crab meat. It will have come from a slave's hands. It will have been packed by a slave's frozen fingers. It will have been speared out of frigid waters by iron hooks held in a slave's cramped fist.

No fairy tale this. Just the story of Soviet slave labor in icy camps, dumping millions of pounds of fish for your dainty cocktail forks each month—and so beginning to kill off a multi-million dollar American fishing industry, canneries, boatbuilding and gear production.

All of which means lots fewer jobs for the average American Joe.

Within the past few months, exactly $3,000,000 worth of this fancily canned crab meat has come into the United States via Seattle and Boston—some of it direct from Russia's forced-labor fishing camps. This slave-packed food for America's tables arrived in 59,000 cases, 15,000 of which entered Seattle right from Siberia.

So that those who deal in this slave-speared crab meat shall know where it comes from—I put in the record the fact that there are 17 such slave fishing camps, stretching from Murmansk to the Sakhalin Islands. And it's easy to get into any one of them. I have before me the official Soviet Corrective Labor Code, which the State Department can have for a nickel phone call. The code (drawn up by the MVD secret police) reports that "The task of the penal policy of the proletariat during the period of transition from capitalism to socialism is the defense of the dictatorship of the proletariat and the Socialist construction carried out by it, against encroachments by class-hostile elements and infringements not only on the part of déclassé elements but also of unstable elements among the workers."

To make certain of this, the secret police must put the condemned in conditions which debar them from the possibility of committing acts which inflict harm on Socialist construction.

This harm, according to the official code before me, can mean coming late to work, attempting to change jobs without permission, griping to the plant foremen out loud so that the other workers can hear, and taking too many days off from the job.

For any of these crimes, you can be sent to any one of several hundred camps run by the secret police. In some, you cut lumber. In others, you help mine 80 percent of Russia's gold. And in some, you fish—for crab meat, among other delectable items, for the world's gourmets. And, since the MVD doesn't exactly set up a pay-roll window every Friday, the crab meat can be sold in America at a price far less than it costs to fish up and can in the United States. So, the more crab meat from Russia, the fewer jobs for the United States.

And that's just what's been happening at a moment when we're thinking of setting up a CCC to care for millions of unemployed youngsters and retiring older workers.

For example, of the 59,000 cases of Soviet crab meat, about 15,000 went through Seattle and 44,000 via Boston. This second shipment came from England. When some of our business people and their Congressmen complained to ECA Chief Paul Hoffman, he revealed that the British had told him that England was forced to buy 80,000 cases of canned crab if London wanted to buy salmon, which her people needed desperately. In exchange for the vital salmon, the British send Russia woolens and cloth.

The British then start a price-cutting war with American crab fishers and packers to get something out of the deal. The English sell for $2 a case less than the American firms do, and when the Americans slash their price to meet the British competition, the British simply cut down by another $2.

There you see an American industry, with thousands of jobs, being threatened by Soviet MVD prison-camp labor. And when it was pointed out to Secretary of the Treasury Snyder that a 1930 law on our books gave him power to ban importation of goods made by forced labor ("for which the worker doesn't offer himself voluntarily," the law states specifically), Mr. Snyder apparently was too busy to reply.

All right, you don't eat crab meat. Maybe you eat nuts. Well, the other day 110,000 pounds of walnuts were unloaded in San Francisco, direct from Soviet-controlled Manchuria, and sold for 20 cents a pound less than our growers can put the stuff on the market. If it's not fish, it's nuts, or gold, or furs, or ships, or any one of a hundred items.

It's just beginning. Soon we'll have lots more to crab about than crab meat.
